Notice of meeting :

Place Scrutiny Committee

Thursday, 10th October, 2024 at 2.00 pm,
Council Chamber, County Hall, The Rhadyr USK and Remote Attendance

AGENDA

Item No	Item	Pages
1.	Apologies for Absence	
2.	Declarations of Interest	
3.	Public Open Forum	
	Scrutiny Committee Public Open Forum ~ Guidance	
	<p>Our Scrutiny Committee meetings are live streamed and a link to the live stream will be available on the meeting page of the Monmouthshire County Council website</p> <p>If you would like to share your thoughts on any proposals being discussed by Scrutiny Committees, you can submit your representation in advance via this form</p> <p>Please share your views by uploading a video or audio file (maximum of 4 minutes) or; Please submit a written representation (via Microsoft Word, maximum of 500 words)</p> <p>You will need to register for a My Monmouthshire account in order to submit the representation or use your log in, if you have registered previously.</p>	

The deadline for submitting representations to the Council is 5pm three clear working days in advance of the meeting.

If representations received exceed 30 minutes, a selection of these based on theme will be shared at the Scrutiny Committee meeting. All representations received will be made available to councillors prior to the meeting.

If you would like to attend one of our meetings to speak under the Public Open Forum at the meeting, you will need to give three working days' notice by contacting Scrutiny@monmouthshire.gov.uk.

The amount of time afforded to each member of the public to speak is at the chair's discretion, but to enable us to accommodate multiple speakers, we ask that contributions be no longer than 3 minutes.

If you would like to suggest future topics for scrutiny by one of our Scrutiny Committees, please do so by emailing Scrutiny@monmouthshire.gov.uk

4.	RLDP Deposit Plan	1 - 1850
	To scrutinise the RLDP Deposit Plan prior to Council endorsement for public consultation	
5.	Place Scrutiny Committee Forward Work Programme and Action List	1851 - 1854
6.	Cabinet and Council Forward Plan	1855 - 1866
7.	To confirm the minutes of previous meetings:	1867 - 1878
	11 th July 2024	
	24 th July 2024 (Special)	
	3 rd September 2024 (Special)	
8.	Next Meeting: 7th November 2024	

Paul Matthews

Chief Executive

MONMOUTHSHIRE COUNTY COUNCIL
CYNGOR SIR FYNWY

THE CONSTITUTION OF THE COMMITTEE IS AS FOLLOWS:

County Councillor Louise Brown	Shirenewton;	Welsh Conservative Party
County Councillor Emma Bryn	Wyesham;	Independent Group
County Councillor Tomos Dafydd Davies	Llanfoist & Govilon;	Welsh Conservative Party
County Councillor Lisa Dymock	Portskewett;	Welsh Conservative Party
County Councillor Jane Lucas	Osbaston;	Welsh Conservative Party
County Councillor Jackie Strong	Caldicot Cross;	Welsh Labour/Llafur Cymru
County Councillor Laura Wright	Grofield;	Welsh Labour/Llafur Cymru
County Councillor Tudor Thomas	Park;	Welsh Labour/Llafur Cymru
County Councillor John Crook	Magor East with Undy;	Welsh Labour/Llafur Cymru

Public Information

Access to paper copies of agendas and reports

A copy of this agenda and relevant reports can be made available to members of the public attending a meeting by requesting a copy from Democratic Services on 01633 644219. Please note that we must receive 24 hours notice prior to the meeting in order to provide you with a hard copy of this agenda.

Welsh Language

The Council welcomes contributions from members of the public through the medium of Welsh or English. We respectfully ask that you provide us with adequate notice to accommodate your needs.

Aims and Values of Monmouthshire County Council

Our purpose

To become a zero-carbon county, supporting well-being, health and dignity for everyone at every stage of life.

Objectives we are working towards

- Fair place to live where the effects of inequality and poverty have been reduced.
- Green place to live and work with reduced carbon emissions and making a positive contribution to addressing the climate and nature emergency.
- Thriving and ambitious place, where there are vibrant town centres and where businesses can grow and develop.
- Safe place to live where people have a home where they feel secure in.
- Connected place where people feel part of a community and are valued.
- Learning place where everybody has the opportunity to reach their potential.

Our Values

Openness. We are open and honest. People have the chance to get involved in decisions that affect them, tell us what matters and do things for themselves/their communities. If we cannot do something to help, we'll say so; if it will take a while to get the answer we'll explain why; if we can't answer immediately we'll try to connect you to the people who can help – building trust and engagement is a key foundation.

Fairness. We provide fair chances, to help people and communities thrive. If something does not seem fair, we will listen and help explain why. We will always try to treat everyone fairly and consistently. We cannot always make everyone happy, but will commit to listening and explaining why we did what we did.

Flexibility. We will continue to change and be flexible to enable delivery of the most effective and efficient services. This means a genuine commitment to working with everyone to embrace new ways of working.

Teamwork. We will work with you and our partners to support and inspire everyone to get involved so we can achieve great things together. We don't see ourselves as the 'fixers' or problem-solvers, but we will make the best of the ideas, assets and resources available to make sure we do the things that most positively impact our people and places.

Kindness: We will show kindness to all those we work with putting the importance of relationships and the connections we have with one another at the heart of all interactions.

Monmouthshire Scrutiny Question Guide

Role of the Pre-meeting

1. Why is the Committee scrutinising this? (background, key issues)
2. What is the Committee's role and what outcome do Members want to achieve?
3. Is there sufficient information to achieve this? If not, who could provide this?

- Agree the order of questioning and which Members will lead
- Agree questions for officers and questions for the Cabinet Member

Questions for the Meeting

Scrutinising Performance

1. How does performance compare with previous years? Is it better/worse? Why?
2. How does performance compare with other councils/other service providers? Is it better/worse? Why?
3. How does performance compare with set targets? Is it better/worse? Why?
4. How were performance targets set? Are they challenging enough/realistic?
5. How do service users/the public/partners view the performance of the service?
6. Have there been any recent audit and inspections? What were the findings?
7. How does the service contribute to the achievement of corporate objectives?
8. Is improvement/decline in performance linked to an increase/reduction in resource? What capacity is there to improve?

Scrutinising Policy

1. Who does the policy affect ~ directly and indirectly? Who will benefit most/least?
2. What is the view of service users/stakeholders? What consultation has been undertaken? Did the consultation process comply with the Gunning Principles? Do stakeholders believe it will achieve the desired outcome?
3. What is the view of the community as a whole - the 'taxpayer' perspective?
4. What methods were used to consult with stakeholders? Did the process enable all those with a stake to have their say?
5. What practice and options have been considered in developing/reviewing this policy? What evidence is there to inform what works? Does the policy relate to an area where there is a lack of published research or other evidence?
6. Does the policy relate to an area where there are known inequalities?
7. Does this policy align to our corporate

objectives, as defined in our corporate plan? Does it adhere to our Welsh Language Standards?

8. Have all relevant sustainable development, equalities and safeguarding implications

9. been taken into consideration? For example, what are the procedures that need to be in place to protect children?

10.

11. How much will this cost to implement and what funding source has been identified?

12.

13. How will performance of the policy be measured and the impact evaluated

General Questions:

Empowering Communities

- How are we involving local communities and empowering them to design and deliver services to suit local need?
- Do we have regular discussions with communities about service priorities and what level of service the council can afford to provide in the future?
- Is the service working with citizens to explain the role of different partners in delivering the service, and managing expectations?
- Is there a framework and proportionate process in place for collective performance assessment, including from a citizen's perspective, and do you have accountability arrangements to support this?
- Has an Equality Impact Assessment been carried out? If so, can the Leader and Cabinet/Senior Officers provide members with copies and a detailed explanation of the EQIA conducted in respect of these proposals?
- Can the Leader and Cabinet/Senior Officers assure members that these proposals comply with Equality and Human Rights legislation? Do the proposals comply with the Local Authority's Strategic Equality Plan?

Service Demands

- How will policy and legislative change affect how the council operates?
- Have we considered the demographics of our council and how this will impact on service delivery and funding in the future?
- Have you identified and considered the long-term trends that might affect your service area, what impact these trends could have on your service/your service could have on these trends, and what is being done in response?

Financial Planning

- Do we have robust medium and long-term financial plans in place?
- Are we linking budgets to plans and outcomes and reporting effectively on these?

Making savings and generating income

- Do we have the right structures in place to ensure that our efficiency, improvement and transformational approaches are working together to maximise savings?
- How are we maximising income?
- Have we compared other council's policies to maximise income and fully considered the implications on service users?
- Do we have a workforce plan that takes into account capacity, costs, and skills of the actual versus desired workforce?

Questions to ask within a year of the decision:

- Were the intended outcomes of the proposal achieved or were there other results?
- Were the impacts confined to the group you initially thought would be affected i.e. older people, or were others affected e.g. people with disabilities, parents with young children?
- Is the decision still the right decision or do adjustments need to be made?

Questions for the Committee to conclude...

Do we have the necessary information to form conclusions/make recommendations to the executive, council, other partners? If not, do we need to:

- (i) Investigate the issue in more detail?
- (ii) Obtain further information from other witnesses – Executive Member, independent expert, members of the local community, service users, regulatory bodies...

Agree further actions to be undertaken within a timescale/future monitoring report...

SUBJECT: DEPOSIT REPLACEMENT LOCAL DEVELOPMENT PLAN (RLDP)

MEETING: PLACE SCRUTINY COMMITTEE

DATE: 10th OCTOBER 2024

DIVISION/WARDS AFFECTED: ALL

1. PURPOSE:

- 1.1 The purpose of this report is to facilitate pre-decision scrutiny on the Deposit Replacement Local Development Plan (RLDP). The Deposit RLDP will be reported to Council on 24th October 2024 to seek Council's endorsement of the Deposit Plan to commence statutory consultation/engagement with communities and key stakeholders.
- 1.2 To note the content of the Revised Delivery Agreement timetable that will be presented to Council on 24th October for consideration as to whether to submit it to Welsh Government (WG).

2. RECOMMENDATIONS:

- 2.1 To scrutinise the Deposit RLDP, prior to it being reported to Council on 24th October 2024 to seek Council's endorsement of the Deposit RLDP to commence statutory consultation/engagement with communities and key stakeholders.
- 2.2 To note the content of the Revised Delivery Agreement timetable that will be presented to Council on 24th October for consideration as to whether to submit it to Welsh Government (WG) for agreement.

3. KEY ISSUES:

Background

- 3.1 The Council has been preparing a Replacement Local Development Plan (RLDP) for the period 2018 to 2033. The RLDP is a key Council policy document that allocates land for development, designates areas for protection and contains policies to provide the basis for deciding planning applications. It will cover the whole of the County except for the part within Bannau Brycheiniog National Park.
- 3.2 The existing LDP was adopted in 2014 and covered a ten year period between 2011-2021. The adopted LDP is therefore out of date, and it is essential the LDP is replaced to safeguard the County against unacceptable development, allocate land to deliver essential affordable housing and to support economic prosperity. All of the strategic housing sites in the adopted LDP have been delivered or are currently being built out, therefore there is a lack of land and opportunity to build new homes or to deliver new employment sites. The RLDP will provide the Council with a sound development plan, which will give certainty to communities and developers up to 2033 on which land is appropriate for sustainable development.
- 3.3 The RLDP identifies land where sustainable forms of development will take place to 2033 and provides an up to date planning policy framework to enable robust decision making on development proposals within the County. It has a key role in delivering the Council's objectives and addressing the core issues of delivering essential affordable homes at pace and scale, responding to the climate and nature emergency, ensuring our communities are socially and economically sustainable by dressing our demographic balance by attracting a younger demographic and supporting the County's economic prosperity. The RLDP takes account of and helps deliver a range of other initiatives, including the land use elements of the Council's Economy, Employment and Skills Strategy, Local Transport Strategy and the Community and Corporate Plan by supporting the delivery of the Council's core purpose of becoming a zero-carbon county, supporting well-being, health and dignity for everyone at every stage of life.
- 3.4 Figure 1 below shows the key steps in the RLDP process. The Council is currently at Stage 4 in the diagram, and if Council agrees to endorse the Deposit RLDP for public consultation/engagement on 24th October 2024 a six-week consultation period would commence on 4th November until 16th December 2024. Following this consultation period with communities, the RLDP will be reported back to Council (July 2025) to consider the comments received from the public consultation and whether to endorse the RLDP's submission to the Welsh Government to be independently examined by a planning inspector. The planning inspector would review whether the RLDP is 'sound' and can therefore be formally adopted by the Council.

At this stage (4), Council is considering whether to endorse the Deposit RLDP for public consultation to engage with communities and key stakeholders over a six-week period (4th November – 16th December).

Figure 1: Key Steps in the RLDP Process

RLDP Revised Delivery Agreement

- 3.5 The Delivery Agreement sets out the timetable for delivering the RLDP and the strategy for community involvement. Several challenges have arisen during the development of the RLDP meaning that progress on the preparation of the RLDP has been delayed this includes delays due to the pandemic, new population data being released, the impact of phosphates on development and concerns made by Welsh Government in relation to the level of growth proposed in previous draft Strategies. The most recent delay impacting on the publication of the Deposit RLDP was due to the timing of a UK General Election. As a result of this delay in the publication of the Deposit RLDP, a revised Delivery Agreement has been prepared which sets out an amended timetable for Plan preparation.
- 3.6 The revised Delivery Agreement, which includes the amended timetable, is attached at **Appendix 2**. Council will consider whether to agree the revised Delivery Agreement for submission to Welsh Government on 24th October 2024.
- 3.7 The Delivery Agreement must be approved by resolution of the Council and submitted to the Welsh Ministers for agreement in accordance with Regulation 9 of the Town and Country Planning (Local Development Plan) (Wales) Regulations 2005 (as amended 2015). Following agreement by the Minister, work will continue on the preparation of the RLDP in accordance with the revised Delivery Agreement.
- 3.8 The amended timetable sets out the following revised dates for future key stages of the RLDP process.

RLDP Key Stage	Previously Agreed DA Timetable	Revised Date – October 2024
Deposit Plan – Political Reporting	March 2024	October 2024
Deposit Plan – Consultation	April-May 2024	November - December 2024
RLDP Submission to Welsh Government	October 2024	July 2025
Examination	Late 2024/early 2025	September - November 2025
Inspector's Report	June 2025	March/April 2026
Adoption	July 2025	May 2026

Deposit RLDP

- 3.9 The Deposit RLDP is a 'core' Council document that sets out the strategy, proposals and detailed policies for the future use and development of land in Monmouthshire (excluding the area within the Bannau Brycheiniog National Park) over the Plan period 2018 to 2033. It identifies how much sustainable growth is needed and where this growth will be located. Its preparation has been guided by a framework of key inputs that includes national legislation/policy, local and regional policies/strategies and an evidence base relating to key local issues for the Plan to address. The Deposit RLDP seeks to address the issues, challenges and opportunities facing the County, that are documented in the Gwent PSB¹ Well-being Plan (August 2023) and MCC's Taking Monmouthshire Forward – Community and Corporate Plan 2022-2028 (April 2023).
- 3.10 The Deposit Plan is attached at **Appendix 1**. A summary version of the Deposit RLDP has also been prepared (attached at **Appendix 3**).
- 3.11 The Councils vision within the Deposit RLDP is that: -
- By 2033 Monmouthshire will be home to well-connected exemplar, affordable housing-led, net zero carbon places that provide employment and support demographically balanced sustainable and resilient communities for all, where:
- People are living in inclusive, equal, safe, cohesive, prosperous and vibrant communities. Both urban and rural areas are well-connected with better access to local services and facilities, open space and employment opportunities.
 - Communities and businesses are part of an economically thriving, ambitious and well-connected County.

¹ The Gwent PSB has been formed by the former five PSBs of Blaenau Gwent, Caerphilly, Newport, Monmouthshire and Torfaen, along with the Aneurin Bevan University Health Board, South Wales Fire and Rescue Service and Natural Resources Wales.

- The best of the County’s built heritage, countryside, biodiversity, landscape and environmental assets have been protected and enhanced to retain its distinctive character.
- People enjoy healthier, more sustainable lifestyles with improved access to public transport and active travel opportunities and have a minimised impact on the global environment, supporting our ambitions for a zero-carbon county.

3.12 The Deposit RLDP includes seventeen objectives to achieve this vision and these objectives are grouped to reflect the seven wellbeing goals (they are not listed in order of importance). However, as the Plan has developed, four core objectives have become apparent: delivering essential affordable homes at pace and scale to meet local needs, ensuring our communities are socially and economically sustainable by attracting and retaining younger people to rebalance our ageing demographic, responding to climate and nature emergency and supporting and enabling sustainable economic growth.

Key Highlights of the Deposit RLDP

3.13 The Sustainable and Resilient Communities Growth and Spatial Strategy:

- Makes provision for approximately 5,400 - 6,210 homes over the Plan period 2018-2033². This includes the provision of approximately 1,595 - 2,000 affordable homes. As there are currently approximately 4,080 homes in the housing landbank³, land will be allocated for approximately 1,320 – 2,130 new homes, including 660 – 1,065 new affordable homes. These homes will be delivered through various housing land supply components, details of which are set out in Table 2 below, Appendix 7 and the Housing Background Paper.
- Allocates a minimum of 38ha of B use class employment land and sets out the planning policy framework to support job growth of up to 6,240 additional jobs over the Plan period. The Plan also includes policies to facilitate growth in foundational sectors such as retail, leisure, tourism and agriculture. The RLDP is supported by the Council’s Economy, Employment and Skills Strategy and Local Transport Strategy. Collectively these key plans/strategies will support sustainable economic growth/job creation through a range of mechanisms and interventions.

² In accordance with the Development Plans Manual (WG, March 2020) an allowance is made for a 15% flexibility allowance to factor in sites that may not come forward, unforeseen issues or to meet higher aspirations for the County to enable the provision/delivery of additional sites if all sites are delivered.

³ As the Plan period has already begun (2018) some of the homes in the landbank have been built, are under construction or have planning permission. The landbank figure also takes into account LDP ‘rollover’ allocations, windfall sites and small sites.

- Focuses growth in the County’s most sustainable settlements of Abergavenny, Chepstow, Monmouth and Caldicot, including Severnside, as well as some growth in our most sustainable rural settlements to deliver much needed affordable homes and to address rural inequality and rural isolation in these areas. Strategic sites are identified to sustainably expand the Primary Settlements of Abergavenny, Caldicot, Chepstow and Monmouth. Additional site allocations are identified in sustainably located edge of settlement locations in various settlements across the County. These site allocations are set out in policies HA1 to HA18.
- Limits the impact of climate change by ensuring new homes are net zero carbon and well connected with existing settlements, providing attractive and accessible places to live and work.

3.14 Table 1 sets out a summary of the overarching spatial distribution of housing provision for the RLDP.

Table 1: Summary of Spatial Distribution of Housing Provision*

	Allocations					
	Completions 2018-2023	Existing Commit- ments	Total Allowances (Small Sites; Windfalls)	LDP Rollover Allocations	RLDP New Housing Allocations (Dwellings)	Total RLDP Housing Provision
Abergavenny (incl. Llanfoist)	537	29	196	0	600	1,362
Chepstow	448	81	154	0	146	829
Monmouth (incl. Wyesham)	286	70	77	160	330	923
Caldicot (incl. Severnside)	663	555	162	0	810	2,190
Secondary Settlements	109	38	67	0	136	350
Rural Settlements	177	25	231	15**	108**	556
Total	2,220	798	887	175	2,130	6,210

*Figures include an indicative 15% flexibility allowance.

** Rural LDP Rollover Allocations and RLDP New Housing Allocations are all within Tier 3 Main Rural Settlements

3.15 In order to deliver the housing provision identified in Policy S1, the following sites are proposed to be allocated for residential development, and in some instances mixed-use opportunities, in the period up to 2033:

Site Ref	Site Name	Settlement	Site Area (ha)	Approximate No. Homes in Plan Period	Approximate No. Affordable Homes in Plan Period
Strategic Sites (Tier 1 Settlements)					
HA1	Land to the East of Abergavenny*	Abergavenny	35.9	500	250
HA2	Land to the East of Caldicot/North of Portskewett*	Caldicot	64	770	385
HA3	Land at Mounton Road*	Chepstow	12.8	146	73
HA4	Land at Leasbrook	Monmouth	11	270	135
Primary Settlements/Sevenside (Tier 1 Settlements)					
HA5	Land at Penlanlas	Abergavenny	6.17	100	50
HA6	Land at Rockfield	Monmouth	1.5	60	30
HA7	Land at Drewen Farm	Monmouth	6.6	110	55
HA8	Tudor Road, Wyesham	Monmouth	2.1	50	25
HA9	Land at Former MoD*	Caerwent	4.2	40	20
Secondary Settlements (Tier 2 Settlements)					
HA10	South of Monmouth Road	Raglan	4.5	54	27
HA11	Land East of Burrium Gate	Usk	2.6	40	20

HA12	Land West of Trem yr Ysgol	Penperlleni	3.4	42	21
Main Rural Settlements (Tier 3 Settlements)					
HA13	Land adjacent to Piercefield Public House	St Arvans	1.1	16	8
HA14	Land at Churchfields	Devauden	1	20	10
HA15	Land East of Little Mill	Little Mill	1.68	20	10
HA16	Land North of Little Mill	Little Mill	0.87	15	8
HA17	Land adjacent to Llanellen Court Farm	Llanellen	1.56	26	13
HA18	Land West of Redd Landes	Shirenewton	1.76	26	13
Total Units				2,305	1,153

* Mixed-use sites

3.16 The RLDP allocates B use class employment land and sets out the planning policy framework to support job growth of up to 6,240 additional jobs over the Plan period. Strategic Policy S12 sets out the requirement to provide for a suitable range and choice of sites for industrial and business development in the County (classes B1, B2, B8 of the Town and Country Planning Use Classes Order 1987). Overall, the Plan makes provision for approximately 57ha of B use class land (to meet the minimum requirement of 38 ha); this comprises employment land taken up between the period 2018 – 2024 and new employment allocations for the remaining Plan period.

Employment Land Supply

Employment Land Take Up 2018- 2024	Approximately 9ha
Employment Allocations	Approximately 48ha
Total Employment Provision	Approximately 57ha

3.17 The following sites are identified for new industrial and business development (Use classes B1, B2 and B8):

Site Ref	Site Name	Area (Ha)	Use Class
Industrial and Business Sites			
EA1a	Land at Nantgavenny Business Park, Abergavenny	0.59	B1
EA1b	Poultry Units, Rockfield Road, Monmouth	1.3	B1
EA1c	Land North of Wonastow Road, Monmouth	4.5	B1, B2, B8
EA1d	Newhouse Farm, Chepstow	2.5	B1, B2, B8
EA1e	Land adjoining Oak Grove Farm, Caldicot	6	B1, B2, B8
EA1f	Quay Point, Magor	14	B1, B2, B8
EA1g	Rockfield Farm, Undy	3.2	B1
EA1h	Gwent Euro Park, Magor	7	B1, B2, B8
EA1i	Raglan Enterprise Park, Raglan	1.5	B1, B2, B8
EA1j	Land West of Raglan	4.5	B1, B2, B8
Identified Mixed Use Sites			
EA1k	Land to the East of Abergavenny (see Policy HA1 for site specific policy requirements)	1	B1
EA1l	Land at Former MoD Site, Caerwent (see Policy HA9 for site specific policy requirements)	1	B1
EA1m	Land to the East of Caldicot (see Policy HA2 for site specific policy requirements)	1	B1
Total		48.09	

3.18 The Deposit RLDP contains a number of Strategic Policies which form the framework for implementing and delivering the Sustainable and Resilient Communities Growth and Spatial Strategy. These are outlined below.

Strategic Policies:

- S1 – Growth Strategy
- S2 – Spatial Distribution of Development – Settlement Hierarchy
- S3 – Sustainable Placemaking & High-Quality Design
- S4 – Climate Change

- S5 – Green Infrastructure Landscape and Nature Recovery
- S6 – Infrastructure
- S7 – Affordable Housing
- S8 – Site Allocation Placemaking Principles
- S9 – Gypsy and Travellers
- S10 – Employment Sites Provision
- S11 – Rural Economy
- S12 – Visitor Economy
- S13 – Sustainable Transport
- S14 – Town, Local and Neighbourhood centres
- S15 – Community and Recreation Facilities
- S16 – Sustainable Minerals Management
- S17 – Sustainable Waste Management

Under each strategic policy there are detailed Development Management Policies that provide additional planning policy guidance for the determination of planning applications within the Plan period up to 2033. Planning policies within the Deposit RLDP seek to address and actively respond to the Climate and Nature Emergency by protecting and enhancing Monmouthshire’s special and unique spaces, heritage assets, landscapes and biodiversity. There are also planning policies to support economic prosperity by safeguarding industrial/commercial areas, support the vitality and attractiveness of our town centres with a town centre ‘first approach’ and support sustainable tourism within the County. The Plan also designates areas for protection, including green wedges and areas of amenity importance.

Supporting Documents

- 3.19 The Deposit Plan has been subject to an Integrated Sustainability Appraisal (ISA) incorporating Strategic Environmental Assessment (SEA), Well-being of Future Generations Assessment (WBFGA), Health Impact Assessment (HIA), Equality Impact Assessment (EqIA) and Welsh Language Impact Assessment (WLIA). The ISA assesses the extent to which the proposals and policies will help to achieve the wider environmental, economic, social and cultural objectives of the RLDP. The Deposit RLDP has also been subject to a Habitats Regulations Assessment (HRA).
- 3.20 The Integrated Sustainability Appraisal Report and Habitats Regulations Assessment of the Deposit RLDP are published in Appendices 4 and 5 respectively. The ISA and HRA are iterative processes and are updated as the RLDP progresses towards adoption.
- 3.21 The Deposit RLDP (Appendix 1) also includes the Infrastructure Delivery Plan table, setting out what is needed to support the development of the allocated housing sites.

- 3.22 The Council has carefully considered the responses we received to the consultation on the Preferred Strategy that was conducted December 2022 - January 2023. Council endorsed post consultation updates to the preferred strategy on 26th October 2023. An Initial Consultation Report is attached in Appendix 6, which set outs a summary of the representations received to the consultation on the Preferred Strategy and Candidate Sites Register, together with commentary from the Council on these consultation responses.
- 3.23 The Candidate Site Assessment Report provides information on the candidate sites assessment methodology and the rationale as to why sites have been included or excluded from the Deposit RLDP. The Assessment can be found in Appendix 7.
- 3.24 As part of the development plan process the Council needs to demonstrate that the Plan is 'sound'⁴. A Self-Assessment of the Deposit Plan against the Tests of Soundness has been undertaken and is considered to demonstrate that the Deposit Plan and the processes followed to reach this stage are 'sound' (attached at Appendix 8). The soundness of the RLDP will continue to be assessed against the tests of soundness as the Plan progresses to an independent Examination by a Planning Inspector subject to Council agreement.
- 3.25 The self-assessment also demonstrates that the RLDP aligns with the objectives of Future Wales and establishes a policy framework that is in general conformity with Future Wales and makes a positive contribution to its policy aims. At a local and regional level, the RLDP is well-placed to implement the vision and objectives of Future Wales by ensuring that it includes policies that adhere to principles of placemaking and sustainable development.

Consultation, Engagement and Stakeholder Involvement

- 3.26 Regulation 17 of The Town and Country Planning (Local Development Plan) (Wales) Regulations 2005 (as amended 2015)) requires the Council to publish its Deposit RLDP proposals for public consultation prior to determining the content of the RLDP for submission to WG. Subject to endorsement by Council, the Deposit RLDP will be subject to statutory engagement and consultation for a six-week period between Monday 4th November 2024 and Monday 16th December 2024, whereby communities and stakeholders will be invited to comment on the content of the Deposit RLDP. The consultation and engagement will be carried out in accordance with the procedures set out in the Delivery Agreement's Community Involvement Scheme (Appendix 2). This will be done by:

⁴ Development Plans Manual (Edition 2 – March 2020).

- Direct contact with statutory consultees and those stakeholders who have asked to be included on the RLDP database (1000+ contacts) (contact and language preference are as indicated by the stakeholder through consultation).
- Through use of social media platforms including via Monmouthshire County Council's X and Facebook accounts.
- Engagement with Members through specific workshops, Member drop-in sessions and in reports to appropriate Council meetings.
- Engagement with Town and Community Councils
- All RLDP information and documents will be made available on the Council's website, which will be updated regularly.
- Deposit of Deposit Plan documents at the Council's headquarters and Community Hubs, where possible.
- Press releases for the local media, where appropriate.
- Producing summary documents for key stages of the RLDP process.
- Public information exhibitions, engagement sessions ('drop-in sessions') and meetings in accessible and neutral locations.
- Virtual engagement and consultation via web based technological tools.
- Site notices will be displayed regarding proposed land allocations at Deposit stage and letters will be sent to adjacent properties (excluding Candidate Sites submitted as these relate to submissions for consideration rather than proposals).

Next Steps

- 3.27 Feedback from the Place Scrutiny Committee will be reported to Council on 24th October 2024. If Council endorses the Deposit RLDP to be issued for statutory consultation/engagement, this will take place over a six-week period from 4th November 2024 – 16th December 2024. It is worth noting that, prior to the consultation starting, the documents will have been in the public domain from 3rd October 2024 as part of this published Scrutiny Committee agenda. Following the stakeholder involvement, engagement and consultation on the Deposit RLDP, responses will be collated and carefully considered.
- 3.28 Following consultation on the Deposit RLDP, the Council will consider all comments received from the consultation, including any necessary amendments, and whether to endorse the Plan for submission to the Welsh Government (July 2025), who will arrange for an independent planning inspector to be appointed to conduct an examination in public (September – November 2025).
- 3.29 Following the examination, the Inspector will issue a report recommending any required changes to the RLDP (March/April 2026). If the Inspector considers the Plan is fundamentally unsound it will not be recommended for adoption. The conclusions reached by the Inspector will be binding and unless the Welsh Government intervenes, the Council must accept the changes and adopt the

RLDP as amended. Once adopted, the RLDP will replace the existing LDP adopted and will become the framework against which decisions on planning applications are made until 2033.

4. EQUALITY AND FUTURE GENERATIONS EVALUATION (INCLUDES SOCIALJUSTICE, SAFEGUARDING AND CORPORATE PARENTING):

- 4.1 The Planning and Compulsory Purchase Act (2004) sets out the requirement for all LDPs to be subject to a Sustainability Appraisal (SA). All stages of the RLDP are subject to an Integrated Sustainability Assessment (ISA) (including Strategic Environmental Assessment (SEA), Well-being of Future Generations (WBFG), Health Impact Assessment (HIA), Equality Impact Assessment (EqIA), and Welsh Language Impact Assessment (WLIA)). The ISA Report is attached in **Appendix 4**. The ISA findings have informed the Deposit RLDP including the detailed policies and site allocations in the plan, in order to ensure that the Plan promotes sustainable development.
- 4.2 An Equality and Future Generations Evaluation (including equalities and sustainability impact assessment) is attached to this report at **Appendix 9**.

Safeguarding and Corporate Parenting

- 4.3 There are no safeguarding or corporate parenting implications arising directly from this report. The RLDP will provide affordable homes, delivery and allocation of which should be cognisant of the needs of children leaving care.

Socio-economic Duty

- 4.4 The RLDP seeks to tackle inequality, specifically by seeking to address house price unaffordability, which currently prevents some of our communities accessing suitable homes within the County. This is likely to benefit younger people, who in turn will make our ageing communities more socially and economically balanced and more sustainable. Good quality and affordable homes are important in achieving poverty reduction and equitable prosperity and supporting the best start in life. Good spatial planning helps to build cohesive communities. The provision of affordable homes combined with policy interventions in relation to the requirement of a mix of market housing will increase opportunities for those in poverty to access safe, secure and suitable homes. In accordance with the WBFGA, the RLDP also seeks to prevent future problems and will therefore continue to avoid new development in flood risk areas and will ensure the delivery of net zero carbon homes to help address the climate and nature emergency and also tackle issues such as fuel poverty.

5. OPTIONS APPRAISAL

Deposit RLDP

Option	Benefit	Risk	Comment
Place Scrutiny Committee consider and comment, as appropriate, on the Deposit RLDP.	This provides the Place Scrutiny Committee with the opportunity to scrutinise the Deposit RLDP and comment accordingly. Any feedback received will be noted and reported to Council on 24 th October 2024.		<p>This is the preferred option.</p> <p>The Deposit RLDP, as drafted, is considered to promote an appropriate level and spatial distribution of housing and employment growth for the County to 2033, which will assist in delivering the Council’s objectives and addressing the core issues of delivering essential affordable homes, responding to the climate and nature emergency by delivering net zero carbon homes in exemplar places, supporting economic prosperity, and ensuring our communities are socially and economically sustainable by attracting and retaining younger people to rebalance our ageing demographic.</p>
Place Scrutiny Committee do not comment on the Deposit RLDP.		The option of not commenting on the Deposit RLDP would result in the Place Scrutiny Committee missing a key	The option of not commenting on the Deposit RLDP would result in the Place Scrutiny Committee missing a key

		opportunity to shape the RLDP.	opportunity to help shape the RLDP and should, therefore, be discounted.
--	--	--------------------------------	--

6. RESOURCE IMPLICATIONS

- 6.1 Officer and consultant time and costs associated with the preparation of the revised Deposit Plan will be met from the Planning Policy budget and existing LDP reserve.
- 6.2 The essential infrastructure requirements for the allocated housing sites are identified in the Deposit RLDP. Although it is expected that the infrastructure would be funded via S106 planning contributions from the developers and site promoters, there may be some instances over the lifetime of the plan that there is a requirement for Council expenditure to assist in providing some infrastructure or in bringing some sites forward. This might include accessing public funding streams, the use of Compulsory Purchase Orders (CPO) and/or potential commercial investment to provide 'shovel ready' sites or business premises. Future Wales 2040 Policy 3 which supports public leadership and the use of public land to deliver affordable housing and delivering economic prosperity within the County.

7. CONSULTEES

- Cabinet Member for Planning and Economic Development & Deputy Leader
- SLT
- Communities and Place DMT
- Member workshops 17th September, 26th September & 2nd October 2024

8. BACKGROUND PAPERS

- Shirenewton/ Mynyddbach
- St Arvans
- Tintern
- Trellech
- Werngifford/Pandy

Introduction

1. **Replacement Local Development Plan**

1.1.1 The Council is preparing a Replacement Local Development Plan (RLDP) for the County (excluding the area within Bannau Brycheiniog National Park), covering the period 2018 to 2033¹. The RLDP is a key Council policy document that allocates land for development, designates areas for protection and contains policies against which future planning applications will be assessed. When adopted, the RLDP will replace the existing adopted LDP as the statutory land use development plan for the County.

1.1.2 The RLDP will identify where and how much new, sustainable development will take place to 2033, underpinned by a clear and robust evidence base. The Council has set fundamental objectives for its RLDP:

- Providing essential affordable at pace and scale.
- Responding to the climate and nature emergency by delivering net zero carbon new homes in exemplar places.
- Ensuring our communities are socially and economically sustainable by attracting and retaining younger people to rebalance our ageing demographic.
- Providing homes that are integral parts of existing settlements, with walking routes to town/local centres, benefiting from and adding to the vibrancy of those settlements.

1.1.3 The RLDP takes account of and helps deliver a range of other initiatives, including the land use elements of the Council's Economy, Employment and Skills Strategy, and Community and Corporate Plan by supporting the delivery of the Council's core purpose of becoming a zero-carbon county, supporting well-being, health and dignity for everyone at every stage of life².

1.1.4 The RLDP has been prepared with regard to relevant legislation, national planning policy and regional/local strategies. The Plan's strategy, policies and proposals have been informed by a robust evidence base in the form of various background reports and supporting studies relating to key local issues for the Plan to address (Appendix 1 refers).

¹ As required by the Planning and Compulsory Purchase Act 2004

² The Community and Corporate Plan 2022 sets out the Council's core purpose, principles, and priorities. It was adopted by Council on 20th April 2023.

The RLDP Process

1.1.5 The preparation of the RLDP involves a number of key stages as shown in Figure 1 above, and has proceeded through stages 1 – 3, with this Deposit Plan being the current stage. The Plan

Figure 1: Replacement Local Development Plan Process

is being prepared in accordance with the Revised Delivery Agreement (October 2024) which sets out the timetable for Plan preparation and the approach to community consultation and engagement.

1.1.6 The RLDP has been through a number of key plan stages since Plan commencement in 2018. An overview of progress and key considerations at each stage is provided in Appendix 2. Several challenges have arisen, affecting progress and requiring further consideration at the relevant stage. These challenges include the publication of updated Welsh Government 2018-based population projections, the Covid-19 pandemic, an objection from Welsh Government to the June 2021 Preferred Strategy, and phosphate water quality issues in the River Wye and River Usk catchment areas. This Deposit Plan has been prepared having regard to the challenges experienced whilst also ensuring the RLDP delivers on its Vision and Objectives.

What is the Deposit RLDP?

1.1.7 This Deposit Plan is a key stage in the preparation of the Development Plan for Monmouthshire³. It progresses the evidence gathering, stakeholder engagement and Pre-Deposit work undertaken to date, including the Preferred Strategy consultation, and sets out the strategy, proposals and detailed policies for the future use and development of land in Monmouthshire over the period 2018-2033.

1.1.8 The Deposit Plan consists of a written statement detailing the policies and proposals, along with a proposals map on a geographical base. Its structure and format is as follows:

- **Executive Summary**
- **Introduction:** Sets out background information with regard to the Deposit RLDP.
- **Context:** Provides a broad introduction to the plan area, outlining the key economic, environmental and social characteristics of Monmouthshire.

³ Regulation 17 of the Town and Country Planning (Local Development Plan) (Wales) Regulations 2005 (as amended 2015)

- **Key Issues, Challenges and Opportunities** - Provides a summary of the key issues, challenges and opportunities within Monmouthshire.
- **RLDP Strategic Framework:** Outlines the RLDP Vision and Objectives which have emerged from the Pre-Deposit Plan making process, sets the context for the Plan's strategic direction, and details the growth and spatial strategy for Monmouthshire.
- **Implementation and Delivery:** Sets out the RLDP strategic policies, site allocation policies and detailed development management policies. This policy framework provides the basis for the rational and consistent consideration of planning applications and appeals.
- **Monitoring Framework:** Identifies key policy indicators and targets which will be used to assess the effectiveness of the RLDP. This will provide a basis for the RLDP annual monitoring reports (AMR).
- **Appendices:** A number of appendices are included which set out further detail in relation to a variety of matters. These appendices form part of the RLDP and have been referenced throughout the main document as appropriate.

1.1.9 The Deposit RLDP is also accompanied by the following maps:

- **Proposals Map:** This illustrates the geographical location and extent of the site-specific development and protection policies that are designated in the RLDP.
- **Constraints Map:** This shows the geographical location and extent of constraints to development that are created by legislation outside of the development plan process, for example Scheduled Ancient Monuments, flood plains and Sites of Special Scientific Interest. Although this does not form part of the RLDP regard must be given to the Constraints Map in the consideration of development proposals. The Constraints Map includes designations made by statutory bodies other than the Council and will be updated as necessary.

1.1.10 Further information on the plan preparation process is set out in the Delivery Agreement and the Council's Planning Policy webpages.

1.2 **Statutory Assessments:**

Integrated Sustainability Assessment

1.2.1 All formal stages of the RLDP, including the Deposit Plan, are subject to an **Integrated Sustainability Appraisal (ISA)** which fulfils the requirements and duties for Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA), Equalities Impact Assessment (EqIA), Health Impact Assessment (HIA), Welsh Language Impact Assessment (WLIA) and Well-being of Future Generations (WCFG). The aim of ISA is to inform and influence the plan-making process by **assessing the extent to which the Plan's proposals and policies will help to achieve the wider environmental, economic, social and cultural objectives of the RLDP.**

1.2.2 The ISA has facilitated a rigorous and iterative assessment of the sustainability issues, challenges and opportunities facing Monmouthshire. As such, the ISA was central to the development of the Issues and Objectives, Preferred Strategy and has informed the detailed policies and proposals set out in the Deposit Plan. Through this approach, the ISA for the RLDP seeks to maximise the development plan's contribution to sustainable development.

Habitats Regulations Assessment

- 1.2.3 The Council is also required to undertake a Habitats Regulations Assessment (HRA) of the RLDP⁴. The HRA must determine the likely significant effects of the Plan, either individually or in combination with the effects of other plans and projects, on European sites of nature conservation importance and if applicable, scope what needs ‘appropriate assessment’ (AA) and how it will be undertaken. European sites of nature conservation importance are defined as Ramsar sites (wetlands of international importance), Special Protection Areas for birds (SPAs) and Special Areas of Conservation (SACs).
- 1.2.4 The HRA is prepared alongside the RLDP as an integrated and iterative process and has an important role in the preparation of the Plan. Accordingly, the RLDP sets out policies and proposals which ensure that the requirements of the regulations are satisfied, and that the integrity of the European Designated sites are not adversely affected.
- 1.2.5 The key stages in the preparation of the ISA and HRA can be found within the Integrated Sustainability Report and the Habitats Regulations Assessment of the Deposit Plan which are published alongside the Deposit Plan. The ISA and HRA are iterative processes and will be updated as the RLDP progresses towards adoption.

Welsh Language

- 1.2.6 In accordance with national guidance, an important element of Sustainable Placemaking in Wales involves consideration of the needs and interests of the Welsh language. The Welsh language is part of the social and cultural fabric of Wales. There are, however, significant variations in its use across the Country. Monmouthshire has a relatively low proportion of population that speak, read and write Welsh (6.6% in 2021) compared with other local authorities in Wales, and the Welsh average (13.8% in 2021). Furthermore, Monmouthshire does not currently have any areas with a notable concentration of Welsh speakers. Subsequently, it is not considered necessary for the RLDP to contain a specific policy to address the Welsh language. The Council will, however, seek to ensure the protection and enhancement of Monmouthshire’s cultural heritage which will be promoted through the RLDP. National planning policy provides advice regarding the consideration of the Welsh language in development and will be taken into account in the determination of planning applications, where appropriate.
- 1.2.7 The Monmouthshire Welsh Education Strategic Plan (WESP) provides detail on the promotion of greater opportunities for children, residents of all ages and the workforce to learn and speak Welsh. Monmouthshire has Welsh medium primary schools in Abergavenny, Caldicot and Monmouth (Monmouth is using a seedling school model from September 2024). The RLDP nevertheless supports the aims of the WESP and will support steps taken within proposals to safeguard and grow the use of the Welsh language. Policy S6 relating to infrastructure includes consideration of and appropriate provision of facilities to support the Welsh Language.

Supporting Documents

- 1.2.8 The Deposit Plan is informed by a robust and credible evidence base which includes a number of studies, assessments and background documents as listed in Appendix 1. These have

⁴ Under Part Iva of the Conservation (Natural Habitats, &C.) (Amendment) (England and Wales) Regulations 2007

informed the policies and proposals set out in the RLDP and should be read alongside the Deposit Plan. Only the main findings of these documents are highlighted in this Deposit Plan given the significant amount of data/information they contain. These key documents are referenced in the relevant sections of the LDP and can be viewed on the Council's website.

- 1.2.9 An Initial Consultation Report has been prepared⁵ which summarises the main issues arising from the Preferred Strategy consultation and identifies how these will be addressed. This key consultation stage, involving a wide range of stakeholders, has influenced the preparation of the Deposit Plan.
- 1.2.10 The Deposit Plan is also accompanied by an Infrastructure Delivery Plan (Appendix 8), setting out what is needed to support the development of the allocated sites, as well as an updated Local Transport Strategy and an Economy, Employment and Skills Strategy. Together, these Plans seek to deliver on the Council's economic ambition and its core purpose of becoming a zero-carbon county, supporting well-being, health and dignity for everyone at every stage of life.
- 1.2.11 A Candidate Sites Assessment Report is also published alongside the Deposit Plan. This sets out the findings of the candidate site assessment process undertaken as part of the RLDP process and identifies those candidate sites that are suitable for allocation in the RLDP.

Using this Document

- 1.2.12 The RLDP should be read as a whole given that many of the Plan's objectives and policies are cross-cutting and interrelated. Decisions on development proposals must have regard to the relevant policies in the RLDP and the requirements of national planning policy.
- 1.2.13 The RLDP does not generally repeat national planning policies as set out in Future Wales, Planning Policy Wales (PPW) and Technical Advice Notes (TANs). National planning policies, along with the RLDP, represent a material planning consideration in the determination of planning applications and regard should be had to them in consideration of development proposals. Where appropriate, this document explains where and how national planning policies apply.

Community & Stakeholder Engagement and Consultation on the Deposit Plan

- 1.2.14 The Deposit Plan will be the subject of community and stakeholder engagement and consultation. Full details of all the consultation/engagement events and methods on how to comment on the Deposit Plan are available to view on the [Council's website](#).

Next Steps

- 1.2.15 Following consultation and stakeholder involvement on the Deposit Plan and consideration of the issues raised, the Council will submit the Deposit RLDP and accompanying documents to the Welsh Government who will appoint an independent Inspector to examine the RLDP⁶. Having regard to the evidence and representations received during the Deposit consultation,

⁵ Regulation 16a of the Town and Country Planning (Local Development Plan) (Wales) Regulations 2005 (as amended 2015)

⁶ Regulation 22 of the Town and Country Planning (Local Development Plan) (Wales) Regulations 2005 (as amended 2015)

the Inspector must determine whether the RLDP accords with the ‘tests of soundness’ set out in the Development Plans Manual.

- 1.2.16 Following the Examination, the Inspector will issue a report recommending any necessary changes to the RLDP. The Inspector’s report will be binding and unless the Welsh Government intervenes, the Council must accept the changes and adopt the RLDP as amended. Once adopted, the RLDP will replace the existing Adopted LDP and will become the framework against which decisions on planning applications are made.

Context

2. Monmouthshire Profile and Overview

2.1.1 This section provides a broad introduction to the Plan area, outlining the key economic, social, environmental and cultural characteristics of Monmouthshire. Of note, the Initial Sustainability Appraisal Scoping Report also sets out a full list of policies, plans, programmes and strategies relevant to the RLDP.

Geographical Context

2.1.2 Located in South East Wales, Monmouthshire occupies a strategic position between the major centres in South Wales, the South West of England and the Midlands. Monmouthshire covers an area of approximately 88,000 hectares (880 square kilometres), of which 3% is defined as 'built on'⁷. Monmouthshire has an estimated population of 92,961⁸, of which around 7% reside within the **Bannau Brycheiniog** National Park area of the County. The County is bordered by a number of Welsh Local Authorities; Newport City Council to the south-west, Torfaen County Borough Council to the west and the **Bannau Brycheiniog** National Park Authority to the north-west. It is also bordered by a number of English Local Authorities; Herefordshire Council to the north-east, South Gloucestershire Council and the Forest of Dean District Council to the east, with links to South Gloucestershire via the Severn Bridge.

2.1.3 The County has a distinctive identity arising from its location in the borderlands between England and the industrial heartland of South Wales. An integral element of Monmouthshire's distinctive settlement pattern arises from its historic market towns and villages and their relationship with the surrounding rural areas. The County has a rich and diverse landscape stretching from the coastline of the Gwent Levels in the south of the County, to the uplands of the **Bannau Brycheiniog** National Park to the north-west and the river corridor of the Wye Valley National Landscape (AONB).

2.1.4 Located at the gateway to Wales and the Cardiff Capital Region, the County is easily accessible from the rest of Wales and England using a number of strategic routes including the M4 and M48 motorways, the Heads of the Valleys road (A465), the A449, A40 and A4042. Monmouthshire also has four railway stations at Caldicot, Chepstow and Severn Tunnel Junction in the south of the County, and, Abergavenny in the north. These provide rail links to the key settlements of Newport, Cardiff and to west Wales, as well as to Bristol, London, Gloucester, Cheltenham, the Midlands and Manchester. An additional walkway rail station is proposed at Magor with Undy.

Settlement Pattern

2.1.5 The Primary Settlements of Abergavenny, Caldicot, Chepstow and Monmouth, offer a wide range of opportunities for employment, shopping, leisure, community facilities and sustainable and active travel. Our towns offer a rich heritage and attractive lifestyles –

⁷ Corine Landcover Inventory

⁸ 2021 Census

incentivising economic investment, attracting visitors and providing a focus for public investment in schools, healthcare and leisure services.

- 2.1.6 Outside of these areas, additional opportunities are found at the wider Severnside area and in the Secondary Settlements of Penperlleni, Raglan and Usk, and in a number of smaller rural settlements. Further details on individual settlements and the settlement hierarchy are provided in the Sustainable Settlement Appraisal which has been developed to identify those settlements which are best suited to accommodate future growth in terms of their location, role and function.

Natural And Built Environment

- 2.1.7 Monmouthshire is renowned for its beautiful landscapes and biodiversity resource. As a largely rural County, Monmouthshire has significant landscape resources and is home to internationally and nationally designated landscapes ranging from the Wye Valley National Landscape (AONB) to the east and the **Bannau Brycheiniog** National Park and the Blaenavon Industrial World Heritage Site to the north west. It has substantial biodiversity and nature conservation resources, a number of which are internationally or nationally recognised, including the Severn Estuary which is designated as a Special Area for Conservation (SAC), Special Protection Area (SPA), Site of Special Scientific Interest (SSSI) and a Ramsar Site. The County is also home to four other SACs, namely the River Wye, the River Usk, the Wye Valley Woodlands and the Wye Valley Bat Sites. These are supplemented by a rich resource of nationally designated Sites of Special Scientific Interest (SSSIs) and non-statutory locally identified designations, including Sites of Importance for Nature Conservation (SINCs) and Regionally Important Geodiversity Sites (RIGS).
- 2.1.8 The Monmouthshire RLDP area also has a rich built heritage and historic environment which includes 31 Conservation Areas, 48 Historic Parks and Gardens, 3 Landscapes of Outstanding Historic Interest, approximately 164 Scheduled Ancient Monuments and 2,145 Listed Buildings. There is a need to protect, promote and enhance the best of our landscape and heritage which are an important part of Monmouthshire's culture and play a key role in tourism and economic growth.

Population

- 2.1.9 Monmouthshire has a population of 92,961 based on the 2021 Census. As a predominantly rural county, the four primary settlements of Abergavenny (including Llanfoist), Caldicot (including Severnside), Chepstow and Monmouth (including Wyesham) account for over half of the population between them at approximately 64%.
- 2.1.10 In terms of population make-up, Monmouthshire has a median age of 49 years compared to 34 years in Cardiff, and has a significantly higher proportion of older age groups (65+) and a lower proportion of young adults (16-44) compared to the Welsh average. The proportion of our population aged 65+ and 85+ is increasing well in excess of the Welsh average. The 2021 Census shows that the population aged 65+ has increased by 26% since 2011, which compares to a Welsh average of 18%. For the County as a whole, the 2021 Census identifies that nearly 26% of the population is over 65 (compared to 21% in Wales), with 16% under 16 (18% in Wales) and just over 58% in the working age population group (16-64) (61% in Wales). Of note, between 2011 and 2021 the working age population and school aged population decreased

by 3.3% and 7.3% respectively⁹. This demonstrates the continuing trend for an ageing demographic in the County which is one of the key issues that Monmouthshire is facing. However, this differs by settlement across the County. The change in the population profile of Monmouthshire in the past 10 years is shown clearly in the population pyramid below.

Change in Population Profile between the 2011 and 2021 Census

2.1.11 The relative absence of young adults is often linked to the affordability of housing across the County. Average house prices in the County are high at £400,496 when compared to the Welsh average of £238,871 (Hometrack, May 2024)¹⁰. House prices are also high in relation to earnings and there is a pressing need for additional affordable housing in the County in both urban and rural areas to assist in ensuring a more balanced population. The issue of affordability also impacts on the ability of young people in the County being able to form their own households. The 2021 Census shows a 14% increase in households with non-dependent children, which indicates that children have to live with parents for longer.

Economy

2.1.12 As the gateway to Wales, Monmouthshire is geographically well connected in a key strategic location with good transport infrastructure linking to the wider region. The County enjoys close proximity to the key growth areas of Cardiff, Bristol, Newport and the Midlands and is only a 45 minute drive to Cardiff and Bristol airports. It is the most competitive economy in Wales after Cardiff and is predicted to have the fastest GVA growth per capita in Wales (UK Competitiveness Index 2023).

⁹ Between 2011 and 2022 the school age population declined from 11,606 to 10,756 and the working age population declined from 56,037 to 54,194.

¹⁰ Based on sales and valuations over six month period October 2023 – March 2024. Sales only over same period related to £360,465 for Monmouthshire and £230,710 for Wales. Data accessed on 13/05/2024.

- 2.1.13 Monmouthshire's location between Cardiff and Bristol makes it an attractive proposition for economic growth and prosperity. Monmouthshire benefits from being a key partner in numerous regional partnerships including the Cardiff Capital Region City Deal, Marches Forward Partnership and The Western Gateway. Opportunities associated with such partnership working include economic investment/innovation and transport and digital connectivity. Further details are provided in Appendix 3.
- 2.1.14 The January 2023 – December 2023 ONS Annual Population Survey indicated that over 80% (80.2%) of Monmouthshire's working-age population were economically active, higher than the figure for Wales, at 77%. The proportion of the economically active of working age unemployed in Monmouthshire was 3.3% compared to 3.7% in Wales. Our residents are also among the best qualified in Wales.¹¹
- 2.1.15 The Council's ambitions for sustainable economic growth and prosperity are set out in the Economy, Employment and Skills Strategy which strives to foster a diverse, fairer, greener and circular economy, generating sustainable employment growth and creating conditions for shared prosperity, focusing on four priority areas – Place, People, Enterprise and Infrastructure. The RLDP has a key role in supporting /delivering the ambitions and objectives of the strategy, including ensuring a supportive policy framework to facilitate economic growth in a range of sectors and identifying sufficient land to enable the growth in B Use Class Sectors.
- 2.1.16 The analysis underpinning the County's Economic Strategy indicate that the County's economy is constrained by a lack of capacity. At present over 99% of available businesses premises are in use. The rate of unemployment is around 3%. In order to achieve economic growth the County needs an increased supply of employment land and labour.
- 2.1.17 The ONS 2023 Annual Population Survey reveals that 65% of residents who are employed work within the County. There is substantial movement of people in and out of the County: 17,100 commuting out of the area and 14,100 commuting into the area (2021)¹². Of those commuting out for employment nearly 27% were commuting to the City of Bristol and a further 21% to other areas in England. Welsh Government's Building Better Places response to Covid-19 acknowledges that the tendency for people to work from home is likely to continue longer term, with Welsh Government ambition being for 30% of the workforce to work remotely on a regular basis.¹³
- 2.1.18 An Employment Monitoring Report ¹⁴ is prepared annually which assesses take-up of allocated employment land in the adopted LDP's Identified Industrial and Business Sites (Policy SAE1) and Protected Employment Sites (Policy SAE2). The results from this annual survey help to inform future employment land requirements. As of March 2023, of the 50.12ha of allocated SAE1 sites in the Adopted LDP, just over 40 hectares of land remained available for B1, B2 and B8 uses. The employment land take-up rate has averaged 1.8 hectares per annum since the adoption of the LDP in 2014.
- 2.1.19 Given the increased propensity in agile and home working, which began during the Covid-19 pandemic, employment land demand/ requirements may change. Notwithstanding this, the

¹³ Smarter working: a remote working strategy for Wales [HTML] | GOV.WALES

¹⁴ The Employment Land Background Paper – December 2023

RLDP provides a range of B Use Class employment sites to meet needs to 2033 and to support the Council's economic ambitions set out in the Economy, Employment and Skills Strategy.

2.2 **Influences on the Replacement Local Development Plan**

Legislative Context

2.2.1 The RLDP has been prepared in the context of relevant national legislation and plans, policies and strategies at the national, regional and local level, details of which are set out in Appendix 4.

Regional Collaboration and Linkages with Neighbouring Local Authorities

2.2.2 When preparing an LDP, local planning authorities are required to demonstrate that the plan is 'sound' by meeting the tests of soundness set out in the Development Plans Manual. In accordance with soundness test 1 'Does the plan fit?' the Council must demonstrate that the RLDP is consistent with other plans i.e. is it compatible with the plans of neighbouring LPAs? And has the LPA demonstrated it has exhausted all opportunities for joint working and collaboration on both plan preparation and the evidence base?

2.2.3 It is therefore imperative that the Council has regard to its neighbouring authorities and the wider South East Wales region and English border authorities in preparing the RLDP. This is important as what is happening in adjoining areas can have implications for Monmouthshire in many ways. Parts of Monmouthshire may act as employment and service centres for people living in neighbouring authorities and vice versa. This requires an understanding of existing and emerging potential linkages, strategies and policies in adjoining areas, as well as active engagement in their development. Suitable consultation processes are in place to ensure that the existing and evolving planning policy context of neighbouring authorities has been considered in the preparation of the RLDP.

2.2.4 Monmouthshire adjoins 8 other local planning authority areas, all of which are at varying stages of their development plan production and are required to routinely consult the Council as part of their development plan preparation. These are:

- Torfaen County Borough Council
- Newport City Council
- Blaenau Gwent County Borough Council
- Bannau Brycheiniog National Park Authority
- Powys County Council
- Herefordshire Council
- Forest of Dean District Council
- South Gloucestershire Council

2.2.5 At the regional level, collaboration between the 10 LPAs in South East Wales takes place via various regional groups including South East Wales Strategic Planning Group (SEWSPG), South East Wales Planning Officer Society (SEWPOS) and South Wales Regional Aggregates Working Party (SWRARWP). Through SEWSPG the LPAs work collaboratively on the preparation of a joint evidence base to inform RLDPs and the emerging SDP. Further detail on such regional

collaboration, and the status of, and linkages with the development plans of neighbouring local authorities is set out in Appendix 5.

Key Issues, Challenges and Opportunities

3. Key Issues and Challenges

3.1.1 The key issues, challenges and opportunities identified through the RLDP preparation process have informed the development of the Plan's Vision, Objectives and the Plan as a whole. The key issues facing the County (economic, environmental, social and cultural) are set out in the RLDP Issues, Vision and Objectives Paper¹⁵ and Appendix 6. A summary of the key issues, challenges and opportunities that the RLDP will address is provided below:

- We have the highest average house prices in Wales. This means a large proportion of people cannot afford to buy a home so either leave the County, or have to live with their parents or in shared housing for longer. We have 2,064 households identified as being in need of affordable housing¹⁶. The RLDP explores opportunities to increase the number of affordable homes and ensure a range and choice of homes, both market and affordable, are incorporated within new developments.
- Our population is getting older. By 2033 we will have more people over the age 65+ living in the County but fewer young people. The 2021 Census identifies that nearly 26% of the population in Monmouthshire is over 65 (compared to 21% in Wales), with 16% under the age of 16 (18% in Wales) and just over 58% of working age (16-64) (61% in Wales). An older population changes the kind of services our communities will need, but also reduces the number of people using and financially supporting businesses and services. We will have a smaller economically active population making Monmouthshire a less attractive place for businesses to locate. This impacts on our future economic prospects. By increasing the supply of affordable housing we can retain a larger number of younger people in the County, increasing the sustainability of our economy and public services.
- The Council has declared a climate and nature emergency and has set out a commitment to strive to reduce its own carbon emissions to net zero in line with the Welsh Government target of 2030, together with a strengthened emphasis on nature recovery. The RLDP provides the land use policy framework to address the climate and nature emergency together, seeking outcomes that recognise the role resilient ecosystems can play in tackling carbon emissions and mitigating the impact of climate change. The RLDP establishes policy to support and enable renewable energy generation and sets out the requirements for net zero carbon developments and other sustainable development principles such as active travel, green infrastructure and local food production. These sit alongside and integrate with policies for protection of sites designated for biodiversity, habitats and species and deliver on Net Biodiversity Benefit. The requirement that all future housing is net zero carbon is intended to reduce overall carbon emissions. The requirement that new strategic sites for housing are within walking distance of existing town centres is also intended to reduce carbon emissions.

¹⁵ The Issues, Vision and Objectives Paper September 2024

¹⁶ MCC Local Housing Market Assessment (LHMA) Refresh 2022-2037. MCC Cabinet approved the LHMA Refresh 2022-2037 in May 2024 prior to submission to Welsh Government. The housing team are currently awaiting sign off from Welsh Government

- We have an urgent need to tackle water quality and phosphate pollution in our rivers. Natural Resources Wales (NRW) has adopted tighter targets for river water quality and have put in place a requirement to achieve phosphate neutrality or betterment in the River Usk and River Wye. In recognition of the water quality issues in the County, the Climate and Nature Emergency Strategy and associated action plans outline steps the Council will take to protect our rivers and ocean.
- There is a need to consider whether existing employment land is suitably located and fit for purpose, along with the potential increase in agile and home working and the impact this may have on employment land demand/requirements. We also need to consider future demand in line with Council aspirations and the opportunities that a shift in working behaviour could create with businesses given greater flexibility over where to locate.
- Monmouthshire benefits from its involvement in regional partnerships including the Cardiff Capital Region City Deal, Marches Forward Partnership and The Western Gateway. Opportunities associated with such partnership working include economic investment/innovation and transport and digital connectivity. Further details are provided in Appendix 3.
- Unemployment levels are low; however, Monmouthshire has a dual economy. The qualifications, skills and earnings of the residents are above the regional and national average, however, for those working in the area earnings are lower and employment is relatively less skilled. Monmouthshire has a net-outflow of commuters. Those who commute out of the County are higher earners than those who commute into the County. To address these issues there is a need to provide support for inward investment and local employment growth/opportunities as identified in the Economy, Employment and Skills Strategy.
- Vacancy rates in some of the County's town and local centres have increased¹⁷ due to changing shopping habits including internet shopping and economic factors such as inflation diminishing the disposable income of many households.
- There are challenges of rural isolation and sustaining rural communities, including regenerating the rural economy. The pandemic emphasised the value and importance of having locally accessible services and facilities.
- We want to protect the landscapes and heritage that make Monmouthshire a unique and attractive place to live. The RLDP recognises the value and importance of placemaking and the provision of locally accessible open/spaces for health and well-being and recreation.
- Tourism plays a significant part in the Monmouthshire economy particularly in assisting in the diversification of the rural economy and in sustaining the County's historic town centres. According to figures supplied by tourism economic indicator STEAM (Scarborough Tourism Economic Activity Monitor), the sector brought in £285m to Monmouthshire in 2022 and supported the equivalent of 3,356 full-time jobs (STEAM report 2022).

¹⁷ Evidence is contained in the Retail section of the 2022-2023 Annual Monitoring Report

Development Constraints

- 3.1.2 The RLDP response to these issues must be considered and delivered with regard to development constraints that need to be avoided, mitigated and balanced to achieve sustainable development principles such as placemaking, active travel and environmental considerations including high quality landscapes across the County, biodiversity designations and green infrastructure. Collectively these constraints and policy requirements will need to be balanced and will influence the location and scale of development appropriate to different parts of the County. Specific examples are discussed throughout the policy framework contained in this Deposit Plan, with some key constraints discussed below.

Water Quality in Riverine Special Areas of Conservation (SAC)

- 3.1.3 Following recent evidence about the environmental impacts of phosphates in watercourses, Natural Resources Wales (NRW) has adopted tighter targets for river water quality and has assessed the nine riverine Special Areas of Conservation in Wales. Within Monmouthshire, it was identified that 88% and 67% of the River Usk's and River Wye's water bodies respectively failed to meet the required target¹⁸.
- 3.1.4 In response, NRW issued detailed planning guidance to ensure that the environmental capacity of the rivers does not deteriorate any further. This outlines what type of development is unlikely to have an impact on phosphate levels in the watercourses. Development proposals within the affected catchment areas of the rivers Usk and Wye that might increase phosphate levels must achieve phosphate neutrality or betterment. This guidance can be found on the Council's website.
- 3.1.5 This guidance has significant implications for development proposals within the river catchment areas. We have been working collaboratively with NRW, Dŵr Cymru Welsh Water (DCWW), Welsh Government, the development industry and our biodiversity officers to find solutions to enable growth and allocate sites through the RLDP process that do not harm the environmental capacity of our watercourses. DCWW have confirmed that a workable and achievable solution to phosphates has been identified for both the Monmouth Wastewater Treatment Works (WwTW) (benefitting the River Wye Catchment) and Llanfoist Wastewater Treatment Works (WwTW) serving Abergavenny (benefitting the upper River Usk catchment). There is a firm commitment by DCWW to implement these improvements. This investment will significantly reduce the amount of phosphates entering the water environment from the treatment works, providing environmental improvement and capacity for new development (housing, commercial, retail, agricultural) to proceed, supporting the long-term sustainability of towns and communities while safeguarding water quality. In addition, NRW's Environmental Permit review has confirmed the potential to use existing capacity within a number of existing wastewater treatment plants which will enable sustainable growth in various settlements in the affected catchment areas over the Plan period.

Site Search Sequence and Best and Most Versatile Agricultural Land

- 3.1.6 The approach to site selection for the Deposit Plan has followed the site search sequence outlined in PPW12, which prioritises the use of suitable and sustainable previously developed

¹⁸ A plan of the catchment area of the Rivers Usk and Wye can be found on the Council's website

land before considering greenfield sites. This process has, however, acknowledged the limited brownfield resource available in Monmouthshire and the environmental, social and economic considerations that need to be balanced in a Monmouthshire context.

- 3.1.7 A key consideration in assessing the Candidate Sites has been the high percentage of Best and Most Versatile (BMV) agricultural land within Monmouthshire. The widespread distribution of BMV agricultural land throughout Monmouthshire means that it does not affect the spatial strategy: all four of our primary settlements are surrounded by BMV agricultural land, so it is not possible to avoid the development of such land via a different spatial strategy.

Green Belt

- 3.1.8 Policy 34 of Future Wales requires the future South East Wales Strategic Development Plan (SDP) to identify a green belt to the north of Cardiff, Newport and the eastern part of the region to manage urban form and growth. The South East Wales Regional Strategic Diagram (page 163 of Future Wales) provides an indicative plan of the area for consideration with the detailed boundary to be defined through the preparation of the SDP.
- 3.1.9 While the County's main towns are situated outside of Future Wales' indicative green belt, in assessing candidate sites and their relationship to Policy 34 of Future Wales, consideration has been given to PPW12 which states that when considering a Green Belt designation, a sufficient range of development land which is suitably located in relation to the existing urban edge should be made available, having regard to the longer term need for development land, the effects of development pressures in areas beyond the Green Belt and the need to minimise demand for travel. This may require land to be safeguarded, and boundaries of proposed Green Belts must be carefully defined to achieve this. Potential Green belt land is to be assessed and designated as part of a Strategic Development Plan (SDP) for the South East Wales Region.

3.2 Key Opportunities

- 3.2.1 Having identified the key issues and challenges facing the County that the RLDP needs to address, the following sets out some of the key opportunities to realising some of the issues and challenges.

Future Wales: The National Plan 2040 (February 2021)

- 3.2.2 Welsh Government published Future Wales 2040 in February 2021. While this sets out the national development framework and direction for development in Wales to 2040, it contains a number of policies that are of particular relevance to Monmouthshire providing the national policy context to address our evidenced key issues. Policy 3 – Supporting Urban Growth and Regeneration- Public Sector Leadership- sets out that Welsh Government will play an active role in the delivery of growth and urban regeneration, working with local authorities to unlock the potential of public land and support local authorities to take an increased development role. Policy 4 – Supporting Rural Communities and Policy 5 – Supporting the Rural Economy, provide the policy framework to consider how age balanced communities can be achieved, where depopulation should be reversed and allow for sustainable, appropriate and proportionate economic growth. Policy 7 – Delivering Affordable Homes, also addresses the key issue of affordable housing prices in the County and provides the framework to address

this through affordable housing-led developments. These policies provide significant opportunities to address a number of the key issues facing the County.

Climate and Nature Emergency

- 3.2.3 As noted above, the Council has declared a climate and nature emergency. The associated Climate and Nature Emergency Strategy and Action Plan identifies the key actions the Council will take to reduce its own carbon emissions to net zero, and also makes a commitment to work with partners and organisations to develop and implement best practice in limiting global warming to less than 1.5°C. As recognised by PPW12, the RLDP's policy framework and allocations provide a significant opportunity to address the causes and effects of climate change. It is recognised that efforts to tackle climate change are wide-ranging and will require a co-ordinated approach to development including aspects such as active travel, green infrastructure, effective use of land and resources and flood resilience.
- 3.2.4 In recognition of the urgent need to address water quality in the County, the Motion for the Rivers and Ocean associated Action Plan, set out measures to tackle river water quality, utilising existing partnerships to provide a co-ordinated approach. Of particular relevance to the RLDP is the ongoing work with NRW and Dŵr Cymru Welsh Water and continued involvement with the Wye Nutrient Management Board and the Usk Catchment Partnership to identify and implement options for delivering improvements in water quality.

Regional Strategic Partnerships

- 3.2.5 As a border county in a strategic 'Gateway to Wales' location, Monmouthshire benefits from its involvement in regional partnerships including the Cardiff Capital Region City Deal, The Western Gateway and Marches Forward. Participation in these partnerships offer a number of opportunities for Monmouthshire, including exploiting areas of mutual benefit and added value, increasing investment prospects and showcasing best practice by building strong networks. The RLDP will provide the policy framework to support relevant opportunities arising from such partnership working, including in relation to economic innovation, transport and digital connectivity, rural development and the transition to net zero. Further details on these strategic partnerships are provided in Appendix 3.

Regional Assessment of Future Growth and Migration for the Cardiff Capital Region (CCR)

- 3.2.6 A Regional Assessment of Future Growth and Migration for the Cardiff Capital Region (CCR) has been prepared on behalf of local authorities in the South East Wales region. It considers how each local authority could contribute towards increasing the number of jobs across the region by 2040 and how the increase in jobs corresponds with projected growth in local authorities, the region and Future Wales 2040. It reviews the migration assumptions underpinning the proposed level of population/jobs growth and the potential implications of the spatial distribution of jobs and people on travel patterns. Prepared within context of Future Wales, the study provides a policy-off approach to the assessment of potential growth in the region. As such, it sits alongside and complements RLDP evidence prepared by each authority in the region. It is not intended to replace or supersede the detailed consideration of growth potential prepared by individual authorities to inform the RLDP process.

Monmouthshire Economy, Employment and Skills Strategy

- 3.2.7 The Council's ambitions for sustainable economic growth/prosperity are set out in the Economy, Employment and Skills Strategy which strives 'to foster a diverse, fairer, greener, and circular economy, generating sustainable employment growth and creating conditions for shared prosperity', and focuses on four key priority themes:
- A vibrant, greener Monmouthshire, including a focus on supporting the vitality of the County's town centres, supporting rural diversification and the transition to net zero and improving the visitor experience to deliver sustainable growth in the hospitality sector.
 - A fairer, more successful Monmouthshire, by encouraging more job opportunities as highlighted above and actions to improve skills and employment progression.
 - A thriving, ambitious Monmouthshire, including support for increasing entrepreneurship, enabling businesses to expand and taking advantage of those sectors in which Monmouthshire and CCR have relative strengths.
 - A well-connected Monmouthshire, attracting business investment, through improved digital and transport connectivity and the availability of employment land and premises.
- 3.2.8 The strategy seeks to tackle inequality, specifically by seeking to address sustainable employment growth through attracting and retaining investment, creating jobs, and improving strategic infrastructure through the identification of sufficient employment land for employment uses. It aligns with the Replacement Local Development Plan (RLDP) and recognises that the RLDP is a key mechanism for achieving many of the key objectives, including a supportive policy framework to facilitate economic growth in a range of sectors and identifying sufficient land to enable the growth of the B Use Class Sector.

RLDP Strategic Framework

4. **RLDP Vision (2018-2033)**

4.1.1 This section of the Plan sets out the Vision, Objectives and Strategy for the County which underpin the RLDP. The Vision outlines how the County is planned to develop, change or be conserved up to 2033, and provides the framework for the Plan's strategy and policies. The Vision set out in the adopted LDP 2011-2021 has been reviewed and updated to take account of the issues, challenges and opportunities facing the County, key elements of the Gwent PSB¹⁹ Well-being Plan (August 2023) and MCC's Taking Monmouthshire Forward – Community and Corporate Plan 2022-2028 (April 2023)²⁰.

RLDP Vision

By 2033 Monmouthshire will be home to well-connected, exemplar affordable housing-led, net zero carbon places that provide employment and support demographically balanced sustainable and resilient communities for all, where:

- People are living in inclusive, equal, safe, cohesive, prosperous and vibrant communities. Both urban and rural areas are well-connected with better access to local services and facilities, open space and employment opportunities.
- Communities and businesses are part of an economically thriving, ambitious and well-connected County.
- The best of the County's built heritage, countryside, biodiversity, landscape and environmental assets have been protected and enhanced to retain its distinctive character.
- People enjoy healthier, more sustainable lifestyles with improved access to public transport and active travel opportunities and have a minimised impact on the global environment, supporting our ambitions for a zero carbon county.

5. **RLDP Objectives (2018-2033): Delivering the Vision**

5.1.1 In order to address the key issues and challenges and deliver the Vision, 17 Objectives have been developed for the RLDP. These build upon the Adopted LDP objectives, taking account of a range of policy drivers that have emerged in recent years, including the Well Being of Future Generations Act 2015, the Gwent PSB Well-being Plan and the Council's Community and Corporate Plan. The Gwent PSB steps replace the objectives previously set out in the Monmouthshire PSB Well-being Plan. The RLDP Objectives have been kept under review and updated as necessary as part of the continued development of the RLDP evidence base.

¹⁹ The Gwent PSB has been formed by the former five PSBs of Blaenau Gwent, Caerphilly, Newport, Monmouthshire and Torfaen, along with the Aneurin Bevan University Health Board, South Wales Fire and Rescue Service and Natural Resources Wales.

²⁰ The Community and Corporate Plan 2022-2028 sets out the Council's core purpose, principles, and priorities. It was adopted by Council on 20th April 2023.

- 5.1.2 The Plan’s objectives are sufficiently aspirational yet also achievable within a spatial planning context. They respond to and deliver upon the Plan’s key issues of delivering essential affordable homes at pace and scale, responding to the climate and nature emergency by delivering net zero carbon new homes in exemplar places, and ensuring our communities are socially and economically sustainable by attracting and retaining younger people to rebalance our ageing demographic. Importantly, the objectives provide the basis for a sound plan in terms of their fit, appropriateness and deliverability²¹.
- 5.1.3 As with the RLDP issues, the objectives have been grouped in alignment with the seven well-being goals as set out in the Well-being of Future Generations (Wales) Act 2015, and are aligned with the RLDP issues, the main policy themes identified in Planning Policy Wales (PPW12), the Gwent PSB Well-being Plan steps and the Council’s Community and Corporate Plan, as set out in Table 1. The objectives are not listed in priority order.

²¹ Development Plans Manual, Edition 3, 2020 (Welsh Government)

Table 1: RLDP Objectives

RLDP Objective Number	Headline	RLDP Objective	RLDP Issues addressed	Main PPW12 theme	Gwent PSB Well-being Plan Steps	Community & Corporate Plan Objectives	
A Prosperous Wales (Well-being Goal 1)							
Page 46	Objective 1	Economic Growth/ Employment	To support a thriving, well-connected, diverse economy, which provides a range of good quality employment opportunities to enable and encourage indigenous business growth and attract inward investment and competitive innovative businesses, including through the provision of start-ups and grow on spaces.	1, 2, 3, 4, 5, 6, 7, 24	Productive and enterprising places	Take action to reduce the cost-of-living crisis in the longer term.	A Thriving and Ambitious Place.
	Objective 2	Town and Local Centres	To sustain and enhance the centres of Abergavenny, Caldicot, Chepstow, Magor Monmouth and Usk as vibrant and attractive centres serving the needs of their population and those of their surrounding hinterlands, and supporting adaptation to meet the needs of the evolving role of the high street.	8	Active and social places	Take action to address inequities, particularly in relation to health, through the framework of the Marmot Principles. Enable and support people, neighbourhoods, and communities to be resilient, connected, thriving and safe.	A Thriving and Ambitious Place.
A Resilient Wales (Well-being Goal 2)							
Objective 3	Green Infrastructure,	To protect, enhance and manage the resilience of Monmouthshire's natural	11, 12, 35	Distinctive and natural places	Take action to reduce our carbon emissions, help	A Green Place to Live.

A Safe Place to Live.

6. RLDP Sustainable and Resilient Communities Strategy

6.1.1 The Deposit Plan sets out the growth and spatial strategy to facilitate sustainable growth in the County up to 2033, embodying the principles set out in the Community and Corporate Plan of tackling inequality, protecting our environment and adapting to a world being reshaped by climate change. The Strategy has been informed by a wide range of robust evidence²² and responds to a number of key challenges that have arisen during the plan preparation process²³. Within this context, the RLDP seeks to deliver on the Vision and Objectives and meet our core purpose of delivering sustainable and resilient communities. Further details on the strategy options considered are set out in the Growth and Spatial Options Paper. All reasonable strategy alternatives have been assessed through the ISA process.

6.1.2 The RLDP Growth and Spatial Strategy seeks to deliver sustainable and resilient communities by addressing our core issues of:

- **Housing Affordability** - delivering essential affordable homes at pace and scale to meet local needs.
- **Rebalancing our Demography**- ensuring our communities are socially and economically sustainable by attracting and retaining younger people to rebalance our ageing demographic.
- **Climate and Nature Emergency**- responding the climate and nature emergency, including through the delivery of net zero carbon new homes for our communities and ensuring development proposals provide a net benefit for biodiversity and improved ecosystem resilience.
- **Economic Prosperity** – supporting and enabling sustainable economic growth.

6.1.3 The Sustainable and Resilient Communities Growth and Spatial Strategy:

- **Makes provision for approximately 5,400 - 6,210 homes over the Plan period 2018-2033²⁴.** This includes the provision of approximately 1,595- 2,000 affordable homes. As there are currently approximately 4,080 homes in the housing landbank²⁵, **land will be allocated for approximately 1,320 – 2,130 new homes, including 660 – 1,065 new affordable homes.** These homes will be delivered through various housing land supply components, details of which are set out in Table 2 below, Appendix 7 and the Housing Background Paper.
- Allocates a **minimum of 38ha of B use class employment land** and sets out the planning policy framework to support job growth of up to 6,240 additional jobs over the Plan period.

²² This includes key Issues, Vision and Objectives, Community and Corporate Strategy, evidence base studies, community and stakeholder consultation/engagement, the Integrated Sustainability Appraisal (ISA), the Sustainable Settlement Appraisal, National Planning Policy and the LDP tests of soundness.

²³ These include Welsh Government objection to the level of growth set out in the 2021 Preferred Strategy and water quality issues in the Rivers Wye and Usk.

²⁴ In accordance with the Development Plans Manual (WG, March 2020) an allowance is made for a 15% flexibility allowance to factor in sites that may not come forward, unforeseen issues or to meet higher aspirations for the County to enable the provision/delivery of additional sites if all sites are delivered.

²⁵ As the Plan period has already begun (2018) some of the homes in the landbank have been built, are under construction or have planning permission. The landbank figure also takes into account LDP 'rollover' allocations, windfall sites and small sites.

The Plan also includes policies to facilitate growth in foundational sectors such as retail, leisure, tourism and agriculture. The RLDP is supported by the Council's Economy, Employment and Skills Strategy and Local Transport Strategy. Collectively these key plans/strategies will support sustainable economic growth/job creation through a range of mechanisms and interventions.

- Focuses growth in the County's most sustainable settlements of Abergavenny, Chepstow, Monmouth and Caldicot, including Severnside, as well as some growth in our most sustainable rural settlements to deliver much needed affordable homes and to address rural inequality and rural isolation in these areas. Strategic sites are identified to sustainably expand the Primary Settlements of Abergavenny, Caldicot, Chepstow and Monmouth. Additional site allocations are identified in sustainably located edge of settlement locations in various settlements across the County. These site allocations are set out in policies HA1 to HA18.
- Limits the impact of climate change by ensuring new homes are net zero carbon and well connected with existing settlements, providing attractive and accessible places to live and work.

6.2 RLDP Sustainable and Resilient Communities Growth Strategy

6.2.1 Strategic Policy S1 sets out the RLDP Growth Strategy.

Strategic Policy S1 – Growth Strategy

In order to meet Monmouthshire's core purpose of building sustainable and resilient communities for all, between 2018 and 2033 the Plan will make provision for:

- 6,210* homes to meet a housing requirement of 5,400 homes.
- A minimum of 38ha of employment land (Use Classes B1, B2, B8).

The focus of this growth will be on the County's most sustainable settlements, as outlined in the sustainable settlement hierarchy set out in Policy S2.

*This figure includes an indicative 15% flexibility allowance.

6.2.2 The RLDP Growth Strategy adopts a 'policy-on' approach based on a demographic-led scenario with added policy assumptions²⁶. It proposes a sustainable level of growth, in terms of homes and jobs, that addresses our local evidence-based issues and objectives, including in relation to the delivery of affordable homes, sustainable economic growth, and rebalancing our demography ensuring that young people can choose to live in the County, while responding to the climate and nature emergency. This Growth Strategy is deemed the most appropriate, sustainable means to deliver the RLDP Vision and Objectives as justified within the RLDP Growth and Spatial Options Paper.

²⁶ Demographic-led option for the LPA area (i.e. excludes the BBNP area within Monmouthshire) using ONS 2020 MYE base and applying assumptions in relation to migration, household membership rates and commuting ratio. Further details are set out in the Growth and Spatial Options Paper.

- 6.2.3 This level of growth is in general conformity with Future Wales’s overall strategy. Although Monmouthshire is not within the National Growth Area identified in Future Wales 2040, our evidence shows that the identified level of growth is essential to deliver our local evidence-based issues and objectives and ensure the RLDP is sound. It is supported by Future Wales policies 3, 4, 5 and 7, which support public leadership and the use of public land to deliver on ambitious affordable housing targets, demographically balanced rural communities, the rural economy and the delivery of affordable homes. The RLDP Growth Strategy will assist in addressing our core issues without harming or compromising Welsh Government’s objectives for the wider South East Wales region.
- 6.2.4 The Growth Strategy also meets the key ‘Tests of Soundness’ of ensuring that the Plan is locally specific, addresses key issues, is supported by robust, proportionate and credible evidence, and ensuring that the Plan’s Vision and Strategy are positive and sufficiently aspirational. A Self-Assessment of the Deposit Plan against the Tests of Soundness includes an assessment of the Plan’s general conformity with Future Wales 2040. This demonstrates that the Deposit Plan and the stages undertaken and processes followed to reach this stage are ‘sound’, and that the RLDP assists in the delivery of key Future Wales policies and is in general conformity with its overarching strategy.

6.3 **RLDP Sustainable and Resilient Communities Growth Strategy: Addressing our Key Issues and Objectives**

Delivery of Affordable Housing

- 6.3.1 The RLDP will deliver approximately 5,400 – 6,210 homes over the Plan period 2018-2033. This includes the provision of approximately 1,595 – 2,000 affordable homes, of which approximately 660 – 1,065 will be delivered through new housing allocations.
- 6.3.2 The Plan is focused on the delivery of affordable homes to specifically address housing affordability which is one of the most fundamental challenges facing our communities. High average house prices and high house prices in relation to earnings in the County have resulted in a pressing need for affordable housing, with a significant proportion of people unable to afford to buy or rent a home, meaning they have to either leave the County, or live with their parents or in shared housing for longer. The Covid-19 pandemic further increased the need for affordable homes and revealed the extent of hidden homelessness in the County.
- 6.3.3 The RLDP seeks to maximise affordable housing delivery on new housing allocations, reflecting the Council’s commitment to deliver 50% affordable homes on new housing sites to help tackle Monmouthshire’s housing need, homelessness and social inequality. The RLDP enables the Council to consider alternative mechanisms for delivering affordable homes and all opportunities to increase the supply of affordable housing will be considered.
- 6.3.4 To deliver on our key objectives, the residential site allocations identified in the Deposit Plan have demonstrated that they are viable and deliverable based on the Council’s requirement to deliver 50% affordable homes on these sites, along with the requirement for net zero carbon homes and associated infrastructure to ensure the developments are sustainable and well-connected. This ambitious policy may require Welsh Government policy position changes on use of Social Housing Grant or other public sector funding. Submitted viability assessments demonstrate at the time of publication that these sites are deliverable. However, it is

recognised this could change in the future and additional public subsidy may be required. The Deposit Plan is accompanied by an Infrastructure Delivery Plan (Appendix 8) and updated Local Transport Strategy to demonstrate the delivery of essential infrastructure.

- 6.3.5 The homes that we deliver will need to match people’s ability to pay. Development proposals will be informed by the latest Local Housing Market Assessment²⁷ to ensure the delivery of appropriate house types and tenure. Policy H8 Housing Mix also requires proposals for market homes to provide smaller house types to assist in addressing housing affordability. The Council is working with the Welsh Government, Registered Social Landlords and house developers to ensure the delivery of affordable homes meets our local needs. The Strategy also recognises the aspiration of Future Wales Policy 3 for public sector leadership to unlock the potential of public land and to take an increased development role.

Rebalancing our Demography

- 6.3.6 Monmouthshire’s population is getting older which impacts on the economic and social sustainability of our communities. We must therefore seek to ensure that younger people can choose to live in the County to create more age-balanced sustainable and resilient communities, as well as increasing the economically active population.
- 6.3.7 The RLDP proposes a level of growth that begins to address the unbalanced and ageing demographic with an increase in younger and working age groups²⁸ and provides opportunities for younger people to both live and work in the County. Policy support for economic growth/job creation and the provision of 50% affordable housing, as well as policy intervention to ensure market sector housing provides a suitable range and mix of house sizes, will assist in attracting and retaining a younger, economically active population and creating a more balanced demography and socially and economically sustainable communities.
- 6.3.8 Requiring the provision of a wider choice of smaller market and affordable homes will provide opportunities for both younger people to both stay in and move to the area, and older people to downsize from large family homes. Enabling younger people to live and work in Monmouthshire will assist in making our ageing communities more socially and economically sustainable.

Responding to the Climate and Nature Emergency

- 6.3.9 The Plan’s proposed level of growth secures the economic, social and cultural sustainability of Monmouthshire’s communities without comprising the environmental sustainability. All new homes will be required to be net zero carbon in accordance with Policy NZ1 reflecting the Council’s commitment to responding to and tackling climate change, and will be well connected with existing settlements, adding to their sustainability. In accordance with national planning policy, we will seek to maintain and enhance biodiversity by ensuring development does not cause any significant loss of habitats or populations of species and provides a net benefit for biodiversity and improved ecosystem resilience. Placemaking principles will underpin all new developments ensuring we deliver attractive and accessible places to live and work.

²⁷ LHMA Refresh 2022-2037. MCC Cabinet approved the LHMA Refresh 2022-2037 in May 2024 prior to submission to Welsh Government. The housing team are currently awaiting sign off from Welsh Government

²⁸ Provides an uplift in younger (0-19, +880) and working age (30-49, +3,222) groups

Supporting Sustainable Economic Growth

- 6.3.10 Supporting sustainable economic growth is a key Council priority which will be achieved through a range of mechanisms and interventions including the RLDP, the Economy, Employment and Skills Strategy and the Local Transport Strategy.
- 6.3.11 The RLDP Growth Strategy seeks to address the issues currently impacting on economic growth, including a shrinking working age population and high levels of out-commuting, by allocating a minimum of 38ha of B use class employment land and setting out the planning policy framework to support job growth of up to 6,240 additional jobs over the Plan period (416 jobs per annum).
- 6.3.12 Reflecting the Growth Strategy, the jobs figure is based on a demographic-led scenario, which includes an adjustment to allow for higher in-migration from Bristol and South Gloucestershire (based on experience over the preceding five years) and a reduction in net out-commuting. The associated employment figure represents the number of jobs that could be supported by the population and housing growth planned for over the Plan period. The projected increase in the working age population and the linked dwelling requirement underpinning the growth strategy will provide scope for residents to live and work in the area, supporting up to 416 jobs per annum. The Employment Land Review (2022) confirms that the job figure is driven by policy interventions intended to support housing and employment growth to achieve an outcome which exceeds a continuation of trends.
- 6.3.13 The proposed level of growth aims to provide a balance of housing and employment growth, as required by national planning policy. This alignment means that economic growth will not be undermined by inadequate housing or be reliant on unjustified levels of in-commuting. Similarly, the level of housing will not give rise to high levels of out-commuting. Supporting this level of growth will reduce the need to travel and travel to work distances, which will assist in addressing our challenges in relation to the climate and nature emergency and contribute towards a more balanced demographic profile in Monmouthshire.
- 6.3.14 To assist in meeting this provision and to support the Council's economic growth ambitions, the RLDP allocates a deliverable range of B use class employment land in attractive, accessible, and sustainable locations across Monmouthshire and in the right quantities to attract new businesses in key growth sectors and to enable our existing businesses to grow, whilst being flexible to future changes. It is recognised that there is an increased propensity for agile and home working in some sectors over the longer term, meaning demand for physical employment land or space is changing.
- 6.3.15 Of note, while the RLDP makes provision for B use class employment land, not all of the job growth will be in these sectors. Many jobs will be delivered through foundational sectors such as tourism, leisure, food, retail, and agriculture, all of which play an important role in Monmouthshire's economy. This reflects the character of the wider economy of South East Wales and should be supported in line with the 'whole economy' approach that is advocated by national planning policy. The RLDP will plan positively for these sectors through complementary supportive policies.
- 6.3.16 Whilst the Strategy projects a growth in jobs over the Plan period, it has become widely accepted that the fundamental shift in working practices experienced as a legacy of the Covid-19 pandemic, with a significant increase in people working from home/remotely, has made it

less important where some jobs are located as employees no longer need to commute for work in many cases. This has provided the opportunity for many people to live and work in the same location via a remote working approach.

- 6.3.17 It is expected that the trend for increased home and remote working will continue over the longer term in accordance with Welsh Government’s ambition of 30% of the Welsh workforce working from or near home²⁹, making it less important where the jobs are located as commuting is reduced as a result of changing working habits. This will also assist in addressing our challenges in relation to the climate and nature emergency.
- 6.3.18 Increased remote/home working will mean both employers and employees will have greater flexibility over where to locate with quality of life and environment potentially becoming increasingly important to Monmouthshire’s benefit. Monmouthshire is a very attractive proposition and stands to gain from an increased economically active population without the associated problems of increased commuting. Local businesses and services would benefit from increased custom and footfall with workers spending their wages in their local areas helping to create vibrant neighbourhoods and sense of place. Notwithstanding this, there remains a need to provide a sufficient range and choice of employment land in the County as not all businesses are able to operate remotely.
- 6.3.19 The RLDP Growth Strategy promotes sustainable economic growth that will help reduce levels of commuting and promote self-contained communities, ensuring the environmental, social and economic sustainability of our communities. This will be achieved by providing policy support to enable and facilitate home/remote working, enabling economic growth through supporting the delivery of the priorities and aims identified in the Council’s Economy, Employment and Skills Strategy, Local Transport Strategy and Climate and Decarbonisation Strategy, maximising opportunities from regional partnerships and providing appropriate B use class employment land in the right locations.

6.4 **RLDP Sustainable and Resilient Communities Spatial Strategy**

6.4.1 Strategic Policy S2 sets out the RLDP Spatial Strategy.

Strategic Policy S2 – Spatial Distribution of Development – Settlement Hierarchy

In order to deliver sustainable and resilient communities for all, the main focus for new development will be distributed based on the following settlement hierarchy:

Settlement Hierarchy		Distribution of Residential Growth*		Distribution of Employment Growth	
		Indicative % of distribution	Indicative No. of homes	% of distribution	Hectares
Tier 1	Primary Settlements: • Abergavenny	22%	1,362	3%	1.7ha**

²⁹ Smarter Working: a Remote Working Strategy for Wales, Welsh Government (2022)

	<p>(inc. Llanfoist)</p> <ul style="list-style-type: none"> • Chepstow • Monmouth (inc. Wyesham) • Caldicot (inc. Severnside Area comprising of: Caerwent, Crick, Magor Undy, Portskewett, Rogiet and Sudbrook) 	<p>13%</p>	<p>829</p>	<p>11%</p>	<p>6.4ha</p>
	<ul style="list-style-type: none"> • Penperlleni • Raglan • Usk 	<p>15%</p>	<p>923</p>	<p>10%</p>	<p>5.84ha</p>
	<p>Secondary Settlements:</p> <ul style="list-style-type: none"> • Penperlleni • Raglan • Usk 	<p>35% across Severnside Area</p>	<p>2,190 across Severnside Area</p>	<p>65%</p>	<p>37.86ha</p>
Tier 2	<p>Secondary Settlements:</p> <ul style="list-style-type: none"> • Penperlleni • Raglan • Usk 	<p>6% across Secondary Settlements</p>	<p>350 across Secondary Settlements</p>	<p>10%</p>	<p>6.05ha</p>
Tier 3	<p>Main Rural Settlements:</p> <ul style="list-style-type: none"> • Devauden • Dingestow • Little Mill • Llandogo • Llanellen • Llangybi • Llanover • Llanvair Discoed • Mathern • Pwllmeyric • Shirenewton/ Mynyddbach • St Arvans • Tintern • Trellech • Werngifford/Pandy 	<p>9% across Main Rural and Minor Rural Settlements (Tiers 3 and 4)</p>	<p>556 across Main Rural and Minor Rural Settlements (Tiers 3 and 4)</p>	<p>0%</p>	<p>0ha</p>
Tier 4	<p>Minor Rural Settlements:</p> <ul style="list-style-type: none"> • Bettws Newydd • Broadstone /Catbrook • Brynygwenin • Coed y Paen • Cross Ash • Cuckoo's Row • Great Oak • Grosmont • Gwehelog • Llanarth • Llanddewi Rhydderch • Llandegveth 				

	<ul style="list-style-type: none"> • Llandenny • Llangwm • Llanishen • Llansoy • Llantilio Crossenny • Llantrisant • Llanvair Kilgeddin • Llanvapley • Mitchel Troy • Penallt • Penpergwm • The Bryn • The Narth • Tredunnoch 				
--	---	--	--	--	--

Settlement boundaries will be defined for Settlement Tiers 1 – 3, within which the principle of development is considered to be acceptable, subject to detailed policy considerations set out in the RLDP.

Within Tier 4 – Minor Rural Settlements, minor infilling between existing buildings will be considered acceptable, subject to detailed policy considerations set out in the RLDP.

Outside of Tiers 1 – 4, open countryside policies will apply where planning permission will only be allowed for the following types of development, subject to satisfying detailed planning criteria:

- Acceptable conversions of rural buildings
- Sub-division of existing dwellings
- Rural Enterprise Dwellings
- One Planet Development
- Rural diversification and rural enterprise uses
- Affordable housing exception sites adjoining settlement boundaries to meet local needs
- Gypsy and Traveller Sites

*Figures include an indicative 15% flexibility.

**The Council will continue to explore opportunities to bring forward vacant premises in Abergavenny for employment use, in conjunction with the CCR/relevant partners.

6.4.2

Policy S2 seeks to focus new development in the primary settlements of Abergavenny (including Llanfoist), Chepstow, Monmouth and Caldicot including the Severnside area, together with a lower level of growth in the most sustainable lower tier settlements to deliver much needed affordable homes and to address rural inequality and rural isolation in these areas. It sets out the proportion of residential growth to be accommodated by each of the settlement tiers (a full breakdown is available in the Housing Background Paper). As such, the spatial strategy will assist in addressing our core issues in relation to affordable housing delivery, rebalancing our demography, responding to the climate and nature emergency and supporting sustainable economic growth.

- 6.4.3 The Settlement Hierarchy reflects the findings of the Sustainable Settlement Appraisal³⁰, which has grouped settlements into tiers based on their role and function and has informed where development should be spatially located to achieve a sustainable pattern of growth. The appraisal sets out the methodology used to assess the sustainability of each settlement, based on three primary principles. It also sets out settlement profiles for each settlement which includes a range of social and economic data along with the services and facilities available. The appraisal confirms the dominant role of the primary settlements of Abergavenny, Chepstow, Caldicot and Monmouth, reflecting the range of services, facilities and transport available. It recognises that some of the lower tier settlements have a close geographical and functional relationship with a Tier 1 settlement which have therefore been clustered together. The settlements in the south of the County in particular exhibit a strong geographical and functional relationship and collectively form the Severnside Area centred around the primary settlement of Caldicot and includes Magor Undy, Rogiet, Caerwent, Portskewett, Sudbrook and Crick. Similarly, the appraisal recognises the strong relationship between Abergavenny and Llanfoist and Monmouth and Wyesham.
- 6.4.4 The spatial strategy and identification of suitable sites for allocation in the RLDP reflect the site search sequence outlined in national planning policy. In determining whether or not to allocate particular sites for development, consideration has been given to such issues as their impact on the physical form of the settlement, placemaking, carbon footprint, landscape setting, affordable housing need, environmental constraints and infrastructure capacity. Where growth cannot be met in an individual settlement, development is directed toward a same tier or higher tier settlement within the same Housing Market Area.
- 6.4.5 Placemaking principles will underpin the delivery of sites in the RLDP ensuring that we deliver sustainable, attractive and accessible places to live and work. Monmouthshire County Council is a signatory of the Placemaking Charter which recognises the Council's commitment to support placemaking in relevant areas of our work and promotes the six placemaking principles in the planning, design and management of new and existing places.
- 6.4.6 To encourage the promotion of sustainable and resilient communities where residents can live and work in the same area, housing growth is accompanied by employment land, where appropriate (as set out in Policy S2). Further details on employment sites provision can found in Policy S12.
- 6.4.7 In accordance with the PPW12's site search sequence, development proposals are expected to make full and appropriate use of land, with preference given to the development of previously developed land. It is, however, recognised that there are limited opportunities for further significant brownfield development in Monmouthshire. While growth is focused in the most sustainable settlements, it must be recognised that landscape quality and agricultural land quality are high throughout the County, and as such these challenges cannot be avoided via a different spatial option. For example, all of our settlements are surrounded by agricultural land with a high-level classification as best and most versatile land. Rather, the Deposit Plan allocates those sites that are the best connected, most sustainable, best deliver placemaking and are least harmful, which has required balanced planning considerations and decisions with a preference for promoting the most sustainable sites.

³⁰ The Sustainable Settlement Appraisal can be viewed on the Council's website.

6.4.8 Future Wales 2040 (Policy 34) requires the future South East Wales Strategic Development Plan (SDP) to identify a Green Belt to the north of Cardiff, Newport and the eastern part of the region to manage urban form and growth. The South East Wales Regional Strategic Diagram set out in Future Wales indicates the indicative extent of the Green Belt in the region which includes part of rural Monmouthshire. The Spatial Strategy has regard to Policy 34 and the indicative Green Belt boundary. Monmouthshire's primary settlements fall outside of the indicative Green Belt boundary. National planning policy allows for extensions to existing settlements within and adjoining the Green Belt of an appropriate scale having regard to the identified and longer term need for development land, the effects of development pressures in areas beyond the Green Belt, the need to minimise demand for travel, and the purpose of the overall greenbelt designation. It states that this may require land to be safeguarded and boundaries of proposed Green Belts must be carefully defined to achieve this. Potential Green Belt land is to be assessed and designated as part of a Strategic Development Plan (SDP) for the South East Wales Region.

6.4.9 Table 2 sets out a summary of the overarching spatial distribution of housing provision for the RLDP. A full breakdown of each component is set out in the Housing Background Paper.

Table 2: Summary of Spatial Distribution of Housing Provision*

Settlement	Commitment		Allowances	Allocations		Total RLDP Housing Provision
	Completions 2018-2023	Existing Commitments	Total Allowances (Small Sites; Windfalls)	LDP Rollover Allocations	RLDP New Housing Allocations (Dwellings)	
Abergavenny (incl. Llanfoist)	537	29	196	0	600	1,362
Chepstow	448	81	154	0	146	829
Monmouth (incl. Wyesham)	286	70	77	160	330	923
Caldicot (incl. Severnside)	663	555	162	0	810	2,190
Secondary Settlements	109	38	67	0	136	350
Rural Settlements	177	25	231	15**	108**	556
Total	2,220	798	887	175	2,130	6,210

*Figures include an indicative 15% flexibility allowance.

** Rural LDP Rollover Allocations and RLDP New Housing Allocations are all within Tier 3 Main Rural Settlements

6.4.10 The RLDP Growth and Spatial Strategy is illustrated in the Strategic Diagram below.

7. Managing Settlement Form

7.1 New built development in the open countryside

7.1.1 It is recognised that there may be exceptional circumstances where new built development may be acceptable in the open countryside for the benefit of the rural economy and sustaining our rural communities. Although well designed schemes can often conserve and enhance biodiversity and landscape quality there is potential to cause negative impacts. It is essential, therefore, that any such development is not at the expense of environmental considerations, including landscape, biodiversity, local amenity and historic, cultural or geological heritage. Where the only option is to provide a new building, careful attention should be given to siting, design and materials to minimise impacts on nature conservation and the surrounding landscape.

7.1.2 Policy OC1 sets out strict criteria for assessing such proposals and seeks to ensure a balance between the need to support rural enterprises, tourism and leisure facilities and rural communities and the need to protect the local environment and character of the open countryside. Proposals that do not accord with the criteria set out in this policy will not be permitted.

7.1.3 The open countryside for the purposes of the RLDP is defined as land lying outside the defined settlement boundaries of the Primary, Secondary and Main Rural settlements or the physical boundaries of Minor Rural settlements, as set out in Policy S2.

Policy OC1 – New built development in the Open Countryside

There is a presumption against new built development in the open countryside, unless justified under national planning policy.

Proposals for new built development in the open countryside will only be permitted where justified under national planning policy and all the following criteria are met:

- a) the proposal is satisfactorily assimilated into the landscape and complies with Policies LC1, GI1, T1, RE3, RE4 and NR1;
- b) new buildings are wherever possible located within or close to existing groups of buildings;
- c) the development design is of a form, bulk, size, layout and scale that respects the character of the surrounding countryside; and
- d) the development will have no unacceptable adverse impact on landscape, historic / cultural or geological heritage, biodiversity, dark skies and local amenity value.

7.2 Green Wedges

7.2.1 National planning policy sets out the importance of managing settlement form and notes that around settlements there may be a need for development plans to include additional protection where alternative policy mechanisms, such as settlement boundaries and open

countryside policies, would not be sufficiently robust to maintain countryside openness and prevent urban sprawl via the designation of green belt and/or green wedge land.

7.2.2 While green belt land is to be assessed and designated as part of a Strategic Development Plan (SDP) for the South East Wales Region as set out in Future Wales Policy 34, PPW12 advises that green wedge designations should be reviewed and proposed through the local development plan process.

7.2.3 The existing green wedges have therefore been reviewed to assess whether these continue to meet the purposes as defined in PPW12. The review also assessed the potential for new wedge designations in accordance with the provisions of national planning policy that “green wedges may be used to provide a buffer between the settlement edge and statutory designations and safeguard important views into and out of the area.” As such, land between the settlement edge of Abergavenny and the Bannau Brycheiniog National Park (BBNP) boundary has been assessed for its potential for green wedge designation.

Policy GW1 – Green Wedge Designations

Green Wedges have been designated in the land between the following areas, as shown on the Proposals Map.

- a) Abergavenny, Llanfoist and the BBNP boundary;
- b) Chepstow, Pwllmeyric and Mathern;
- c) Portskewett and Sudbrook;
- d) Rogiet and Caldicot;
- e) Shirenewton and Mynyddbach
- f) Undy, Llanfihangel Rogiet and Rogiet.

There is a presumption against new built development within green wedge designations unless exceptionally justified under national planning policy.

8. Sustainable Placemaking and High-Quality Design

8.1 Sustainable Placemaking

- 8.1.1 Monmouthshire is renowned for its distinctive identity and the high quality of its natural, historic and built environments. This policy is intended to protect and enhance the quality of the County's settlements and countryside by ensuring that new development is designed to a high standard that creates buildings and places that are sustainable, well-integrated within their context and contribute to the economic, social, environmental and cultural well-being of strong, vibrant and healthy communities. The Plan seeks to achieve this by ensuring new development incorporates the principles of sustainable placemaking and good design.
- 8.1.2 The RLDP strategy and policies seek high quality sustainable design and green infrastructure and will place people, natural resources and the natural environment at the heart of the design process. Proposals should embrace a green infrastructure-led approach that is capable of delivering a wide range of social, economic, environmental, and health and well-being benefits for local communities and the County as a whole. This will enhance the character and identity of Monmouthshire's settlements and countryside, encourage sustainable lifestyles and create attractive, safe and accessible places. The achievement of this will depend largely upon identifying and understanding the local characteristics which are distinctive to an area: a green infrastructure approach to design will be essential to delivering placemaking. A Placemaking Wales Charter has been developed by Welsh Government and the Design Commission for Wales in collaboration with the Placemaking Wales Partnership: the Council is a charter signatory to these principles.

Strategic Policy S3 – Sustainable Placemaking & High Quality Design

Development will contribute to creating high quality, attractive and sustainable places that support the health and well-being of the community and respond to climate change. In order to achieve this, development must:

- i) Incorporate high quality, sustainable, safe and inclusive design that offers ease of access for all and provides connectivity between uses;
- ii) Incorporate an appropriate mix of uses, where applicable, to minimise the need to travel and to maximise opportunities for sustainable travel;
- iii) Incorporate a green infrastructure-led approach that respects local distinctiveness and the character of the site and its surroundings; and
- iv) Protect and enhance the natural, historic and built environments and show an understanding of how these function together to contribute towards the quality of places.

8.2 Creating Well-designed Places

8.2.1 One of the key principles in PPW12 is achieving the right development in the right place. The creation of well-designed places plays an important role in well-being and can help aid community cohesion by ensuring places have a balance of uses where people can live, work and socialise.

Policy PM1 – Creating well-designed places

All development should be of a high-quality sustainable design and respect the local character and distinctiveness of Monmouthshire's built, historic and natural environment. Development proposals will be required to:

- a) respect the existing form, scale, siting, height, massing, materials (including colour) and layout of its setting;
- b) ensure a safe, secure, pleasant and accessible environment for all members of the community supporting the principles of community safety and maximising opportunities for connectivity to the wider environment;
- c) contribute towards a sense of place and identity whilst ensuring that the location, scale, amount, mix of use and density of development, including cumulative impact, is compatible with existing uses and its local context;
- d) respect and enhance local distinctiveness and landscape character as defined through the LANDMAP process, particularly where built and natural views, panoramas or historical features are present;
- e) maintain reasonable levels of privacy and amenity of occupiers of neighbouring properties, where applicable;

- f) ensure that existing residential areas are protected from overdevelopment and insensitive or inappropriate infilling;
- g) Integrate multifunctional green and blue infrastructure and public open space within site boundaries, providing connectivity to wider networks as appropriate.

8.2.2 In the application of this policy regard should be given to design considerations set out in national planning policy including PPW12 and TAN12 Design. Reference should also be given to LANDMAP Landscape Character Assessments, where appropriate. This will help ensure that new development meets the expectations of this Plan, is fully integrated into its environment, taking account of the character of the area and provides locally distinctive design solutions. In accordance with national planning policy, development proposals should include a Design and Access Statement where appropriate. These statements enable applicants to demonstrate the design process undertaken and how the objectives of good design and placemaking have been considered in the process. These statements will vary according to the scale and complexity of the application and are 'living' documents which can be updated as necessary. Where such statements are not required, design and placemaking must still be taken into account in accordance with Policy PM1, as well as other relevant policies.

8.2.3 This policy will be supported by SPG which will set out detailed design requirements and must be referred to as appropriate.

8.3 **Amenity and Environmental Protection**

8.3.1 Policy PM2 seeks to prevent development proposals that would result in unacceptable risk or harm due to air, light, noise or water pollution or contamination. The policy will prevent incompatible land uses and development being located in proximity to existing sources of pollution. Similarly, it will prevent inappropriate development on or in proximity to potentially contaminated land.

8.3.2 Although air quality in Monmouthshire generally meets current standards, there are two Air Quality Management Areas (AQMA) within the County – at Bridge Street in Usk and Hardwick Hill /Mount Pleasant in Chepstow (as shown on the Constraints Map). Where it is considered that a development proposal may impact upon an AQMA, or exacerbate an existing problem, developers will be required to provide an assessment of air quality impact, together with proposals for mitigation.

Policy PM2– Environmental Amenity

Development proposals that would cause or result in a significant risk/harm to local amenity, health, the character/quality of the countryside or interests of nature conservation, landscape or built heritage importance, due to the following, will not be permitted unless it can be demonstrated that measures can be taken to overcome any significant risk:

- Air pollution;
- Light pollution;
- Noise pollution;

- Water pollution;
- Contamination.

8.4 Advertisements

8.4.1 This policy sets out detailed criteria for assessing advertisement proposals and aims to ensure that such proposals are strictly controlled in order to protect the special quality, character and distinctiveness of the County. Particular scrutiny will be given to proposals affecting the Blaenavon Industrial Landscape World Heritage Site, Bannau Brycheiniog National Park and the Wye Valley National Landscape (AONB), as detailed in policies LC2, LC3 and LC4. Policy PM3 has a broad remit and relates to all forms of advertisements where planning permission is required. Further guidance on the control of outdoor advertisements is set out in national planning guidance and should be referred to accordingly.

Policy PM3 – Advertisements

Proposals for advertisements will only be permitted where:

- a) having regard to the existing number and siting of advertisements in the locality the proposal would not result in an unacceptable clutter of advertisements;
- b) existing means of support are used for signs, wherever possible;
- c) if located within the open countryside they would not unacceptably detract from the rural setting of the locality;
- d) if located in a Conservation Area, they would not unacceptably detract from the character or appearance of the area;
- e) if located within the open countryside or a Conservation Area, externally lit signs are only appropriate to enable signposting to uses trading outside of daylight hours;
- f) there would no adverse impact on public or highway safety.

Proposals for bilingual signs and advertisements will be supported in principle, subject to detailed planning considerations.

8.4.2 It is recognised that well designed signage can add to visual interest in the context of a street scene, however too many signs can amount to visual clutter. As a result, criterion b) aims to ensure existing frames, poles, brackets and hanging equipment is utilised where possible to minimise any impact.

8.4.3 For signage within the open countryside or Conservation Areas external illumination is only appropriate to uses that are reasonably expected to trade outside of daylight hours, which differs substantially between seasons. Policy LC5 relates to dark skies and lighting and should also be referred to.

8.4.4 As a Welsh border County, the distinctive culture and identity of Monmouthshire can be promoted through bilingual signage and advertising. Proposals for bilingual signs are therefore

encouraged and supported in principle to safeguard and positively enhance the Welsh language.

8.5 **Historic Environment**

8.5.1 Monmouthshire has a rich built heritage and historic environment which includes 31 Conservation Areas, 48 Historic Parks and Gardens, 3 Landscapes of Outstanding Historic Interest, approximately 164 Scheduled Ancient Monuments (SAMs) and 2,145 Listed Buildings.

8.5.2 There is a need to protect, promote and enhance the best of our historic environments which are an important part of Monmouthshire's culture making it a unique and attractive place to live, the historic environment also plays a key role in sustainable tourism and economic growth.

8.5.3 Chapter 6 of PPW12 relating to Conserving and Enhancing the Historic Environment and its Assets provides the national planning policy framework for Listed Buildings, Scheduled Ancient Monuments and archaeological remains, Historic Parks and Gardens, Historic Landscapes and World Heritage Sites. Any development proposals that may affect these heritage assets or their settings, must consider The Historic Environment (Wales) Act 2016 and associated national guidance, including Chapter 6 of PPW12 and TAN24: The Historic Environment.

8.5.4 Listed Building or Conservation Area Consent applications must be accompanied by a Heritage Impact Statement in accordance with the Historic Environment (Wales) Act 2016.

Historic Parks and Gardens

8.5.5 The Cadw statutory register (February 2023) identifies Historic Parks and Gardens of special historic interest, 48 of which (March 2024) are located in Monmouthshire and identified on the Constraints Map accordingly. Information within the Cadw Register must be taken into account when considering the implications of development upon these historic assets and their settings.

Historic Landscapes

8.5.6 Cadw has also produced a separate register identifying Landscapes of Outstanding Historic Interest in Wales. Information within the Cadw Register must be taken into account when considering the implications of development upon these historic assets and their settings. The following Historic Landscapes have been identified within Monmouthshire:

- Blaenavon (Blaenavon Industrial Landscape World Heritage Site)
- The Gwent Levels (Gwent Levels Historic Landscape of Outstanding Historic Interest)
- The Lower Wye Valley

Listed Buildings

8.5.7 Listed buildings are designated by Cadw who maintain the statutory List of Buildings with Special Architectural or Historic Interest. National should be referred to accordingly in relation to any proposals that may affect Listed Buildings or their settings.

8.6 **Conservation Areas**

8.6.1 The 31 Conservation Areas within Monmouthshire include a wide spectrum of different areas, from market towns and rural villages to medieval castles. These are listed below with their boundaries identified on the proposals Map.

Abergavenny Town	Pen-y-Fal, Abergavenny	Rogiet Llanfihangel
Bettws Newydd	Llandogo	St Arvans
Caerwent	Llanhennock	Shirenewton
Caldicot Castle	Llanover	Skenfrith
Chepstow	Llantilio Crossenny	Tintern
Dixton	Magor	Tredunnoch
Grosmont	Mathern	Trellech
Hendre	Monmouth	Usk
Itton	Mounton	Whitebrook
Llanarth	Raglan	
Llandenny	Rockfield	

8.6.2 Given the significant number of Conservation Areas within Monmouthshire and their contribution to the County's special qualities and distinctive character, it is essential to protect and enhance their character and appearance. Policy HE1 sets out detailed criteria for assessing development proposals in Conservation Areas and, where appropriate, aims to ensure that the findings of Monmouthshire's Conservation Area Appraisals are fully taken into account when considering development proposals. In the assessment of planning applications, the Council will seek to preserve or enhance the special character or appearance of Conservation Areas. Chapter 6 of PPW12 relating to Conserving and Enhancing the Historic Environment and its Assets provides the national planning policy framework in relation to Conservation Areas and should also be considered.

8.6.3 Monmouthshire's Conservation Area Appraisals identify the special qualities of the designated Conservation Area. Development proposals must be able to respect and preserve important views and vistas as identified in the appraisals. Views could be narrow or glimpsed sightings of, for example, key landmark buildings or landscape features. Vistas could be wider or panoramic views that provide perspective or context and create the setting of a Conservation Area. All Conservation Areas will have a key setting individual to each area, development proposals should consider this unique context whether this be of an urban or rural setting and consider height, scale, massing and grain accordingly.

- 8.6.4 Proposals for development must demonstrate their ability to preserve or enhance the special character or appearance of the area. The character of an area can be defined by the distinctive qualities of a place, including use, activity, setting and connection to its surroundings. The architectural styles and language of buildings within the area form the appearance of streets, squares, lanes and open spaces. Physical alterations to buildings can affect their appearance which in turn can affect the character of these Conservation Areas. Development proposals seeking to enhance areas of poor character or appearance within Conservation Areas will be welcomed.

Policy HE1 – Conservation Areas

Development including proposals for alterations, extensions or conversions of existing buildings within Conservation Areas or their settings must preserve or enhance the character or appearance³¹ of the Conservation Area. They must also have regard to the Conservation Area Appraisal for that area.

Development proposals within Conservation Areas will be permitted if they meet all of the following criteria:

- a) have no adverse effect on important views into and out of the Conservation Area;
- b) have no adverse effect on important vistas within and out of the area and the character and appearance of the street scene and roofscape, townscape or landscape setting;
- c) pay special attention to complementing or reflecting the special architectural qualities and distinctiveness of the Conservation Area including development pattern, profile, form, scale, mass, detailing and materials;
- d) pay special attention to the setting of the development and its open areas;
- e) retain, restore or reinstate historic features and details of buildings, including garden or forecourt features, boundary walls, paving etc. as appropriate.

Parking and servicing arrangements associated with new uses must not detract from the character or appearance of the Conservation Area. High quality modern design may be acceptable, particularly where new compositions and points of interest are created.

Permission will be refused where proposals are unsympathetic to an existing building and/or detract from the character or appearance of the Conservation Area.

Specialist recording, archiving and publishing may be required prior to the demolition of any historic building within a Conservation Area and may be required in other cases of alteration.

8.7 Design of Shop Fronts in Conservation Areas

³¹ Section 72 of the Planning (Listed Buildings and Conservation Area) Act 1990 test refers to preserve or enhance character or appearance.

- 8.7.1 This policy seeks to maintain high standards of shop front design in Conservation Areas. Shop fronts are an important element in the character and appearance of Conservation Areas and it is important that their design respects the historic and architectural form of the street scene and the individual buildings in which the shops are set.

Policy HE2 – Design of Shop Fronts in Conservation Areas

In Conservation Areas the removal of traditional shop fronts will not be permitted.

Improvements to non-traditional shop fronts will be permitted where they retain historic features and the proposed improvements are in character with the area. Proposals to replace modern shop fronts will be permitted where they meet the following criteria:

- a) reinstate or restore lost details which will enhance the Conservation Area;
- b) use traditional arrangement, materials and paint colours;
- c) integrate positively with the surrounding area, and where it replaces two or more units, respects the character of individual units;
- d) have fascia boards and signage in keeping with the design, materials and scale of the character of the building in which they are set; and
- e) use unobtrusive security measures such as internal shutters, toughened glass or traditional timber shutters.
- f) do not incorporate internal illumination and any external illumination where necessary for night time trading is externally mounted and is of a scale, design and lux level appropriate to the building and shop front.

Archaeological Sensitive Areas

- 8.7.2 Monmouthshire also has a significant archaeological resource, with 12 Archaeologically Sensitive Areas (ASAs) across the County. The ASAs are located in Abergavenny, Caerwent, Chepstow, Grosmont, Monmouth, Raglan, Skenfrith, Tintern, The Gwent Levels, Trellech, Usk and Whitecastle. An Archaeology Planning Advisory Note (PAN) was endorsed by the Council in August 2020 providing guidance on archaeology in Monmouthshire and detail on how archaeology is addressed in the planning process which must be taken into consideration in development proposals.

Scheduled Ancient Monuments

- 8.7.3 There are approximately 164 Scheduled Ancient Monuments (SAMs) within Monmouthshire. SAM consent is required for all proposals that would potentially alter a SAM. National policy should be referred to accordingly in relation to any proposals that may affect SAMs.
- 8.7.4 Consultation with Glamorgan Gwent Archaeological Trust (GGAT), who act as archaeological advisors to the Local Planning Authority (LPA), is strongly recommended at the earliest stage of development proposals in relation to ASAs and SAMs.

8.8 Roman Town of Caerwent

- 8.8.1 This policy seeks to preserve the special and unique character of the Roman Town of Caerwent, in order to ensure that the remains of the town are left undisturbed and that its special character and openness is preserved.
- 8.8.2 The remains of the Roman town of Caerwent are acknowledged to be of European significance and to constitute one of the most important archaeological sites in Wales. The greater part of the Roman town has been designated as a Scheduled Ancient Monument (SAM). There has been a presumption against development within the Roman Town walls or in their vicinity since the 1954 Monmouthshire County Development Plan. The RLDP continues this aim to ensure that the remains are left undisturbed.
- 8.8.3 The distinctive character and appearance of this part of the Conservation Area is assessed further in the Caerwent Conservation Area Appraisal.

Policy HE3 – Roman Town of Caerwent

Development within or adjacent to the walls and ditches of the Roman Town at Caerwent will only be permitted where it can be demonstrated:

- a) That the archaeological remains are left undisturbed; and
- b) That the special character and openness of the Caerwent Conservation Area is preserved or enhanced in accordance with the Caerwent Conservation Area Appraisal.

9. **Climate Change**

- 9.1.1 The need to tackle climate change represents a fundamental challenge if sustainable development and the obligations under the Well-being of Future Generations Act 2015 are to be delivered. One of the themes embodied in the Well-being of Future Generations Act is the need for ‘a resilient Wales’ whereby there is capacity to adapt to change such as climate change. A key principle of sustainable development, as recognised in PPW12, is tackling climate change by reducing the greenhouse gas emissions that cause climate change and ensuring that places are resilient to the consequences of climate change. National guidance outlines how the planning system can play an important part in improving sustainability of new developments whilst also tackling climate change. The RLDP provides a positive planning policy framework to support and enable this approach.
- 9.1.2 In May 2019 Monmouthshire County Council passed a motion declaring a climate emergency and has committed to strive to limit the increase in global temperatures to 1.5°C. In November 2021 this was broadened to incorporate a strengthened emphasis on nature recovery in recognition of the nature emergency and the relationship between the two. In recognition of the water quality issues in the County, a Motion for Rivers and Ocean was declared by Council in March 2022 with an action plan agreed by Council in September 2022 to outline steps the Council will take to protect our rivers and ocean. In May 2024 the Climate and Nature Emergency Strategy was published to update and combine the strategies and better reflect the Community and Corporate Plan. The updated overarching strategy is underpinned by four work streams and action plans: Council Emissions, Nature Recovery, Rivers and Ocean and Communities and Climate.

Strategic Policy S4 – Climate Change

All development proposals will be required to address the causes of, and adapt to the impacts of, climate change. Means of achieving this will include:

- i) Avoiding locating development in areas at risk of flooding, or where appropriate, minimising the risk of flooding including the incorporation of measures such as Sustainable Drainage Systems (SuDs) and flood resilient design;
- ii) Incorporating low/zero carbon energy requirements by reducing energy demand and promoting energy efficiency through the design of buildings by prioritising fabric first and orientation design principles;
- iii) Supporting the development of renewable and low/zero carbon energy generation and storage and a presumption against energy generation utilising fossil fuels, fracking and methods that are not low/zero carbon;
- iv) Utilising sustainable construction techniques and local supplies through the adoption of the circular economy principles, where possible;
- v) Incorporating water efficiency measures and minimising adverse impacts on water resources and quality;
- vi) Using land efficiently and co-locating uses to minimise the overall need to travel and maximise opportunities for sustainable travel;
- vii) Providing ultra-low emission vehicles charging infrastructure to reduce emissions and improve air quality; and
- viii) Supporting the resilience of development through green infrastructure solutions, including opportunities for biodiversity and resilient ecosystems, greenspace provision and connectivity, and water resource management.

9.1.3 Policy S4 builds on a number of actions from the Climate and Nature Emergency Strategy and draws together specific sustainability issues in relation to energy use and generation, efficient resource use and flood risk and provides a framework for sustainable growth which seeks to enable development that both mitigates the causes of climate change and is able to adapt to its likely effects. Such an approach is essential in ensuring that Monmouthshire meets its commitments contained within the Monmouthshire declaration on Climate Emergency (Nov 2021) and the economic, environmental and social objectives of the RLDP.

9.1.4 The RLDP recognises that the sustainability issues covered by Policy S4 are only part of the solution to addressing climate change, and while the planning system has an important role to play in this agenda, actions by individuals, communities and other organisations outside of the planning system are vital. We recognise that the climate emergency and nature emergency are intrinsically linked and that the principles of sustainable development are wide-ranging and include such aspects as transport, green infrastructure and the natural environment. These principles are dealt within the Plan's other Strategic Policies, including S3 – Sustainable Placemaking and High Quality Design, S9 – Sustainable Transport and S17 – Green Infrastructure, Landscape and Nature Conservation and are therefore not repeated in this policy. These policies should be considered as a whole.

9.1.5 Following new evidence regarding the environmental impacts of phosphate in watercourses Natural Resources Wales (NRW) has adopted tighter targets for the water quality of the River Usk and River Wye. In this respect, development proposals have to ensure that there will be no adverse effects on the site integrity of the two riverine SACs, the River Usk SAC and the River Wye SAC, regarding water quantity, level and flow. In particular, development will not be permitted if it cannot be accommodated under the Review of Consents for flow in these rivers, including the maximum permissible percentage reduction from naturalised flow levels and hands-off flow conditions.

9.2 Net Zero Carbon Homes

9.2.1 Policy NZ1 below seeks to ensure that new homes are built to the highest energy efficiency standards and utilise renewable energy sources for their 'regulated energy' (heating, hot water, lighting). The UK has a statutory target for reducing greenhouse gas emissions to net zero by 2050 (as set out in the Climate Change Act 2008, as amended) and ensuring that we build homes to the highest possible standard, alongside the de-carbonisation of the national grid, will contribute to achieving this target. PPW12 sets out that Welsh Government expect all new development to mitigate the causes of climate change in accordance with the Energy Hierarchy for planning. Reducing energy demand and increasing energy efficiency will ensure a more sustainable form of development that has a lower carbon footprint. Welsh Government encourage Local Planning Authorities (LPAs) to bring forward higher standards than the national minimum, which are set out in Building Regulations, in order to achieve a higher energy efficiency standard of building. This policy will ensure that new homes built within Monmouthshire mitigate the causes of climate change, by reducing energy demand through energy efficient building fabric, decarbonising the heating systems in place of gas boilers or fossil fuel alternatives and seeking to balance the essential operational functions (regulated energy) of a home with renewable energy sources.

Policy NZ1 – Monmouthshire Net Zero Carbon Homes

All new build residential development will be required to demonstrate compliance with the standards outlined below through the submission of an appropriately detailed, RICS-aligned operational energy assessment with any planning application resulting in the creation of 1 or more dwellings.

Development proposals for new homes must demonstrate the following:

- Space heating demand less than 25 kWh/m²/yr;
- On-site renewable energy generation to deliver the greater of:
 - matching the annual regulated electricity demand of the development; or
 - generating at least 40 kWh/m²fp/yr.
- EPC A or equivalent in accordance with the current version of the National Calculation Methodology for assessing the energy performance of dwellings;
- New homes must not connect to the gas grid and all heating and hot water needs should be met by low carbon heating systems. No fossil fuel systems are to be used on-site;

- ULEV charging infrastructure must be provided to every dwelling.

All developments must submit an as built performance survey following construction and prior to occupation of the home/s to demonstrate that they have been built to the applicable standards and minimise the ‘performance gap.’

- 9.2.2 In a Monmouthshire context ‘Net Zero Carbon’ is defined as being a home that seeks to balance its ‘essential’ operational running costs (regulated energy) from renewable energy sources whilst ensuring the building fabric is to the highest standard (performance rating A). These measures, in combination with the de-carbonisation of the national grid, will result in development that mitigates the causes of climate change, by minimising carbon and other greenhouse gas emissions associated with the development in accordance with PPW12. This standard is above the current Building Regulations and drives the energy efficiency of homes further towards full operational carbon balance.
- 9.2.3 The space heating demand is the amount of heat energy needed to heat a home or building over a year and is expressed in kWh/m²/year. It is a measure of the thermal efficiency of the building elements. Various design and specification decisions affect space heating demand including building form and orientation, insulation, air-tightness, windows and doors and the type of ventilation system. Reducing space heating demand to the target levels identified is necessary to achieve a net zero carbon (in operation) building and aligns with recommendations from the Climate Change Committee, Royal Institute of British Architects (RIBA), Low Energy Transformation Initiative (LETI) and the UK Green Building Council (UKGBC). It is also beneficial to residents and building users as it directly reduces energy costs.
- 9.2.4 Energy Performance Certificates (EPC) provide information on the energy efficiency of a building providing a range from A to G – with A being most efficient. The EPC focuses on two main areas, Efficiency Rating – relating to the running costs of the property and Environmental Impact Rating – relating to the carbon dioxide emissions from the property. We must build homes which are of the highest energy efficiency in accordance with the energy hierarchy in PPW12 (Figure 10). Building homes to this higher standard will reduce energy demand and use energy efficiently.
- 9.2.5 Energy consumption generated by heating, hot water and lighting (regulated energy) must be generated by renewables on the dwelling or via the overall development to ensure that the essential operational functions of a home are met by renewable energy sources only, resulting in a “Net Zero” balance for carbon emissions for these essential functions. In combination with the de-carbonisation of the national grid, this will progress Monmouthshire further in relation to reducing carbon emissions and addressing climate change.
- 9.2.6 New buildings must not use fossil fuels for heating, hot water and cooking if Monmouthshire, Wales and the UK, are to stay within carbon budgets. Alternatives forms of renewable energy are available and should be used in the essential operation of the home. For example, heat pumps powered by renewable energy sources can provide both space heating (and cooling) and hot water and can serve individual homes or communal heating systems. Solar thermal panels, which turn solar energy into heat can also help with space, water heating and generate energy for lighting.

9.3 **Flood Risk and Sustainable Drainage Systems**

Page 82

- 9.3.1 A key effect of climate change is the risk of flooding, both in terms of the likelihood of flooding as well as the intensity of flooding. In accordance with national guidance, S4 seeks to steer highly vulnerable development away from flood risk areas, to assess the implications of development in areas of flood risk and to ensure that new development does not increase the risk of flooding elsewhere. PPW12 and TAN 15: Development and Flood Risk, (July 2004) set out detailed national policy on development and flood risk and the Development Advice Maps set out flood zones to which different policy actions apply. An updated version of TAN 15: Development, Flooding and Coastal Erosion was published in September 2021 for consultation with the intention of it coming into effect in December 2021.
- 9.3.2 However, in November 2021, the Minister for Climate Change issued a letter to explain that the new TAN 15 was paused until June 2023 before coming into effect. This was supplemented by a further letter in December 2021 explaining that the existing policy framework of PPW12, TAN 15 (July 2004) and the Development Advice Map will remain in place during the pause period and the package of work to be completed by local authorities during that time. The letter states that in relation to development plan reviews, the flood risk considerations that feed into settlement strategy and site allocations must be in accordance with the new TAN 15 and the Flood Map for Planning. A second consultation draft of TAN 15 was published in January 2023 seeking views on further revisions. Site allocations have therefore been made with regard to the Flood Map for Planning and the January 2023 draft TAN 15 policy framework. In assessing flood risk and development, development proposals will be required to satisfy national policy on flooding set out in PPW12 and TAN 15 (applicable version at the time).
- 9.3.3 In addition to national flood risk guidance, regard should also be given to the Local Flood Risk Management Strategy, which is prepared by the Council as the Lead Local Flood Authority. The Strategy is a plan to manage flood and coastal erosion specifically in the Monmouthshire Area and contains information on local flood risk and local land drainage knowledge that may not be covered by the national Flood Maps for Planning. In this respect, early engagement with MCC as the Lead Local Flood Authority is strongly advised.
- 9.3.4 In accordance with national guidance, we have commissioned a Strategic Flood Consequence Assessment (SFCA) along with nine other Local Planning Authorities in the South-East Wales region to inform the preparation of the RLDP. The SFCA, TAN 15 (existing and draft) and Flood Map for Planning has been used to help inform the spatial strategy and the identification of areas most suitable for development, with allocations made outside of flood risk areas.
- 9.3.5 Monmouthshire County Council is also the Sustainable Drainage Approving Body (SAB) for the County. The Council is committed to implementing sustainable approaches to surface water drainage and expects development to incorporate Sustainable Drainage Systems (SuDS) wherever possible. Further details of requirements are set out in Policy CC1.

Policy CC1 – Sustainable Drainage Systems

Development proposals will be expected to incorporate water management measures, including Sustainable Drainage Systems (SuDS), to reduce surface water run-off and minimise its contribution to flood risk elsewhere.

The distribution of SuDS features across the site should be prioritised, reducing the size of any single SuDS feature.

- 9.3.6 The use of sustainable drainage systems (SuDS) must be an integral part of a development to ensure consideration is given to surface water drainage discharges, water quality, amenity and biodiversity enhancements. A separate regulatory framework, established through Schedule 3 of the Flood and Water Management Act 2010 (FWMA) is now in place to ensure this happens and establishes Monmouthshire County Council as a SuDS Approving Body (SAB), having statutory responsibility for approving and in some cases adopting and maintaining the approved drainage systems.
- 9.3.7 Under Schedule 3 of the Flood and Water Management Act 2010 (FWMA) the SuDS Approving Body is required to ensure that drainage proposals for all new development over 100 m² of construction area, where there are drainage implications as defined by the legislation, are fit for purpose, designed and built in accordance with the National Standards for Sustainable Drainage set out in Welsh Government's Statutory Standards for Sustainable Drainage: SuDS in Wales – Designing, Constructing and Maintaining Water Drainage Systems (2018).
- 9.3.8 However, regardless of size, there will still be an expectation that sustainable drainage methods are incorporated into a scheme where practicable. Policy CC1 therefore, seeks to ensure that development below the SAB size threshold noted above also implement the effective management of surface water drainage through SuDS features.
- 9.3.9 TAN 15 notes that SuDS manage rainfall in a similar way to natural processes, making use of the landscape and vegetation to control the flow and volume of surface water. They offer a variety of engineering solutions that can be employed to manage surface water run-off, recognising there are differences in soil structure, water table levels and infiltration rates across Wales. The Statutory Standards for Sustainable Drainage establish a hierarchical approach to drainage with priority given to surface water runoff collected for use, then infiltrated to ground followed by discharged to a surface water body. Drainage to a surface water sewer or combined sewer should only be used in exceptional circumstances and only once natural options have been excluded for valid reasons. SuDS can include green roofs, rainwater harvesting systems, soakaways/infiltration systems, permeable surfaces, detention basins and swales.
- 9.3.10 As the SuDS process is independent of the planning process, developers are strongly advised to consider planning and SuDS requirements in combination and as early in the design process as possible, as the implementation of SuDs across the site will influence the layout and masterplan. In this regard, early engagement with the SAB should be prioritised. SuDs features on sites over 100m² will be enforced through SAB Legislation. For proposals smaller than 100m², planning conditions and obligations will be used to ensure SuDS implementation. In order to provide effective drainage in the long term, developers will need to make arrangements for the future maintenance of SuDS and water courses associated with the development.

9.4 **Renewable and Low Carbon Energy Generation**

- 9.4.1 It is widely recognised that the planning system plays a key role in reducing carbon emissions and facilitating the infrastructure to generate renewable and low carbon sources of energy. Both Future Wales and PPW12 set out the requirements for clean growth and the decarbonisation of energy, including national and local policy aspirations:
- Environment (Wales) Act (2016) – requirement to achieve an 100% reduction in carbon emissions by 2050 (Updated March 2021).
 - In March 2021, Welsh Government announced a commitment to achieve a **Net Zero Wales by 2050** following a recommendation report by the Climate Change Committee (CCC).
 - Welsh Government targets specifically related to **local energy generation and ownership**:
 - Wales to generate electricity to 70% of its consumption from renewable sources by 2030;
 - 1 GW of renewable electricity and heat capacity in Wales to be locally owned by 2030, increasing to 1.5GW by 2035; and
 - New energy projects to have at least an element of local ownership.
- 9.4.2 To ensure this role is fulfilled, PPW12 places a requirement on planning authorities to develop an evidence base to inform the development of renewable and low carbon energy policies. The Welsh Government’s Practice Guidance: Planning for Renewable and Low Carbon Energy – A Toolkit for Planners (Sept 2015) is advocated within PPW12 as an acceptable methodology for developing an evidence base to inform spatially based renewable energy policies and allocations for inclusion within the RLDP. The Carbon Trust has worked with the Council to undertake a Renewable and Low Carbon Energy Assessment (RLCEA) in line with the Toolkit requirements. Full details of the evidence base are set out in the Renewable Energy Background Paper.
- 9.4.3 The Council is in the process of preparing a Local Area Energy Plan (LAEP) which considers the whole energy system in the County and the potential ways to move towards a net zero carbon energy system. This is broader than the work covered within in the RLCEA which addresses specific land use requirements set out in PPW12 for inclusion in the RLDP. However, the two are linked and work is ongoing to ensure the two align where appropriate.
- 9.5 **Local Search Areas**
- 9.5.1 The RLCEA undertook a high-level constraints assessment of the County to identify areas that could be considered as potential Local Search Areas for wind or ground mounted solar PV development. It concluded that there is limited potential for wind development and that solar power had the greatest potential for contributing to renewable energy provision in the County. However, this resource reduces significantly when Best and Most Versatile Agricultural Land is excluded, with the remaining ‘less constrained’ areas being sparse, distinct land parcels distributed throughout the County rather than broad areas. Therefore, given the prevalence of high-quality agricultural land in the County, the RLDP does not allocate Local Search Areas for either wind or solar resources. Proposals for renewable energy generation schemes of less than 10MW will be considered on a case-by-case basis having regard to national planning policy and the requirements of criteria-based policy CC4 and other relevant policies of the Plan.

9.6 Renewable Energy Allocation

9.6.1 As part of the Council's ongoing decarbonisation aspirations, Land at Raglan Enterprise Park has been identified as having potential for a ground mounted solar development. This provides an opportunity to contribute to local and national renewable energy targets as well as potentially providing a direct-access energy source to adjoining existing and proposed employment uses. The proposal would be subject to satisfying detailed planning considerations including CC3 – Renewable Energy Generation.

Policy CC2 – Renewable Energy Allocation

Approximately 16 ha of Land at Raglan Enterprise Park, Raglan is identified as having potential for a ground mounted solar development, subject to detailed planning considerations. Opportunities for direct-access use should be fully explored and utilised as part of the proposal.

9.7 Renewable and Low Carbon Energy Generation

Policy CC3 – Renewable Energy Generation

Renewable and low carbon development proposals, inclusive of associated infrastructure, which contribute to meeting national and local renewable and low carbon energy efficiency targets will be permitted where:

- a) A sequential approach to site selection has been followed to demonstrate that any reasonable alternatives have been considered;
- b) Off-grid connection opportunities have been fully explored in addition to grid connection;
- c) There are no unacceptable cumulative impacts in combination with existing or consented development;
- d) There are no unacceptable adverse impacts upon the landscape, townscape and historic features and there is compliance with Policy LC1, with regard to protection and enhancement of landscape character;
- e) There are no unacceptable adverse impacts on biodiversity;
- f) There are no unacceptable adverse impacts on the amenities of nearby residents by way of noise, dust, odour or increases in traffic including construction and decommissioning stages;
- g) When the technology is no longer operational there is a requirement to decommission, remove the facility and complete a restoration of the site through an agreed restoration strategy;
- h) The wider environmental, economic, social and community benefits directly related to the scheme outweigh any potentially adverse impacts; and
- i) The distinct identity of Monmouthshire will not be compromised.

- 9.7.1 Proposals for large scale energy development are classed as Development of National Significance and are determined by Welsh Ministers. Large scale energy developments include:
- All on-shore wind generation over 10 megawatts; and
 - Other renewable energy generation sites with generating power between 10 megawatts and 350 megawatts.
- 9.7.2 Future Wales' spatial priority is for large scale wind energy developments to be directed towards Pre-Assessed Areas for Wind Energy (as shown on associated Map within Future Wales). There are no Pre-Assessed Areas for Wind Energy identified within Monmouthshire.
- 9.7.3 Proposals below the threshold for Development of National Significance are determined by local planning authorities. PPW12 and other national guidance documents³² set out national policy on site selection considerations including impact on Best and Most Versatile Land and biodiversity and ecological networks. In addition to PPW12, Policy CC3 sets out the criteria by which proposals for renewable and low carbon energy schemes of 10MW or less will be assessed, seeking to balance the protection of the County's unique natural and built assets and the amenities of residents and visitors with the need to reduce carbon emissions and encourage zero carbon technologies. The impact of associated infrastructure will also be assessed as part of the proposal and should be minimised with preference given to locating schemes close to the grid connection or direct use options.
- 9.8 **Renewable Energy Targets**
- 9.8.1 The Renewable and Low Carbon Energy Assessment (RLCEA) also considers the contribution that Monmouthshire County Council is potentially able to make towards the national energy targets mentioned in paragraph 8.4.1 above. A range of potential renewable energy sources were considered as part of the RLCEA. However, due to factors such as a relatively small resource, infrastructure restrictions or long-term contracts in place for dealing with waste, the RLDP only sets targets for ground mounted solar, onshore wind, rooftop solar PV and heat pumps. Renewable energy sources that do not have targets are encouraged and open to consideration as part of the planning application process and will be noted as part of the monitoring process.
- 9.8.2 Table 3 sets out the targets for ground mounted solar and onshore wind. These are resource-based targets consistent with national planning policy. A low and more ambitious target has been prepared reflecting competing land uses and other constraints such as landscape impact, grid capacity and high-quality agricultural land.
- 9.8.3 Table 3 also sets out targets relating to roof mounted solar generation and installation of heat pumps. These targets align with the RLDP growth levels and the Council's commitment to deliver net zero homes in relation to new allocations.

³² Planning implications of renewable and low carbon energy development and the Minister for Climate Change Letter – BMV and solar PV arrays March 2022

Table 3 – Renewable Energy Targets

Resource Based Target									
Energy Technology	Estimated Maximum Theoretical Resource		Current Installed Capacity		Low Target (inclusive of current installed capacity)		High Target (inclusive of current installed capacity)		Comments
Power									
	MW	MWh p.a	MW	MWh p.a.	MW	MWh p.a.	MW	MWh p.a	
Onshore Wind	32	76,000	0.3	700	3	7,000	6	14,000	2 – 4 small turbines
Ground Mounted Solar (excl. BMV land)	1,887	1,653,000	35	31,000	94	82,000	189	165,564	Equivalent to 165 or 331 ha
Target Aligned with RLDP Growth Strategy									
					Low Target (new allocations only)		High Target (new allocations only)		
					MW	MWh p.a.	MW	MWh p.a.	
Roof Mounted Solar PV (realigned with the RLDP growth rates)	Targets relate to new development only, linked to the RLDP growth strategy.				10	9,000	15	13,000	Approximately 2,500 – 3,000 homes and suitable employment
Total Power				43,7000	107	98,000	210	178,564	
Heat									
Heat Pumps (realigned with the RLDP growth rates)	Targets relate to new development only, linked to the RLDP growth strategy.				30	53,000	40	70,000	Approximately 2,500 – 3,000 homes and suitable employment
Total Heat				6,000	30	53,000	40	70,000	
Total Heat and Power				49,7000	137	151,000	250	248,564

10. **Green Infrastructure, Landscape and Nature Recovery**

- 10.1.1 Monmouthshire has significant and distinctive green infrastructure (GI), landscape, biodiversity and nature resources, a number of which are of international and national importance, as well as numerous locally designated sites. The need to protect, enhance and manage these resources are key objectives of the RLDP, Future Generations and Well-being Act, Monmouthshire's Community and Corporate Plan as well as Monmouthshire's Climate and Nature Emergency Strategy.
- 10.1.2 There is clear national policy guidance and legislation with regard to maintaining and enhancing GI, landscape character and nature recovery. Future Wales 2040 Policy 9- 'Resilient Ecological Networks and Green Infrastructure' and Chapter 6 of PPW12 both respond to Section 6 Duty of the Environment (Wales) Act 2016.

Net Benefit for Biodiversity

- 10.1.3 The Environment (Wales) Act 2016 introduced an enhanced Biodiversity and Resilience of Ecosystems Duty (Section 6 Duty) on public authorities in Wales. This places a duty on the Council to seek to maintain and enhance biodiversity by ensuring development does not cause any significant loss of habitats or populations of species and must provide a net benefit for biodiversity and improved ecosystem resilience.
- 10.1.4 PPW12 notes that the broad framework for implementing the net benefit for biodiversity and building resilience through the planning system will include addressing five key themes of ecosystem resilience: Diversity, Extent, Condition, Connectivity and Adaptability to Change (DECCA).

Section 7 Habitats and Species

- 10.1.5 Section 7 of the Environment (Wales) Act 2016 requires Welsh Ministers to publish and maintain a list of habitats and species that are regarded as ‘principal importance’ for the purpose of building ecosystem resilience and maintaining and enhancing biodiversity in relation to Wales. These lists are referred to as S7 habitats and species and are afforded additional protection under this legislation.

Green Infrastructure Assessments

- 10.1.6 Section 6 Duty and PPW12 also set out that development proposals must adopt a proactive placemaking approach to delivering multi-functional green infrastructure and ecosystem resilience, and this is required to be demonstrated through Green Infrastructure Assessments. GI assessments should undertake an evidence base step wise approach addressing the DECCA themes to inform the design and implementation of projects. Guidance on GI assessments and the step wise approach can be found in PPW12, as well as NRW Area Statements and MCC has also undertaken a GI strategy and Local Nature Recovery Action Plan, which should be part of the evidence base to inform GI assessments.

Area Statements

- 10.1.7 The Environment Act (Wales) 2016 introduced a requirement to produce an Area Statement for South East Wales, which NRW published in March 2020. The overarching focus for the Area Statement is to review the way in which natural resources are managed and used, support ecosystem services and build resilience through four themes; Linking Landscape, Climate Ready Gwent, Healthy Active Connected and, Ways of Working. The RLDP will have regard to the Area Statement.

Wales, Regional and Local Nature Recovery Action Plans

- 10.1.8 The Wales Nature Recovery Action Plan (NRAP) is a broad guide to deliver Welsh Government outcomes to benefit nature recovery on a national scale. At a regional scale The Resilient Greater Gwent project delivered in the Greater Gwent Nature Recovery Action Plan (GGNRAP) provides a framework to drive change at the regional scale and to support organisations to work together. Monmouthshire’s Local NRAP will translate these objectives to local scale and aims to provide achievable actions to help reverse the decline in biodiversity and build ecosystem resilience in Monmouthshire.
- 10.1.9 Policy S5 seeks to ensure that development proposals adopt this proactive placemaking approach set out in national policy, Area Statements and NRAPS and that all those participating in the planning process follow evidence based Green Infrastructure Assessments and the step wise approach outlined in PPW12 and The Environment (Wales) Act 2016 in order to deliver GI and landscape benefits and assist in nature recovery and ecosystem resilience.

Strategic Policy S5 – Green Infrastructure, Landscape and Nature Recovery

Development proposals will adopt a strategic and proactive placemaking approach. An evidence based Green Infrastructure Assessment and step wise approach will inform design and long-term delivery of a multifunctional landscape; capable of delivering a wide range of social, economic, environmental, health and well-being benefits for local communities and the County as a whole, including climate change action, net benefit for biodiversity and ecosystem resilience.

Development proposals must:

Maintain, protect and enhance the integrity and connectivity of Monmouthshire's green infrastructure, landscape, biodiversity, access and heritage assets through the following key functions:

- i) Greenspace provision, connectivity and enjoyment by ensuring the creation of accessible multifunctional interconnected spaces and routes that offer opportunities for recreation and health and well-being;
- ii) Landscape setting and quality of place, by identifying, assessing, protecting and enhancing the natural and distinctive landscape, historical, cultural, ecological and geological heritage, including natural and man-made elements associated with existing landscape character;
- iii) Biodiversity and resilient ecosystems by protecting, assessing, positively managing and enhancing biodiversity and geological interests, including designated and non-designated sites, protected and priority species and their habitats, and the ecological connectivity between them;
- iv) Sustainable energy use;
- v) Local food production; and
- vi) Flood attenuation and water resource management.

10.2 Green Infrastructure

10.2.1 Green infrastructure (GI) is defined as “the network of natural and semi-natural features, green spaces, rivers and lakes that intersperse and connect places”. GI is inclusive of natural or man-made wetland, freshwater and coastal elements that are often referred to as Blue Infrastructure. At a landscape scale GI can include ecosystems such as uplands, valleys, wetlands, river corridors, canals and coastlines. At a local and smaller scales, it could include fields, woodlands, hedges, ponds, natural green spaces, parks, gardens, designed sustainable drainage systems, street trees, verges, PROW and other environmental features within urban and rural settings which provide benefits for the economy, local people and nature recovery.

10.2.2 GI plays a fundamental role in sustainable energy use through efficient building and site design and construction. Concepts such as green roofs and planting of particular species to facilitate appropriate shading and cooling reinforce the role GI can play in reducing carbon emissions and providing opportunities for climate change adaptation such as flood attenuation and water resources management. The Council's Climate and Nature Emergency Strategy and Supporting Action Plans also recognise GI as a mechanism for addressing climate change action and mitigation and is also addressed in Strategic Policy S4 – Climate Change.

- 10.2.3 GI can enhance Monmouthshire's strong rural and agricultural economy. Support for local food production and rural diversification opportunities could include the design and management of food production, space for community food growing, allotment provision, planting in public realm spaces and providing for pollinating insects.
- 10.2.4 In accordance with Strategic Policy S5, Policy GI1 seeks to ensure that development proposals maintain, protect and enhance the integrity and connectivity of Monmouthshire's multifunctional GI.

Policy GI1 – Green Infrastructure

Development proposals will be expected to maintain, protect and enhance the integrity and connectivity of Monmouthshire's diverse GI network by:

- a) Undertaking an appropriate GI asset and opportunities assessment and step wise approach based on the scale and complexity of development to inform development proposals. All major development proposals will be required to submit a GI Assessment.
- b) Ensuring that existing GI assets are protected, retained and integrated into new development. Where loss of GI is unavoidable, in order to secure sustainable development, appropriate mitigation and/or compensation of the lost assets will be required.
- c) Incorporating new and /or enhanced GI of an appropriate type, standard and size. Where on-site provision of GI is not possible, contributions will be sought to make appropriate provision for GI off-site.

A GI Statement must be provided with all planning applications. The statement will be proportionate to the scale, nature and complexity of the development proposed and will describe how GI has been incorporated into the proposal. The GI Statement will need to demonstrate how a step wise approach as outlined in chapter 6 of PPW12 has been applied.

- 10.2.5 In line with national policy all developments will be required to submit a GI assessment or GI statement, depending on the nature/scale of the development proposal.
- 10.2.6 All developments should be planned in a way to enhance and integrate existing GI assets within development proposals and ensure they maximise ecosystem services and resilience and consider connectivity to wider GI and complimentary networks. This should be considered through integration and enhancement of PROWs, cycle routes, green space and blue/green corridor connectivity and land management activity that supports enhancements to habitat and climate change adaptation.
- 10.2.7 Development proposals should be informed by the GI priorities and principles identified in GI assessments, MCC's GI Strategy and MCC's GI SPG. The GI SPG will provide further advice on GI implementation and methodology as well as the content and delivery of GI assessments and GI statements.

MCC GI Strategy

- 10.2.8 The Council's GI strategy provides an overarching framework for positive actions by all stakeholders involved in the future protection, management and enhancement of GI in Monmouthshire and provides a delivery mechanism for actions set out in the Climate and Nature Emergency Strategy and Community and Corporate Plan and sets out key objectives and priorities for guiding the planning management and delivery of GI in Monmouthshire. It also forms part of the baseline evidence to help inform the Strategic Regional Green Infrastructure for Gwent delivered through the Gwent Green Grid Partnership, as well as a positive and proactive approach to the management of Monmouthshire's GI assets in tandem with the RLDP's strategy.

Trees, Woodland and Hedgerows

- 10.2.9 Trees, woodland and hedgerows are an integral part of features which contribute to Monmouthshire's local GI assets. National policy set out in PPW12 and TAN 5 refers to how important trees and woodlands are to biodiversity and their significance in connecting habitats for resilient ecological networks.
- 10.2.10 Policy GI2 therefore will protect trees, hedgerows, groups of trees and areas of woodland where they have ecological value, contribute to the character or amenity of a particular locality or perform a beneficial GI function. Where appropriate, Tree Preservation Orders (TPOs) or planning conditions will be used to protect important trees and woodland groups.

Policy GI2 – Trees, Woodland and Hedgerows

Development proposals that would adversely impact on trees, woodland and hedgerows that are either a public amenity, of cultural heritage, provide important ecosystem services, are protected, or significantly contribute to GI connectivity will not be permitted.

Where trees, woodland and hedgerows are present, development will only be permitted where they are informed by appropriate surveys, assessment and plans to identify and inform biodiversity, GI and landscape value, methods for retention, integration, protective mitigation and long-term protection through maintenance and management.

If removal and/or damage is necessary, a scheme for replacement trees, woodland or hedgerows must be agreed as part of the development proposal design and will be subject to the minimum planning ratios as set out in National Policy.

- 10.2.11 Development proposals on sites containing, or that will impact on trees, woodland and hedgerows that may be affected by the development will be required to undertake a detailed assessment and mitigation in accordance with 'BS 5837:2012 Trees in relation to design, demolition and construction' and 'BS 8545:2014 Trees: from nursery to independence in the landscape' or any subsequent replacement to that guidance.
- 10.2.12 Trees, woodland and hedgerows contribute to biodiversity, landscape character and carbon capture. Permanent removal of trees, woodland and hedgerows will only be permitted where a step wise approach has been followed and significant and clearly defined public benefits shall be achieved through the development proposal. Where loss is unavoidable a developer will be

required to provide compensatory planting at a ratio equivalent to the quality, environmental and ecological importance of the trees and hedgerows lost, preferably on site allowing for unconstrained growth. PPW12 provides ratios for compensation and should be referred to accordingly.

- 10.2.13 This policy will also be supported by an SPG on Trees, Woodlands and Hedgerows which will be prepared to provide guidance on assessment and implementation. This will include details on canopy cover in Monmouthshire from NRW's tree canopy cover assessment.

10.3 **Landscape Character**

- 10.3.1 Monmouthshire benefits from major landscape resources and areas of visual quality and is home to internationally and nationally designated landscapes. These provide significant environmental, economic, cultural, and social benefits and help to create a sense of place. The County's key landscape attributes range from exposed upland moorlands in the northwest, to well-wooded central lowlands interspersed with good quality agricultural land, diverse river catchments, and the historically and ecologically unique coastal landscape to the south.

- 10.3.2 The RLDP will seek to protect, maintain and enhance Monmouthshire's landscape setting and quality of place as set out in Strategic Policy S5 and development management policies LC1, LC2, LC3, L4 and LC5. These development management policies specifically protect the internationally designated Blaenavon Industrial Landscape World Heritage Site (WHS), the Bannau Brycheiniog National Park (BBNP), which is also a Dark Skies Reserve, and the Wye Valley National Designated Landscape Area of Outstanding Nature Beauty (AONB). Other landscape features which contribute to Monmouthshire's distinctive character will also be afforded appropriate levels of protection and their significance highlighted using NRW's LANDMAP³³ process.

- 10.3.3 Policy LC1 seeks to ensure that proposals for development protect, conserve and enhance Monmouthshire's landscape character as defined by LANDMAP Landscape Character Assessments. Proposals that would adversely affect the landscape character will not be permitted.

Policy LC1 – Landscape Character

Development proposals that would impact upon landscape character, as defined by LANDMAP, must demonstrate through a landscape assessment how landscape character has influenced their design, scale, nature and site selection.

Development will be permitted provided it would not have an unacceptable adverse effect on the special character or quality of Monmouthshire's landscape in terms of its visual, historic, geological, ecological or cultural aspects by:

- a) Causing significant visual intrusion;

³³ LANDMAP is a GIS based landscape resource developed by NRW where landscape characteristics, qualities and influences on the landscape are recorded and evaluated in a nationally consistent data set.

- b) Causing significant adverse change in the character of the built or natural landscape;
- c) Being insensitively and unsympathetically sited within the landscape;
- d) Introducing or intensifying a use which is incompatible with its location;
- e) Failing to harmonise with, or enhance the landform and landscape;
- f) Losing or failing to incorporate important traditional features, patterns, structures and layout of settlements and landscapes of both the built and natural environment; and /or
- g) Respecting dark skies.

Particular emphasis will be given to those landscapes identified through the LANDMAP Landscape Character Assessment as being of high and outstanding quality because of a certain landscape quality or combination of qualities.

10.4 Landscape Character Assessments

10.4.1 Development proposals should be informed by an appropriate Landscape Character Assessment which considers the effect of development, and cumulative impact where appropriate, on landscape, historic and urban features, character, qualities and capacity to absorb change. Examples may include Landscape and Visual Impact assessments (LVIA), Assessment of the Significance of the Impact of Development on Historic Landscape (ASIDOHL) and Town Visual Impact Assessment (TVIA).

10.4.2 LANDMAP data should be used as a basis for more detailed landscape assessments and this information along with other studies should provide part of the evidence base regarding landscape, to ensure that development proposals are informed by and reflect the distinctive character, qualities and sensitivities of the area. Other such studies include Monmouthshire's Landscape and Sensitivity Capacity Study.

10.4.3 An updated Landscape and Sensitivity Capacity Study to inform the RLDP has been undertaken. The update takes account of development that has occurred since the adoption of the current LDP and assesses key areas submitted at the Stage 1 Call for Candidate Sites. This work focuses on the Primary, Severnside and Secondary settlements and provides an opinion on the least sensitive areas in terms of landscape in these settlement areas for residential growth potential. The RLDP growth and spatial strategy has been informed by this Landscape Sensitivity Capacity update assessment.

10.5 Blaenavon Industrial Landscape World Heritage Site

10.5.1 This policy specifically seeks to protect the Blaenavon Industrial Landscape World Heritage Site (BILWHS) and its setting from inappropriate development in order to maintain its unique historic character and values (as set out in the BILWHS Management Plan).

Policy LC2 – Blaenavon Industrial Landscape World Heritage Site

Development within or, in the vicinity of, the Blaenavon Industrial Landscape World Heritage Site (BILWHS) will only be permitted where it would:

- a) Preserve or enhance the landscape setting and character as defined through the LANDMAP process;
- b) Have no serious adverse effect on significant views into and out of the World Heritage site;
- c) Promote the standards of design in terms of distinctiveness, siting, mass, scale and materials that are sympathetic to, preserve or enhance the character of the local area.

Development that would cause unacceptable harm to the outstanding universal values and unique character as set out in the BILWHS Management Plan that justify the designation of the World Heritage Site, or its setting, will not be permitted.

10.5.2 In November 2002, an area of 33 sq km at Blaenavon was designated as a World Heritage Site due to its outstanding international importance. This area is one of the finest surviving examples of a landscape created by coal mining and iron making in the late eighteenth and nineteenth centuries. The town of Blaenavon lies within the designated area and its surrounding landscape includes a range of Scheduled Ancient Monuments, many Listed Buildings, Conservation Areas and Sites of Special Scientific Interest.

10.5.3 A small part of the site, 20 hectares, lies within the Monmouthshire Plan area to the southwest of Llanfoist. The designation creates an international obligation to protect and conserve the world heritage values of the site. Although no additional statutory controls are imposed through the designation, it does highlight the outstanding importance of the site as a material consideration to be taken into account in the determination of planning applications.

10.5.4 Development proposals within, or affecting the setting of, the World Heritage Site should have regard to LANDMAP and the BILWHS Management Plan. All proposals must seek to conserve and enhance the unique historic character and special qualities of the landscape.

10.6 National Parks and National Landscapes

10.6.1 PPW12 requires development plan policies to favour the conservation of the natural beauty of National Parks and National Landscapes (AONBs), although it is recognised that regard should be had to the economic and social well-being of such areas. National guidance also states that National Parks and National Landscapes (AONBs) are of equal status in terms of landscape and scenic beauty and that both must be afforded the highest status of protection from inappropriate developments.

10.7 Bannau Brycheiniog National Park

- 10.7.1 Policy LC3 seeks to protect the setting of the Bannau Brycheiniog National Park (BBNP) from inappropriate development in order to maintain its unique character and special landscape qualities.
- 10.7.2 Although there are 12,000 hectares of National Park within the County, its planning is controlled by the Bannau Brycheiniog National Park Authority. Notwithstanding this it is recognised that the BBNP provides an important backdrop to the Abergavenny area and wider landscape character of Monmouthshire protecting its setting from encroachment by inappropriate development.
- 10.7.3 The BBNP is also recognised as having an International Dark-Sky Association (IDA) designation. A dark sky is an area where the night sky is relatively free from artificial light and it therefore it is important to protect this dark sky reserve in areas in close proximity to the BBNP.

Policy LC3 – Bannau Brycheiniog National Park

Development in the vicinity of the Bannau Brycheiniog National Park will only be permitted where it would:

- a) Preserve or enhance the landscape setting, as defined through the LANDMAP process;
- b) Have no serious adverse effect on significant views into and out of the National Park.
- c) Have no adverse impact on the International Dark Skies Reserve designation.

Development that would cause unacceptable harm to the qualities that justify the designation of the Bannau Brycheiniog National Park or its setting will not be permitted.

- 10.8 **Wye Valley National Landscape (Area of Outstanding Natural Beauty)**
- 10.8.1 Policy LC4 seeks to protect the Wye Valley National Landscape (AONB) from inappropriate development in order to maintain its unique character, special landscape qualities and local distinctiveness.
- 10.8.2 The Wye Valley National Landscape (AONB) provides a range of benefits for Monmouthshire residents and visitors in terms of its visual amenity, cultural heritage and important habitats. Proposals for development within, or affecting the setting of, the National Landscape (AONB) should have regard to the strategic objectives and policy proposals set out in the Wye Valley National Landscape (AONB) Management Plan and seek to conserve and enhance the unique character and special qualities of the landscape.
- 10.8.3 Management of the National Landscape (AONB) is co-ordinated through the Wye Valley National Landscape (AONB) Management Plan, 2021-2026. The Plan sets out the vision and strategic objectives for the area in helping to conserve and enhance the outstanding landscape of the Lower Wye Valley.

Policy LC4 – Wye Valley National Landscape (AONB)

Within the Wye Valley National Landscape (AONB), any development must be subservient to the primary purpose to conserve and enhance the natural beauty of the area. In considering development proposals regard will be given to:

- a) The long term effect of the proposal, and the degree to which its nature and intensity is compatible with the character, purpose and overall management of the National Landscape (AONB);
- b) The degree to which design, quality and use of appropriate materials harmonise with the surrounding landscape and built heritage;
- c) The extent of the landscaping proposed;
- d) The need to protect features in the landscape identified as important through LANDMAP;
- e) The extent to which a proposed new building or use will generate additional traffic and the requirement for improvement of existing roads and lanes, including the surfacing of green lanes;
- f) The impact of the proposed development upon nature conservation interests.

Development proposals that are outside the National Landscape (AONB) but would detract unacceptably from its character and setting will not be permitted.

10.9 Dark Skies and Lighting

- 10.9.1 As a predominantly rural and relatively undeveloped area, Monmouthshire is sensitive to light pollution which can affect the tranquillity of the natural environment and can have a negative impact on landscape character and biodiversity. A large proportion of Monmouthshire's rural area has some of the darkest skies in Wales as evidenced in the NRW Tranquil Maps (2021) with the BBNP and Wye Valley National Landscape (AONB) falling within the two darkest night sky categories. As set out in Policy LC2, the BBNP is also recognised as having an International Dark-Sky Association (IDA) designation.
- 10.9.2 Nocturnal species such as bats have adapted to live in darkness to avoid competition and predation and will actively avoid lit areas. Sources of lighting which can have the potential to disturb biodiversity are not limited to street lighting or security lighting, but can also include, flood lighting, light spill via windows, and in some cases car headlights.
- 10.9.3 Proposals which might result in artificial lighting of habitat, important for bats or other biodiversity, will need to be accompanied by sufficient information to enable a full assessment of the proposal to be undertaken. The lighting strategy will need to retain key habitat features, with an appropriate buffer, in darkness with no illumination or glare. Appropriate mitigation measures will be sought to screen the glare and obtrusiveness of lighting from features identified as important for biodiversity and neighbouring countryside areas.
- 10.9.4 The built form can also be adversely affected by light pollution it is therefore important to protect the architectural and historic environment from insensitive lighting. Light spillage can

also impinge upon people's homes, infringing on privacy. Where lighting is located in or close to a residential property / area, the hours of illumination should be appropriately controlled.

10.9.5 Policy LC5 seeks to control the use of external lighting, light pollution and light spill from developments. While external lighting is essential for reasons of safety and security and is necessary for commercial use and some community and sports facilities, excessive and poorly designed lighting can cause light pollution and have cumulative and adverse effects on human health and well-being and biodiversity. In addition, lighting equipment itself can spoil daytime views.

10.9.6 Particular care will be given to lighting proposals in the open countryside, due to the need to protect the dark skies tranquillity, remoteness and landscape character of Monmouthshire's rural areas.

Policy LC5 – Dark Skies and Lighting

Development proposals involving external lighting must include appropriate lighting details and where proportionate a strategy to ensure:

- a) Lighting is necessary for the development;
- b) The proposed lighting and associated infrastructure is the minimum required;
- c) Light spillage is minimised;
- d) The prevention of glare and respect for the amenity of neighbouring land uses;
- e) The visual and landscape character of the built and natural environment is not unacceptably affected;
- f) In open countryside locations dark skies are retained;
- g) Potential adverse impacts on biodiversity and ecological connectivity are minimised; and
- h) Cumulative and in-combination lighting impacts are avoided.

10.10 Nature Recovery and Geodiversity

10.10.1 Monmouthshire is rich and diverse in nature resources, which is reflected in the range of international, national and local designations within the county, which include:

- **International** [statutory]: Special Protection Area (SPA), Special Areas for Conservation (SACs), Ramsar Sites
- **National**[statutory]: Sites of Special Scientific Interest (SSSIs), National Nature Reserves (NNRs)
- **Local** [non-statutory]: Local Nature Reserves (LNR), Local Wildlife Sites (LWS), Sites of Importance for Nature Conservation (SINCs) and Regionally Important Geodiversity Sites (RIGS)

International/National (Statutory) Sites and Protected Sites and Species

- 10.10.2 Proposals in statutory designated sites including SPA, SACs, SSSIs, NNRs or sites containing habitats that are irreplaceable as defined by PPW12, are as a matter of principle, unacceptable.
- 10.10.3 PPW12 and TAN 5 set out national planning policy for international and nationally designated sites and protected species. NRW should be consulted on proposals that may affect international / national sites and any protected species.
- 10.10.4 Consideration must also be given to the Conservation of Habitats and Species Regulations 2017 (as amended) in the context of both species protection and the potential impacts on sites in the National Site Network during the development management process. The Conservation of Habitats and Species Regulations 2017 also requires that development proposals likely to have a Significant Effect on a SPA or SAC are subject to an Appropriate Assessment.
- 10.10.5 Any development proposal that could have a significant effect on the integrity of a SAC, SPA or Ramsar site will not be in accordance with the development plan. This also applies to Functionally Linked Land, which is defined as habitat outside the designated site boundary that is fundamental to the ability of the designations to reach their Conservation Objectives. The parameters for this being specific to each designated site.
- 10.10.6 In line with the Habitats Regulations and in consultation with NRW, it will be necessary for project level assessments to be undertaken where there is a potential for significant effects on sites in the National Site Network.
- 10.10.7 In accordance with best available monitoring and evidence, guidance on specific SAC issues e.g. nutrients in SAC rivers which is relevant to development management procedures, is published by Welsh Government, NRW and where appropriate, Monmouthshire County Council.
- 10.10.8 A Habitats Regulations Assessment (HRA) in accordance with the Conservation of Habitats and Species Regulations 2017 (as amended) has been undertaken alongside RLDP to consider development plan level hazards, likely significant effects, and potential adverse impacts on protected sites in the National Site Network. Policy NR3 Severn Estuary European Marine Site has been developed in response to the recommendations of this assessment.

Locally Designated (Non-Statutory) Sites, Undesignated Sites and Protected Species

- 10.10.9 Development proposals affecting locally designated non-statutory sites, or undesignated sites that satisfy the relevant designation criteria, or Section 7 Habitats or Species, or Local Nature Recovery Action Plan habitats/species of importance, will be assessed against Policy NR1.
- 10.10.10 Non-statutory sites can form the core of a vital network of threatened habitats, play an essential role in protecting, maintaining, connecting, and restoring biodiversity and contribute to nature recovery and a net benefit for biodiversity. Guidance on Protection for Non-statutory Designations is included in PPW12. In accordance with Strategic Policy S5, Policy NR1 seeks to protect, positively manage and enhance Monmouthshire's biodiversity, ecosystems resilience and geological importance. It seeks to ensure that development proposals have regard to their impact on nature recovery and that provision for net benefit for biodiversity & ecosystem resilience is creatively incorporated into the design of development including siting, scale,

density, and other key considerations, such as reducing the spread and impact of invasive non-native species (INNS), to promote local priorities.

- 10.10.11 Guidance on maintaining and enhancing biodiversity is set out in PPW12 including the step wise approach to avoiding harm and delivery of net benefit for biodiversity. The approach includes avoiding damage, minimising damage, mitigating damage and restoring, providing compensation on-site, providing compensation off-site and the option for refusing applications where development is not appropriate.

Policy NR1 – Nature Recovery and Geodiversity

Where biodiversity or ecosystem resilience could be impacted by a development proposal, applications must be accompanied by an ecological survey and assessment of the likely impact of the proposal on locally designated site(s) and functionally linked land, species or habitat(s) and shall make appropriate provision for their safeguarding and delivery of net benefit for biodiversity.

Development proposals in sites containing protected species or habitats which are defined as irreplaceable by PPW12 are unacceptable.

Development proposals that are likely to damage a locally designated site of biodiversity and / or geological importance, or a site that satisfies the relevant designation criteria, or the continued viability of priority habitats and species, or Section 7 list of species and habitats, will only be permitted where:

- a) The need for the development clearly outweighs the biodiversity, ecosystem resilience or geological importance of the site; and
- b) It can be demonstrated that the development cannot reasonably be located elsewhere.

Where development addresses criteria a) and b), it will be expected that any unavoidable harm is minimised by effective avoidance measures and mitigation. Where this is not feasible, appropriate provision for compensatory habitats and features of equal or greater quality and quantity must be provided on-site and where not possible, off-site. Where appropriate, long-term management and maintenance of biodiversity must be secured.

Development proposals must deliver net benefit for biodiversity and ecosystem resilience and will be expected to:

- i) Maintain, incorporate, and enhance existing semi-natural habitats, linear habitat features, the ecological connectivity between them, other features of nature conservation interest and geological features. These must be safeguarded during construction work.
- ii) Incorporate locally appropriate, climate resilient, native, and local provenance vegetation in any landscaping or planting scheme, except where special requirements in terms of purpose or location may dictate otherwise.
- iii) Ensure the protection and enhancement of biodiversity and landscape resources through appropriate building design, site layouts, retention of dark corridors, landscaping techniques and choice of plant species.

iv) Where appropriate, make provision for on-going maintenance of retained or created nature conservation interests.

- 10.10.12 Proposals which may have an adverse effect on locally designated sites, protected or priority species and habitats, must be accompanied by sufficient information to enable a full assessment of the proposal to be undertaken. The need for such assessments will not be limited to development located within the designated areas, as significant effects may occur even if the proposed development is located some distance from the conservation interest.
- 10.10.13 A site subject to pre-emptive clearance, will be considered during the planning process as it was before clearance took place. In the absence of evidence to the contrary, it shall be presumed to have been in good ecological condition and the delivery of net benefit for biodiversity must be achieved from that presumed status.
- 10.10.14 Where development is permitted, appropriate planning conditions or obligations may be required to ensure suitable protection, monitoring, mitigation or compensation and favourable management.
- 10.10.15 Where the adverse effect on biodiversity and ecosystem resilience clearly outweighs other material considerations, the development should be refused.
- 10.10.16 This policy will be supported by SPG which will provide further information on the delivery of net benefit for biodiversity in Monmouthshire. The Monmouthshire Local Nature Recovery Action Plan (NRAP) shall be referred to accordingly to identify priorities for maintaining and enhancing biodiversity & ecosystem resilience in the County.

10.11 **Gwent Levels and Severn Estuary (European Marine Site)**

- 10.11.1 The Gwent Levels and Severn Estuary European Marine Site (EMS) are identified as a contiguous series of SSSI, SPA, Ramsar site, SAC and a Special Landscape of Historic Interest of Monmouthshire's coastal area. A number of locally designated SINCs have also been identified in the area for their valuable priority habitats. The Welsh National Marine Plan (WNMP) and Severn Estuary Shoreline Management Plan³⁴ identify key areas of priority for the management of the coastal area. National Policy should be referred to accordingly in relation to proposals that may affect coastal areas.
- 10.11.2 Future Wales 2040 identifies the Gwent Levels as one of nine National Natural Resource Areas and is integral in seeking to deliver the elements of the Nature Recovery Action Plan for Wales in response to climate change and national nature emergencies. The Gwent Levels Management Plan 2022 provides a vision and set of aims for its ongoing and future management. These are supported by a Gwent Levels Landscape Character Assessment and Gwent Levels GI Strategy.

10.12 **Severn Estuary European Marine Site (EMS)**

³⁴ Developed in partnership by local authorities, regulators and other stakeholders is a high level non-statutory policy document designed to assist coastal flood and erosion risk management planning.

- 10.12.1 Policy NR2 seeks to protect the Severn Estuary European Marine Site (EMS) within Monmouthshire, which is a recommendation from the RLDP's HRA. Evidence from the HRA has demonstrated that the EMS is subjected to regular disturbance by user groups, especially dog walkers, which generally have the biggest disturbance effect on features of the protected site.
- 10.12.2 Residential development, tourism development, sustainable transport infrastructure and development with the potential to impact Functionally Linked Land, could contribute to recreational pressure on the Severn Estuary features. Any development proposals that would increase visitor access to sensitive habitat features in the Severn Estuary SAC, SPA and Ramsar site, especially on to saltmarsh and mudflat habitat, will not be supported unless no adverse effect on the integrity of the sites can be confirmed.
- 10.12.3 A Core Recreational Catchment zone of 12.6km has been identified by the HRA to inform the RLDP. This indicates where new development might be required to make financial contribution to fund on-site SAC/SPA conservation measures, as part of strategic mitigation measures. This takes the form of a recreation mitigation and management strategy and would include a mixture of suitable alternative natural greenspace and strategic access management and monitoring measures.
- 10.12.4 Suitable alternative natural greenspace must be a key design consideration in the developments within 12.6km of the Severn Estuary with housing site allocation policies referring to provision. Supplementary Planning Guidance will provide further information on the mechanisms for delivery.
- 10.12.5 The Severn Estuary EMS Regulation 33 Guidance prepared by Natural England and Countryside Council for Wales (2009) remains the relevant guidance when considering effects on the integrity of the EMS.

Policy NR2 – Severn Estuary Recreational Pressure

Development proposals that would result in an increase in visitor pressure on features of the Severn Estuary SAC, SPA, Ramsar site, or Functionally Linked Land will not be supported unless it can be demonstrated that no adverse impact on the integrity of the European Marine Site will occur.

10.13 Protection of Water Sources and Water Environment

- 10.13.1 This policy aims to maintain and enhance the quality and quantity of water resources, including aquifers, rivers, canals, lakes, ponds, wetlands, ground waters, surface waters and other water features, which are important for a wide range of uses and for their intrinsic ecological and amenity value. Full regard must be had to the Water Framework Directive (WFD)³⁵ which sets

³⁵ Water Framework Directive (WFD)2000/60/EC has been the main law for water protection in Europe. It applies to inland transitional and coastal surface waters as well as groundwaters. It ensures an integrated approach to water management, respecting the integrity of whole ecosystems, including by regulating individual pollutants and setting corresponding regulatory standards.

out the requirements in relation to the water environment and requires good water quality status for all water bodies.

- 10.13.2 The Council, NRW and Dŵr Cymru Welsh Water all have a role to play in the protection and enhancement of the water environment. The Council will work collaboratively with NRW, DCWW and other appropriate organisations with regard to any proposal that is likely to affect water sources or quality.
- 10.13.3 Deteriorating water quality and quantity can affect the supply of water for domestic, industrial and agricultural based uses, water based recreation, fisheries, nature conservation and general amenity. Some new developments including housing or agricultural enterprises can lead to increased amounts of nutrients entering the river environment from additional wastewater or land management. Nutrient enrichment, also known as eutrophication, can alter the balance of plant species in our rivers causing significant ecological damage. Consequently, development will only be permitted where the Council, in consultation with NRW and other appropriate bodies is satisfied that suitable measures have been undertaken to protect water resources and will generally encourage initiatives that result in an improvement in those resources. Conversely, development that poses an unacceptable risk to water resources (including ground water and surface water) or features dependent on those resources will not be permitted.

Wastewater Infrastructure

- 10.13.4 Water quality can be improved through effective wastewater infrastructure provision. Dŵr Cymru Welsh Water (DCWW) is the sewerage undertaker for the County and has a general duty to provide the sewerage system. On this basis DCWW is currently committed to undertake improvements in Wastewater Treatment Works (WwTW) capacities, treatment levels and discharge quality through actions programmed secured through their Asset Management Programme (AMP) process.

Phosphate Water Quality in Riverine Special Areas of Conservation (SAC)

- 10.13.5 Following evidence of the environmental impacts of eutrophication and in particular the nutrient phosphates in Monmouthshire's rivers, namely the River Usk and River Wye, NRW has issued detailed planning guidance to ensure that the water quality of our rivers does not deteriorate any more.
- 10.13.6 Any proposed development that increases the volume of concentration of wastewater and is within the catchment areas of the River Usk and River Wye will need to evidence within a planning application that the development proposal is in accordance with the latest NRW guidance. Development proposals need to ensure they would not result in an unacceptable impact of the water quality of our SAC rivers.
- 10.13.7 In most cases there will be a requirement to connect to the public sewerage system. DCWW have confirmed that there is a firm commitment to secure improvements to their WwTW to reduce the amount of phosphates entering the water environment providing water quality improvement and capacity for new sustainable development.

Groundwater Source Protection Zones

- 10.13.8 Groundwater Source Protection Zones (SPZs) are defined by NRW as groundwater sources, such as wells, boreholes and springs that are used for public drinking water supply. The purpose of SPZs is to provide additional protection to safeguard drinking water quality and it is crucial we look after groundwater sources and take steps to minimise their risk of pollution. Certain types of proposed development with SPZ may have inherent risk of groundwater pollution, such as non-mains foul drainage systems. Development therefore that does not connect to the public sewer mains network in SPZs will not be acceptable.
- 10.13.9 A groundwater SPZ exists within Monmouthshire (covering the settlements Sudbrook, Portskewett, Caldicot, Crick, Caerwent, Llanvair Discoed and parts of Shirenewton) and is identified on the constraints map. All development proposals within the SPZ must be able to demonstrate that the proposal complies with sustainable resource management and that no contamination of the water supply will result from the development proposal.

Surface Water

- 10.13.10 Surface water should not connect to the public sewerage system. As set out in Strategic Policy S4 (Climate Change) and Policy CC1 (Sustainable Drainage Systems) the Council is committed to implementing a sustainable approach to surface water drainage and expects development to incorporate Sustainable Drainage Systems (SuDS) wherever possible. Further details of requirements for surface water management are set out in Policy CC1.
- 10.13.11 Development will only be allowed where provision is made for the necessary surface water infrastructure to protect water quality and capacity.
- 10.13.12 The provision of GI, including wetland habitats and woodland planting should be considered as flood attenuation solutions and as a measure to reduce surface water run-off. Where there are watercourses running through sites solutions should be found to leave the watercourse to run its natural course. New culverts, dams or impoundments should be avoided to maintain river connectivity which will benefit fish and other wildlife. Where there are existing impoundments, dams or culverts, solutions should be sought to have these removed and return the watercourses back to their natural state.

Policy NR3 – Protection of Water Sources and the Water Environment

Development, which may impact upon the water environment and associated land, will only be permitted where it:

- a) Would not harm or pose an unacceptable risk to the capacity or flow of groundwater, surface water or coastal water systems;
- b) Would not harm or pose an unacceptable risk to the quality and quantity of ground waters, surface waters, wetlands or coastal water systems including, where appropriate, their ecological and amenity value; and
- c) Where practicable and reasonable, improves water quality,

- 10.14 **Countryside Access**

- 10.14.1 Monmouthshire has an attractive and extensive countryside access network that consists of footpaths, bridleways, byways and restricted byways as set out in the Council's Countryside Access Improvement Plan 2020- 2030 (CAIP). There are over 2,164km Public Rights of Way (PROW), as well as permissive paths that support promoted routes such as the Wye Valley Walk, commons, Open Access, countryside sites, green and blue spaces.
- 10.14.2 Both PROW and associated permissive paths provide a gateway for visitors and residents to explore Monmouthshire's heritage, wildlife and landscapes. They support active travel, tourism, the local economy, provide safe routes and opportunities to access the open countryside and sustain and improve health and well-being. Only 11% of the network is either bridleways or restricted byways which can be used by walkers, cyclists and horse riders. This network is fragmented and limited; therefore it is the CAIP's objectives to improve countryside access and give more opportunities to access the outdoors near where residents live in line with the Wellbeing and Future Generations Act 2015 and complement the provisions of the Active Travel (Wales) Act and the Environment (Wales) Act.

10.15 **Public Rights of Way (PROW) Network**

- 10.15.1 Reflecting the objectives and vision of Monmouthshire's CAIP to improve countryside access, Policy PROW1 seeks to protect and enhance the County's PROW network.
- 10.15.2 It is recognised that the development of new residential, employment, retail, leisure and other sites provides an opportunity to improve and provide new links to the PROW network and this is also set out in the Plan's placemaking policies (S3, PM1 and residential allocation policies). Proposals should also explore the potential to incorporate bridleways into the development.

Policy PROW1 – Public Rights of Way

Any Public Rights of Way (PROW) affected by a development proposal will require retention or a successful Path Order to either move the PROW on to a suitable alternative or to extinguish the PROW. Any predicted adverse impacts on the character, safety, enjoyment and convenient use of a PROW must be mitigated.

Provision of additional routes where appropriate, will be sought in new developments with linkages to the existing network.

- 10.15.3 Monmouthshire County Council will use either planning conditions, planning obligations or informatives, where necessary to secure such protection or enhancements.
- 10.15.4 Development proposals that affect a PROW must include a plan accurately showing the existing routes so that the effect of the proposed development can be assessed.
- 10.15.5 The granting of planning permission for a development does not give permission to divert, extinguish or obstruct a PROW and is a separate permission to any legal consents that may be required in relation to diverting, changing or altering a PROW. Planning permission does not give authorisation for structures such as gates to be erected, or temporary or permanent closure or diversion. Where any kind of development which might affect a PROW is concerned, early contact with the relevant Public Rights of Way Team is recommended.

Infrastructure

11. Infrastructure Requirements

11.1.1 Adequate and efficient infrastructure is recognised in PPW12 as being crucial for economic, social and environmental sustainability. The RLDP recognises the need to ensure that appropriate infrastructure is already in place or can be provided to accommodate the level and locations of growth identified in the RLDP. The provision of a range of services and facilities is essential to delivering sustainable development and to meeting diverse community needs, and the provision of appropriate infrastructure will be supported by the Plan.

11.1.2 Infrastructure covers a range of services and facilities provided by public and private bodies and includes:

- Physical infrastructure such as transport facilities and related infrastructure (such as footpaths, cycleways), water provision and treatment, sewerage, flood prevention and drainage, waste disposal, power generation and supply, including renewables, digital infrastructure and telecommunications.
- Infrastructure such as schools, healthcare, transport services (including public transport), community buildings, community recycling facilities, sport and recreation facilities, open space, etc.
- Green and Blue Infrastructure (as detailed in Strategic Policy S5) such as woodlands, hedgerows, ponds, green spaces, designed sustainable drainage systems and trees.

11.1.3 Without appropriate investment to enable the provision of improved or new infrastructure, the proposed level of growth will be neither sustainable nor acceptable. New development will therefore be required to provide or contribute towards the provision of necessary infrastructure to enable it to be provided in a timely manner and to support sustainable development in Monmouthshire. Development will only be permitted when agreement has been reached between the relevant parties on the funding and programmed implementation of required provision in line with Policy S6.

11.1.4 Developers should consult and work with statutory undertakers and service providers to ensure that adequate provision is made for such infrastructure – this includes highways, utility services and surface water drainage and sewage disposal. Given Monmouthshire’s rural character, the provision of adequate digital infrastructure is key to enhancing the County’s economic and community connectivity and communication needs and reducing the need to travel.

11.1.5 Policy S6 will be delivered through the development management process. Planning contributions can be secured via agreements entered into under Section 106 of the Town and Country Planning Act 1990. Planning obligations are a means of seeking contributions from developers to enhance the quality of a development, provide community benefits and infrastructure, and mitigate any negative impacts that may arise as a consequence of the development. The Council will negotiate obligations where these are necessary, relevant to planning, directly related to the proposed development and reasonable in all other respects. Further guidance on the use of planning obligations is provided in PPW12 and Welsh Office

Circular 13/97 Planning Obligations. Supplementary Planning Guidance will be prepared to provide further detail on the Council's Planning Obligations policy.

- 11.1.6 An Infrastructure Delivery Plan has been prepared to accompany the RLDP (Appendix 8), which identifies the key infrastructure needed, anticipated timescales of delivery and potential funding streams to support the delivery of allocated sites. Appendix 8 sets out the key issues, constraints, policy and infrastructure requirements needed to deliver the Plans site allocations.
- 11.1.7 Where a viability assessment is deemed necessary, the Council will require applicants to provide detailed information and supporting evidence. The Council's policy requirements should be the starting point for viability appraisals with an expectation that land values will reflect these requirements. Where it is considered necessary to independently assess viability assessments, the costs will be borne by the developer.

Strategic Policy S6 – Infrastructure

Where existing infrastructure is inadequate to serve the proposed development, new or improved infrastructure and facilities must be provided as part of the proposed development to mitigate any likely adverse impacts. Where possible, infrastructure improvements should be provided prior to occupation. Where provision on-site is not appropriate, off-site provision, or a financial contribution towards it, will be sought.

Arrangements will be required towards the future management and maintenance of facilities provided, either in the form of initial support or in perpetuity, including the use of management companies where appropriate.

Planning agreements and obligations will be sought to secure improvements in infrastructure, facilities, services and related works, where they are necessary to make development acceptable. In identifying appropriate contributions, due regard will be paid to the overall development viability, including the cost of measures that are necessary to physically deliver a development and ensure that it is acceptable in planning terms. The requirements for such agreements/obligations will include consideration and appropriate provision of:

- Affordable housing
- Education facilities and/or required improvements
- Sustainable transport measures
- Transport infrastructure
- Recreation and leisure facilities including formal and informal open space
- Green and blue infrastructure
- Community and cultural facilities
- Welsh language including Welsh language facilities
- Ecological mitigation and enhancement
- Strategic utilities including water and sewerage infrastructure
- Waste management facilities
- Health infrastructure and/or facilities

In the event that viability considerations indicate that not all the identified contributions can be reasonably required, priority contributions will be determined on the basis of the

individual circumstances of each case. In the case of residential developments, priority will be given to the affordable housing requirement set out in Policy S7 unless there is an overwhelming need for the contribution, in whole or in part, to be allocated for other necessary purpose/s.

11.2 **Telecommunication, broadband and other digital infrastructure**

11.2.1 Electronic and digital infrastructure plays a pivotal role in maintaining the economic well-being in Wales, as well as being a social lifeline for many. Fast reliable broadband and telecommunication connections are therefore essential to meet the needs of communities. They also play an important role to both businesses, organisations and individuals, particularly when working from home which has become increasingly prevalent over recent years. PPW12 highlights this importance noting that it is a Welsh Government objective to offer fast and reliable broadband to every property in Wales and to support the deployment of mobile infrastructure across the Country. Furthermore, Future Wales outlines how digital communications infrastructure is vital to the future success and economic competitiveness of businesses, whilst supporting community and individual needs and requires new developments to include the provision of high-speed broadband infrastructure from the outset.

11.2.2 While many forms of electronic and telecommunications infrastructure are supported by extensive permitted development rights, Policy IN1 seeks to support any telecommunications and broadband infrastructure where it is required, while at the same time ensuring there are no environmental impacts or adverse impacts on residential amenity and/or the historic and natural environment.

Policy IN1– Telecommunication, broadband and other digital infrastructure

Telecommunication, broadband and other digital infrastructure proposals will be considered in light of technical and operational requirements and permitted where the following criteria are met:

- a) The development relates to planned development/provision of a wider network;
- b) The siting and appearance of the proposed apparatus and associated structures should seek to minimise impact on the visual amenity, character and appearance of the surrounding area and, the amenity of neighbouring residents;
- c) There would be no significant adverse impact on the built or natural heritage or, the historic environment. Particular care should be given in the Wye Valley National Landscape (AONB) and adjacent the Bannau Brycheiniog National Park (BBNP);

The application is accompanied by evidence of compliance with Government guidelines on health impacts of telecommunications infrastructure.

Where new apparatus/structures are proposed, the application is accompanied by evidence that explores opportunities to utilise existing buildings, masts or structures in the first instance, and provides justification of why the application location is necessary.

<p>Key Evidence</p>	<ul style="list-style-type: none"> • Infrastructure Delivery Plan • High Level Viability Assessment • Viability Assessments for Residential Site Allocations

12. **New Housing in Settlements**

12.1.1 Strategic Policy S2 sets out those settlements that will be the primary focus for new housing developments in the County. Settlement boundaries have been drawn around Primary and Secondary Settlements (Policy H1) and Main Rural Settlements (Policy H2). There will be a presumption in favour of new residential development within these boundaries, subject to detailed planning considerations. Policy S2 also identifies Minor Rural Settlements, which although have no development boundaries, small infill development may be acceptable, subject to detailed planning considerations (Policy H3). Outside of the defined settlement boundaries, open countryside policies will apply (Policies H4, H5 and H6).

12.1.2 It should be noted that in sewered areas all development will be required to connect to the mains sewer. However, it is recognised that some of the settlements identified in Policies S2, H1 and H2 do not have existing mains sewer infrastructure. Where connection to the sewer is not possible, non-mains sewerage drainage may be acceptable in some instances. If a development area falls within a groundwater Source Protection Zone (SPZ) then connection to non-mains sewer will not be acceptable due to risk to groundwater pollution.

12.2 **Residential Development in Primary and Secondary Settlements**

Policy H1 – Residential Development in Primary and Secondary Settlements

Settlement boundaries have been drawn for the following Primary and Secondary Settlements identified in Policy S2:

Primary Settlements

- Abergavenny (inc. Llanfoist)
- Chepstow
- Monmouth (inc. Wyesham)
- Caldicot (inc. Severnside area comprising of: Caerwent, Crick, Magor Undy, Portskewett, Rogiet and Sudbrook)

Secondary Settlements

- Penperlleni
- Raglan
- Usk

Within the settlement boundaries new build residential development / redevelopment or conversion to residential, or subdivision of large dwellings or reuse of accommodation, such as upper vacant floors in town centres for residential use, will be permitted subject to detailed planning considerations and other policies of the RLDP that seek to protect existing retail, employment, community uses and tourism.

12.2.1 Developments allowed under this policy will need to make provision for affordable housing in accordance with Strategic Policy S7.

12.2.2 The settlement of Crick does not have existing mains sewer infrastructure and is located within a groundwater Source Protection Zone (SPZ). As noted above connection to non-mains sewer will not be acceptable in an SPZ due to risk to groundwater pollution.

12.3 Residential Development in Main Rural Settlements

Policy H2 – Residential Development in Main Rural Settlements

Settlement boundaries have been drawn for the following Main Rural Settlements identified in Policy S2:

- Devauden
- Dingestow
- Little Mill
- Llandogo
- Llanellen
- Llangybi
- Llanover

- Llanvair Discoed
- Mathern
- Pwllmeyric
- Shirenewton/ Mynyddbach
- St Arvans
- Tintern
- Trellech
- Werngifford/Pandy

Within the Settlement Boundaries of Main Rural Settlements planning permission will be granted for new residential development/redevelopment, or conversion to residential, or sub-division of large dwellings, subject to detailed planning considerations, including no unacceptable adverse impact on village form and character and surrounding landscape, and other policies of the RLDP that seek to protect existing retail, employment, community uses and tourism.

- 12.3.1 National policy contained in PPW12 provides a firm steer that new development should be directed to existing urban areas where there is greatest potential for reducing the need to travel due to the co-location of houses, jobs, shops, services and public transport facilities. Conversely, there is a clear message that in general, development should not be located in countryside locations where the absence of such facilities would inevitably lead to an increase in the need to travel, particularly by the use of the private motor car. Given the high levels of need for affordable housing for local people in rural areas of Monmouthshire, the RLDP spatial strategy seeks to provide an appropriate amount of housing development in those villages that have reasonable access to services and/or public transport, identified as Main Rural Settlements in Strategic Policy S2.
- 12.3.2 Developments allowed under this policy will need to make provision for affordable housing in accordance with Strategic Policy S7.
- 12.3.3 The settlement of Llanvair Discoed does not have existing mains sewer infrastructure and is located within a groundwater Source Protection Zone (SPZ). As noted above connection to non-mains sewer will not be acceptable in an SPZ due to risk to groundwater pollution.

12.4 Residential Development in Minor Rural Settlements

Policy H3 – Residential Development in Minor Rural Settlements

In the following Minor Rural Settlements planning permission will be granted for minor small scale rounding off or infilling of a small gap between existing buildings, of no more than 1 or 2 dwellings, or residential redevelopment, or conversion to residential or sub-division of large dwellings, subject to detailed planning considerations, including no unacceptable adverse impact on village form and character and surrounding landscape, and other policies of the RLDP that seek to protect existing retail, employment, community uses and tourism.

Minor Rural Settlements:

- Bettws Newydd
- Broadstone /Catbrook
- Brynygwenin
- Coed y Paen
- Cross Ash
- Cuckoo's Row
- Great Oak
- Grosmont
- Gwehelog
- Llanarth
- Llanddewi Rhydderch
- Llandegveth
- Llandenny
- Llangwm
- Llanishen
- Llansoy
- Llantilio Crossenny
- Llantrisant
- Llanvair Kilgeddin
- Llanvapley
- Mitchel Troy
- Penallt
- Penpergwm
- The Bryn
- The Narth
- Tredunnock

12.4.1 Strategic Policy S2 also identifies Minor Rural Settlements. These are settlements that, because of their size, form and absence of community facilities would normally only be considered suitable for minor infilling or rounding off of settlements within or immediately adjoining that settlement without encroachment into the open countryside, and of a scale appropriate to its size and role, except for the possibility of affordable housing on exception sites, i.e. sites where development would not normally be allowed other than to provide affordable housing.

12.4.2 Developments allowed under Policy H3 will need to make provision for affordable housing in accordance with Strategic Policy S7.

12.5 **New Housing in the Open Countryside**

12.5.1 In accordance with PPW12, the RLDP seeks to strictly control and reduce the environmental impact of new dwellings in the open countryside of Monmouthshire. The RLDP defines 'open countryside' as those parts of the plan area lying outside defined Primary, Secondary and Main Rural Settlement Boundaries or the physical boundaries of Minor Rural Settlements. New build

dwellings in the open countryside will not be permitted unless justified by the types of developments noted in Policy S2 and OC1.

- 12.5.2 PPW12 and TAN 6: Planning for Sustainable Rural Communities, set out clear statements of national policy on housing in the open countryside, such as One Planet and rural enterprise dwellings, and therefore are not repeated here as separate policies. Proposals for new dwellings in the open countryside will be assessed against this national policy framework. Where new built development is justified / permitted in the open countryside, Policy OC1 New Built Development in the Open Countryside will also apply.

12.6 **Conversion / Rehabilitation of Buildings in the Open Countryside for Residential Use**

Policy H4 – Conversion / Rehabilitation of Buildings in the Open Countryside for Residential Use

The conversion / rehabilitation of a building in the open countryside for residential use will be permitted where all the following criteria are met:

- a) the form, bulk, materials and general design of the proposal, including any extensions, respect the rural character and design of the building;
- b) the proposal, including curtilage and access, is in scale and sympathy with the surrounding landscape and does not require the provision of unsightly infrastructure;
- c) rebuilding works, necessitated by poor structural conditions and / or the need for new openings in walls, should not involve substantial reconstruction, with structural surveys being required for marginal cases;
- d) the more isolated and prominent the building, the more stringent will be the design requirements with regard to new door and window openings, extensions, means of access, service provision and garden curtilage, especially if located within the Wye Valley National Landscape (AONB);
- e) buildings of modern and / or utilitarian construction and materials such as concrete block work, portal framed buildings clad in metal sheeting or buildings of substandard quality and / or incongruous appearance will not be considered favourably for residential conversion; and
- f) the building is capable of providing adequate living space within the structure. Only very modest extensions and ancillary buildings will be allowed having regard to the context and scale of the existing building and normal permitted development rights to extend further or to construct ancillary buildings will be withdrawn.

- 12.6.1 There has been considerable demand for the rehabilitation and conversion of barns and vacant rural buildings into residential units in Monmouthshire. Reflecting this trend, Policy H4 sets out strict controls to be applied in the consideration of such proposals in order to ensure that

the conversion /rehabilitation of buildings does not detract from the special qualities of Monmouthshire's open countryside.

- 12.6.2 It is important that any proposals for the conversion / rehabilitation of buildings in the open countryside for residential use conserve the character and quality of Monmouthshire's countryside and natural heritage value. Such proposals will only be permitted where they meet the criteria set out in Policy H4 and other relevant policies of the plan / national guidance. Proposals should be sympathetic to the rural setting in terms of the particular location, appropriate design and traffic considerations. Policy H4 will also be applied to proposals to extend buildings that have already been converted.
- 12.6.3 In terms of criterion e), the Council will need to be satisfied at the time of the original application that adequate ancillary garaging and storage space can be achieved for the dwelling in order to avoid pressure for further, possibly harmful, development at a future date. Out buildings will not normally be acceptable except where modest in size and sensitively located. Similarly, conservatories are not considered suitable for barn conversions.
- 12.6.4 The conversion of buildings for tourism related uses will be required to satisfy the Policy T1.
- 12.6.5 The criteria set out in Policy H4 will be expanded upon in Supplementary Planning Guidance.

12.7 Replacement Dwellings in the Open Countryside

Policy H5 – Replacement Dwellings in the Open Countryside

The replacement of existing dwellings in the countryside will be permitted provided that:

- a) the original dwelling
 - i) is not a traditional farmhouse, cottage or other building that is important to the visual and intrinsic character of the landscape;
 - ii) has not been demolished, abandoned its residential use or fallen into such a state of disrepair so that it no longer has the appearance of a dwelling;
- b) the design of the new dwelling is of a form, bulk, size and scale that respects its setting;
- c) the proposal does not require an unacceptable extension to the existing residential curtilage;
- d) the replacement dwelling shall be of similar size to the replaced; and
- e) any outbuildings should be modest in size and sensitively located and it can be demonstrated at the time of the original application that adequate ancillary garage and storage space can be achieved for the dwelling.

- 12.7.1 Policy H5 sets out detailed criteria to exercise control over replacement dwellings in the countryside in order to ensure that such development does not detract from the special qualities of the open countryside in Monmouthshire.
- 12.7.2 This policy seeks to retain those traditional dwellings that make a positive contribution to the County's rural character, and to ensure that replacement dwellings in the open countryside conserve the character and quality of Monmouthshire's countryside. A key consideration in

assessing the acceptability of proposals for replacement dwellings is visual impact in the landscape. It is important that replacement dwellings relate to a permanent, established and continuing residential use and that the scale/design (including residential curtilage) do not result in any greater impact on the character and quality of the area.

12.7.3 Policy H5 will be expanded upon in Supplementary Planning Guidance (SPG).

12.8 Extension of Rural Dwellings

Policy H6 – Extension of Rural Dwellings

In order to protect the character of the countryside, extensions to dwellings in the open countryside should be modest and respect or enhance the appearance of the existing dwelling. They will be required to:

- a) be subordinate to the existing building; and
- b) where the building is of a traditional nature, to respect its existing form, including the pattern and shape of openings, and materials.

12.8.1 This policy applies to proposals located outside of Tiers 1- 4 of the settlement hierarchy and aims to avoid over-extension of existing rural dwellings and the adverse impact that this has on the character / appearance of the open countryside. Large scale extensions can be particularly harmful if they result in the loss of the scale and character of traditional rural dwellings. Extensions will therefore be strictly controlled to limit their individual and cumulative impact. Proposals should ensure that the existing building remains the dominant form. The tendency to seek successive extensions to individual buildings will be restricted.

12.8.2 Policy H6 will be expanded upon in Supplementary Planning Guidance (SPG).

12.9 Specialist Housing

Policy H7 – Specialist Housing

Proposals for specialist housing development, and extensions to established specialist housing facilities, will be permitted within or adjacent to defined settlement boundaries where:

- a) There is safe and convenient access to shops, services, community facilities and public transport appropriate to the needs of the intended occupiers;
- b) It is appropriate for its intended residents and the neighbourhood in terms of form, scale and design, type and affordability of the accommodation, as well as the provision of support and care; and
- c) It meets the affordable housing requirements of Policy S7 where the development falls within Use Class C3.

12.9.1 PPW12 states that a mix of market and affordable housing types should be planned for including the housing requirements of older people and people with disabilities, which is more

commonly termed ‘specialist housing’. Specialist housing is intended to enable the occupants to live as independently as possible, but designed so that support can be provided on site. Specialist housing may be self-contained (C3 Use Class) or non-self-contained (C2 Use Class) and can be provided in a range of formats and can include:

- Age-restricted general market housing, generally aimed at those over 55, potentially with some shared amenities but without on-site support or care;
- Sheltered housing, typically purpose-built flats with some communal facilities, a warden and some support such as on-site assistance;
- Enhanced sheltered housing/assisted living, which will have additional services to enable people to retain independence;
- Extra care housing has additional care support for residents who may be less independent, and has access to medium to high level of care with 24- hour access to support services and registered care staff; and
- Residential care/nursing homes, for those with a high level of dependency and which have rooms within a residential building and provide a high level of care for daily living.

12.9.2 To ensure that residents of such housing are well integrated with the wider communities, sites for these facilities should be located within or adjoining defined settlement boundaries and accessible to a range of services and facilities, such as GP surgeries and shops.

12.10 Housing Mix

12.10.1 In accordance with national guidance new housing developments in both urban and rural areas should incorporate a mix of market and affordable house types, tenures and sizes to cater for the range of identified housing needs and contribute to the development of balanced communities. This includes specific consideration of the differing needs of our communities. National guidance also makes clear that policies can be included to meet challenges and particular circumstances evident in their areas. As set out in the key issues and challenges section, one of the most fundamental challenges facing Monmouthshire’s communities is housing affordability.

12.10.2 One of the core purposes of the RLDP is to provide urgently needed affordable housing within exemplar, mixed, sustainable and well-connected places, to assist in addressing the demographic and affordability challenges facing the County. A limited offer in terms of housing mix has implications for affordability. A range of homes, both in size and type is required to retain, attract and meet the needs of younger adult population age groups. While it is recognised that Low Cost Home Ownership (LCHO) can provide opportunities for first time buyers through starter homes, there is also a need to provide additional smaller market homes for those that do not meet the criteria of LCHO properties but cannot necessarily afford market homes in Monmouthshire.

12.10.3 While a range and choice of homes is needed to attract and retain younger age groups, it is recognised that there is also a requirement to meet the needs of an ageing population and those who want to live independently but require accessible or adapted accommodation. Policy H7 provides detail on specialist housing.

- 12.10.4 The provision of one, two and three bedroom homes comprising of flats, terraced and semi-detached house types will increase the choice of homes for single households, smaller families, young couples/mixed young households, as well as older households who would like to downsize. Bungalows and innovative single storey homes will be welcomed, where appropriate. It is expected that development proposals for sites of 10 or more homes should provide a range and mix of homes to assist in addressing the demographic and affordability challenges facing the County.
- 12.10.5 Policy H8 relates to all proposals of 10 or more homes that include market homes in their schemes, including site allocations. Priority will be given to the provision of small to medium size homes of 3 bedrooms or fewer. Proposals that predominately consist of large detached market properties of 4 bedrooms or more will not be supported. Homes should be designed so that they are flexible and responsive to the changing needs of the occupants over their lifetime.
- 12.10.6 The mix and tenure of affordable homes must be agreed with MCC's Housing and Communities Department and will be based on housing need, as set out in Policy S7 Affordable Housing.
- 12.10.7 Site promoters must take into account the most up to date housing evidence, as well as other relevant sources and demonstrate how they have considered housing mix in their proposals.

Policy H8 – Housing Mix

To assist in addressing the demographic and affordability challenges in Monmouthshire, development proposals of 10 or more homes must include a range and mix of house types, tenure and size, to be agreed by the Council.

Such development proposals must be accompanied by a statement setting out how the mix of market housing will assist in achieving balanced communities, including the site allocations included within the RLDP.

Affordable Housing

13. Affordable Housing

13.1.1 Good quality affordable homes are important in achieving poverty reduction, equitable prosperity and supporting the best start in life. A core RLDP objective is to deliver much needed affordable homes at pace and scale to help address inequality in both urban and rural communities. This reflects the aims of the Council's Community and Corporate Plan objectives ensuring our communities live in a fair and a safe place. The Council is committed to ensuring that 50% of the homes constructed on new site allocations will be for affordable housing.

Affordable Housing Target

13.1.2 The delivery of affordable homes across the County that seeks to address these issues is a key aim of the Plan, and an integral part of the general provision of housing in the RLDP. Economically viable and deliverable allocations will facilitate this aim and ensure communities have access to good quality affordable homes to meet a range of needs.

13.1.3 The Local Housing Market Assessment Refresh 2022- 2037 (LHMA)³⁶ (May 2024) estimates a net need of 453 affordable homes per annum for the Monmouthshire planning administrative area (excluding the BBNP area) for the first five years of the LHMA period (2022 – 2027), with a further 82 affordable homes per year for the remaining ten year period. The majority of the estimated affordable housing need relates to social rent accommodation (370 per year) with low cost home ownership (41 per year) and intermediate rent (42 per year) accounting for the remainder. This would represent an affordable housing requirement of 3,085 homes if extrapolated over the Plan period. This is not a realistic affordable housing target for the Plan and it is not expected to be as new development is only one of a variety of means of achieving a supply of affordable homes. However, as set out in Section 4 and the supporting text of Policy S1, affordable housing provision is a key issue for the County and forms an integral part of the overarching Strategy with 50% provision required on all new site allocations and sites of 20 homes and over within settlement boundaries (as identified in Tiers 1 – 3 of Policy S2).

13.1.4 The LHMA identifies the greatest social rent need is for one-bed homes. There is a particularly high need for one-bedroom social rent accommodation which has been influenced by the significant increase in homelessness presentations since the COVID pandemic. Although this need is particularly high, it is important to ensure that a mix of house types and tenures is provided on new developments in order to achieve balanced communities.

13.1.5 Monmouthshire has three Housing Market Areas (HMA) within its boundaries namely, Abergavenny, Chepstow and Monmouth, which are referenced within the LHMA³⁷ and should be referred to as appropriate.

³⁶ MCC Cabinet approved the LHMA Refresh 2022-2037 in May 2024 prior to submission to Welsh Government. The housing team are currently awaiting sign off from Welsh Government.

³⁷ The HMAs are not the same as the sub-market areas upon which the Council's viability evidence is based.

13.1.6 Prior to submission of any planning application, developers will be expected to liaise with the Council to agree the mix and tenure of units required to meet housing need. The Council will use the following definitions of affordable housing:

- **Social rented housing** – refers to homes let by Registered Social Landlords (RSLs) to households taken from the Council’s Housing Register who are eligible for social rented housing. The rents are set at Welsh Government benchmark levels.
- **Intermediate housing** – refers to homes for sale and rent where prices or rents are above social rent levels but below market levels. All of these will be provided through a RSL or the Local Authority.
- **Low Cost Home Ownership** – refers to homes purchased either at less than open market value or with some form of financial assistance or subsidy such as shared equity or shared ownership housing.
- **Neutral Tenure** is where the tenure of housing is not predetermined but can vary according to needs, means and preferences of households to whom it is offered. This incorporates the tenures described above. This arrangement gives flexibility in that it allows the tenure type of a property to be set according to current need.
- **Specialist affordable housing** may be sought for people with specific accommodation requirements that may not otherwise be met and where a need has been identified. This can include sheltered retirement housing, adapted housing for households with a physical disability and supported housing, for example for young homeless people or people with learning difficulties.

13.1.7 The delivery option preferred by Monmouthshire County Council will be set out in the Affordable Housing SPG.

13.1.8 The Council requires affordable housing to be managed by a RSL approved for development, or the Local Authority in Monmouthshire, whereby procedures are already set in place to ensure that dwellings remain affordable in perpetuity.

13.1.9 All affordable housing needs to be developed to meet the standards set out by Welsh Government, currently set out in Welsh Development Quality Requirements (WDQR) 2021, unless otherwise agreed by the Council.

Affordable Housing Provision

13.1.10 Strategic Policy S7 provides detail of the thresholds at which affordable housing will be required. A High-Level Affordable Housing Viability Study has been undertaken as part of the RLDP evidence base, this demonstrates that on-site provision of 50% affordable homes is achievable throughout most of the County on sites of 20 homes or more. On sites of 5-19 homes, on-site provision of 40% affordable homes is evidenced to be achievable. The affordable housing thresholds set out in Policy S7 reflect the outcomes of this work. Financial contributions will be required for sites that fall beneath the thresholds set out in Strategic Policy S7, further detail of such contributions is set out in paragraphs 12.1.12 – 12.1.13.

13.1.11 The Council will seek to provide affordable housing on-site. Only in exceptional circumstances will off-site provision be considered. This might occur, for instance, in situations where the management of the affordable housing cannot be effectively secured. In such cases it may be

possible for off-site new build housing or refurbishment/conversion of existing properties to provide a satisfactory alternative that meets the needs of the local community. Such schemes would be subject to specific financial arrangements, further detail of which will be included in Supplementary Planning Guidance.

- 13.1.12 In the exceptional circumstances and not on the strategic site allocations, where on-site provision is not considered appropriate and off-site units cannot be delivered as an alternative site is not available, the Council will consider accepting an affordable housing contribution payment in lieu of on-site affordable housing provision. Where this is the appropriate approach, prior to obtaining planning permission, applicants will need to enter into a S106 agreement to pay a financial contribution towards affordable housing in the HMA in which the site is located. The methodology for calculating this financial contribution will be included in Supplementary Planning Guidance. A financial contribution towards affordable housing will have an impact on land values and landowner expectations, therefore, the Council will expect that applicants have considered in full the overall cost of development, including the required financial contribution towards affordable housing, and any abnormal costs, when negotiating the purchase of land.
- 13.1.13 Affordable housing will be required on sites below the thresholds set out in Policy S7 if the Council considers that there has been a deliberate attempt to subdivide the site, phase the total development or reduce the density in an attempt to avoid the threshold.
- 13.1.14 All new residential planning applications, including resubmissions of proposals that have not been delivered previously, must comply with the provisions set out in Policy S7.

Brownfield Sites

- 13.1.15 The majority of the financial viability assessments that have been undertaken for housing allocations in the RLDP relate to greenfield sites; as does the evidence from the high-level assessments used to inform the policy approach for windfall sites.
- 13.1.16 It is a recognised principle that abnormal costs associated with a development should generally be reflected in the value paid to the landowner. There may, however, be cases where the combined impact on site value of abnormal development costs and other appropriate planning requirements for a proposed development would result in a residual land value that is insufficient to provide both an adequate profit margin for the developer, and a land value sufficient to encourage a reasonable landowner to sell for the proposed use. In such cases, the Council may be prepared to negotiate on the number of affordable dwellings that is required to deliver a viable development scheme. Any such cases will involve a detailed and “open book” financial viability assessment of the proposed development.
- 13.1.17 The same principle may apply to the conversion of existing buildings to residential use; although the affordable home thresholds set out in Policy S7 will still be the thresholds that landowners and developers must consider when agreeing all land transactions.

S7 – Affordable Housing

The affordable homes target for the Plan period of 2018 – 2033 is **1,595 – 2,000** homes. This will be delivered in accordance with the following framework:

- i) **New site allocations** – On-site provision of 50% affordable homes on all new site allocations.
- ii) **Sites of 20 homes and over** – On-site provision of 50% affordable housing applies to development proposals on sites within existing settlement boundaries as identified in Tiers 1-3 of Strategic Policy S2.
- iii) **Sites of 5 to 19 homes** – On-site provision of 40% affordable housing applies to development proposals on sites within existing settlement boundaries as identified in Tiers 1-3 of Strategic Policy S2.
- iv) **Sites of 1 to 4 homes** – Financial contributions towards the provision of affordable housing in the local planning authority area will be required in accordance with details set out in the Affordable Housing Supplementary Planning Guidance.
- v) **Conversions and sub-divisions** – Financial contributions towards the provision of affordable housing in the local planning authority area will be required in accordance with details set out in Affordable Housing Supplementary Planning Guidance.

In determining how many affordable homes should be provided on a development site, the figure resulting from applying the proportion required to the total number of dwellings will be rounded to the nearest whole number, where half rounds up.

All proposals must meet national policy guidance in relation to the most efficient use of land and should not be subdivided or phased in an attempt to avoid on-site provision of affordable homes.

This Strategic Policy applies to all residential planning applications. Exceptions will not be made for sites that previously had planning permission and have been resubmitted.

13.2 Affordable Housing Exception Sites

13.2.1 Strategic Policy S1 identifies the preferred growth strategy for the County with a focus of growth in the County's most sustainable settlements in accordance with the settlement hierarchy set out in Strategic Policy S2. While it is recognised the allocated housing sites will provide 50% affordable homes, it is not always possible to meet the locally identified need for affordable housing in existing settlements. Furthermore, not all settlements will have an allocated site in their locality. National planning guidance encourages the use of an affordable housing exceptions policy to help meet affordable housing requirements and support communities. As a result, Policy H9 allows the provision of small 100% affordable housing sites adjoining existing settlements, which would not otherwise be allocated for housing.

13.2.2 Any proposals for 100% affordable housing exception sites must be proven to meet genuine local need and be supported by appropriate evidence to support this. This local need would normally relate to the part of the town or community council area in which the site is located. Evidence of local need is set out in the LHMA. All affordable housing exception sites must provide affordable housing to meet locally identified need in perpetuity. As noted above, the Council's preference is for affordable housing schemes to be managed by Registered Social

Landlords (RSL), secured through a S.106 agreement. Effective and early partnership between site promoters and RSLs is therefore encouraged.

13.2.3 Policy H9 sets out the development thresholds for 100% affordable housing exception sites which are considered acceptable in each of the settlement hierarchy tiers. It is recognised that there may be a need for flexibility in this approach, for example, where there is an overwhelming need for smaller homes. Any exceedance must be agreed with the Council.

13.2.4 Prior to submission of any planning application developers will be expected to liaise with the Council to agree the mix and tenure of units required to meet housing need.

Policy H9– Affordable Housing Exception Sites

Favourable consideration will be given to the siting of 100% affordable housing exception sites adjoining Tier 1, 2, 3 and 4 settlements identified in Strategic Policy S2, that would not otherwise be released for residential development provided that all of the following criteria are met:

- a) The scheme meets a genuine local need which could not otherwise be met within the locality;
- b) The proposed homes are of a size, tenure and design which is commensurate with the identified affordable housing need of the locality;
- c) The proposal relates to:
 - i) 25 or less homes in Tier 1 Primary Settlements,
 - ii) 15 homes or less in Tier 2 Secondary Settlements,
 - iii) 10 homes or less in Tier 3 Main Rural Settlements or
 - iv) 5 homes or less in Tier 4 Minor Rural Settlements;
- d) The site represents a logical extension to the existing settlement with no significant adverse impact on settlement form, character and surrounding landscape;
- e) The affordable housing meets the needs of local people and will be managed by a Registered Social Landlord (RSL) in perpetuity, which will be secured via a S.106 legal agreement. In exceptional circumstances where an RSL is not involved, clear and adequate legal agreements must be in place to ensure that the benefits of affordable housing will be secured for initial and subsequent occupiers.

Residential Allocations

14. Residential Site Allocations

14.1.1 Policies S1 and S2 provide information on the breakdown of housing components making up the housing provision figure of 6,210 homes (including 15% flexibility allowance). New housing allocations will contribute 2,130 homes and a further 175 homes from Rollover LDP sites (2,305 total homes) towards meeting the housing provision figure. Policy S8 sets out the placemaking principles that apply to all residential sites allocations. Policies HA1 – HA18 detail the new housing allocations policies setting out specific requirements associated with each site.

HA1- HA18 – Residential Site Allocations					
In order to deliver the housing requirement identified in Policy S1, the following sites are allocated for residential development in the period up to 2033:					
Site Ref	Site Name	Settlement	Site Area (ha)	Approximate No. Homes in Plan Period	Approximate No. Affordable Homes in Plan Period
Strategic Sites (Tier 1 Settlements)					
HA1	Land to the East of Abergavenny	Abergavenny	35.9	500	250
HA2	Land to the East of Caldicot/North of Portskewett	Caldicot	64	770	385
HA3	Land at Mounton Road	Chepstow	12.8	146	73
HA4	Land at Leasbrook	Monmouth	11	270	135
Primary Settlements/Sevenside (Tier 1 Settlements)					
HA5	Land at Penlanlas	Abergavenny	6.17	100	50
HA6	Land at Rockfield	Monmouth	1.5	60	30

HA7	Land at Drewen Farm	Monmouth	6.6	110	55
HA8	Tudor Road, Wyesham	Monmouth	2.1	50	25
HA9	Land at Former MoD	Caerwent	4.2	40	20
Secondary Settlements (Tier 2 Settlements)					
HA10	South of Monmouth Road	Raglan	4.5	54	27
HA11	Land East of Burrium Gate	Usk	2.6	40	20
HA12	Land West of Trem yr Ysgol	Penperlleni	3.4	42	21
Main Rural Settlements (Tier 3 Settlements)					
HA13	Land adjacent to Piercefield Public House	St Arvans	1.1	16	8
HA14	Land at Churchfields	Devauden	1	20	10
HA15	Land East of Little Mill	Little Mill	1.68	20	10
HA16	Land North of Little Mill	Little Mill	0.87	15	8
HA17	Land adjacent to Llanellen Court Farm	Llanellen	1.56	26	13
HA18	Land West of Redd Landes	Shirenewton	1.76	26	13
Total Units				2,305	1,153

14.1.2 A housing trajectory accompanies the site allocations, summarising annual phasing information for all allocated sites within the Plan, setting out the expected rate of housing

delivery throughout the Plan period. This will form the basis for the ongoing monitoring of housing delivery in the County. The housing trajectory is set out in Appendix 9.

Residential Site Allocations Placemaking Principles

- 14.1.3 Policy S3 – Sustainable Placemaking and High-Quality Design sets out the strategic objectives for all development to create sustainable places to live, work and relax. Building on these strategic objectives, Policy S8 establishes key placemaking principles that should be incorporated into the residential site allocations. It covers a range of policy requirements including housing mix and tenure, landscape and biodiversity and sustainable travel expectations. Collectively these placemaking principles will help create sustainable housing developments that provide well-connected and balanced communities that are also respectful of Monmouthshire’s natural and historical environment. The placemaking principles are supplemented by site specific requirements, which are set out below.

Strategic Policy S8 – Site Allocation Placemaking Principles

All residential site allocations must comply with and incorporate the following placemaking principles into the schemes:

Sustainable Communities

- Creation of a high-quality and well-connected extension to the settlement, which responds to its edge of settlement location. Where appropriate, the layout will identify and respect key views to and from the wider landscape setting.
- Provision of 50% affordable homes on-site comprising a mix of housing types and tenures to meet local need.
- Dwellings built to net zero carbon standards, including the incorporation of renewable energy generation technologies and low carbon heating systems and ULEV charging points.
- Provide a mix of house types, tenures, sizes, materials and colour to be developed at an appropriate density.
- Broadband /digital infrastructure must be provided to serve each new home.

Green Infrastructure, Landscape and Nature Recovery

- Make provision within the development for appropriate green infrastructure, multifunctional streetscapes and useable public open space in accordance with National Policy and agreed standards, including play and recreation provision, community growing opportunities and accessibility for all.
- Demonstrate a proposal that is informed by the surrounding landscape character and reflects the distinctive landscape character, qualities and sensitivities of the area.
- Take a proactive approach to deliver a net benefit for biodiversity and ecosystem resilience within the development site by maintaining, incorporating and enhancing semi-natural habitats and ecological connectivity between them.

- Ensure the protection and enhancement of biodiversity through appropriate building design, site layouts, lighting proposals that retain dark corridors, landscaping techniques and choice of plant species.
- Ensure that trees, woodland and hedgerows along site boundaries and within the site are retained and protected as far as possible with adequate space to allow access for maintenance and to maintain functional and viable wildlife corridors and green infrastructure assets.

Sustainable Travel and Highways

- Design of the site and its connections must prioritise active travel to local trip attractors and public transport, in line with the Sustainable Transport Hierarchy (PPW12/Wales Transport Strategy). Active Travel Act guidance should be applied to routes, facilities and sustainable transport promotion.
- Sites must contribute to active travel and public transport improvements as necessary.
- Ensure that the development does not adversely affect the safety, capacity and operation of the highway network.
- Streets must be designed and built to adoption standards in accordance with national and local design standards and offered for adoption pursuant to the requisite highway adoption agreements.

Education Requirements

- Sites must contribute to primary and secondary school provision in the area in accordance with capacity requirements.

Residential amenity

- Ensure a safe, secure, pleasant and accessible environment for all members of the community.
- Maintain reasonable levels of privacy and amenity of occupiers of neighbouring properties.
- Incorporate satisfactory air quality measures for mitigating and/or reducing emissions, as appropriate.
- Incorporate good acoustic design which must be compatible with thermal comfort by ensuring adequate ventilation and avoidance of overheating, in the interests of protecting residents from the harmful effects of noise.

Flood Risk and Sustainable Drainage Systems

- Potential flood risk to, or as a consequence of, the development of the site must be suitably assessed in accordance with national planning policy.
- The development must manage surface water through a sustainable drainage system in accordance with Welsh Government's Statutory Standards for Sustainable Drainage Systems 2018. The distribution of SuDS features across the site should be prioritised, reducing the size of any single SuDS feature.

Site specific considerations are set out in Policies HA1 to HA18.

14.2 Residential Allocations

- 14.2.1 In addition to the placemaking principles set out in Policy S8, each residential allocation has specific requirements that are set out in the site allocation policies below.

Strategic Housing Allocations

14.3 Land to the East Abergavenny East

- 14.3.1 This strategic site allocation is a sustainably located edge of settlement site. The site is located on the eastern edge of Abergavenny and is bounded by the A465 and railway line to its western boundary and the footslopes of the Ysgyryd Fach (Little Skirrid) to the east. Development here will expand the built-up area of the town beyond the railway line and A465 which currently form a hard development boundary to the town. The site will form a well-connected mixed-use urban expansion to Abergavenny containing a mix of residential uses alongside employment/commercial uses, associated facilities and services. The allocation represents the intended future direction of development in the Abergavenny area with the longer-term intention for further growth beyond the Plan period.
- 14.3.2 The creation of an exemplar residential-led, mixed-use community is a key principle behind the allocation. Densities, street patterns and design must be responsive to the character of Abergavenny. A network of permeable streets that connect the site internally and with the wider area is integral to the development. Similarly, maximising the potential of green infrastructure and open space provision and creation of focal points for the community is critical to the placemaking objectives associated with the site. A masterplan, establishing a design code and key land use parameters is being prepared and agreed for the site. Input from the Design Commission for Wales has helped shape the site's progression to date.
- 14.3.3 The greenfield allocation is a residential-led, mixed use development including 50% affordable housing, net zero carbon homes and green infrastructure provision, which will form a sustainable urban extension of Abergavenny. The western end of the site plays an important role in integrating the new neighbourhood with the railway station and wider Abergavenny and offers potential to provide a 'community hub' serving both the urban extension and the railway station area, park and ride facility for the railway station, and linkages to and from the allocation to the station and Abergavenny.
- 14.3.4 The integration of the strategic site with the existing settlement is a key principle in the site's development and identifying connection links that provide crossings across the railway line and the A465 is a key focus for the site. There are a number of options being explored including at grade signalled crossings across the A465 and utilising existing bridges at the train station, as well a new continuous bridge over the A465 and railway. A further option is the downgrading and reimagining of the A465 to change the character and environment of the trunk road in the vicinity of the allocation. All options involve a multi-agency and multi-disciplinary approach reflecting that the A465 is in Welsh Government's control and the railway in Transport for Wales and Network Rail's control. These parties are in active dialogue in promoting the site and the associated infrastructure and are in principle accepting of the delivery of this extension to the settlement.
- 14.3.5 The site is also within the River Usk phosphorus sensitive catchment area.

Policy HA1 - Land to the East of Abergavenny

Allocated as a residential-led mixed-use development

Development of the site should accord with the following parameters, placemaking principles and development requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Number of Homes
Total Site: 35.9 ha	Strategic Mixed-use Development including: <ul style="list-style-type: none"> • Residential • Mixed-use Neighbourhood Centre • Park & Ride • B1 Use Class Uses 	Approx. No. of homes: 500* Open Market: 250 Affordable Homes: 250

*Within the Plan period

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following:

Sustainable Communities

- a) To provide a mixed-use development containing the following key uses:
 - Approximately 500 homes* including 50% affordable homes.
 - A minimum 1 hectare of B1 Use Class uses.
 - A neighbourhood centre, the uses and scale of which to be agreed by MCC.
 - Green infrastructure and open space provision, including allotments/community food growing spaces, incorporating the creation of focal points for the community.
 - Park and ride facility serving Abergavenny Railway Station.
 - Active travel connections with visible, prioritised routes to/from the site to the Railway Station and Abergavenny.
- b) The completion of non-residential elements must be delivered in line with an agreed phasing programme.
- c) The site design and masterplanning should create an exemplar of residential and GI-led placemaking, establishing clear parameters and principles to be followed by site developers.
- d) Provision of an appropriate design response and interface between the western edge of the development and the A465 corridor that respects the importance of the visual connectivity between the site and existing settlement and is in keeping with the distinct character of Abergavenny.

- e) A balanced approach to densities should be provided that makes efficient use of land and reflects the character of Abergavenny while also respecting the character of the surrounding landscape.
- f) Higher densities should be focussed on western and central locations and towards key attractors such as the mixed-use centre and Railway Station. Lower density development may be appropriate along the eastern boundary to retain the visual and physical integrity of the urban/countryside edge and maintain the distinct landscape character of Abergavenny.
- g) Densities and layout should respect the changes in levels within the site.

Green Infrastructure, Landscape, and Nature Recovery

- h) Site design and layout should include opportunities to capture views of the wider landscape including the Bannau Brycheiniog National Park (BNNP) and the Usk Valley.
- i) Development must ensure the retention and protection of substantial GI assets as far as possible, including retaining and enhancing tributaries of the River Gavenny.
- j) Hedgerows along the site boundary should be retained with adequate space to allow access for maintenance and to maintain functional and viable wildlife corridors.
- k) Any tree loss associated with the redesign of the A465 corridor must be subject to appropriate compensatory planting.

Sustainable Travel & Highways

- l) A connectivity strategy setting out the number, location, form and delivery of connectivity points between the site and existing settlement of Abergavenny will be agreed with the Local Planning Authority. The strategy will include changes to the character and environment of the A465 to provide safe and accessible crossings and means of access(s) and appropriate crossings over the railway line.
- m) Off-site highway infrastructure improvements must be delivered as necessary, having regard to requirements arising from the Transport Assessment and including:
 - An agreement with the Highway Authority for the proposed accesses and junction on to the A465.
 - Emergency secondary access on to Garth Road.
- n) Make provision for good quality, safe, legible and accessible pedestrian and cycle linkages to key access points including linkages to the local schools, Abergavenny town centre and bus transport services.
- o) Incorporate and enhance the existing Public Right of Way footpaths as key connection routes running through the site linking up with wider Abergavenny and as a through route to the wider countryside.

- p) Make provision for a bus link into the site design and, if necessary, a financial contribution towards improved public transport and bus frequency.

Air Quality

- q) Incorporate satisfactory air quality measures for mitigating and/or reducing emissions.

A masterplan establishing key design and placemaking principles is being prepared and will be agreed with the Local Planning Authority prior to the determination of any planning application.

Indicative Masterplan: Land to the East of Abergavenny

-  REDLINE BOUNDARY
-  RESIDENTIAL DEVELOPMENT
-  NEIGHBOURHOOD CENTRE
(including Community Buildings, Cycle Hire/ Parking
and Electric Vehicle Charging)
-  PROPOSED B1 ZONE
-  PARK AND RIDE
-  PROPOSED TREES
-  VEHICULAR ACCESS
-  PEDESTRIAN/ CYCLE ACCESS
-  EXISTING TREES
-  PROPOSED ACTIVE FRONTAGES
-  PUBLIC RIGHT OF WAY
-  PROPOSED ATTENUATION FEATURE
-  PROPOSED PEDESTRIAN/ CYCLE ROUTE
-  EMERGENCY SERVICE ACCESS
-  EXISTING BUS STOP
-  POTENTIAL PLAY AREA

14.4 **Land to the East of Caldicot/North of Portskewett**

- 14.4.1 Land to the East of Caldicot/North of Portskewett is a sustainably located edge of settlement site. Development here will extend the settlement of Caldicot to the north-east, adjacent to the Crick Road, Portskewett site. Development will take place north of the Caldicot Castle Country Park, a Conservation Area and Area of Amenity Importance. No built development will take place in these sensitive areas. The site is located to the south of a Council owned solar farm, opportunities to link the site with this renewable energy resource are being explored. The site includes previously developed land comprising a commercial equestrian centre, with much of the remainder being greenfield Council-owned land. The inclusion of such suitable land is supported by Future Wales Policy 3 which supports public leadership and the use of public land to deliver on ambitious affordable housing targets.
- 14.4.2 This strategic site will provide a residential-led mixed-use development delivering net zero carbon homes of which 50% will be affordable, along with a primary school, a local centre, public open space, appropriate community facilities and employment uses. The site will form a new neighbourhood of Caldicot with links to Portskewett to the east. The primary school will bring benefits for the wider community serving both the new development and the nearby homes in both Caldicot and Portskewett. The school combined with the local centre will provide a key focal point of the site.
- 14.4.3 Crick Road provides a central spine through the development and will be incorporated into the site as an active frontage providing legibility for the community across the site. This will act as a gateway to the site as a whole and ensure the development either side of the road is integrated in a cohesive manner. Permeability is key to enabling integration both within the site and the surrounding area. Given the proximity to heritage designations and its edge of settlement location, the development will have a strong sense of place with an emphasis on sympathetic architectural form, high-quality design and include a logical street hierarchy with an appropriate residential density. A masterplan is being developed for the site, which identifies key issues and opportunities within the site as well as establishing a design code and key land use parameters. Input from the Design Commission for Wales has helped shape the site's progression to date.
- 14.4.4 An active travel link is required which will provide access to the site all year round. An east-west active travel link is also integral to the development of the site to provide a clear multi-user connection to the centre of Caldicot through the parkland area, ensuring accessibility to the wider town. It is, however, recognised that this may provide more of a recreational link at certain times of the year. Furthermore, the area to the west of the former railway also includes a number of constraints, and particular consideration will need to be given to the Nedern Brook wetlands SSSI. A further connection to the former MoD railway cycle and walking route (Greenway) between Crick and Caerwent will be included within the proposals.
- 14.4.5 The site is 1.1km from the Severn Estuary European Marine site (EMS). The Habitats Regulations Assessment acknowledges that proposals within Severnside could have a Likely Significant Effect on the EMS via recreational pressure and functionally linked land which will need to be considered.

Policy HA2 - Land to the East of Caldicot/North of Portskewett

Allocated for a residential-led mixed-use development.

Development of the site should accord with the following parameters, placemaking principles and development requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Number of Homes
Circa 64ha	Strategic Mixed-Use Development including: <ul style="list-style-type: none"> Residential Primary School Mixed use Neighbourhood Centre B1 Use Class Employment Strategic public open space 	Approx No. of Homes: 770 Open Market Homes: 385 Affordable Homes: 385

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following criteria below:

Sustainable Communities

- a) Provision of a mixed-use development containing the following key uses:
 - 770 homes including 50% affordable homes.
 - Primary School.
 - Strategic public open space, including community playing fields, allotments, community orchard and green infrastructure provision.
 - A neighbourhood centre including appropriate community facilities, the uses and scale of which to be agreed by MCC.
 - A minimum of 1ha B1 Use Class employment land.
- b) Crick Road must be incorporated into the site as an active street frontage providing cohesion and a gateway for the development as a whole.
- c) The design and masterplanning of the site should create an exemplar of residential and GI-led placemaking, establishing clear parameters and principles to be followed by site developers.
- d) The completion of non-residential elements must be delivered in line with an agreed phasing programme.

Green Infrastructure, Landscape and Nature Recovery

- e) Development of the site to consider existing topography, assets, features and contours of the site and include measures to integrate development appropriately while reducing visual impact. Less dense development should be provided on the edge of the site.

- f) Development should consider and respond positively to the setting of the Grade II Listed Building, the Conservation Area, Country Park and views to the nearby Scheduled Ancient Monument. No built development will take place within these sensitive areas.
- g) Recognition of the impact, scale and location of the site on the Severn Estuary European Marine Site (EPS) and Nedern Brook Site of Special Scientific Interest (SSSI). Interface between the SSSI and built development (including areas of formal recreation) requires careful design to avoid increased disturbance to qualifying features. No built development or additional access/transport routes shall occur within the SSSI.
- h) The site is within the 12.6km Core Recreational Catchment Zone for the Severn Estuary European Marine Site and will be considered for a financial contribution as part of the Mitigation Strategy for the site. Green space design must consider any emerging guidance for Suitable Alternate Natural Greenspace (SANG) to reduce recreational pressure on the features of the Estuary.
- i) Mount Ballan SINC and other woodland areas will be retained and protected with an appropriate buffer.
- j) Include opportunities for grassland and hedgerow restoration, wetland creation and woodland connectivity that will be managed appropriately for protected species.
- k) Include opportunities for grassland area enhancement and enhanced native planting around ponds and wetland areas that will be managed appropriately for protected species. No built development will take place in the SSSI.
- l) The proposal will be accompanied by a lighting scheme. Dark corridors should be maintained and light spillage on to wildlife corridors is minimised, with particular reference to corridors and priority habitats used by bats and dormice present on the site.
- m) Public Rights of Way within the site must be incorporated into the site design and remain available for public use.

Sustainable Travel and Highways

- n) The site must incorporate on and off-site measures to provide good quality, attractive, safe, legible and accessible pedestrian and cycle linkages both to and within the new development area. Key connections include an active travel route to Caldicot Town Centre. Connection should also be made to the former MoD railway cycle and walking route.
- o) Provision of off-site highway infrastructure improvements as necessary, having regard to requirements arising from the Transport Assessment and including:
 - An agreement must be entered into with the Council to facilitate the construction of multiple development accesses along Crick Road and any necessary access points along the B4245 to the north of the site;
 - A minimum of a 2 metre footway for pedestrians over the site's frontages linking to existing footways;

- Revision of speed limits along Crick Road to 20mph, the location of which to be agreed with MCC.
- Provision of a public transport link to be provided along Crick Road and throughout the site, details of which to be agreed with MCC, including any necessary financial contributions to improve nearby infrastructure.

Flood Risk and Sustainable Drainage Systems

- p) No built development will be permitted within the part of the site located in floodplain.

Other

- q) Development must ensure adequate buffers are provided to take account of water mains intersecting the site.

A masterplan establishing key design and placemaking principles is being prepared and will be agreed with the Local Planning Authority prior to the determination of any planning application.

14.5 Land at Mounton Road, Chepstow

- 14.5.1 Land at Mounton Road is a sustainably located edge of settlement greenfield site comprising of approximately 12.8ha of agricultural/parkland/woodland, located to the western edge of Chepstow, west of the A466 (St Lawrence Road), north of the A48 and south of Mounton Road. Public Rights of Ways (PROWs) are located just outside the northern boundary of the site (off Mounton Road) and National Cycle Network 4 (NCN4) runs along the A466. Future Active Travel routes are proposed along Mounton Road, and the A466 and A48 highways.
- 14.5.2 The site benefits from less than 20-minute walking times to Chepstow town centre, railway station and other key services and facilities, as well as to Bulwark local centre. The site will be masterplanned to ensure active travel connections within and beyond the site to Chepstow's key services and facilities.
- 14.5.3 The site, although not located within a designated landscape, is in close proximity to the setting of the Wye Valley National Landscape (AONB), which is located approximately 100m to the northwest of the site. The site is outside Chepstow's Conservation Area, however, Mathern's Conservation Area boundary which includes Wyelands Historic Park and Gardens, is just to the south of the site boundary. The site is within the parkland setting of the Grade II Listed St Lawrence House, which is located just to the north boundary of the site, along with several other characterful residential properties to the north. There are groups of mature woodland and mature hedgerows which contain several important natural ecological habitats. The protection and preservation of these habitats is a key consideration in the development of the site.
- 14.5.4 Other key considerations include the site's proximity to Chepstow's air quality management area (AQMA) at Hardwick Hill and the potential effects of increased vehicular movement on the Highbeech Roundabout and surrounding transport network.
- 14.5.5 The site is 2.3km from the Severn Estuary European Marine site. The Habitats Regulations Assessment acknowledges that proposals could have a Likely Significant Effect on the EMS via Recreational Pressure and Functionally linked land which will need to be considered.

Policy HA3 - Land at Mounton Road, Chepstow

Allocated for a residential led mixed-use development

Development of the site should accord with the following parameters, placemaking principles and development requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Number of Homes
12.8 ha	Strategic Mixed-Use: <ul style="list-style-type: none"> Residential Commercial uses such as Class C1 hotel and Class C2 residential care home 	Approx No. of Homes: 146 Open Market Homes: 73 Affordable Homes: 73

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following criteria below:

Sustainable Communities

- a) Creation of a high-quality well-connected extension, which responds to its edge of settlement location and to its gateway locality to Chepstow and Wye Valley National Landscape (AONB) setting.
- b) A street hierarchy comprising a legible, permeable and connected network of street, footpaths and cycleways should be developed to inform the character of different parts of the site.
- c) A focal tree-lined avenue should lead to the entrance of the community parkland from the A466 entrance point.
- d) The non-residential element of the site to be delivered in line with an agreed phasing schedule.
- e) The commercial uses of the development, which could include a hotel and care home are to be located in the north east focal/gateway point of the site.
- f) An appropriate scale, massing, height and appearance of buildings, in particular the hotel and care-home, to respect the site's location, character and residential amenity impact;
- g) Provision of a publicly accessible Community Parkland, with a parkland character that respects the setting of the Grade II listed St Lawrence House and creates opportunities for recreation and leisure.
- h) Provision of an appropriate design response and interface between the eastern edge of the development and the A466 road corridor.
- i) Provision of an appropriate design response for the proximity and transition to the green wedge and wider landscape to the south and west of development in terms of lighting and built form.

Green Infrastructure, Landscape and Nature Recovery

- j) Existing western and northern boundary hedgerow and woodland shall be retained, buffered and protected. Trees with TPOs and other mature trees will be retained and protected within the Community Parkland and managed appropriately to maintain biodiversity value.
- k) The site is within the 12.6km Core Recreational Catchment Zone for the Severn Estuary European Marine Site and will be considered for a financial contribution as part of the Mitigation Strategy for the site. Green space design must consider any emerging guidance for Suitable Alternate Natural Greenspace (SANG) to reduce recreational pressure on the features of the Estuary.
- l) Provision of a lighting strategy that considers and mitigates for visual impact on landscape character and setting and minimises light spillage on to wildlife corridors and habitats.

Sustainable Travel and Highways

- m) Provision of on and off-site highways infrastructure improvements as necessary, having regard to requirements arising from the Transport Assessment and including:
- A legal agreement for the proposed A466 primary access junction, footways, street lighting, crossing provision and the widening and improvement of the existing footway on the A466.
 - A legal agreement for the construction of off-site pedestrian/cycling improvements, including connections to bus stops in both directions, the National Cycle route and Chepstow's community hospital.
 - The layout in north west corner of the site will connect the proposal to the existing Public Right of Way 355/3/3 footpath.
 - Land to be safeguarded for potential future improvements to the Highbeech Roundabout.
 - Provision of a public transport link through the site, details of which to be agreed with MCC, including any necessary financial contributions to improve public transport services and nearby infrastructure.

Residential Amenity

- n) The incorporation of satisfactory air quality measures for mitigating and/or reducing emissions. Development must not significantly worsen (either individually or cumulatively) any air pollution emissions in areas where pollution levels are close to their objective or limit value levels, nor result in a breach of an air quality objective or limit value.

A masterplan establishing key design and placemaking principles is being prepared and will be agreed with the Local Planning Authority prior to the determination of any planning application.

14.6 Leasbrook, Monmouth

- 14.6.1 The strategic site allocation at Leasbrook relates to a greenfield site comprising 12.5ha to the north-east of Monmouth. Leasbrook is a sustainably located edge of settlement site north of Dixon Road. The site is located adjacent to existing development at Dixon Close and Hereford Road, including Haberdashers' Monmouth School's playing pitches to the west, along with agricultural land to the east and north. The site is in close proximity to the Dixon Roundabout offering good links to locations further afield when public transport and use of the private car is necessary. Key facilities including Monmouth Town Centre, health care, schools and leisure centre are all within 20-minute walking distance of the site, making it very accessible via existing footways and active travel links.
- 14.6.2 The site offers opportunity to create an exemplar residential and GI-led development which is of importance due to the gateway location of the site on the entrance to Monmouth from the north. Density of development will vary across the site in response to its context given the sloping gradients within the site. Permeable street networks must be integrated within the site along with a clear street hierarchy and public space providing opportunity for focal points. A masterplan will be prepared and agreed for the site. Input from the Design Commission for Wales has helped shape the site's progression to date.
- 14.6.3 Key considerations for the development of the site include the need for an emergency access to be delivered due to the location of a very small part of the main site access being located in floodplain. A footpath link to Dixon Close and along Dixon Road will allow links to wider active travel links in Monmouth. Appropriate ecology mitigation is required due to the sites proximity to two Special Areas of Conservation (SACs). A green buffer is also required to minimise any potential landscape impact on the adjacent Dixon Conservation Area and the Lower Wye Valley Landscape of Historic Interest.

Policy HA4 - Land at Leasbrook, Monmouth

Allocated for residential development

Development of the site should accord with the following parameters, Placemaking Principles and Development Requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Number of Homes
11ha	Residential	Approx No. of Homes: 270 Open Market Homes: 135 Affordable Homes: 135

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following criteria below:

Sustainable Communities

- a) Creation of a high-quality and well-connected extension to Monmouth, which responds to its edge of settlement location.

Green Infrastructure, Landscape and Nature Recovery

- b) Development of the site to consider existing topography, assets, features and contours of the site and include measures to integrate development appropriately while reducing visual impact. Less dense development should be provided on the northern and eastern edge of the site.
- c) Maintain and enhance populations of protected and priority species.
- d) The proposal must be accompanied by a lighting scheme. Dark corridors should be maintained and light spillage on to wildlife corridors minimised, with particular regard to the Greater Horseshoe Bat Juvenile Sustenance Zone and corridors used by bats.
- e) A S.106 agreement must be signed and include the requirement for additional woodland buffer planting with well-designed public access to be provided on the eastern edge of the site (in the blue line of ownership) to protect the Greater Horseshoe Bat Juvenile Sustenance Zone and the wider landscape character due to the site's proximity to the Dixon Conservation Area and Lower Wye Valley Landscape of Historic Interest. This is required in addition to any on-site GI provision.
- f) Protect, buffer and maintain existing TPO trees and significant trees by including within the Green Infrastructure provision and enhance by including new planting of native species of local provenance.

Sustainable Travel and Highways

- g) Emergency vehicular access must be provided to connect to the A466 on Hereford Road to allow for a secondary means of access if required in an extreme flooding event.
- h) Provision of on and off-site measures must be delivered to provide good quality, attractive, safe, legible and accessible pedestrian and cycle linkages both to and within the new development area. Key connections include a footpath link to Dixon Close and along Dixon Road which allows links to further active travel routes in Monmouth. Sufficient space within the site boundary must also be included to allow the future provision of active travel route MCC-M25A(DL)4A.
- i) Provision of off-site highway infrastructure improvements as necessary, having regard to requirements arising from the Transport Assessment and including:

An agreement must be entered into with the Council for the facilitation of the construction of the development access;

The implementation of required off-site junction mitigation/ improvement measures as appropriate, details of which to be agreed with the Council;

Provision of a public transport link through the site if necessary, details of which to be agreed with the Council, including any necessary financial contributions to improve public transport services and nearby infrastructure.

Flood Risk and Sustainable Drainage Systems

- j) Potential flood risk to, or as a consequence of, the development of the site must be suitably assessed in accordance with Welsh Government's Technical Advice Note (TAN) 15: Development and Flood Risk including consideration of flooding in extreme events on Dixton Road.

A masterplan establishing key design and placemaking principles is being prepared and will be agreed with the Local Planning Authority prior to the determination of any planning application.

Primary Settlements

14.7 Land at Penlanlas, Abergavenny

14.7.1 Land at Penlanlas is a greenfield site comprising approximately 6ha, located adjacent to the Bannau Brycheiniog National Park (BBNP) eastern boundary and the north-western fringe of Abergavenny. The site is bounded to the east and south by residential properties, by Old Hereford Road to the west and an electricity substation and other agricultural grassland to the north.

14.7.2 The site benefits from less than 25 walking time to Abergavenny town centre, with other key services and facilities, including schools, in closer proximity. Abergavenny Railway Station is just over 30 minutes' walk away and there will be opportunities to connect the site to Abergavenny's core with active travel links and promote the use of sustainable modes of travel. The site is also within the River Usk phosphorus sensitive catchment area.

Policy HA5 - Land at Penlanlas Farm, Abergavenny

Allocated for residential development

Development of the site should accord with the following parameters, Placemaking Principles and Development Requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Total Homes
6.17ha	Residential	Approx No. of Homes: 100 Open Market Homes: 50 Affordable Homes: 50

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following:

Sustainable Communities

- Incorporation of lower density development on the northern edge of the site and buffer zone to the north-west of the site to integrate it into the landscape.
- Provision of allotments in the site.

Green Infrastructure, Landscape and Nature Recovery

- Preserve or enhance the landscape setting of Bannau Brycheiniog National Park (BBNP) and have no adverse impact on the International Dark Skies Reserve designation.
- Incorporate and enhance the existing Public Right of Way Footpath 91 running along the site's eastern boundary to include sufficient space to maintain existing and new hedgerows, green infrastructure assets, SuDS and public access.

- e) Include opportunities for species rich grassland restoration and creation that will be managed appropriately.

Sustainable Travel and Highways

- f) Provision of off-site highway infrastructure improvements as necessary, having regard to requirements arising from the Transport Assessment and including:
- An agreement with the Council to construct the development access and undertake off-site works to widen Old Hereford Road and necessary pedestrian/cycling improvements and reduce the speed limit on Old Hereford Road.
 - Financial contributions to improve public transport services and nearby infrastructure.
- g) Provision of good quality, safe, legible and accessible pedestrian and cycle linkages to key access points including the north-eastern corner of the site, south-eastern corner of the site and Old Hereford Road.

Residential Amenity

- h) The incorporation of satisfactory air quality measures for mitigating and/or reducing emissions. Development must not significantly worsen (either individually or cumulatively) any air pollution emissions in areas where pollution levels are close to their objective or limit value levels, nor result in a breach of an air quality objective or limit value.

14.8 Land at Rockfield Road, Monmouth

14.8.1 Land at Rockfield Road is a greenfield site comprising 1.5ha, located on the north-western edge of Monmouth. This site is located adjacent to a residential site on Rockfield Road with extant planning permission for 70 homes and sits neatly within a gap between this permitted site to the east and existing residential development to the south and west. The northern boundary of the site comprises of a mature hedgerow with fields beyond. Retention of a green buffer on the edge of the site is required to minimise any potential landscape impact on the wider surroundings.

14.8.2 The site benefits from less than 15 minutes walking distance to the Monmouth District Centre on Rockfield Road providing a range of services including a convenience store. A primary school, the southern entrance of the Town Centre and a range of other facilities are located within 20 minutes walking distance. The adjacent public footpath must be linked into the site to provide connectivity.

Policy HA6 - Land at Rockfield Road, Monmouth

Allocated for residential development

Development of the site should accord with the following parameters, Placemaking Principles and Development Requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Total Homes
1.5ha	Residential	Approx No. of Homes: 60 Open Market Homes: 30 Affordable Homes: 30

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following:

Green Infrastructure, Landscape and Nature Recovery

- a) Include opportunities for grassland and hedgerow restoration, with appropriate buffers that ensure features can be managed appropriately for protected species including dormouse.
- b) Provision of a lighting strategy that considers and mitigates for visual impact on landscape character and setting and minimises light spillage on to wildlife corridors and habitats, with particular reference to corridors used by horseshoe bats.
- c) Ensure that PROW 375/127 is linked to development and has adequate space provided to accommodate active travel provision, public realm and hedgerows.

Sustainable Travel and Highways

- d) Provision of access to the development and off-site highway improvements that are deemed necessary are subject to the approval and agreement of the Highway Authority.
- e) Financial contributions are required to improve public transport services and nearby infrastructure.

14.9 Land at Drewen Farm, Monmouth

- 14.9.1 Land at Drewen Farm comprises 6.6ha of greenfield land and forms the remaining part of the adopted LDP Wonastow Road housing site in Monmouth known as Kingswood Gate. The site wraps around the Kingswood Gate site located to the south and west, with Watery Lane to the east and agricultural land to the north. The site is located within 15-minute walking distance of a school and the Monmouth District Centre on Rockfield Road, providing a range of services including a convenience store. The southern entrance of the Town Centre and a range of other facilities are located within 20-minute walking distance.

- 14.9.2 Key considerations of the site include the need for additional hedgerow and tree planting on the northern boundary to minimise any potential landscape impact on the wider surroundings. Retention of green buffers in and around the site are also essential to minimise any potential impact on both ecology and the wider landscape. Public footpath links to Watery Lane are essential.

Policy HA7 - Land at Drewen Farm, Monmouth

Allocated for residential development

Development of the site should accord with the following parameters, Placemaking Principles and Development Requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Total Homes
6.6ha	Residential	Approx No. of Homes: 110 Open Market Homes: 55 Affordable Homes: 55

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following:

Sustainable Communities

- a) Incorporation of lower densities along the boundaries of the open countryside responding to its edge of settlement location.

Green Infrastructure, Landscape and Nature Recovery

- b) Existing boundary features to be enhanced with additional hedgerow and tree planting to mitigate for development and respond to its edge of settlement location.
- c) Requirement of additional GI connectivity and buffers between sensitive habitats and built development, and areas adjacent to the Wonastow Field SINIC.

Sustainable Travel and Highways

- d) Provision of on and off-site measures to provide good quality, attractive, safe, legible and accessible pedestrian and cycle linkages both to and within the new development area. Key connections include PROW MCC-M17B, future PROW route MCC-M17A along Watery Lane and into the adjacent Kingswood Gate site allowing links to further active travel routes in Monmouth.
- e) Provision of access to the development and off-site highway improvements that are deemed necessary are subject to the approval and agreement of the Highway Authority.
- f) Financial contributions are required to improve public transport services and nearby infrastructure.

14.10 Tudor Road, Monmouth

- 14.10.1 The Tudor Road allocation comprises 2.05 hectares of greenfield land on the eastern side of Wyesham in Monmouth. The site benefits from access to number of facilities of less than 5 minutes walking distance including a primary school, convenience store/post office and open space. The Wyesham area also includes a supermarket which is within a 15-minute walk. The secondary school and leisure centre and other facilities in the Town Centre are located within a 25-minute walking distance on the other side of the River Wye. A new pedestrian and cycle crossing to connect Wyesham to the wider Monmouth area providing a safe and improved route has gained planning consent and is expected to be constructed within the Plan period.
- 14.10.2 A key consideration of the site is its location adjacent to the Wye Valley National Landscape (AONB). An appropriate green buffer is required along the boundary of the site to ensure the edge of the built development is softened, minimising any potential impact on this important designation.

Policy HA8 – Land at Tudor Road, Wyesham, Monmouth

Allocated for residential development

Development of the site should accord with the following parameters, Placemaking Principles and Development Requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Total Homes
2.1ha	Residential	Approx No. of Homes: 50 Open Market Homes: 25 Affordable Homes: 25

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following:

Sustainable Communities

- a) A mix of house types, tenure and size with lower densities on the edge of the site adjacent to the boundary of the Wye Valley National Landscape (AONB).

Green Infrastructure, Landscape and Nature Recovery

- b) Development of the site to consider existing topography, assets, features and contours of the site and include measures to integrate development appropriately while reducing visual impact.
- c) Protect, buffer and maintain existing trees and hedgerows, on site boundaries and central linear features, by including within the Green Infrastructure provision and enhance to provide both a buffer and enhanced green corridor.
- d) Appropriate buffer planting to be included to enhance and protect linear features used by foraging and commuting bats associated with the Wye Valley and Forest of Dean Bat Sites SAC.

- e) Provision of a lighting strategy that considers and mitigates for visual impact on landscape character and setting and minimises light spillage on to wildlife corridors and habitats, including corridors used by bats.
- f) An area of public open space to be included within the site boundary in the south eastern corner of the site.

Sustainable Travel and Highways

- g) Provision of on and off-site measures to provide good quality, attractive, safe, legible and accessible pedestrian and cycle linkages both to and within the new development area. Key connections include to the nearby active travel route MCC-M14A, which allows links to further active travel routes in Monmouth.
- h) Provision of the development's primary access involving re-engineering of the existing Tudor Road junction, providing access to 7 – 19 Tudor Road, along with relocation of the associated residents' off-street parking.
- i) Provision of off-site highway infrastructure improvements as necessary, having regard to requirements arising from the Transport Assessment and including:
 - An agreement must be entered into with the Council for the construction of the development access;
 - The implementation of required off-site junction mitigation/improvement measures as appropriate, details of which to be agreed with the Council;
 - Financial contributions to improve public transport services and nearby infrastructure, details of which to be agreed with the Council.

Flood Risk and Sustainable Drainage Systems

- j) A scheme for the management of overland flows from the land above the site will need to be considered and incorporated into the site drainage.

14.11 Land at Former MoD, Caerwent, Severnside

- 14.11.1 The Former Ministry of Defence (MoD) site in Caerwent is a brownfield site comprising of 4.2ha of former MoD land, located to the north eastern edge of Caerwent, north of the A48 highway. The site will provide a sustainable affordable-led, mixed-use (residential and B1 employment) development where there are opportunities to co-locate homes and commercial uses.
- 14.11.2 The site, located within Severnside, benefits from an approximate 10-minute walking time to Caerwent's key services and facilities, which includes a public house, post office and farm shop. There are opportunities to connect and link the site to sustainable travel, including the National Cycle Network Route (NCN) and bus stops along the A48.
- 14.11.3 There is an existing large derelict red brick building as well as several smaller utilitarian buildings within the site, and hardstanding areas. The site which has been unoccupied for several years has been neglected and as such has regenerating scrubland/overgrown vegetation within the site and along the boundary with the A48. Protected and priority species have been identified within the site.

14.11.4 There are two existing residential properties adjoining the south east and south west boundary of the site. Residential amenity impact to these properties will be required to be considered with the masterplan design.

14.11.5 The site is 3km from the Severn Estuary European Marine site. The Habitats Regulations Assessment acknowledges that proposals could have a Likely Significant Effect on the EMS via Recreational Pressure and Functionally linked land which will need to be considered.

Policy HA9 - Land at Former MOD, Caerwent

Allocated for a mixed-use residential scheme

Development of the site should accord with the following parameters, placemaking principles and development requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Number of Homes
4.2ha	Mixed-Use Residential Commercial B1	Approx No. of Homes: 40 Open Market Homes: 20 Affordable Homes: 20

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following:

Sustainable Communities

- a) Provision of a mixed-use development of residential and commercial B1 uses with a minimum of 1ha for B1 employment land.
- b) The non-residential element of the site to be delivered in line with an agreed phasing schedule.
- c) Any proposed new commercial buildings must be of an appropriate scale, massing and height to respect the site's character and edge of settlement setting and residential amenity impact.

Green Infrastructure, Landscape and Nature Recovery

- d) Maintain and enhance populations of protected and priority species including reptiles, dormouse, and the lesser horseshoe maternity roost through retention of existing habitat and appropriate buffer planting.
- e) Appropriate buffer and boundary treatments to the north of the site must be considered.
- f) Provision of a lighting strategy that considers and mitigates for visual impact on landscape character and setting and minimises light spillage on to wildlife corridors and habitats, including corridors used by bats and dormice present on the site.

- g) The site is within the 12.6km Core Recreational Catchment Zone for the Severn Estuary European Marine Site and will be considered for a financial contribution as part of the Mitigation Strategy for the site. Green space design must consider any emerging guidance for Suitable Alternate Natural Greenspace (SANG) to reduce recreational pressure on the features of the estuary.

Sustainable Travel and Highways

- h) Provision of off-site highway infrastructure improvements as necessary, having regard to requirements arising from the Transport Assessment and including:
- An agreement for the proposed A48 Junction, footways, street lighting, crossing provision and associated highway improvements.
 - An agreement for the construction of safe off-site pedestrian and cycling crossing of the A48, and to allow for connection to the NCN 4.

Secondary Settlements

14.12 Land South of Monmouth Road, Raglan

- 14.12.1 Land south of Monmouth Road, Raglan is a greenfield site comprising approximately 7.6ha of agricultural land, located to the south-east of Raglan. The site borders Raglan Conservation Area located to the south of Raglan Castle. The site benefits from less than 10 minutes walking time to Raglan's centre, with other key services and facilities including a school in closer proximity.

Policy HA10 - Land South of Monmouth Road, Raglan

Allocated for residential development

Development of the site should accord with the following parameters, Placemaking Principles and Development Requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Total Homes
4.5 ha	Residential	Approx No. of Homes: 54 Open Market Homes: 27 Affordable Homes: 27

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following:

Sustainable Communities

- a) Development should not have a significant adverse impact on the settings of Raglan Castle Scheduled Ancient Monument and Registered Park and Garden.

- b) The site's location bordering Raglan Conservation Area and positioning alongside the main access into the Conservation Area should be reflected in the site's masterplanning.
- c) Building form and type should be varied with a mix of positions to help create space between the buildings and emphasise the linkages to the wider landscape.
- d) Building heights should be one or two storeys to ensure effective integration into the landscape.

Green Infrastructure, Landscape and Nature Recovery

- e) Protect, buffer and maintain existing TPO trees and other trees and hedgerows by including within the Green Infrastructure provision and enhance by include new planting of native species of local provenance.
- f) Include opportunities for grassland improvement and habitat suitable for breeding great crested newts.

Sustainable Travel and Highways

- g) Provision of off-site highway infrastructure improvements as necessary, having regard to requirements arising from the Transport Assessment and including:
 - An agreement with the Council for the proposed Monmouth Road junction, footways, street lighting, crossing provision and the widening and improvement of the existing footway on Monmouth Road.
 - Primary access arrangements on to Monmouth Road.
 - An emergency secondary access on to Station Road.
 - Financial contributions to carry out any necessary improvements to the local and strategic highway network.
 - Financial contributions to improve public transport services and nearby infrastructure.
 - Provision of good quality, safe, legible and accessible pedestrian and cycle linkages to key access points including a footpath link onto Station Road linking to the primary school and playing fields to the south and the village centre via Chepstow Road.

14.13 Land East of Burrium Gate, Usk

- 14.13.1 Land east of Burrium Gate is a greenfield site comprising of 2.9 ha of agricultural land, located at the eastern edge of Usk, north of Monmouth Road.
- 14.13.2 The site benefits from an approximate 10-minute walking time to Usk Primary School and a 15-minute walk to Usk town centre (Twyn Square) with key services and facilities. There are opportunities to link the site to sustainable travel facilities including bus stops along Monmouth Road and a planned active travel route along Monmouth Road.
- 14.13.3 Key considerations with regard to the development of the site include its proximity to Usk's air quality management area (AQMA), the site's impact on overland drainage flow and its layout

and design upon the setting of Usk. The site is also within the River Usk phosphorus sensitive catchment area.

Policy HA11 - Land-east of Burrium Gate, Usk

Allocated for residential development

Development of the site should accord with the following parameters, placemaking principles and development requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Number of Homes
2.6 ha	Residential	Approx No. of Homes: 40 Open Market Homes: 20 Affordable Homes: 20

In addition to the placemaking principles identified in Policy S8, the site must comply with the following:

Green Infrastructure, Landscape and Nature Recovery

- a) The development layout will respond to its topography and be maintained with a development ridgeline no more than 40m above Ordnance Datum (AOD), in order to protect the landscape character of Usk.
- b) The boundary hedge to the east and south of the site will be retained and enhanced, allowing for site access where appropriate.
- c) An appropriate buffer to SINC sites will be included and opportunities to create and enhance priority grassland habitat will be provided as part of the development.

Sustainable Travel and Highways

- d) Provision of off-site highway infrastructure improvements as necessary, having regard to requirements arising from the Transport Assessment and including:
 - An agreement for the proposed Monmouth Road junction, footways, street lighting, crossing provision and the widening and improvement of the existing footway on Monmouth Road.
 - Provision of good quality, safe, legible and accessible pedestrian and cycle linkages.
 - Financial contributions to improve public transport services and nearby infrastructure.
 - Implementation of a traffic regulation order to extend the speed limit on Monmouth Road.

Residential amenity

- e) The incorporation of satisfactory air quality measures for mitigating and/or reducing emissions within Usk's AQMA. Development must not significantly

worsen (either individually or cumulatively) any air pollution emissions in areas where pollution levels are close to their objective or limit value levels, nor result in a breach of an air quality objective or limit value.

Flood Risk and Sustainable Drainage Systems

- f) A scheme for the management of overland flows from adjacent land will need to be included to ensure existing overland flood risk has been accommodated within the layout of the site.

14.14 **Land West of Trem yr Ysgol, Penperlleni**

- 14.14.1 Land west of Trem yr Ysgol is a greenfield site comprising of 3.4 ha of agricultural land located to the south-western edge of Penperlleni, within the back-drop of the Bannau Brycheiniog National Park (BBNP). Vehicular access is proposed to connect to the existing Trem yr Ysgol highway, part of the recently built residential development.
- 14.14.2 The site benefits from an approximate 5-minute walking time to Goytre Fawr Primary School and an approximate 10-minute walk to key services and facilities, such as the local public house and convenience store. There are opportunities to connect and link the site to sustainable travel, including existing bus stops along the adjacent A4042.
- 14.14.3 The site is bounded by the Ffynnon Ddu watercourse along the eastern and southern boundaries and to the north west by the A4042 Trunk Road. The site contains several important natural ecological habitats. Towards the south west there is an existing wet woodland associated with the watercourse along with grassy marshland. There are also several mature trees within the site, including a veteran Oak Tree.
- 14.14.4 A DCWW mains pipe runs through the northern section of the site, where there are access easements, prohibiting development within a buffer of the pipe. A community orchard and public open space provision is proposed in this area of the site.

Policy HA12 - Land west of Trem yr Ysgol, Penperlleni

Allocated for a residential development

Development of the site should accord with the following parameters, placemaking principles and development requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Total Homes
3.4 ha	Residential	Approx No. of Homes: 42 Open Market Homes: 21 Affordable Homes: 21

In addition to the placemaking principles identified in Policy S8, the site must comply with the following:

Green Infrastructure, Landscape and Nature Recovery

- a) The site design will identify and respect any key views to the wider Bannau Brycheiniog National Park (BBNP).
- b) Protect, buffer, enhance and maintain existing TPO trees and other veteran and over-mature trees and hedgerows and include within the Green Infrastructure provision new planting of native species of local provenance.
- c) An appropriate landscape buffer will be provided to the eastern stream corridor.

Sustainable Travel and Highways

- d) Provision of off-site highway infrastructure improvements as necessary, having regard to requirements arising from the Transport Assessment and including:
 - An agreement to extend and re-engineer Trem yr Ysgol to provide pedestrian and primary vehicular access;
 - Provision of a link through the site to allow for pedestrian access to the southbound bus stop.

Main Rural Settlements

14.15 Land adjacent to Piercefield Public House, St Arvans

- 14.15.1 Land adjacent to Piercefield Public House is a 1.1ha greenfield site, located to the southern edge of St Arvans, west of the A466, within the Wye Valley National Landscape (AONB).
- 14.15.2 The site benefits from under 5-minute walking times to St Arvans' key services and facilities, such as the Piercefield Public House, village store and children's nursery. There are opportunities to connect and link the site to sustainable travel, including the National Cycle Network(NCN) and bus stops along the adjacent A466 and to the adjacent PROW along the south east boundary of the site.
- 14.15.3 The site is 3km from the Severn Estuary European Marine site. The Habitats Regulations Assessment acknowledges that proposals could have a Likely Significant Effect on the EMS via Recreational Pressure and Functionally linked land which will need to be considered.
- 14.15.4 The site is within the Otter Hole Regionally Important Geodiversity Sites (RIGS).

Policy HA13 - Land adjacent to Piercefield Public House, St Arvans

Allocated for residential development

Development of the site should accord with the following parameters, placemaking principles and development requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Total Homes
1.1 ha	Residential	Approx No. of Homes: 16 Open Market Homes: 8

	Affordable Homes: 8
--	---------------------

In addition to the placemaking principles identified in Policy S8, the site must comply with the following:

Green Infrastructure, Landscape and Nature Recovery

- a) The site design will identify and respect any key views to the wider Wye Valley National Landscape (AONB) setting.
- b) The site is within the 12.6km Core Recreational Catchment Zone for the Severn Estuary European Marine Site and will be considered for a financial contribution as part of the Mitigation Strategy for the site. Green space design must consider any emerging guidance for Suitable Alternate Natural Greenspace (SANG) to reduce recreational pressure on the features of the estuary.
- c) Provision of a lighting strategy that considers and mitigates for visual impact on landscape character and setting and minimises light spillage on to wildlife corridors and habitats, including corridors used by bats.

Sustainable Travel and Highways

- d) Provision of off-site highway infrastructure improvements as necessary, having regard to requirements arising from the Transport Assessment and including:
 - An agreement for proposed A466 road junction, footways, street lighting, crossing provision, connection to the cycle network and the widening and improvement of the existing footway on the A466.
- e) The layout will connect the proposal to the existing Public Right of Way 379/1/2 footpath running along the site's south eastern boundary.

14.16 Land at Churchfields, Devauden

14.16.1 Land at Churchfields is a greenfield site, comprising of 1.4ha of agricultural land located to the western edge of Devauden. The site is located west of Churchfields existing residential homes, and vehicle access is proposed to connect to the existing Churchfields Cul-de-sac highway. The site is located within the Wye Valley National Landscape (AONB).

14.16.2 The site benefits from approximately 5-minute walking times to Devauden's community services and facilities, such as the local store and village community hall. There are opportunities to connect and link the site to sustainable travel, including the existing bus stops along the adjacent B4293 and the PROW which runs immediately adjacent to the western boundary of the site.

Policy HA14 - Land at Churchfields, Devauden

Allocated for residential development

Development of the site should accord with the following parameters, placemaking principles and development requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Total Homes
1 ha	Residential	Approx No. of Homes: 20 Open Market Homes: 10 Affordable Homes: 10

In addition to the placemaking principles identified in Policy S8, the site must comply with the following:

Green Infrastructure, Landscape and Nature Recovery

- a) The site design will identify and respect any key views to the wider Wye Valley National Landscape (AONB) setting.
- b) Development of the site to consider existing topography, assets, features and contours of the site and include measures to integrate development appropriately while reducing visual impact.
- c) The site is within the 12.6km Core Recreational Catchment Zone for the Severn Estuary European Marine Site and will be considered for a financial contribution as part of the Mitigation Strategy for the site. Green space design must consider any emerging guidance for Suitable Alternate Natural Greenspace (SANG) to reduce recreational pressure on the features of the estuary.

Sustainable Travel and Highways

- d) Provision of off-site highway infrastructure improvements as necessary, having regard to requirements arising from the Transport Assessment and including:
 - An agreement to extend and re-engineer Churchfields to provide pedestrian improvements (to nearby bus stops) and primary vehicular access;
- e) The layout will connect the proposal to the existing Public Right of Way 357/64/1 footpath running along the site's western boundary.

14.17 Land East of Little Mill

- 14.17.1 The site comprises 4.1 hectares on the eastern side of Little Mill, north of and adjacent to the A472. The site is in close proximity to a proposed Future Active Travel route for walking and cycling and is also close to a number of Public Rights of Way. The site is served by bus route 63 (Cwmbran-Pontypool-Usk-Chepstow), with both eastbound and westbound bus stops along the A472.

- 14.17.2 The site is within the Usk Glacier Terminal Moraine Regionally Important Geodiversity Site (RIGS).

Policy HA15 - Land east of Little Mill

Allocated for residential development

Development of the site should accord with the following parameters, placemaking principles and development requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Total Homes
1.68ha	Residential	Total Homes: 20 Open Market Homes: 10 Affordable Homes: 10

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following:

Green Infrastructure, Landscape and Nature Recovery

- a) Sensitive lighting of the site and associated infrastructure will be required due to the presence of a high conservation value lesser horseshoe bat roost to the south of the site.

Sustainable Travel and Highways

- b) Provision of off-site highway infrastructure improvements as necessary, having regard to requirements arising from the Transport Assessment and including:
 - Provision of vehicular access via Cae Melin
 - Provision of a 2.0 metre wide footway on eastern side of Cae Melin linking to existing footways on the A472.

Flood Risk and Sustainable Drainage Systems

- c) A scheme for the management of overland flows from adjacent land will need to be included to ensure the potential flood risk from the land above the site has been accommodated within the layout of the site.

14.18 Land North of Little Mill

- 14.18.1 Land north of Little Mill is a greenfield site situated at the northern limits of the village. Residential properties border the southern edge of the site, with a railway line to the north-west and open grazing land to the north and east. A PROW runs along the site's eastern boundary, and it is served by bus route 63 (Cwmbran-Pontypool-Usk-Chepstow), with both eastbound and westbound bus stops along the A472. Allocation of the site is a continuation of the Adopted LDP allocation.

Policy HA16 - Land North of Little Mill

Allocated for residential development

Development of the site should accord with the following parameters, placemaking principles and development requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Total Homes
0.87ha	Residential	Approx No. of Homes: 15 Open Market Homes: 7 Affordable Homes: 8

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following:

Green Infrastructure, Landscape and Nature Recovery

- a) Protect buffer and maintain existing mature trees within the Green Infrastructure provision of the site.
- b) Provision of a lighting strategy that considers and mitigates for visual impact on landscape character and setting and minimises light spillage on to wildlife corridors and habitats, including corridors used by bats.

Sustainable Travel and Highways

- c) Off-site highway infrastructure improvements as necessary including vehicular access through the extension of Ty Gwyn Road.
- d) Provision of good quality, safe, legible and accessible pedestrian and cycle linkages to key access points including public transport stops, the public rights of way network and key services including those located along Berthon Road.

Residential Amenity

- e) The incorporation of appropriate noise and vibration mitigation measures reflecting the site's proximity to the railway line on its north-western boundary.

Flood Risk and Sustainable Drainage Systems

- f) Incorporation of surface water drainage solutions to the south eastern corner of the site.

14.19 Llanellen Court

- 14.19.1 Land adjacent to Llanellen Court Farm is a greenfield site comprising of agricultural land, located in the rural village of Llanellen, south of Abergavenny. The site is in close proximity to a number of Public Rights of Way, including National Cycling Network (NCN) route 49, which relates to a proposed Active Travel route along the Monmouthshire Brecon Canal to the west. The site is served by both northbound and southbound bus stops along the A4042.

Policy HA17 - Land adjacent to Llanellen Court Farm, Llanellen

Allocated for residential development

Development of the site should accord with the following parameters, placemaking principles and development requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Total Homes
1.56ha	Residential	Approx No. of Homes: 26 Open Market Homes: 13 Affordable Homes: 13

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following:

Green Infrastructure, Landscape and Nature Recovery

- a) Protect, buffer and maintain existing TPO trees and other trees and hedgerows by including within the Green Infrastructure provision and enhance with new planting of native species of local provenance.

Sustainable Travel and Highways

- b) An agreement must be entered into with the Council for the implementation of required off-site works and improvement measures including:
 - The adoption of the existing development access.
 - The construction of the proposed off-site pedestrian/cycling improvements for safe access to bus stops on the A4042 in both directions.
 - The creation of accessible pedestrian access to the bus stop on Elm Drive, a shared-use path to link to the Monmouthshire and Brecon Canal and exploration of better links to the village centre other than the PROW.
 - The provision of access improvements where necessary.

14.20 Land west of Redd Landes, Shirenewton

14.20.1 Land west of Redd Landes is located on the western edge of Shirenewton. The site is located opposite the recreation ground, play area and recreation hall and offers links to wider public rights of way that connect to the primary school and other parts of the village. Additional footways to improve these connections are required as part of the development. A key consideration of the site is the need for additional hedgerow and tree planting to minimise any potential landscape impact on the wider surroundings.

14.20.2 The site is 6km from the Severn Estuary European Marine site. The Habitats Regulations Assessment acknowledges that proposals could have a Likely Significant Effect on the EMS via Recreational Pressure and Functionally linked land which will need to be considered.

Policy HA18 - Land west of Redd Landes, Shirenewton

Allocated for residential development

Development of the site should accord with the following parameters, placemaking principles and development requirements, which should be delivered in an appropriately phased manner and be formally tied to planning consents.

Site Area	Allocation Type	Total Homes
1.76ha	Residential	Approx No. of Homes: 26 Open Market Homes: 13 Affordable Homes: 13

In addition to the Placemaking Principles identified in Policy S8, the site must comply with the following:

Sustainable Communities

- a) Inclusion of an active frontage along the main road to foster connection with the wider settlement.

Green Infrastructure, Landscape and Nature Recovery

- b) Existing boundary features to be enhanced with additional hedgerow and tree planting to boundaries to mitigate for development and respond to its edge of settlement location.
- c) The site is within the 12.6km Core Recreational Catchment Zone for the Severn Estuary European Marine Site and will be considered for a financial contribution as part of the Mitigation Strategy for the site. Green space design must consider any emerging guidance for Suitable Alternate Natural Greenspace (SANG) to reduce recreational pressure on the features of the estuary.
- d) Provision of a lighting strategy that considers and mitigates for visual impact on landscape character and setting and minimises light spillage on to wildlife corridors and habitats.

Sustainable Travel and Highways

- e) Provision of on and off-site measures to provide good quality, attractive, safe, legible and accessible pedestrian and cycle linkages both to and within the new development area. Key connections include a footpath link on the eastern part of the site to the road frontage footway allowing for ease of access to the recreation hall and grounds, along with a new footway link to the north of the site connecting to the existing Public Right of Way 380/42/1.
- f) Provision of off-site highway infrastructure improvements as necessary, having regard to requirements arising from the Transport Assessment and including:
 - An agreement must be entered into with the Council for facilitation of the construction of the development access;

- A 2 metre footway on the northern side of Route R122 Earlswood Road over the site's frontage linking to the existing footway at Redd Landes;
- Relocation of the existing 20mph and 40mph speed limits and measures to promote the change in speed limit and environment, the location of which to be agreed with the Council.

Other

- g) Protection measures in the form of a diversion or easement width may be required to ensure the protection of any water mains traversing the site.

Gypsy & Travellers

15. Gypsy and Travellers

Strategic Policy S9 – Gypsy and Travellers

Land will be made available at Bradbury Farm, Crick for 7 pitches to accommodate unmet Gypsy and Traveller accommodation needs identified in the latest Gypsy and Traveller Accommodation Assessment.

- 15.1.1 Local Authorities are required to assess Gypsy and Travellers needs under the Housing (Wales) Act 2014 and prepare an update every five years. An updated Gypsy and Travellers Accommodation Assessment (GTAA) for Monmouthshire has been prepared and was agreed by Welsh Government in June 2024. PPW requires Local Authorities in their local development plans to allocate sites to meet the identified need in the GTAA and include policies for the provision of Gypsy, Traveller and Show People sites.
- 15.1.2 The updated GTAA identifies a need for nine residential pitches between the period 2020 – 2025 and a further four pitches for the remaining Plan period of 2026 – 2033, giving a total need of thirteen pitches until the end of Plan period. Of the thirteen pitches needed, two pitches have been granted planning permission for a family that was part of the GGTA. This reduced the pitch requirement to 11. The decision by the Planning Committee on 16th July 2024 to approve a further four pitches at Llancayo, reduces the overall pitch requirement further to seven. To address the remaining need over the Plan period, the site at Bradbury Farm, Crick is allocated for seven pitches.
- 15.1.3 The GTAA update does not identify a need for a transit pitch³⁸. In terms of transit sites, it is considered that these would be best considered on a regional basis, requiring collaboration with neighbouring local authorities. Welsh Government are in the process of commissioning an all-Wales mapping study on Gypsy and Traveller Transit Site provision, with publication anticipated in late 2024. This will inform a regional study to be commissioned by SEWSPG on behalf of the ten Local Planning Authorities in south east Wales, to look at supply and demand for Gypsy and Traveller Transit accommodation across the region with a view to recommending suitable broad areas for future accommodation to meet regional need, based on known transit patterns and routes.
- 15.2 **Gypsy, Traveller and Travelling Showpeople Sites**

³⁸ Welsh Government Circular 005/2018 – Planning for Gypsy, Traveller and Showpeople (June 2018) notes a Transit site is a site where occupiers have agreement to stay for periods of less than three months as set out in The Mobile Homes (Wales) Act 2013.

Policy GT1 – Gypsy, Traveller and Showpeople Sites

Proposals for Gypsy and Traveller and Travelling Showpeople will be permitted provided that:

- a) the site is within or adjacent to a settlement boundary. Sites in the countryside away from existing settlements will be considered where there is a lack of suitable sustainable locations for sites within or adjacent to existing settlement boundaries, in accordance with Circular 005/2018;
- b) the site has a safe and convenient access to the highway network and will not cause traffic congestion or safety problems;
- c) the site is of a suitable size to allow for the planned number of caravans, amenity blocks, a play area (for children on sites housing multiple families), the access road and include sufficient space for the parking and safe circulation of all vehicles associated with occupiers within the site curtilage;
- d) the site does not occupy a prominent location and is consistent with RLDP policies for protecting and enhancing character and distinctiveness of the landscape and environment. Where necessary the proposal will include mitigating measures to reduce the impact, and assimilate the proposal into its surroundings e.g. screening and landscaping;
- e) the site is not within areas at high risk of flooding and proximity to uses with potential sources of pollution or emissions;
- f) the site is of an appropriate scale to its location and does not have an unacceptable impact on the amenities of neighbouring land uses;
- g) it is served, or can be served, by adequate on-site services for water supply, power, drainage, sewage disposal and waste disposal (storage and collection), and for Travelling Showpeople that there is a level area for outdoor storage and maintenance of equipment.

- 15.2.1 In addition to the permanent site(s) identified in Policy S9, it is important to include a detailed criteria-based policy in order to meet any future or unexpected need. Site proposals must be in accordance with advice in Welsh Government Circular 005/2018: Planning for Gypsy, Traveller and Showpeople Sites, which will be a material consideration as appropriate in the determination of any planning applications. In addition, sites being developed by a public body, such as a Local Authority, should be designed in accordance with the Welsh Government Guidance: Designing Gypsy and Traveller Sites. Policy GT1 provides the framework for assessing proposals for Gypsy, Traveller and Travelling Showpeople sites, whether for permanent, transit or emergency use.

16. Employment Sites Provision

Strategic Policy S10 – Employment Sites Provision

Provision is made for 57ha of employment land to meet a minimum requirement of 38ha of land on a suitable range and choice of sites for industrial and business development (Use Classes B1, B2, B8) in accordance with the Plan's Spatial Strategy.

Existing employment land and premises that continue to be required for employment purposes will be protected from alternative forms of development.

Development proposals within settlement boundaries that seek to deliver the Council's vision for sustainable economic growth will be permitted, particularly where they reflect the aims of the Economy, Employment & Skills Strategy. All proposals will be subject to detailed planning considerations, including the protection of the natural and built environment.

- 16.1.1 Monmouthshire's economic profile is characterised by low unemployment levels, but a high economic inactivity rate, reflecting its increasing ageing population and shrinking working age population. Levels of out-commuting and the distances travelled have also been high historically. Combined, these factors are impacting on employment growth within Monmouthshire and the social sustainability of our communities. The RLDP seeks to address these issues by promoting a growth level and spatial strategy that will promote higher employment growth, supporting greater labour force retention and achieve a reduction in the net out-flow of workers. The RLDP provides the planning policy framework to enable the provision of up to 6,240 jobs over the Plan period (416 jobs per annum). This level of job

growth aligns with the projected population and housing growth and takes account of adjustments to household membership rates for key younger age groups and a reduced level of commuting by retaining more of the resident workforce.

16.1.2 Securing local economic growth and prosperity is a key aim of the Plan and will be achieved through a range of mechanisms and sectors. Delivering on the growth ambition will require more than simply allocating land in the RLDP; the Economy, Employment and Skills Strategy (EESS) sets the Council’s direction of travel and action plan focussed around four key priority themes that have emerged from the Corporate and Community Plan.

Figure 3

Economy, Employment and Skills Strategy – key priority themes and objectives	
<p>Place: A vibrant, greener Monmouthshire</p> <ul style="list-style-type: none"> • Promote the distinctive diversity of Monmouthshire as a county of opportunity. • Support the vitality of our town centres. • Support the transition towards net zero and protect our environment. • Support rural diversification. • Enhance the experience for visitors and deliver sustainable growth in our tourism economy. 	<p>People: A fairer, more successful Monmouthshire</p> <ul style="list-style-type: none"> • Support a balanced change in the demographic profile of our county. • Support the creation of 6,240 sustainable job opportunities. • Equip people with skills and qualifications to enter employment, enable employment progression and explore a Skills Centre in Monmouthshire. • Collaborate with comprehensive schools, further and higher education partners to enhance access and networks.
<p>Enterprise: A thriving, ambitious Monmouthshire</p> <ul style="list-style-type: none"> • Support the sustainable growth of existing businesses including our larger businesses. • Finding our place in relation to regional growth opportunities • Increase uptake of support for people wishing to start or grow a business. • Continue to foster a strong entrepreneurial culture. • Encourage innovation and clustering in sectors. • Make public procurement spend more accessible. • Foster a thriving local food economy. 	<p>Infrastructure: A well connected Monmouthshire attracting business investment</p> <ul style="list-style-type: none"> • Inform the use and distribution of employment land and premises. • Explore the Council’s role in the delivery of employment floor space. • Support improvements in digital connectivity. • Support improvements to key public transport services. • Attract investment from larger high value enterprises.

- 16.1.3 The RLDP has a key role supporting the Council's vision for economic growth and will be one of the main enablers in delivering sustainable economic growth and increasing employment opportunities in existing and emerging sectors. The EESS recognises that the RLDP is a key mechanism for achieving many of the objectives noted above. This ranges from a supportive policy framework to facilitate economic growth in a range of sectors to identifying sufficient land to enable the growth of the B Use Class Sector.
- 16.1.4 Monmouthshire is geographically well connected, located in a key strategic location that benefits from good links to Cardiff, Bristol and the Midlands. With the removal of the Severn Bridge tolls, Monmouthshire's relationship with the West of England Combined Authority (WECA), the Bristol City Region, Forest of Dean and South Gloucestershire is also expected to strengthen and enhance the County's economic role in the region. Monmouthshire is well located to benefit from initiatives such as the Cardiff Capital Region City Deal, Great Western Cities, the Marches Forward Partnership and the Western Power House, which aim to drive economic growth through regional collaboration.
- 16.1.5 As noted in the Development Plans Manual (March 2020), the aim of a LDP strategy is to achieve a balance between homes and jobs thereby reducing the need for commuting. The Manual recognises that the scale of economic growth to be delivered in a plan will be strongly influenced by factors including the available labour force, skills, net migration levels and commuting patterns. While these factors remain relevant and are key objectives of the Plan, it is becoming widely accepted that the fundamental shift in working practices experienced as a legacy of the Covid-19 pandemic, with a significant increase in people working from home/remotely, has made it less important where some jobs are located as employees no longer need to commute for work in many cases. This has provided the opportunity for many people to live and work in the same location via a new remote working approach and aligns with Welsh Government's 'Smarter Working: a Remote Working Strategy for Wales. This sets out Welsh Government's approach to achieving 30% of the Welsh workforce working at or near to home and embedding a culture that supports remote working. The RLDP can support this shift in working practices by securing the provision of local shared working hubs, provision of broadband infrastructure and placemaking to ensure quality home environments.
- 16.1.6 It should be noted that not all of these jobs will be in planning B-class uses and many will be delivered through foundational sectors such tourism, leisure, food and retail and the agricultural and forestry sector, which play an important role within Monmouthshire's economy. Future Wales recognises and supports the significant role foundational and agricultural sectors can play in the Welsh economy generally but with significant relevance to supporting the rural economy (Policy 5 of Future Wales). The RLDP plans positively for these sectors through complementary Strategic Policies including S14 – Town, Local and Neighbourhood Centres, S11 – Rural Economy and S12 – Visitor Economy and associated detailed Development Management Policies.

16.2 **Employment Land Reviews**

- 16.2.1 In line with PPW12 and the requirement to provide an economic development evidence base to support LDP preparation, the Council commissioned the preparation of an Employment Land Review (ELR). This has undertaken a review of employment forecasts and B-use class land requirements for the Plan period 2018 – 2033. The study recommends that a forecast

scenario based on past take-up rates is adopted for the RLDP. This provides a minimum requirement of 38ha of employment land, including a five-year buffer to allow for choice and uncertainty in forecasting. The ELR breaks this down by individual land use types as follows:

- B1: 3.5ha
- B2: 9.2ha
- B8: 25.2ha

16.2.2 Providing for this level of jobs growth is part of a complex picture. A fundamental element will be the provision of a deliverable range of employment land supply, in appropriate locations and in the right quantities to attract new businesses and enable our existing businesses to grow. To ensure a range of types and sizes of employment land premises is provided, development within settlement boundaries will be permitted subject to detailed planning considerations. This includes the integration of new employment opportunities in mixed-use developments and small units and workshops for small businesses to promote new start-ups and support sustainable economic growth. However, it is recognised that many of the County's businesses are SMEs and may not require new land allocations to grow.

16.2.3 Moreover, there is an increased propensity for agile and home working over the longer term, meaning demand for physical employment land or space is changing. It is acknowledged that this tends to relate more to office-based sectors, and that not all sectors are able to work from home or in an agile manner. Having regard to the outcome of the evidence base set out above, the RLDP allocates sufficient employment land (B use class) to cover the employment needs of the County in locations consistent with the Plan's Spatial Strategy.

16.2.4 In accordance with PPW12, the ELR sits alongside the Regional Employment Study (Larger Than Local Study, March 2020), which covers a Larger than Local Area of Blaenau Gwent, Caerphilly, Monmouthshire, Newport and Torfaen. This related study provides a regional scale analysis of the economic evidence base and the property and employment land market in the Larger than Local Area, up to 2040 (the ELR covers the 2018 – 2033). This Study provides a regional viewpoint of demand and land requirements and recognises the important role the M4 corridor plays, as well as the strategic function of the north of the sub-region linking to Herefordshire and the west Midlands. Strategic employment sites should be geographically distributed throughout the region to support this.

16.2.5 In terms of land requirements, the Larger than Local ELR estimates Monmouthshire requires between 46ha and 60ha for the period 2018 – 2040 depending on the method adopted. This compares to an overall requirement of between 224ha and 275 ha for the five authorities. Full details are available in the Larger Than Local Study.

16.3 **Employment Allocations**

16.3.1 Strategic Policy S12 sets out the requirement to provide for a suitable range and choice of sites for industrial and business development in the County (classes B1, B2, B8 of the Town and Country Planning Use Classes Order 1987). Overall, the Plan makes provision for approximately 57ha of B use class land comprising employment land take up between the period 2018 – 2024 and new employment allocations for the remaining Plan period.

Employment Land Supply

Employment Land Take Up 2018- 2024	Approximately 9ha
Employment Allocations	Approximately 48ha
Total Employment Provision	Approximately 57ha

16.3.2 Policy EA1 below identifies these new employment sites and mixed-use sites that include land for employment development in addition to residential.

Policy EA1 – Employment Allocations

The following sites are identified for new industrial and business development (Use classes B1, B2 and B8):

Site Ref	Site Name	Area (Ha)	Use Class
Industrial and Business Sites			
EA1a	Land at Nantgavenny Business Park, Abergavenny	0.59	B1
EA1b	Poultry Units, Rockfield Road, Monmouth	1.3	B1
EA1c	Land North of Wonastow Road, Monmouth	4.5	B1, B2, B8
EA1d	Newhouse Industrial Estate, Chepstow	2.5	B1, B2, B8
EA1e	Land adjoining Oak Grove Farm, Caldicot	6	B1, B2, B8
EA1f	Quay Point, Magor	14	B1, B2, B8
EA1g	Rockfield Farm, Undy	3.2	B1
EA1h	Gwent Euro Park, Magor	7	B1, B2, B8
EA1i	Raglan Enterprise Park, Raglan	1.5	B1, B2, B8
EA1j	Land West of Raglan	4.5	B1, B2, B8
Identified Mixed Use Sites			
EA1k	Land to the East of Abergavenny (see Policy HA1 for site specific policy requirements)	1	B1
EA1l	Land at Former MoD Site, Caerwent (see Policy HA9 for site specific policy requirements)	1	B1

EA1m	Land to the East of Caldicot/North of Portskewett (see Policy HA2 for site specific policy requirements)	1	B1
Total		48.09	

- 16.3.3 An Employment Land Schedule which sets out the phasing of the employment allocations is set out in Appendix 10.
- 16.3.4 The proposals plan identifies approximately 4ha of land at Newhouse Industrial Estate, Chepstow (EA1d) for employment uses, however, approximately 2.5ha of this has contributed to the employment land supply due to the other 1.5ha having planning permission for a petrol filling station and drive thru restaurants. The larger land allocation allows for employment uses to be favourably considered should the planning permission not be implemented.
- 16.3.5 Allocation EA1g – Rockfield Farm, Undy forms part of the Adopted LDP Rockfield Farm Mixed Use Strategic site and benefits from an extant planning permission.
- 16.3.6 Allocation EA1h – Gwent Euro Park, Magor is located within the Gwent Levels Site of Special Scientific Interest (SSSI) and also within Flood Risk Zone C1 (Development Advice Map) and Defended Flood Zone (Flood Map for Planning). The allocation area corresponds with land benefitting from an extant planning permission.
- 16.3.7 Allocations EA1i – Land at Former MoD, Caerwent and EA1m – Land to the East of Caldicot/North of Portskewett are situated within a Core Recreational Zone of 12.6km for the Severn Estuary European Marine Site identified by the Habitats Regulation Assessment. In accordance with Policy NR2 – Severn Estuary Recreation Pressure and the site-specific policy requirements set out in HA9 and HA2 respectively, development will be considered for a financial contribution as part of the Mitigation Strategy for the European designation. Green space design must also consider any emerging guidance for Suitable Alternate Natural Greenspace (SANG) to reduce recreational pressure on the features of the Estuary.

16.4 Protected Employment Sites

- 16.4.1 The provision of a suitable range and choice of sites for industrial and business development in the County also involves the protection of existing employment sites from alternative development. Policy E1 sets out the criteria against which development proposals for the alternative use of existing employment sites / premises will be assessed. Significant existing employment sites in the County are identified in Policy EA2 below, although Policy E1 will apply to all existing employment sites and premises even if not included in the following table.

Policy EA2 – Protected Employment Sites

The following existing sites as indicated on the Proposals Maps are protected for industrial and business development (Use Classes B1, B2 and B8):

Site Ref	Site Name
----------	-----------

EA2a	Mill Street, Abergavenny
EA2b	Lower Monk Street, Abergavenny
EA2c	Union Road, Abergavenny
EA2d	Hatherleigh Place, Abergavenny
EA2e	Former Cranberry Foods, Abergavenny
EA2f	Nantgavenny Business Park, Abergavenny
EA2g	Station Road, Chepstow
EA2h	Job Centre, Chepstow
EA2i	Bulwark Road, Chepstow
EA2j	Beaufort Park, Chepstow
EA2k	Newhouse Industrial Estate, Chepstow
EA2l	Wonastow Road, Monmouth
EA2m	Mayhill/Hadnock Road, Monmouth
EA2n	Tri-Wall, Wonastow, Monmouth
EA2o	Magor Brewery, Magor
EA2p	Severn Bridge, Caldicot
EA2q	Cheeseman's Industrial Estate, Rogiet
EA2r	Progress Industrial Estate, Rogiet
EA2s	Wales One, Magor
EA2t	Cuckoo's Row, Raglan
EA2u	Raglan Enterprise Park, Raglan
EA2v	Grange Mill Industrial Estate, Raglan
EA2w	Little Castle Farm Business Park, Raglan
EA2x	Woodside Industrial Estate, Usk
EA2y	Mamhilad

16.5 Protection of Existing Employment Land

- 16.5.1 Reflecting a key objective of Policy S12 to protect existing employment land from alternative development, Policy E1 below sets out the criteria against which development proposals for the alternative use of existing employment sites / premises will be assessed.

Policy E1 – Protection of Existing Employment Land

Proposals that will result in the loss of existing or allocated industrial and business sites or premises (Use Classes B1, B2 and B8 to other uses will only be permitted if:

- a) The site or premises is no longer suitable or well-located for employment use;
- b) A sufficient quantity and variety of industrial sites or premises is available and can be brought forward to meet the employment needs of the County and the local area;
- c) There is no viable industrial or business employment use for the site or premises;
- d) There would be substantial amenity benefits in allowing alternative forms of development at the site or premises;
- e) The loss of the site would not be prejudicial to the aim of creating a balanced local economy.

Exceptionally, planning permission may be granted for a change of use of existing employment land when the above criteria are not fully complied with if:

- i) The proposal is for small scale retail uses which are ancillary to the main business / industrial activity; or
- ii) Small scale service activities of an industrial nature which are not suited to the high street and involve the sale, service or repair of vehicles or machinery.

- 16.5.2 The importance of protecting existing employment sites / premises is of continuing value over the Plan period in order to ensure there is an appropriate portfolio of employment land and premises that can be safeguarded from competing uses and provides for a sufficient quality, range and choice. The policy applies to existing, allocated and permitted business, industrial and warehousing sites and premises.

- 16.5.3 The Council does, however, acknowledge that there may be instances where sites allocated or designated for employment use are no longer appropriate. In such cases the Council may be willing to review the employment allocation / designation and consider whether an alternative and more beneficial use of the site or premises would be appropriate. Consideration will also be given to whether the amenity of an area could be improved by the relocation of inappropriate industries and their replacement by a more suitable use.

- 16.5.4 Proposals for non-B uses will need to demonstrate that either the existing use is inappropriate or that the land or premises is surplus to the requirements of the employment market. Viability and marketing evidence must be provided to justify the loss of the employment land or premises. The type of evidence required will vary depending on individual circumstances but may include details of why the land or premises is no longer in use and evidence to show that appropriate and reasonable efforts have been made to market it for sale or lease for its existing or allocated use for a period of at least 12 months.

16.5.5 In terms of assessing whether sites / premises are well-located for business and industrial use, consideration will be given to accessibility to the primary highway network, sustainable travel and proximity to housing or other sensitive uses.

16.5.6 The Council consider that some B2 employment sites may also be suitable for modern waste management facilities, subject to detailed planning considerations. Further detail on potential sites for waste management facilities is provided in the Section 22 setting out the waste related policies.

16.6 **Non-Allocated Employment Sites**

16.6.1 Policy E2 below seeks to enable proposals for employment use on non-allocated sites by non-speculative, single-site users / specific large employers that cannot be accommodated on existing or proposed business/industrial sites and sets out the criteria against which such proposals will be assessed.

Policy E2 – Non-Allocated Employment Sites

Proposals for industrial and business development (Use Classes B1, B2 and B8) by non-speculative single-site users will be permitted provided that all the following conditions are met:

- a) The proposed site is within or adjoining settlement boundaries of Primary Settlements or existing and proposed industrial / business sites;
- b) It can be demonstrated that the proposal cannot be accommodated on existing or proposed industrial or business sites within the County;
- c) The proposal is compatible with adjacent land uses;
- d) There is a demonstrable need for the type and scale of development in that location; and
- e) The proposal would cause no unacceptable harm to the surrounding landscape, historic / cultural heritage, biodiversity or local amenity value.

Such developments will be controlled with a Section 106.

16.6.2 It is considered that the plan provides for a sufficient variety – in terms of size, mix of uses, quality and distribution – of industrial and business sites within the County. However, there may be instances where a specific large employer cannot find a suitable site either on an existing or allocated industrial /business site, or within other local authority areas within the employer’s area of search. In these instances, a planning application for industrial or business use, although to be advertised as a departure from the Plan, could be considered on a non-allocated site, taking into account detailed planning criteria and whether there is a need for the development.

17. Rural Enterprise

Strategic Policy S11 – Rural Economy

Development to enable rural enterprise uses and the diversification of the rural economy will be permitted outside settlement boundaries where it is of a scale and type compatible with the surrounding area and will cause no unacceptable harm to the surrounding landscape, historic and cultural heritage, biodiversity or local amenity value.

Development must re-use or adapt existing buildings where possible. The exceptional circumstances in which new buildings may be permitted outside settlement boundaries to support the rural economy are set out in RE1, RE3, RE4, RE5 and RE6.

- 17.1.1 The need to sustain and regenerate the County's rural economy is a key objective of the Plan. In allowing for an appropriate amount of diversification and enterprise in rural areas, the Plan seeks to sustain and enhance and, where appropriate, regenerate the County's rural settlements. The promotion of diverse economic activity is a key element of this, which is also recognised as a key objective of the Economy, Employment and Skills Strategy. More specifically, the Monmouthshire Local Food Strategy (May 2024), sets a long-term goal of fairer, greener, healthier food and farming in a flourishing economy that benefits all Monmouthshire's residents. Developing food as an economic sector is identified as a core theme in achieving this goal.
- 17.1.2 Future Wales 2040 has expressed a commitment to supporting vibrant rural areas. Policy 5 – Supporting the Rural Economy – establishes the national policy approach for LDPs to plan positively to meet the employment needs of rural areas through appropriate and proportionate economic growth.
- 17.1.3 National policy supports rural enterprise and agricultural diversification where it is environmentally acceptable. TAN 6: Planning for Sustainable Rural Communities (2010) advises that RLDPs should facilitate the diversification of the rural economy by accommodating the needs of both traditional rural industries and new enterprises, whilst minimising impacts on the local community and the environment. New enterprises should be small-scale, located within or adjoining settlement boundaries and not have an unacceptable impact on the local community or environment. Separate criteria apply to agricultural diversification as set out in TAN 6: Planning for Sustainable Communities. Diversification may include livestock, non-traditional livestock and crop farming, tourism projects and renewable energy proposals that help to increase the viability of the existing agricultural holding by reducing their operating costs. Policies RE1 – RE3 provide detailed policy criteria to assess rural enterprise and rural diversification proposals.
- 17.1.4 The significant role tourism plays in Monmouthshire's economy, particularly in assisting in the diversification of the rural economy, is also recognised. Diversification for such purposes could therefore assist in maintaining and enhancing local employment opportunities, with further details set out in Strategic Policy S12 – Visitor Economy and associated Development Management policies.

17.1.5 It is recognised that an important balance exists between rural enterprise and diversification and the need to promote sustainable development and maintain the local distinctiveness and high quality of Monmouthshire’s environment. To achieve this balance, and in accordance with national planning policy, priority should be given to the re-use of existing buildings rather than the development of new ones. Where this is not possible, limited new build may be acceptable in exceptional circumstances. Detailed criteria in relation to this are set out below.

17.2 **Employment in Secondary and Main Rural Settlements**

17.2.1 PPW12 and TAN 6 recognise that local employment opportunities within rural settlements are essential to sustain and improve village communities and have a vital role in promoting healthy economic activity. In accordance with national guidance and reflecting the Council’s vision for sustainable economic growth and prosperity, this policy seeks to allow the development of small-scale enterprises as an exception within and adjoining the settlement boundaries of Secondary and Main Rural Settlements identified in Strategic Policy S2.

Policy RE1 –Secondary and Main Rural Settlements Employment Exceptions

Within or adjoining the settlement boundaries of the Secondary and Main Rural Settlements identified in Policy S2, the construction of small-scale purpose built industrial and business development will be permitted, subject to detailed planning considerations, including:

- a) The proposal would cause no unacceptable harm to the natural or built environment;
- b) It can be demonstrated that the proposal cannot be accommodated on existing or proposed industrial or business sites with the County;
- c) The proposal is compatible with surrounding land uses and in scale with the existing settlement.

17.2.2 PPW12 notes that new employment sites in rural locations are likely to be small and should generally be located within or adjacent to defined settlement boundaries. Small businesses often find village locations attractive places to establish a business and their presence provides valuable employment opportunities for local communities, reduces out-commuting, assists in diversifying the rural economy and thereby promotes sustainable development.

17.2.3 There may be instances where the development of new, or expansion of existing employment sites on the edge of settlements would be more acceptable from an amenity, environmental and highway safety view than development within the identified Secondary and Main Village settlements. Such development, however, needs careful consideration, particularly in relation to protecting the countryside from visual intrusion, and will be subject to detailed planning considerations.

17.3 **Conversion or Rehabilitation of Buildings in the Open Countryside for Employment Use**

- 17.3.1 PPW12 recognises that the re-use and adaptation of existing rural buildings has an important role in meeting the needs of rural areas for commercial and industrial development as well as agricultural diversification. Policy RE2 therefore provides the opportunity for the conversion and rehabilitation of existing buildings for business re-use, subject to detailed planning considerations.

Policy RE2 – The Conversion or Rehabilitation of Buildings in the Open Countryside for Employment Use

Proposals for the conversion or rehabilitation of existing buildings in the open countryside, to employment use will be permitted provided that all the following criteria are met:

- a) The form, bulk, and general design of the proposal, including any extensions, respect the rural character and design of the building;
- b) In respect of farm diversification proposals, any necessary re-building work should respect or be in sympathy with the location and traditional characteristics of the building; in all other cases the buildings should be capable of conversion without major or complete reconstruction;
- c) The more isolated and prominent the building the more stringent will be the design requirements with regard to new door and window openings, extensions and means of access, service provision and curtilage, especially if located within the Wye Valley National Landscape (AONB);
- d) The conversion of modern farm and forestry buildings will only be permitted if the building has been used for its intended purpose for a significant period of time. Particularly close scrutiny will be given to proposals relating to buildings that are less than 5 years old, or which are known to have been used for their intended purpose for less than 5 years, and where there has been no change in farming or forestry activities on the unit since the building was erected permission may be refused;
- e) The proposal including curtilage and access, is in scale and sympathy with the surrounding landscape and does not require the provision of unsightly infrastructure and ancillary buildings; and
- f) The building is capable of accommodating the proposed use without substantial extension.

The above criteria will also be applied to proposals to extend buildings that have already been converted.

- 17.3.2 In line with national guidance, it is recognised that the re-use and conversion of permanent buildings in the countryside provide a valuable opportunity to offer employment and support the rural economy. Due to their location, such developments must be carefully controlled, and a balance is required to protect the character and appearance of the existing building and the surrounding area.

17.3.3 Proposals for the conversion and rehabilitation of rural buildings for employment use will only be permitted where they conform to the criteria set out above and other relevant policies of the plan, particularly those which seek to minimise any detrimental effect on landscape value, environmental quality and amenity (including S5, LC1, PM 2 and NR1). In all cases it is essential that the proposed use and design has regard to the character, scale and appearance of the existing building and surrounding area. Further details will be provided in Conversion of Agricultural Buildings Design Guide Supplementary Planning Guidance.

17.3.4 The Council is also concerned about possible abuse to the system whereby agricultural and forestry buildings – particularly those built under permitted development rights – are constructed with the intention of early conversion to another use. This policy seeks to prevent any such attempts to abuse the planning system. Further guidance is provided in TAN 6 Planning for Sustainable Rural Communities.

17.4 **Agricultural Diversification**

17.4.1 In accordance with national policy, Policy RE3 supports the diversification of agriculture provided that proposals meet the criteria set out in this and other relevant plan policies, including S11 – Rural Economy.

Policy RE3 – Agricultural Diversification

Development proposals which make a positive contribution to agriculture diversification will be permitted where the new use or building meets the following criteria:

- a) The proposed non-agricultural development is run in conjunction with, and is complementary to, the agricultural activities of the enterprise;
- b) The proposal is supported by an appropriate business case which demonstrates the link to existing business activity and the benefits of the scheme in terms of sustaining employment / the rural economy;
- c) In relation to new build, the applicant must demonstrate that there are no existing buildings suitable for conversion / re-use in preference to new build;
- d) Any rebuilding work should respect or be in sympathy with the local and traditional characteristics of the building;
- e) Proposals for new built development meet the criteria set out in Policy OC1.

17.4.2 It is recognised that agricultural businesses increasingly have to diversify into other forms of related activity to remain viable. TAN 6 Planning for Sustainable Rural Communities (2010) recognises that many economic activities can be sustainably located on farms. Possible diversification activities include farm shops, workshops and sport and recreation services – some of which are dealt with by other RDLP policies. It is important that such proposals contribute to and complement the agricultural activities of the farm, rather than dominate them and should be well-founded in terms of effectively contributing to the agricultural business. This policy therefore requires the applicant to provide a business case for diversification proposals in order to demonstrate the link to existing business activity and the benefits of the scheme, in relation to sustaining employment and the rural economy. This

should include details of existing farm activities, the need for diversification, and details and implications of the proposals on the rural economy (e.g. provision of local employment opportunities) and the environment.

- 17.4.3 Agricultural diversification proposals should be integrated into the environment and rural landscape. In line with national guidance, initial consideration should be given to adapting existing farm buildings, however the provision of a sensitively designed new building on a working farm within existing farm complexes may be appropriate (subject to meeting the criteria set out above and in Policy OC1 New Built Development in the Open Countryside) where a conversion opportunity does not exist.

17.5 **New Agricultural and Forestry Buildings**

- 17.5.1 This policy sets out the criteria for assessing proposals for new agricultural and forestry buildings.

Policy RE4 – New Agricultural and Forestry Buildings

New agricultural and forestry buildings, as well as any means of access and yard spaces, that are subject to planning control, will be permitted where:

- a) The building, hard standing or access is necessary for agricultural or forestry purposes;
- b) The building is functionally suitable for the specific use;
- c) Adequate provision is made for the disposal of foul and surface water and any animal waste without risk to the environment.

- 17.5.2 Agricultural and forestry buildings can be a visually intrusive element in the rural landscape by virtue of their size, location and materials used in their construction. Where new buildings are required, careful consideration will be given to their location and design so that any adverse effect upon the character and amenity of the surrounding area is reduced to the practical minimum and will be required to satisfy the policy requirements of OC1 and LC1. Proposals should be designed for agricultural or forestry function and have regard to BS5502 – Code of Practice for Design of Buildings and Structures for Agriculture.

17.6 **Intensive Livestock/Free Range Poultry Units**

- 17.6.1 Intensive livestock farming can be defined as a specialised system of livestock production where the livestock are housed indoors and can be started up at any time of the year³⁹. Intensive livestock units include buildings in which cattle are kept over the winter months.
- 17.6.2 Given their scale, intensive livestock and free-range poultry units can be difficult to assimilate into the landscape and can result in adverse amenity affects, including noise and odours. However, the careful siting and landscaping of such units can keep impacts to a practicable minimum. It is therefore important that proposals incorporate measures to limit their potential impacts, including noise and smell. The impact on water quality will need to be fully

³⁹ Source: Agriculturadictionary.com

assessed to demonstrate phosphate neutrality or betterment in line with the appropriate standards in place and proposals will be required to satisfy the requirements of the latest NRW guidance. Developers of intensive livestock or free-range poultry units are also directed to NRW intensive farming environmental permitting guidance notes: Guidance on environmental permitting for intensive farming of pigs and poultry and Planning permission and environmental assessment; Poultry units (Guidance note GN021).

- 17.6.3 Policy RE5 seeks to achieve a balance between the economic production of food and the protection of amenity and the environment (in conjunction with the use of planning obligations and conditions). Further guidance is also set out in TAN 6: Planning for Sustainable Rural Communities.

Policy RE5 – Intensive Livestock / Free Range Poultry Units

Intensive livestock or free-range poultry production units will be permitted subject to the following criteria:

- a) New livestock units and associated slurry tanks and lagoons are sited so as not to cause unacceptable nuisance to any non-agricultural dwelling or building;
- b) New units are sited so as to minimise their visual impact by avoiding exposed locations and, where practicable, locating them within or adjoining existing groups of buildings;
- c) Units that have serious implications for the surrounding highway network will be resisted;
- d) The unit is designed, and uses appropriate technology, to minimise the nuisance of smell, noise, air pollution and neutralise impact on water quality.

17.7 **Agricultural Land**

- 17.7.1 Given the importance of agriculture to Monmouthshire's rural economy it is recognised that there is a need to protect the best and most versatile agricultural land from inappropriate development. PPW12 sets out national planning policy on conserving the best and most versatile agricultural land.

17.8 **Recreation and Leisure Facilities in the Open Countryside**

- 17.8.1 Whilst there is a general presumption against inappropriate development in the countryside, it is recognised that suitable recreational, tourism and leisure uses can benefit the rural economy and assist in its diversification. Such development would be subject to adequate safeguards for the character and appearance of the countryside, particularly its landscape, biodiversity and amenity value. Such development should be sympathetic in nature and scale to the local environment and to the needs of visitors and the local community.
- 17.8.2 Policy RE6 supports rural enterprise and diversification of the rural economy by allowing for the provision of suitable recreational and leisure facilities in the countryside, subject to detailed planning considerations.

Policy RE6 – Provision of Recreation and Leisure Facilities in the Open Countryside

Development proposals for recreation and leisure uses in the countryside will be permitted subject to detailed planning considerations provided that:

- a) They are of a small-scale, informal nature and, including adequate safeguards for the character and appearance of the countryside (particularly its landscape, biodiversity and local amenity value).
- b) Development must re-use or adapt existing buildings where possible.

In exceptional circumstances new buildings of an appropriate scale may be acceptable where justified and where the proposal meets the criteria set out in Policy OC1.

- 17.8.3 In rural areas recreation and leisure related development is considered to be an essential element in providing for a healthy, diverse local economy and in contributing to the provision and maintenance of facilities for local communities.
- 17.8.4 It is considered that the countryside is best suited to low-key informal recreation and quiet, passive pursuits such as walking, picnic areas, cycling, fishing, rowing and sailing/boating. In assessing such proposals, particular consideration will be given to the need to safeguard the character and appearance of the countryside, particularly its landscape, biodiversity and local amenity value.
- 17.8.5 PPW12 recognises that the re-use and adaptation of existing rural buildings has an important role in meeting the needs of rural areas including sport and recreation. Proposals for the conversion / adaptation of buildings for such uses will be assessed against national policy set out in PPW12, TAN 6 and RE2, where appropriate. Where the re-use / adaptation of existing buildings is not possible, limited new build of an appropriate scale may be acceptable in exceptional circumstances where justified and where proposals meet the criteria set out in Policy OC1.

18. Visitor Economy

Strategic Policy S12 – Visitor Economy

Development proposals that support Monmouthshire's visitor economy and promote sustainable forms of tourism will be permitted subject to material planning considerations.

Development proposals that would have an unacceptable adverse impact on features and areas of tourism interest and their landscape character and settings, or that would result in the unjustified loss of tourism facilities will not be permitted.

- 18.1.1 PPW12 recognises the importance of tourism to economic prosperity and job creation and its ability to act as a catalyst for environmental protection, regeneration, and improvement in both urban and rural areas. In rural areas tourism related development is an essential element in providing for a healthy, diverse local economy and in contributing to the provision and maintenance of facilities for local communities.
- 18.1.2 Future Wales 2040 equally values that tourism and leisure are a major and growing employer contributing to the Welsh rural economy. Policy 5: Supporting the Rural Economy sets out that sustainable forms of tourism including opportunities for green, active and cultural tourism should be explored within the planning policy framework. These forms of tourism are also reflected in 'Welcome to Wales: Priorities for the Visitor Economy:2020-2025' which focuses on promoting distinctively Welsh tourism that grows the industry, while also providing benefits of environmental sustainability and biodiversity protection (green tourism), health benefits

(active tourism) and social enrichment that is specific and unique to Welsh/Monmouthshire identity (cultural tourism).

- 18.1.3 Tourism plays a significant part in the Monmouthshire economy, particularly in assisting in the diversification of the rural economy and in sustaining the County's historic town centres. Monmouthshire benefits from extensive natural and cultural assets that offer considerable potential for residents and visitors to enjoy. The County is noted for its natural beauty and has a rich and diverse landscape stretching from the coastline of the Gwent Levels in the south to the uplands of the Bannau Brycheiniog National Park (BBNP) in the north and the picturesque river corridor of the Wye Valley National Landscape (AONB) in the east. Monmouthshire's historic market towns, castles and cultural/heritage assets are also key attractions.
- 18.1.4 The visitor economy provides jobs, services and facilities that are essential to the well-being and enjoyment of local communities and residents of Monmouthshire. According to figures supplied by tourism economic indicator STEAM (Scarborough Tourism Economic Activity Monitor), the sector brought in £285m to Monmouthshire's economy in 2022 and supported the equivalent of 3,356 full-time jobs (STEAM report 2022). The report also indicates that although there has been an increase in overall bed stock in Monmouthshire, this increase has been in non-serviced accommodation⁴⁰ while serviced accommodation⁴¹ has continued to decline.
- 18.1.5 Given the importance of tourism to the Monmouthshire economy, particularly the rural economy, the need for the RLDP to safeguard, provide and enhance the visitor economy/tourism facilities is essential in ensuring that Monmouthshire realises its potential as a high quality and competitive visitor destination. The RLDP therefore provides a supportive policy framework for sustainable tourism proposals throughout Monmouthshire and prevents the loss of tourism facilities, with more detailed criteria-based policies in T1 and T2.
- 18.2 **New or Extended Tourism Accommodation and Facilities in the Open Countryside**
- 18.2.1 Policy T1 seeks to support new or extended tourism accommodation and facilities (serviced and non-serviced) in open countryside locations that embrace and evidence sustainable forms of tourism including green, active and cultural tourism, supporting Monmouthshire's rural economy. It is, however, important that proposals for such developments within open countryside locations are not at the expense of environmental considerations. This Policy therefore seeks to carefully manage the development of tourism accommodation and facilities in the open countryside.

⁴⁰ Non serviced accommodation are facilities that offer no additional services other than the place you stay, such as holiday lets and glamping units)

⁴¹ Serviced accommodation (where cleaning and cooking services are provided, such as hotels and B&Bs)

Policy T1 – New or Extended Tourism Accommodation and Facilities in the Open Countryside

Development proposals for sustainable tourism accommodation and facilities in the open countryside will only be permitted if the proposal can be justified against any of the following criteria:

- a) Is of a small scale appropriate to its context and a non-permanent nature that would cause no material harm to the landscape character and environmental/biodiversity quality of the surrounding area, either individually or cumulatively with other development in the area; or
- b) Contributes to agricultural diversification or an existing rural enterprise business and meets the criteria set out in S11 and RE3; or
- c) Consists of the conversion/rehabilitation of an existing rural building meeting criteria set out within Policy H4; or
- d) Relies upon a geographically fixed resource which exceptionally justifies the development; or
- e) Is located within or adjacent to an existing visitor attraction or accommodation as ancillary development to established medium or large hotels.; or
- f) Demonstrates significant economic benefit to Monmouthshire.

Sustainable tourism proposals in the open countryside that accord with any of the criteria above must also meet all of the following criteria set out in (g)-(l) below:

- g) Protect, maintain and enhance landscape character, biodiversity, the resilience of ecosystems and the historic environment;
- h) Are of a scale, permanency and design appropriate to site context;
- i) Incorporate sustainable and efficient resource use;
- j) Have the necessary infrastructure capacity;
- k) Prioritise, promote and facilitate sustainable travel and have safe and efficient highway design;
- l) Do not have an unacceptable amenity impact on occupiers of neighbouring properties.

All tourism proposals must be evidenced with a 'Sustainable Tourism Need and Impact Assessment' (STNIA).

All tourism proposals are required to be short-stay only and not extend beyond a period of stay of 28 days.

- 18.2.2 The policy requirements set out in T1 ensure proposals for new or extended tourism accommodation and facilities in the open countryside demonstrate and deliver sustainability principles, in accordance with National Policy and Strategic Policy S12. Tourism proposals must deliver positive benefits through innovative design, sustainable and efficient resource use,

environmental/biodiversity enhancement and net gain. Tourism proposals within or near to the statutory landscapes of the Blaenavon Industrial Landscape World Heritage Site (BILWHS), Bannau Brycheiniog National Park (BBNP) and Wye Valley National Landscape (AONB) will also be required to meet respective landscape policy criteria of LC2, LC3 and LC4. Development proposals involving lighting would need to meet requirements of LC5 to ensure the tranquillity of the dark night skies.

- 18.2.3 New tourism accommodation and facilities proposals need to consider sustainable travel opportunities from the outset and identify initiatives to improve sustainable travel to and around the tourism location. The scale of proposals will need to be carefully considered to ensure any impact on the highway network is acceptable in accordance with sustainable transport policies ST1 and ST2. In accordance with Policy EP1, proposals must consider the need to protect amenity and ensure no harm to existing neighbouring uses, such as overlooking and noise impact.

Supporting infrastructure

- 18.2.4 Supporting ancillary infrastructure, such as amenity blocks, drainage and foul sewage disposal, hard-standings and operational development may not necessarily be appropriate in open countryside locations. These infrastructure requirements are likely to have negative urbanising and environmental impacts causing harm to the surrounding open countryside setting and landscape character. Therefore, the need for supportive ancillary infrastructure and foul drainage requirements must be demonstrated within the supporting Sustainable Tourism Need and Impact Assessment (STNIA) and, wherever possible, existing buildings should be utilised.
- 18.2.5 As set out in policies S11 and RE3, sustainable tourism uses can complement and help support farm businesses and Monmouthshire's rural economy. Tourism proposals in the open countryside should seek to re-use existing buildings within the farm unit/ farmstead. Proposals for new build tourist facilities such as glamping units located on farmland (outside of the farmstead away from existing buildings), must meet all the criteria (g) –(l) of Policy T1. New build proposals akin to new dwellings for holiday use will not be supported. Rural conversions to holiday let use can offer scope for a tourism use where they would normally be resisted for a residential use due to limited space and amenity, as they are intended to be used on a short-term basis and do not require additional paraphernalia.

Camping, touring caravans and glamping proposals

- 18.2.6 Certain tourism proposals by their purpose and function will require a countryside location. This is true for caravan sites, camping sites and more recently glamping proposals (including pods, shepherds huts and yurts) which have become increasingly popular with the staying visitor market. The scale and permanence of these proposals is a key consideration in determining their acceptability. In general, the policy is supportive of non- permanent 'camping and glamping' tourism proposals, such as touring caravans, tents, yurts, shepherds huts and proposals that do not require intrusive new build infrastructure, such as new build amenity blocks. Permanently sited new accommodation, such as static caravans, lodges and larger self-contained glamping units that require significant infrastructure requirements will require careful consideration and comprehensive justification with an STNIA.

Other exceptional circumstances

- 18.2.7 Exceptionally, tourism proposals may be considered acceptable in the open countryside if the proposal relies upon a geographically fixed resource, such as dis-used quarries, lakes/reservoirs, or are adjacent to an existing visitor attraction or tourism accommodation as ancillary development to established medium or large hotels.
- 18.2.8 Furthermore, a proposal that brings significant economic benefit in Monmouthshire may be exceptionally considered. Such proposals would need to be carefully balanced with underlying sustainability and design principles to ensure the protection of the surrounding open countryside character.

Sustainable Tourism Needs Impact Assessment (STNIA)

- 18.2.9 All proposals for a tourism facilities and accommodation need to be supported with a comprehensive Sustainable Tourism Needs Impact Assessment (STNIA).
- 18.2.10 The STNIA should be proportionate to the nature of the proposal, its scale and location. However, as a general overview the type of information required would include:
- Evidence to support why the tourism facility is needed. For example, no such facilities or sites exist within the locality.
 - Evidence to indicate the proposal is a viable business and how the business will support Monmouthshire's economy.
 - How the proposal is in accordance with sustainability principles. For example, it delivers green (environment and biodiversity benefits), active (health benefits) and/or cultural (specific to Welsh/Monmouthshire identity) tourism.
 - A transport statement to assess sustainable travel opportunities and initiatives to improve sustainable travel to the tourism location, anticipated levels of vehicular traffic, parking space demand and highway safety impact.
 - Infrastructure requirements in relation to foul sewage.
 - Design Statement setting out how the design, scale and permanence is appropriate to site context and setting. The design statement, where appropriate, should also detail the exit strategy and decommissioning.
 - A Landscape and Visual Impact Statement (LVIA) including details of mitigation.
 - A Green Infrastructure (GI) statement or assessment and details of how biodiversity and ecosystem resilience will be maintained and enhanced.
- 18.2.11 To ensure individual units will not be available for private residential use, planning permissions for tourism accommodation will be controlled with either planning conditions or a S106 agreement. This will ensure that such accommodation is maintained as holiday use for short stay periods.

18.3 Protection of existing tourism facilities

18.3.1 Policy T2 seeks to retain a variety of tourism facilities to ensure there is a wide range and choice of facilities in Monmouthshire. The Council would only support the loss of a tourism facility where it can be demonstrated that the facility is no longer suitable or viable for tourism use, and its loss would not adversely affect the range and quality of tourism facilities available within the locality and/or County. Information and evidence to support such a proposal would be needed in relation to the length of time a facility has been vacant and associated marketing evidence, demand trends in occupancy rates and customers preferences and the suitability of the building in terms of size and layout for modern serviced accommodation.

Policy T2 – Protection of existing tourism facilities

The loss of a tourism facility will only be permitted if:

- a) Its loss would not adversely affect the range and quality of tourism facilities available within the locality and/or County; and
- b) It can be demonstrated that the facility is no longer suitable or financially viable and could not be expected to become financially viable for tourism use.

Sustainable Transport

19. Sustainable Transport

19.1.1 Reflecting the National Policy approach of the Llwybr Newydd The Wales Transport Strategy (WTS) 2021, Future Wales 2040 and PPW12, Strategic Policy S13 sets out the requirements for development proposals to be in accordance with the Sustainable Transport Hierarchy, which places an emphasis on development to be located and designed in a way which ensures the reduction in the need to travel and a shift away from the private car for travel.

Strategic Policy S13 – Sustainable Transport

Development proposals will be required to accord with the Sustainable Transport Hierarchy, as set out in National Policy. This will be facilitated by:

- a) Promoting and prioritising active travel (walking, wheeling and cycling) and public transport above private motor vehicles, using location and design to reduce the need to travel;
- b) Maintaining and improving on the Active Travel Network Maps (ATNMs) to maximise active travel opportunities, including links to these networks associated with new developments;
- c) Ensuring development enables transition to Ultra Low Emission Vehicles (ULEVs) by providing necessary underlying infrastructure;
- d) Ensuring developments are designed to provide safe and efficient access and safe and efficient capacity to the transport network;
- e) Ensuring developments are served by an adequate level of parking provision, with cycle parking given competitive advantage, in accordance with relevant guidance;
- f) Demonstrating how proposals enable solutions to rural transport issues, where appropriate, and;
- g) Promoting digital and innovative infrastructure in both urban and rural areas to enable remote access to work, education and services.

19.1.2 For the purposes of this policy, reference to adequate in respect of the quantum of parking refers to that which is consistent with relevant guidance including the Council's SPG on Parking and Active Travel Act guidance (ATAG) re: motorised vehicle and cycle parking, respectively.

19.1.3 In line with the Active Travel Act 2013 and Welsh Government Active Travel Act Guidance (2021), the Council has produced Active Travel Network Maps (ATMNs) identifying the walking, cycling and wheeling routes required to create fully integrated networks. Proposed new developments are required to have regard to ATMNs and provide additional linkages where appropriate. Further information on Monmouthshire's existing and future active travel routes are detailed on the Welsh Government's ATMN maps.

19.1.4 Rural Transport

- 19.1.5 Monmouthshire is a rural county, and while the majority of its population is concentrated in towns, it is recognised that travel by car may be the only realistic mode of travel for some in rural areas, where there is limited public transport infrastructure. As such, developments will be required to make provision to accommodate vehicular traffic and maintain and improve the highway network. This should not, however, translate into traffic in settlements or favouring car transport where more sustainable, efficient and effective options can be made available.
- 19.1.6 The Llwybr Newydd Wales Transport Strategy (WTS) has committed to a Rural Pathway which sets out how regional Corporate Joint Committees (CJCs) and Welsh Government policy makers will work together on strategies to tailor solutions to extend the geographical reach of public transport and school transport links into rural areas, as well as trip reduction through car sharing schemes and e-bikes and the creation of local distribution networks hubs to help manage the impacts of increasing home deliveries. Development proposals in rural areas of Monmouthshire should therefore demonstrate innovative solutions to connect rural locations to services and facilities.

Regional Planning

- 19.1.7 The Llwybr Newydd Wales Transport Strategy (WTS) sets out a National Transport Delivery Plan (NTDP) for Regional Transport Plans (RTPs) to tailor delivery of the WTS to the needs of every part of Wales. RTPs will be prepared by Corporate Joint Committees (CJCs) and delivered by Local authorities.
- 19.1.8 Monmouthshire is part of the South East (CJC) Region of Wales and development proposed in the RLDP will need to demonstrate how regional aspirations and opportunities can be incorporated in local plans as part of a joined up approach with transport planning and local land use planning. Future Wales 2040 policies 11 and 12 set out National and Regional transport plans and initiatives for Wales and the importance to strategically plan for opportunities arising from the investment in public transport. The recent South East Wales Transport Commission Final Recommendations Plan 2020 recommends various 'Network of Alternatives' to solve congestion and travel reliance on the M4 travel route, which sets out public transport and active travel improvement schemes and the need for a 'behavioural shift' in people to change commuting patterns. Within Monmouthshire the report specifically recommends enhancement of the Severn Tunnel Junction railway station and access arrangements. Policy 36 of Future Wales: South East Metro, which Monmouthshire is a part of, further identifies the Metro as "a major strategic opportunity to improve rail, bus, cycling and walking infrastructure across the region" and that the local planning policy frameworks must ensure that long term strategic decisions maximise opportunities in areas that will benefit from the Metro.
- 19.1.9 The RLDP therefore proposes strategic development within Monmouthshire's most sustainable locations that have opportunities and potential to connect and link with regional travel aspirations and RTPs, including identified opportunities at Severn Tunnel Junction and the South East Wales Metro scheme.

Strategic Transport Assessment

- 19.1.10 A Strategic Transport Assessment (STA) has been prepared to consider the impact (by means of modelling and quantifying the demand on the network and changes to the flow/movement

on the network) of the proposed strategic sites, as well as the cumulative impact of all residential allocations across the County. The study will also help inform the Transport Assessments for proposed new development. A Local Transport Strategy 2024-2029 (LTS) has been prepared to set out the Council's transport priorities over the years 2024-2029. The RLDP will support active travel, public transport and road improvement schemes identified within the LTS and where required, safeguard land for their development under Policy ST5. The LTS is expected to feed into the statutory Regional Transport Plan (RTP) that the South East Wales Region is anticipated to commence preparation of in 2024.

19.2 Sustainable Transport policies

19.2.1 In accordance with Strategic Policy S13 the following development management policies set out how sustainable transport considerations will be delivered, protected and safeguarded throughout the County.

19.3 Sustainable Transport Proposals

19.3.1 Policy ST1 seeks to ensure that development proposals accord with the Sustainable Transport Hierarchy and that proposals are able to provide necessary and related improvements to the highway system, or provide a contribution towards improvements connected to the proposed development to overcome identified problems. Development proposals that would generate unacceptable additional traffic growth or adversely affect the safe and efficient operation of a highway system will not be permitted.

Policy ST1 - Sustainable Transport Proposals

All developments which are likely to have a significant impact on trip generation and travel demand must be accompanied by a Transport Assessment (TA). The TA must include a Transport Implementation Strategy that accords with the Sustainable Transport Hierarchy as set out in National Policy and develop a strategy to reduce the need to travel, facilitate, promote and prioritise active travel and ensure access to the public transport network. In town centre locations car-free development will be supported where practicable.

If a rural location is essential for the proposed development, links to public transport should be considered and if necessary, included. A proportionate approach will be applied to the assessment of TAs and their accordance with the Sustainable Transport Hierarchy.

Any new highway infrastructure and design will be expected to satisfy Active Travel Act Guidance (ATAG), National and Local highway design guides and parking guidelines.

Financial contributions may be required for safety/congestion mitigation measures, or towards improvements to the highway network and sustainable travel.

Developments that are likely to create significant additional road traffic growth, or adversely affect the safe and efficient operation of the highway system will not be permitted.

Transport Assessments and Travel Plans

- 19.3.2 Transport Assessments (TAs) are an important mechanism for setting out the scale and anticipated impact of a proposed development. National Policy (TAN18) sets out the thresholds above which development proposals will need to be accompanied by a TA, although the local planning authority will require a TA whenever it considers there is a justification of a specific need. The TA will indicate whether improvements or mitigation are needed to overcome any specific problems.
- 19.3.3 TAs provide an important basis for the preparation of Travel Plans which will be utilised to ensure the integration of new development aligns with the Sustainable Transport Hierarchy. Travel plans for residential schemes must identify key trip attractors, including schools, healthcare facilities, shopping areas, local bus stops, public transport interchanges and employment areas. All non-residential developments must likewise identify key trip origins. In both cases, the developer must analyse active travel and public transport links and identify improvements.
- 19.3.4 Travel plans should demonstrate how road network demand will be mitigated through trip reduction, efficiency and modal shift. Mitigation measures can include route infrastructure, promotion and facilitation. The travel plan should also identify and provide facilities supportive to active travel and/or public transport provision (e.g. signage, cycle parking). Section 2(8) of the Active Travel Act defines a range of features as related facilities for the purposes of the act (as set out in the paragraph below). This will enable behavioural change by giving people the supportive environment and facilities required to make the transition from car to active travel modes of transport and encourage the use of public transport facilities. These should be proportionate to the purpose, location and scale of the development.
- 19.3.5 As a general overview the type of detail required, although not limited to, would be:
- Signage/wayfinding;
 - Seating;
 - Sufficient cycle parking (a mix of secure/covered and easy-access);
 - Suitable electric bike charging facilities;
 - Public bike pumps;
 - Bins;
 - Drinking water fountains;
 - Toilets, changing and shower facilities within workplaces and/or community facilities;
 - Public Transport:
 - Display boards for public transport timetable and route information;
 - Bus stop shelters/seating.
- 19.3.6 For active travel routes linking to public transport and active travel routes off-site, design and construction by the developer is preferred: in such instances developers will enter into a highway improvement agreement with the Authority and carry out work after agreeing designs with MCC Highways and Active Travel Officers.
- 19.3.7 TAs should also set out how they plan for ULEVs and charging points/infrastructure should be planned as part of the proposed development. Charging facilities must not compromise the active travel offer (i.e. loose cables should not create a hazard, charging points must not narrow footways below minimum width or be next to car parking or on pavement build-outs).

- 19.3.8 TAs should be informed by local context, including up-to-date public transport accessibility with the objective of reducing reliance on the car and supporting modal shift to walking, cycling and public transport. Therefore, in town centres where there is ease of access to public transport facilities, car-free development will be supported.
- 19.3.9 It is recognised that Monmouthshire is predominantly a rural county and while development is directed to the County's most sustainable settlements, the RLDP also supports appropriate development within Monmouthshire's rural locations where justified by other RLDP policies. This is important in supporting our rural economy and in sustaining our rural communities. In such instances, an accompanying TA will need to address Monmouthshire's rural context which will be assessed proportionally by LPA Officers. TAs for rural locations should also consider and demonstrate innovative solutions to connect rural locations to services and facilities, such as enabling multi-modal journeys, improvements to public transport, car-sharing schemes and/or other solutions to reduce travel in the first place, such as improvements to digital infrastructure to facilitate remote access to employment, education and other services from rural locations.
- 19.3.10 Further guidance on TAs and Travel Plans can be found in National Policy, including TAN18.
- 19.4 **Highway Design Considerations**
- 19.4.1 The Council will seek to adopt and maintain all new transport routes within developments. Additions to the highway network including footways and active travel routes, junctions, circulation and parking must be built to appropriate standards of design, construction, capacity, safety and amenity and be inclusive for all users.
- 19.4.2 Connecting communities by sustainable modes should be a primary consideration in local highway design, space allocation and junction priority to balance safety, comfort, and efficiency for all road users. Measures such as landscaping and modal filters should be planned to improve active travel permeability and prevent transgression of vehicles into spaces not designed for them. Priority at junctions should be assessed using the Sustainable Transport Hierarchy.
- 19.4.3 In determining whether proposed highway details are appropriate, the Council will have regard to national, regional and local guidance, which give advice on general matters applicable to all new highway development, residential roads and industrial estate roads.
- 19.5 **Highway Hierarchy**
- 19.5.1 Policy ST2 sets out Monmouthshire's highway hierarchy which will be used to assess the merits of requests for additional accesses to the network and priorities for improvement.
- 19.5.2 Traffic segregation is necessary in the interests of safety and the efficiency of the highway system. Inter-urban traffic requires routes that have relatively fast design speeds and are relatively uninterrupted by junctions, turning traffic and slow-moving traffic. Particular regard will be paid to the role of the strategic and arterial routes in supporting the future economic prosperity of Monmouthshire. In contrast, access routes are usually unsuitable for through traffic, particularly HGV's. However, in all instances the implications for residential amenity, landscape and nature conservation interests will be taken into account.

Policy ST2 – Highway Hierarchy

The following transport routes are identified as the main routes in the County for the movement of people and goods. Development proposals should be assessed from the appropriate level highway in the hierarchy, which comprises the following routes:

a) **Strategic Routes:**

- Motorways M4 and M48;
- Trunk roads A40T, A48T, A4042T, A449T, A465T, and A466T

Only in exceptional circumstances, will new direct accesses be permitted off Strategic Routes. Proposals that would result in short local journeys on these routes and add to unacceptable congestion will be refused.

b) **Arterial Routes:**

- A48 (High Beech Roundabout, Chepstow to Newport)
- A466 (High Beech Roundabout, Chepstow to Herefordshire boundary north of Monmouth)
- A472 (Little Mill to Usk Interchange)
- A4077 (Gilwern to Powys boundary)
- A4136 (Monmouth to Gloucestershire boundary)
- A4143 (Llanfoist to Brecon Road, Abergavenny)
- B4245 (Parkwall to Magor)

On arterial routes proposals for on street parking, new frontage access and turning movements will be considered against the interests of road safety and the efficient movement of traffic.

c) **Local Routes:**

- B4233 (Monmouth to Abergavenny)
- B4235 (Usk to Chepstow)
- B4246 (Llanfoist to Gilwern)
- B4251 (Abergavenny to Skenfrith)
- B4269 (Llanfoist to Llanellen)
- B4293 (Chepstow to Monmouth)
- B4347 (Rockfield to Grosmont)
- B4598 (Abergavenny to Usk).

On local routes parking and turning movements may be restricted and the number of frontage accesses limited on road safety and traffic movement (especially public transport) grounds.

d) **Access Routes**

These roads are those not listed in (a), (b) or (c) above. If appropriate, parking, turning movements, traffic speeds and the number of frontage access will be limited on road safety, amenity and traffic movement grounds.

19.5.3 Strategic routes (motorways and Trunk roads) fall into the remit and control of Welsh Government Highways.

19.6 Freight

19.6.1 Policy ST3 seeks to ensure the efficient movement of freight and reduce heavy road freight traffic through developing rail freight facilities, safeguarding existing rail sites and facilities, and promoting sustainable last-mile solutions.

19.6.2 The County's rail network provides a strategic transport link at a local, regional and national level. The economic prosperity and attractiveness of the whole region to inward investment will be influenced by the quality and efficiency of these rail links. The existing rail network may also provide opportunities to develop road / rail transfer points, the development of which could contribute to the reduction of heavy road freight traffic. All such schemes will be subject to detailed planning considerations and guidance as set out in national planning policy.

19.6.3 So-called 'Last-mile' deliveries, the distribution of commercial goods to the end-user (often in light goods vehicles (LGVs)), increasingly contribute to road traffic increase and pose particular risks to road safety and active travel propensity. Plans that include last-mile distribution should show consideration and mitigation of this impact, preferably through trip reduction and the use of sustainable transport modes.

Policy - ST3 Freight

To reduce or prevent heavy road freight traffic, opportunities to develop freight transfer points between road / rail / last mile sustainable transport should be explored and will be favourably considered subject to detailed planning considerations.

The development of facilities for the movement of freight by rail will be favourably considered, subject to detailed planning considerations. Proposals which would prejudice the operation of, or cause the loss of, freight sites and facilities will not be permitted, unless the facility has closed or is closing and it can be shown that there is no realistic prospect of it resuming, having regard to its potential viability in the long term.

19.7 Rear Access and Service Areas

19.7.1 The Council supports the implementation of traffic management measures in town centres by removing non-essential traffic and allowing car-free developments. Policy ST4 seeks to achieve this aim by enabling the provision of rear access/service areas within Central Shopping and Commercial Areas (CSCAs). It is recognised that provision of rear access and servicing in historic settlements can be difficult unless part of a larger development scheme, although there may be opportunities for such facilities in small-scale developments. Within Conservation Areas proposals will also be required to satisfy HE1.

Policy ST4 – Rear Access/Service Areas within Central Shopping and Commercial Areas

Development within the defined Central Shopping and Commercial Areas that require servicing must, where feasible, include provision for rear access and servicing.

Development that relies on the use of on-street servicing will only be permitted where this would not conflict with walking, cycling and general traffic flows, or create highway dangers.

Development that would result in the loss of rear service roads or yards will only be permitted if satisfactory alternative provision is made.

19.8 Supporting Provision of and Safeguarding Routes for New Transport Schemes

- 19.8.1 Policy ST5 seeks to support and safeguard land for active travel, public transport schemes and road improvement schemes which have been identified in the Local Transport Strategy (LTS). Where known, the safeguarded routes are shown on the Proposals Map.

Policy ST5 - Transport Schemes

The following transport schemes identified in the Local Transport Strategy will be supported and safeguarded from development that would likely prejudice their implementation:

Active Travel schemes

- a) Abergavenny and Llanfoist Active Travel Schemes
- b) Caldicot Active Travel Schemes
- c) Chepstow Active Travel Schemes
- d) Monmouth Active Travel Schemes
- e) Usk Active Travel Schemes
- f) Magor and Undy Active Travel Schemes
- g) Undy to Rogiet Active Travel improvements alongside B4245

Public Transport Improvement schemes

- h) Abergavenny Train Station improvements
- i) Abergavenny Bus Station improvements
- j) Chepstow Transport Hub (rail and bus)
- k) Severn Tunnel Junction Interchange improvements (rail and bus)
- l) Monmouth Bus/Coach Stop
- m) Magor Walkway Station

Road Schemes

- n) B4245 /M48/ Severn Tunnel Junction Link Road
- o) B2425/Severn Tunnel Junction Link Road
- p) Chepstow Highbeech Roundabout improvements

19.8.2 Proposed new active travel routes must meet ATAG and opportunities should be maximised to further improve upon existing infrastructure. Opportunities for active travel routes to connect to, improve and develop long distance regional and national walking and cycling routes, for example the Wales Coastal Path and the National Cycle Network (NCN), should be explored, if there is the opportunity to do so.

19.8.3 Public transport improvement schemes should provide for convenient modal interchange, such as bike parking and park and ride, to promote multi-modal sustainable transport options to reduce congestion and parking demand in town centres. Public transport should be easily located, accessible and convenient by walking, wheeling and cycling.

19.9 Redundant Routes

19.9.1 Policy ST6 seeks to safeguard redundant routes, such as former canal and rail routes, from development where there is realistic prospect of their re-use for transport purposes in the future. This should ensure that such facilities remain available for future sustainable transport use through the provision of new leisure, active travel and horse-riding routes and can be considered an important part of the green infrastructure network.

Policy ST6 – Protection of Redundant Routes

Redundant routes, such as former canal and rail routes and associated features, will be protected from development that would prejudice future sustainable transport use.

S13 - Links to Wider Policy Framework

RLDP Objectives

Objective 1 – Economic Growth/Employment

Retail & Commercial Centres

20. Retail and Commercial Centres

20.1 Retail Hierarchy

- 20.1.1 The need to sustain and enhance the County's towns and local centres as vibrant and attractive centres, serving the needs of their population and those of their surrounding hinterlands, is a key objective of the RLDP. PPW requires local planning authorities to identify a hierarchy of centres, distinguishing between higher order centres that have a wider range of uses and larger catchment areas, and lower order centres which are important to communities for day-to-day needs. Policy S14 sets out this hierarchy for Monmouthshire helping to meet Objective 2 of the RLDP and the core purpose of building sustainable and resilient communities for all.
- 20.1.2 The Primary Settlements of Abergavenny, Chepstow and Monmouth are market towns, providing a broad range of facilities and services, of which retailing is a key component, for residents and visitors. The centres attract significant numbers of shoppers from their respective town and rural hinterlands. The towns are also main visitor destinations in the County, providing a range of leisure, tourism and cultural facilities. Caldicot town centre has a more limited offer than the other primary settlements, although it remains an important centre serving the area with a range of facilities. Monmouthshire County Council, with the support of key stakeholders such as Caldicot Town Council, Cardiff Capital Region and Welsh Government, is implementing an ambitious town centre regeneration project in Caldicot. Caldicot benefits from a number of tourist attractions such as Caldicot Castle and Country Park, Black Rock and the Gwent Levels.

- 20.1.3 The minor county towns of Usk and Magor also provide an important role in the hierarchy. These towns serve a more local function for residents, with a prominent focus on convenience (food) shopping and an element of comparison (non-food) shopping, together with some local service provision.
- 20.1.4 The local centres of Raglan and Bulwark provide an important day-to-day function for their communities providing convenience shops and local services that are easily accessible.
- 20.1.5 Neighbourhood centres and shops similarly provide an important day-to-day function for their local communities. These facilities are located in Abergavenny, Caldicot, Chepstow and Monmouth.

Strategic Policy S14 - Town, Local and Neighbourhood Centres

All new or enhanced retail, commercial and social developments, including leisure, cultural and entertainment uses, will be focused in accordance with the hierarchy defined below. Developments should be consistent in scale and nature with the size and character of the centre and its role in the hierarchy.

Proposals must maintain or enhance the vibrancy, vitality and attractiveness of the centre. Proposals which would undermine the vibrancy, vitality and attractiveness of the centre will not be permitted.

Town Centres: Abergavenny, Caldicot, Chepstow, Monmouth

Minor County Town Centres: Usk, Magor

Local Centres: Raglan, Bulwark

Neighbourhood Centres:

Abergavenny: Hillcrest Road, Rother Avenue and Hereford Road

Caldicot: West End

Chepstow: The Old Farm Shopping Centre, Thornwell and Larkfield Business Estate

Monmouth: Overmonnow, Wyesham, The Albion and Monmouth District Centre

- 20.1.6 The Monmouthshire Town Centre/Retail Study 2024 provides further detail on the role and function of the centres listed in Policy S14. The Retail Study found the County's centres are performing well with an encouraging share of comparison shopping. The centres do however face competition from nearby centres in the subregion including Cardiff, Bristol, Newport, Cwmbran and Hereford. Key findings of the study identify that Monmouthshire's centres are

vulnerable to out-of-town developments and should be protected as principal destinations for main food shopping and comparison trips. The report also recognises that there is growth in service uses that provide further opportunities to maintain and enhance the vitality, attractiveness and viability of our centres. It also notes that regeneration initiatives and environmental improvements play an important role in increasing the attractiveness and appeal of our centres to residents and visitors. The Retail Study has informed the retail and commercial centres policy framework.

20.2 Central Shopping and Commercial Areas

20.2.1 While the predominance of retail (A1 uses) is vital and should continue to underpin retail and commercial centres, it is only one of the factors that contribute towards their vibrancy and viability. This approach is echoed in PPW where it notes centres are distinguished by a diversity of activity and uses which should contribute towards a centre's well-being and success, whilst also reducing the need to travel. It is recognised that commercial uses, including leisure and community uses, play a key role in supporting the vitality and viability of centres. These uses include (but are not limited to) cinemas, theatres, galleries, libraries, health centres, community hubs, gyms/other fitness uses and children's play centres. These commercial uses along with food and drink uses, such as restaurants and cafes, can benefit retail and commercial centres, extending the offer and contributing to successful and lively centres during both the day and evening.

20.2.2 The aim of Policy RC1 is therefore to encourage a diversity of uses within the County's central shopping and commercial areas, provided any such uses would not undermine vitality, attractiveness or viability of centres.

Policy RC1 – Central Shopping and Commercial Areas

Central Shopping and Commercial Areas (CSCAs) are designated for Abergavenny, Caldicot, Chepstow, Monmouth, Magor and Usk. Within CSCAs (except for Primary Shopping Frontages) the following policy criteria apply, subject to detailed planning considerations:

- a) Development will be permitted where the proposal relates to a retail or commercial use which will safeguard the vitality, attractiveness and viability of the defined CSCAs;
- b) Change of use at ground floor level to uses other than retail or commercial will not be permitted unless it can be demonstrated that the vitality and viability of the CSCA will not be adversely affected;
- c) Change of use of ground floor premises to residential will not be permitted unless evidence is provided to demonstrate that the premises is not viable for retail or commercial use, including that the premises has been vacant for at least one year and that genuine attempts at marketing the existing use have been unsuccessful;
- d) The loss of car parking within CSCAs will be resisted, unless it can be demonstrated that the proposal is linked to a town centre regeneration scheme and sufficient parking is available.

- 20.2.1 Residential uses can help increase vitality and viability of commercial centres and will be supported on upper floors. Residential uses may also be permitted on ground floors where premises have been left vacant for over a year, as long as it can be demonstrated that the proposal would not impact on the vitality, attractiveness and viability of the centre. Marketing evidence will be required for any such proposals, and it must be demonstrated that the property has been actively marketed as a commercial use in an appropriate manner for at least a year prior to the submission of an application. A marketing report must be submitted to support any planning application and at a minimum should include sales particulars and information from sales / letting agents with any feedback to date, along with details of the market needs of a particular area. Further scrutiny will be given to properties with an existing shopfront where a change of use of a ground floor is proposed to a residential use.
- 20.2.2 Given the predominantly rural nature of Monmouthshire it is recognised that many residents and visitors travel by car to the County's Town Centres. Car parks have a direct functional relationship with the CSCAs, particularly short stay car parks. Loss of car parking within centres could impact the amount of people visiting these areas and have a resultant negative impact on their vitality and viability. A number of car parks are therefore located within the designated CSCAs and the loss of car parking for alternative uses will be resisted, unless it can be demonstrated that the proposal is linked to a town centre regeneration scheme and, sufficient car parking is available to serve the centre.
- 20.3 **Primary Shopping Frontages**
- 20.3.1 Primary Shopping Frontages (PSF) have been designated to cover those areas of the County's main town centres where retail uses (Use Class A1) predominate. Primary Shopping Frontages relate only to the ground floor level of premises. Clusters of retail uses can contribute significantly to the vitality, attractiveness and viability of town centres. It is therefore essential that the retail core of the County's Town Centres is protected and that developments which undermine this function are resisted.
- 20.3.2 Policy RC2 therefore gives priority to retail (A1 uses) in the identified Primary Shopping Frontages and seeks to protect the predominant shopping role/character of the centres by controlling the loss of retail uses in the PSF.

Policy RC2 – Primary Shopping Frontages

Primary Shopping Frontages are designated in Abergavenny, Caldicot, Chepstow and Monmouth in the following locations:

Abergavenny

PSF1 Cross Street, High Street & Frogmore Street

PSF2 Cibi Walk

Caldicot

PSF4 Newport Road (17-41 & 26-32 & Holman House)

Chepstow

PSF5 High Street (2-23 & 24-29)

PSF6 St Mary Street

Monmouth

PSF7 Monnow Street (1-93 & 6-114)

PSF8 Church Street & Agincourt Square

Within Primary Shopping Frontages, development or redevelopment proposals for non-A1 commercial uses on ground floors, or a change of use on ground floors from Use Class A1 to non-A1 commercial uses, will only be permitted where all of the following apply:

- a) It retains or delivers an active shopfront;
- b) The use would not create an over-concentration or unacceptable balance of non-A1 uses that would disproportionately dilute the continuity of the primary shopping frontage detracting from its established retail character;
- c) It would not result in the loss of A1 retail units in prominent locations, corner units or those with long frontages.

Where a proposal fails to meet all of the above criteria, an exception may be considered provided:

- i) It can be demonstrated that the proposed use would not harm the vitality, attractiveness and viability of the street frontage; and
- ii) The premises have been vacant for at least a year, genuine attempts at marketing the existing use have been unsuccessful, and the proposal would bring a vacant premises back into an active commercial or community use.

A justification statement must be submitted to provide evidence for all proposals considered to be exceptions.

20.3.3 The way town centres function has changed significantly in recent years and will continue to evolve. However, there is a need to ensure that the heart of commercial centres dominated by retail units is not lost to other uses, as large numbers of retail units in close proximity to each other are important to the attractiveness of centres, by providing convenience to shoppers. There is nevertheless a need to strike a balance between A1 retail uses and complementary non-A1 commercial uses in centres as a whole through provision of an optimal mix to ensure vitality, attractiveness and viability of centres. Accordingly, the Primary Shopping Frontages have been reduced where appropriate to ensure the focus of PSFs is on the retention of retail uses, while allowing appropriate non-retail uses in the CSCAs. The minimum proportion of A1 commercial uses that the Council consider appropriate in each of the identified Primary Shopping Frontages will be set out in Supplementary Planning Guidance. Proposals that would result in the proportion of non-A1 retail uses at ground floor level exceeding the identified threshold will only be permitted in the exceptional circumstances listed in Policy RC2.

20.3.4 In order to assist in the application of the criteria, an annual retail health check is undertaken and presented in the Retail Annual Monitoring Report. This information will be used to maintain an accurate record of the types of uses within individual premises. This data will also

be utilised to determine the appropriate thresholds of A1 uses within the individual Primary Shopping Frontages which will be set out in Supplementary Planning Guidance.

20.3.5 Consideration will be given to location and prominence of premises, in that there will be a presumption against the loss of A1 retail units in prominent locations, corner units or those with long frontages. It is also important to ensure that the non-A1 units, in terms of number, frontages lengths and distribution, do not create an over concentration of such uses which detract from the established retail character of the primary shopping area.

20.3.6 Particular scrutiny will be given to the assessment of proposals for A3 uses within PSFs. While it is recognised that cafes and restaurants play an important social role in centres complementing retail uses, hot food take away premises and bars that are closed during the day make a limited contribution to the vitality of retail and commercial centres. These are instead more appropriately directed to the wider CSCA.

20.3.7 The Council does not wish to see shops remaining vacant for a long period of time. Nevertheless, with regard to proposals for a change of use to non-A1 commercial uses it must be demonstrated that the property has been actively marketed for retail use in an appropriate manner for at least a year prior to the submission of an application. A justification statement must be submitted along with a marketing report to support any planning applications for non-A1 commercial uses and at a minimum should include sales particulars and information from sales / letting agents with any feedback to date, along with details of the market needs of a particular area.

20.4 **Local Centres and Neighbourhood Centres/Shops**

20.4.1 It is recognised that outside of identified town centres there are a number of other smaller centres/shops that play an important role in resident's everyday lives. Policy RC3 seeks to maintain and strengthen the role and function of local centres and neighbourhood centres/shops by focusing retail and complimentary commercial uses of an appropriate scale and nature within them.

Policy RC3 – Local Centres and Neighbourhood Centres/Shops

The County's local centres, neighbourhood centres and shops are defined in Strategic Policy S14 and are identified on the Proposals Map.

Development proposals for A1 retail development in designated local centres and neighbourhood centres will be permitted provided that the development, either individually or cumulatively with other recent or proposed developments, does not undermine the vitality, attractiveness or viability of town centres.

Proposals for A1, A2, A3 and other complementary commercial uses will be supported in local and neighbourhood centres where they are in keeping with the scale, role and function of the individual centre.

Proposals that would result in the loss of A1, A2, A3, or commercial uses within local centres and neighbourhood centres will not be permitted unless genuine attempts at marketing the existing use have been unsuccessful.

20.5 New Retail Proposals

20.5.1 A town centre first approach is fundamental in relation to the location of proposals for new retail and commercial development, in accordance with national policy guidance set out in PPW12 and Future Wales 2040. Policy RC4 seeks to focus future retail and commercial development in the County's designated Central Shopping and Commercial Areas (CSCAs). This is considered essential in strengthening the centres role/function in the retail and commercial hierarchy, reinforcing their attractiveness to local communities and visitors and in maintaining and enhancing their vitality and viability. The policy also supports sustainability objectives by focusing such facilities in accessible locations in accordance with the Sustainable Transport Hierarchy.

Policy RC4 – New Retail Proposals Outside of Identified Town and Local Centres

The preferred location for new retail and commercial uses, including extensions to existing retail and commercial premises, will be in the designated Central Shopping and Commercial Areas (CSCAs) and Local Centres. Where it can be demonstrated that no suitable sites exist in the CSCA/local centre, then sites on the edge of the CSCA/local centre should be considered before finally considering out-of-town sites. Development proposals outside these areas will be required to be assessed against the following criteria:

- a) A demonstrable need exists for the proposed development;
- b) The proposed development, either individually or cumulatively with other recent or proposed developments, would not have a detrimental impact on the trade/turnover, vitality and viability of town, local or neighbourhood centres;
- c) The proposed development is of an appropriate scale and type to the size, character and function of the centre and its position in the retail and commercial hierarchy;
- d) The proposed development would not have a detrimental impact on future public or private investment needed to safeguard vitality and viability of the centres;
- e) The proposal is in a location accessible by sustainable travel;
- f) The proposal is not on land allocated for other uses. This especially applies to land designated for industry, employment and housing, where retail and commercial development can be shown to limit the range and quality of sites for such uses.

Retail Impact Assessments will be required for retail and commercial developments outside the centres identified in the retail and commercial hierarchy in Strategic Policy S10, the content of which should be proportionate to the potential impact of the proposed use. The following floorspace thresholds will apply:

- g) Outside the CSCAs of Abergavenny, Caldicot, Chepstow & Monmouth – 500 sq.m gross

- h) Outside the CSCAs of Usk & Magor – 250 sq.m gross
- i) Outside the Local Centres of Raglan & Bulwark – 150 sq.m gross

20.5.2 This policy sets out the criteria against which proposals for retail and commercial development outside CSCAs and local centres, as identified on the Proposals Map, will be assessed. This policy relates to all new retail and commercial development including redevelopment, extensions, subdivision and changes of use class. It also contributes to protecting/enhancing designated CSCAs and local centres by resisting out-of-town development that could be detrimental to such centres, and any associated regeneration schemes to improve their vitality, attractiveness and viability.

20.5.3 All such retail and commercial proposals must comply with criteria a) to f) however, retail impact assessments are only required for those developments over the thresholds identified in Policy RC4.

20.6 Local Shops

20.6.1 The importance of the local shop is essential to many communities, particularly for those in rural areas. It is recognised that outside of identified centres there are a number of other shops that play an important role in resident’s everyday lives. Existing shops and facilities in such locations are therefore protected in the policy framework set out Policy CI1 Community Facilities. In addition to this, Policy S15 provides support for new local shops as community facilities. Proposals for local shops outside of the County’s retail centres must be for less than 150 sq.m gross to ensure compliance with Policy S14 and RC4.

21. Community and Recreation Facilities

Strategic Policy S15 – Community and Recreation Facilities

Development proposals that provide and/or enhance community and recreation facilities will be permitted within or adjoining settlement boundaries subject to detailed planning considerations.

Development proposals that result in the unjustified loss of community and recreation facilities will not be permitted.

- 21.1.1 The Council is committed to protecting and enhancing community and recreation facilities, including open spaces, allotments and community growing areas and Areas of Amenity Importance to meet the needs of residents over the Plan period. Strategic Policy S15 therefore provides support for new proposals and the protection of existing facilities and spaces.

Community and Recreation Facilities

- 21.1.2 Providing a range of community facilities which are accessible to as many people as possible is essential in developing sustainable, resilient and inclusive communities. Such facilities are valuable in terms of the amenities they provide, the employment they generate and in attracting people to live within an area.
- 21.1.3 For the purpose of this policy, community facilities are defined as facilities used by local communities for leisure, social, health, education and cultural purposes and include:

- Village halls/ Community hubs
- Village shops/post offices
- Schools, educational and training facilities
- GP surgeries / health and well-being centres
- Leisure centres and leisure facilities such as Theatres and Cinemas
- Allotments/ community food growing
- Public houses
- Places of worship
- Indoor facilities, such as libraries
- Cemeteries

21.1.4 Community facilities can be owned by the public, private or community groups. Such facilities can be considered appropriate in residential and non-residential areas, where they satisfy the relevant planning policies, as they serve the needs of the wider community. Whilst there is a general presumption in favour of community facilities, they should not erode the character and appearance of the natural and built environment, nor the design qualities of their location. Any proposals for community facilities must also be of a scale appropriate to the settlement they are proposed in. New facilities need to have good access to public transport and active travel routes, as well as be in walkable distance to as many homes as possible. Proposals that involve the loss of community facilities will be assessed against the criteria Policy CI1.

21.1.5 Recreation facilities include formal sport, recreation and leisure pursuits such as team games, children's play facilities, as well as more informal activities such as walking in the countryside. Recreation and leisure facilities are an important generator of tourism and, in practice, the difference between facilities for local residents and tourists is difficult to define. However, for the purposes of the Plan, policies which relate to recreation and community facilities refer to activities primarily undertaken by local residents as opposed to the more tourist related activities associated with visitors. Policy CI2 sets out the standards for recreation facilities (formal outdoor space) provision and Policy CI3 sets out the criteria which proposals that involve the loss of recreation facilities will be assessed against.

Allotment and community food growing

21.1.6 Allotments and community food growing facilities provide a valuable recreational resource and can improve the quality of life for communities. The Council is therefore committed to their retention, enhancement and provision. Given that the demand for allotments and community food growing may increase over the Plan period, proposals to develop further facilities in the County will be favourably considered. The Council has adopted a Local Food Strategy (2024) which sets out objectives and ways to deliver community growing projects, which the RLDP Framework supports. Policy CI2 sets out the standard for allotment and community food growing provision.

Public Open Spaces and Areas of Amenity Importance

21.1.7 The Council is committed to providing, protecting and enhancing open spaces in the County that are important for recreation, amenity, biodiversity, connectivity and/or heritage. Access to areas of public open space is essential in enhancing the quality of life for all and promoting sustainable and resilient communities. It can help foster social inclusion, assist in healthier

lifestyles and allow for recreation and leisure activities. It is important that an accessible network of open space and amenity areas are protected, maintained and improved. Policy CI2 sets out the standards for public open space and Policies CI3 and CI4 set out measures for the protection of public open space and designated Areas of Amenity Importance (AAI) respectively.

21.2 **Retention of Existing Community Facilities**

21.2.1 As recognised in Strategic Policy S15, community facilities are essential in promoting the health and wellbeing and sustainability of local communities, including our rural communities where community facilities provide an essential service to local residents. It is important, therefore, that development proposals or changes of use do not result in the loss of community facilities. Policy CRF1 seeks to protect and retain existing community facilities in Monmouthshire's towns and villages.

Policy CI1 – Retention of Existing Community Facilities

The change of use or conversion of neighbourhood or village shops, halls, public houses and other community facilities to other uses will only be permitted where all of the following criteria are met:

- a) The local community would continue to be adequately served by facilities to which there is convenient access by sustainable travel;
- b) Evidence is provided that the existing use is no longer viable. In respect to commercially operated facilities evidence must be provided that the facility is no longer financially viable;
- c) Evidence is provided that appropriate marketing of the facility, whether in use or vacant, has been unsuccessful.

21.2.2 In some instances, a community facility may be an isolated resource where there is no comparable facility, which is often the case in rural locations. Rural village shops and public houses for example, provide a vital service and social function for communities. As such, the Council will seek to protect these facilities through the careful consideration of planning applications that have a detrimental impact on their continued existence.

Viability

21.2.3 The viability of a facility as a business, such as a local shop or public house, will be material to the assessment of a proposal for change of use or redevelopment. The Council, as set out in criterion b), will require the submission of evidence that demonstrates the current financial status of a facility. Details of the information to be provided would be subject to discussions between the Council and the applicant and will be dependent on the nature of the business. The information must, however, be sufficient to enable an adequate assessment of whether an alternative occupier could maintain a financially viable business at the site.

21.2.4 Establishing viability is not exclusively a financial issue. Community facilities that are non-profit making, such as village halls, health centres and places of worship, will require an assessment of non-financial matters in order to establish ongoing viability. This includes for example, an

assessment of patronage/attendance levels, the prevalence of other similar facilities in the area and the suitability of the location.

Marketing

21.2.5 Evidence that appropriate marketing and advertising has been carried out to secure the sale of the premises for the existing established use will be required. This marketing period should be for a minimum of 12 months and would be expected to use appropriate property agents in the locality.

21.2.6 The Council is likely to seek independent professional advice from a commercial property valuer with regard to establishing the market value of a property and the efficacy of any marketing exercise. Such professional advice would also be useful where the facility has been vacant for a number of years in providing an assessment of potential demand for the facility both locally and in relation to general market conditions.

21.3 Provision of Formal and Informal Open Space, Allotments and Community Food Growing

21.3.1 The provision of formal and informal open space, allotments and community food growing, and/or contributions towards improving existing areas of open space, allotments and community growing areas will be sought in connection with new residential developments where they are needed and justified. This approach will help create sustainable developments that cater for the community's needs as well as promoting sustainable mixed-use developments that facilitate access via public transport, walking and cycling.

21.3.2 Policy CI2 sets out the standards for formal and informal open spaces, allotment and community growing provision. For the purposes of this policy, open space is defined in accordance with TAN16 Sport, Recreation and Open Space (2009). This sets out the Fields in Trust (FIT) standard, which is categorised into: formal spaces such as playing fields, outdoor sport courts and children's play areas; and informal spaces, such as parks, communal green spaces and infrastructure, woodland and scrubland areas.

21.3.3 Local Authorities are required to provide allotments for their residents if they consider there is demand under section 23 of the 1908 Allotments Act (as amended). The FIT standard sets out the median level of provision for allotments, community gardens and urban farms in Wales as 0.3 hectares per 1,000 population. The Council will use this standard for such provision.

Policy CI2 – Provision of Formal and Informal Open Space and Allotments / Community Growing Areas

New development proposals will be assessed against the Council's standards for formal outdoor space, informal outdoor space, allotments and community growing, as set out below:

	Open Space Typology	Quantity Guideline (hectares per 1,000 population)	Definition

FORMAL OPEN-- SPACE	Playing pitches	1.2 ha	Sports pitches including football rugby, hockey, lacrosse, cricket and American football
	All outdoor sports	1.6 ha	Courts and greens comprising natural or artificial surfaces, including tennis courts, bowling greens, athletics tracks and other outdoor sports areas
	Equipped/designated play areas	0.25 ha	Local Area for Play (LAP) and Locally Equipped Areas for Play (LEAP) aimed at children who can play independently, as well as Neighbourhood Equipped Areas of Play (NEAP)
	Other outdoor provision	0.3ha-*	All weather multi-use games areas (MUGA) including skateboard parks
	Sub total	3.35ha	
INFORMAL OPEN SPACE	Parks and gardens	0.8ha	Green spaces including urban parks, country parks, forest parks and formal gardens
	Amenity green space	0.6ha	Informal recreation spaces, public squares, communal green spaces in and around housing, village greens
	Natural and semi-natural space	2.0ha	Woodland, scrub, grassland and open access land

	Sub total	3.4ha	
ALLOTMENTS & COMMUNITY GROWING	Allotments & Community growing	0.3ha	Allotments, community gardens and community orchards

- 21.3.4 The Council has undertaken an Open Space Audit. This assesses the quantity of formal and informal public open space provision within the County and compares this provision with the benchmark standards endorsed by FIT.
- 21.3.5 The Open Space audit findings can be used as a means of justifying the provision of new recreational facilities and/or remedying local deficiencies in provision. It can also be used as a means of safeguarding and enhancing existing facilities as appropriate. It can also assist in providing the evidence and justification in seeking S106 financial obligations from developers where new housing development increases local recreational need.
- 21.3.6 It should be noted that the Open Space audit represents a quantitative analysis of open space in the County. Other considerations relating to accessibility, proximity to and the quality of existing provision have not been assessed.
- 21.3.7 Any provision should be well related to the development that it is intended to serve, however, where some of the provision needs to be made off-site a financial contribution may be appropriate to allow facilities to be provided or improved in a suitable location nearby. For example, in relation to equipped/fixed play and designated areas of play having numerous small play areas provided within new development sites that are devoid of any real play value to children and young people is not desirable, and in these circumstances it is the Council's preference for improvements to destination play areas in the locality. A cabinet report was endorsed by Council in January 2020 in relation to this approach to fixed play assessments and provision.
- 21.3.8 Developers are encouraged to maximise the functionality of public open spaces by considering opportunities for biodiversity net gain, ecological connectivity, SUDS and active travel. Recreational facilities should not be included within areas of SUDS.
- 21.4 **Safeguarding Existing Recreational Facilities, Public Open Space and Allotments / Community Growing**
- 21.4.1 In accordance with Policy S15, Policy CI3 seeks to protect recreation facilities, public open spaces and allotment and community growing uses in the County from development to other land uses. This policy does not cover designated Areas of Amenity Importance, which are protected in Policy CI4 below.

Policy Policy CI3 – Safeguarding Existing Recreational Facilities, Public Open Spaces and Allotments / Community Growing

Development proposals that involve the loss of land and facilities with recreational, open space, allotments and community growing uses will only be permitted where:

- a) Alternative provision of at least equivalent community benefit is made available in the locality by the developer on a site acceptable to the local planning authority; or
- b) There is, and would be, an excess of accessible recreational facilities, public open space and allotments/community growing areas in the locality having regard to the standard as set out in Policy CI2.

21.5 Areas of Amenity Importance

21.5.1 Across Monmouthshire Areas of Amenity Importance (AAI) play an important role in the built environment by enhancing the quality of life and the health and well-being of residents. They also provide benefits through their contribution to ecology, recreation, the cultural/historic environment, landscape and wider environmental benefits. Areas of Amenity Importance are identified on the Proposals and Inset Maps.

21.5.2 A review of AAI has been undertaken as part of the RLDP evidence base. The audit includes an assessment of Formal and Informal Recreational Space (exclusions include golf courses, recreational water bodies, indoor sports, leisure centres or car parks associated with recreational uses), Equipped Children’s Play Areas along with Amenity Open Space.

21.5.3 Areas of Amenity Importance often come under pressure for development. There are limited opportunities outside of site allocations to increase the amount of recreational and open space, and therefore it is imperative that existing AAIs are preserved and protected from loss and inappropriate development.

21.5.4 Proposals that are complementary to the use/function of an AAI and would not lead to the loss of an AAI, such as outdoor sports facilities and amenity blocks (where there is a proven need and these support the existing function of the AAI), public toilets, active travel routes, drainage infrastructure and, upgrades to equipment already present on sites, may be considered appropriate. Site promoters must provide evidence in any proposals on AAIs to demonstrate that there would be no adverse impact of development on the function that the AAI fulfils.

Policy CI4 – Areas of Amenity Importance

Areas of Amenity Importance are identified on the Proposals Map. Development proposals that lead to the loss of Areas of Amenity Importance will not be permitted.

Minerals

22. Minerals

22.1 Sustainable Minerals Management

Strategic Policy S16 – Sustainable Minerals Management

The Council will sustainably manage its mineral resources by:

- i) Safeguarding known/potential land won sand and gravel, sandstone and limestone resources for future possible use;
- ii) Maintaining a minimum 10-year bank of crushed rock reserves throughout the Plan period in line with the requirements of the latest South Wales Regional Aggregates Working Party Regional Technical Statement on Aggregates; and
- iii) Encouraging the efficient and appropriate use of high-quality minerals and maximising the potential for the use of secondary and recycled aggregates as an alternative to primary won resources.

22.1.1 In accordance with national and regional policy requirements, the RLDP encourages a sustainable approach to minerals planning. This seeks to ensure that valuable finite resources are safeguarded for possible future extraction and that the use of secondary and recycled aggregates is maximised in preference to primary aggregates.

22.1.2 Future Wales recognises minerals as a policy area requiring a co-ordinated framework through the preparation of a Strategic Development Plan (SDP). Progress on the preparation of an SDP for the South East Wales region will continue to be monitored as the Plan progresses. PPW12 and Minerals Technical Advice Note 1: Aggregate (2004) (MTAN1) require Local Planning Authorities to make provision for a minimum of land bank of 10 years for crushed rock and 7 years for land-based sand and gravel throughout the full 15 years of a development plan period. To establish these requirements MTAN1 requires the preparation of Regional Technical Statements (RTS) for the areas covered by both the South Wales and North Wales Regional Aggregates Working Parties (RAWPs).

22.1.3 A revised RTS – 2nd Review for South Wales⁴² was published in September 2020 and endorsed by the Minister for Energy, Planning and Rural Affairs in March 2021. The revised RTS makes recommendations for the apportionment necessary to ensure an adequate supply of crushed rock and sand and gravel, including the nationally recommended minimum provision of 10 and 7 years respectively, are available for the entire duration of the RLDP. The total apportionments for Monmouthshire are zero for land-won sand and gravel and 6.05 million tonnes for crushed rock, specifically Limestone in Monmouthshire case. These compare with existing landbanks (excluding dormant sites) of zero for sand and gravel, and 11.25 million tonnes for crushed rock (as of 31st December 2016), reflecting the significant permitted reserves of Limestone at

⁴² Regional Technical Statement – Second Revision main report – Final September 2020 and South Wales Appendix B - and Welsh Government RTS Clarification Letter – 11th November 2021

the Ifton Quarry. When compared against the apportioned requirement as set out in the RTS2, Monmouthshire has a surplus of provision and therefore the RTS (2nd Review) does not require Monmouthshire to make allocations within the RLDP.

- 22.1.4 On a regional basis Monmouthshire forms part of the former Gwent sub-region along with Torfaen, Newport and Blaenau Gwent. Within the sub-region there is an overall shortfall of reserves. The RTS2 notes that in view of the shortfall in the sub-region, the former Gwent sub-region may need to work in collaboration in order to meet the combined requirements for the sub-region as a whole. Monmouthshire has undertaken a Limestone Aggregate Resource Assessment (January 2024) to inform options for meeting the sub-region apportionment. The assessment reviews the mineral resource safeguarding maps against a series of constraints in the County including SSSIs, predictive agricultural land classifications, and ancient woodland. The report concludes that given the constraints associated with Monmouthshire, potential does not exist at this stage to meet some or all of the carboniferous limestone apportionment/allocation required for the wider former Gwent sub-region. We will continue to work in partnership with the other authorities in the sub-region to explore options for meeting the RTS2 apportionments.
- 22.1.5 Policy S16 seeks to ensure that best use of high-quality mineral resources is achieved and is not used for a lower grade purpose than intended. The increased use of alternatives to naturally occurring minerals is also promoted. The re-use and/or recycling of construction and demolition material and industrial waste serves not only to reduce the amount of waste produced but also conserves scarce resources and minimises environmental damage.
- 22.1.6 As noted above, there is a sufficient landbank of permitted aggregate resource in the County for the duration of the RLDP period. Should any planning application for new or extended minerals working be submitted then any such proposal would be considered under national policies contained in PPW12 and MTAN1.
- 22.1.7 Further detail on mineral reserves and regional monitoring arrangements are set out in the Minerals Background Paper.

22.2 Local Building and Walling Stone

Policy M1 – Local Building and Walling Stone

Proposals for new or the re-opening of small-scale quarries for building and walling stone for local conservation and heritage projects or new build to meet any unmet need will be permitted, subject to national planning policy and detailed planning considerations.

- 22.2.1 As noted above, applications for the working of mineral reserves will be considered under national planning policy. However, one such exception may occur when quarrying enables the provision of locally derived stone for use in restoration and new building work that reinforces the distinctiveness, character and identity of the County. Policy M1 enables this to take place, although care will be needed to ensure that proposals are small-scale, do not have a harmful impact on the countryside and do not involve the use of extensive blasting or use of heavy vehicles.

22.3 Minerals Safeguarding Areas

Policy M2 – Minerals Safeguarding Areas

Development proposals which may impact on the minerals safeguarding areas shown on the Proposals Map will be considered against the following requirements, as applicable:

- a) Proposals for permanent development uses within identified mineral safeguarding areas will not be approved unless:
 - i) The potential of the area for mineral extraction has been investigated and it has been shown that such extraction would not be commercially viable now or in the future or that it would cause unacceptable harm to ecological or other interests; or
 - ii) The mineral can be extracted satisfactorily prior to the development taking place; or
 - iii) There is an overriding need for the development; or
 - iv) The development comprises infill development within a built up area or householder development or an extension to an existing building.
- b) Proposals for development uses of a temporary nature within identified mineral safeguarding areas will not be approved unless they can be completed and the site restored to a condition that does not inhibit mineral extraction within the timescale that the mineral is likely to be needed.

22.3.1 As set out in national planning guidance, the safeguarding of finite minerals resources is a means of preserving natural resources for future generations. This does not infer these will ever be worked and in most cases only very limited use will be made of them. It is also important to remember safeguarding also does not confer any permission/allocation for extraction/exploitation. The safeguarding areas shown on the Proposals Map relate to the British Geological Survey (BGS) Aggregate Safeguarding Map for South East Wales.

22.3.2 In most instances, development may proceed within safeguarding areas as long as developers demonstrate the resource in question is either of poor quality/quantity and would not be economical to exploit, or the nature of the development in question would not prejudice exploitation of the resource. Such consideration will normally be made at the planning application stage and should form part of any submission for approval.

22.3.3 With regard to aggregates (hard rock and sand and gravel) identified and safeguarded on the Proposals Map, the extraction of mineral resources will generally not be acceptable within 200m of identified settlements in the RLDP for hard rock and within 100 metres for sand and gravel.

22.4 Mineral Site Buffer Zone

Policy M3 – Mineral Site Buffer Zones

Development proposals for sensitive or minerals development will not be permitted within the mineral site buffer zone identified on the Proposals Map.

- 22.4.1 National policy requires the RLDP to safeguard permitted and allocated mineral sites from new development that would prejudice the future extraction of the reserve /resource or the operation of the site. Buffer zones aim to reduce the conflict between mineral working and other sensitive land uses as a result of noise and dust from mineral extraction / processing and vibration from blasting. No new mineral development will be permitted within the buffer zone to prevent encroachment towards sensitive land uses. Similarly, no new sensitive development will be permitted within the buffer zone both to prevent any encroachment but also to prevent an additional constraint for the mineral working. ‘Sensitive development’ is defined in paragraph 70 of MTAN1 as ‘any building occupied by people on a regular basis and includes housing areas, hostels, meeting places, schools and hospitals, where an acceptable standard of amenity should be expected. Sensitive development could also include specialist high technology industrial development where operational needs require high standards of development’.
- 22.4.2 Paragraph 71 of MTAN1 requires a minimum 200 metre buffer zone around hard rock quarries. A buffer zone has therefore been drawn around Ifton Quarry as identified on the Proposals Map.

Waste

23. Sustainable Waste Management

Strategic Policy S17 – Sustainable Waste Management

To facilitate the delivery of sustainable management of waste the Plan will:

- i) Require waste proposals to conform to the principle of the waste hierarchy, supporting those that move waste up the hierarchy;
- ii) Support an integrated and adequate network of waste management installations that has regard to the nearest appropriate installation concept and self-sufficiency principles where necessary;
- iii) Identify suitable allocated and protected Class B2 industrial sites that are appropriate for in-building waste management treatment facilities, subject to detailed planning considerations;
- iv) Support the circular economy by encouraging the minimisation of waste production and the use of reused and recycled materials in the design, construction and demolition stages of development; and
- v) Ensure that provision is made for the sustainable management, sorting, storage and collection of waste in all new development.

- 23.1.1 The planning system has an important role to play in facilitating sustainable waste management. Welsh Government's policy for waste management is set out in 'Towards Zero Waste' (2010) and associated Sector Plans. Local authorities are required to develop a sustainable approach to the management of waste, including the support of proposals which move the management of waste up the waste hierarchy, with waste prevention and re-use at the top of the hierarchy, followed by preparation for re-use, recycling, recovery and finally disposal.
- 23.1.2 The Collections, Infrastructure and Markets Sector Plan (CIMSP) sets out the waste management framework considered to provide the best solutions to meet environmental, social and economic needs in Wales to 2050. The CIMSP requires the provision of an integrated and sustainable network of waste facilities. The 'Nearest Appropriate Installation' concept and the principle of self-sufficiency will only be applicable in relation to mixed municipal wastes (covered by Article 16 of the revised Waste Framework Directive).
- 23.1.3 Future Wales recognises waste as a policy area requiring a co-ordinated framework through the preparation of a Strategic Development Plan (SDP). Progress on the preparation of an SDP for the South East Wales region will continue to be monitored throughout the Plan period. In the meantime, PPW12 and TAN 21: Waste, establish regional monitoring arrangements to inform the preparation of LDPs and assist in the determination of planning applications. The 2018-2019 South East Wales Waste Monitoring Report (published 2020) concludes that there is currently no need for additional landfill capacity within the South East Wales region. In addition, the report advises that any new proposal for further waste treatment should be

carefully assessed to ensure that overprovision does not occur within the region. As such, no specific need for such waste management facilities has currently been identified at a regional level.

23.1.4 At a local level, Monmouthshire has a number of partnerships in place to deal with its municipal waste.

- Residual Municipal Waste- Monmouthshire is a member of Project Gwyrdd, a residual waste procurement partnership made up of five local authorities, (Caerphilly, Cardiff, Monmouthshire, Newport and the Vale of Glamorgan) who have entered into a long-term contract with Viridor Waste Management Ltd to treat municipal residual waste at their Energy from Waste Facility at Trident Park in Cardiff.
- Food Waste- this is dealt with via a long-term procurement partnership involving Bridgend, Blaenau Gwent, Monmouthshire and Torfaen with the Severn Trent Water Anaerobic Digestion Facility at Stormy Down, near Porthcawl.
- Garden Waste – Monmouthshire has a medium-term contract with Abergavenny Green Waste Company.
- Recycled Waste – is bulked and sent to reprocessors across the UK.
- Residual Commercial Waste – this is bulked and treated as part of the Project Gwyrdd arrangements.
- Trade Waste – Monmouthshire County Council also offer a trade collection service for residual waste, which is recycled in the same way as municipal recycled waste.
- Landfill – Less than 1% of waste from Monmouthshire goes to landfill, with the facilities used depending on where the reprocessing of material takes place.

(Source: MCC Neighbourhood Services Section)

23.1.5 TAN 21: Waste, notes that many general employment sites and major industrial areas are likely to be suitable locations for waste facilities⁴³. Details of those employment land allocations that are considered potentially suitable for the provision of waste management facilities are set out in Policy W3, subject to the detailed criteria-based policies contained throughout the Plan, against which planning applications for waste management facilities will be assessed.

23.1.6 Developments should, where possible, minimise the production of waste in the development process through the use of secondary and recycled aggregates as part of the construction process in accordance with the circular economy principle.

23.1.7 It is also important that new developments facilitate sustainable waste management options for the people living in and using new developments once complete. This Policy aims to encourage the recycling of waste materials by the provision of adequate facilities for the storage and collection of waste and separation at source. Waste related considerations should be taken into account in the design of the development so that they are properly integrated into it, and fully accessible to collection vehicles.

⁴³ Paragraph 3.19 of TAN 21: Waste (2014)

23.2 Waste Management Facilities

Policy W1 – Waste Management Facilities

Proposals for waste management facilities, except those involving the final deposit of waste on land at the site or open windrow composting, will be permitted within industrial sites (Class B2 of the Town and Country Planning Use Classes Order 1987) subject to detailed planning considerations, other RLDP policies and national and regional considerations.

Where such proposals cannot be accommodated on existing or proposed Class B2 industrial sites they will be permitted provided that all the following conditions are met:

- a) The proposal site is within settlement boundaries or existing and proposed industrial/business sites; and
- b) There is a demonstrable need for the type and scale of development in that location.

All proposals for waste management facilities should also comply with the following criteria:

- i) Where energy is recovered as part of the waste management process the means of access to the appropriate national grid or identified end user is demonstrated;
- ii) Where appropriate, the maximum possible use is made of non-road transportation for the receipt of the waste arising and the distribution of the output products;
- iii) There is no processing and no substantial storage of waste material in the open air; and
- iv) The proposals are compatible with adjoining land uses.

Development of sustainable waste management facilities in appropriate open countryside locations, including open windrow composting and anaerobic digestion, will be supported subject to detailed planning considerations.

- 23.2.1 Strategic Policy S17 seeks to provide a choice of sites to meet Welsh Government's requirement for the 'establishment of an integrated waste management network' by designating allocated and protected class B2 industrial sites as being potentially suitable for in-building waste management facilities. Advances in technology and the introduction of new legislation, policies and practices mean that many modern waste management / resource recovery facilities on the outside look no different to any other industrial building and on the inside contain industrial de-manufacturing processes or energy generation activities that are no different to many other modern industrial processes in terms of their operation or impact. Some waste operations such as open windrow composting and anaerobic digestion may, however, need to be located outside of settlement boundaries as they are generally carried out in the open air. Each application will therefore need to be determined on its merits in

accordance with detailed development management criteria and other relevant environmental protection and countryside policies.

23.2.2 Annex C of TAN 21: Waste (2014) sets out the specific planning considerations that need to be taken into account in assessing planning applications for new waste management facilities. TAN 21: Waste (2014) also establishes the requirement to submit a 'Waste Planning Assessment' for all applications for a waste facility classified as a disposal, recovery or recycling facility. The assessment should be proportionate to the nature, scale and size of the development proposed.

23.2.3 Details of the employment land allocations considered potentially suitable for the provision of waste management facilities are set out in Policy W3.

23.3 **Agricultural Land – Disposal of Inert Waste**

Policy W2 – Agricultural Land – Disposal of Inert Waste

Proposals to deposit inert waste on an agricultural holding that has been brought in from elsewhere for the purpose of agricultural improvement will only be permitted where:

- a) a significant improvement in the agricultural land classification grade of the land will be achieved;
- b) it can be demonstrated that the improvement sought is essential for the purposes of agriculture within the holding and cannot be achieved by means other than by deposit of waste;
- c) the proposal involves depositing the minimum volume of waste consistent with achieving the agricultural land improvements sought; and
- d) waste material capable of being economically recycled is not deposited on site.

23.3.1 Within the countryside, proposals are often put forward for the improvement of agricultural land through the deposit of inert waste material. Whilst such sites are often small in nature and often exempt from licensing from Natural Resources Wales, the process does require planning permission. Policy W2 sets out the criteria against which such proposals will be assessed. Proposals will only be permitted where it can be demonstrated that there is a genuine agricultural justification for the deposit of waste material.

23.4 **Waste Sites**

23.4.1 In accordance with PPW12 and Strategic Policy S17, Policy W3 identifies those employment allocations and existing waste disposal or management sites that are considered suitable in principle for new facilities, although all applications for development will have to satisfy a detailed assessment of any environmental and highway impacts, in accordance with other RLDP policies. Other areas having the benefit of lawful B2 use, including the Protected Employment Sites identified in Policy EA2, may also be considered, subject to meeting the relevant policies of the Plan.

Policy W3 – Identified Potential Waste Management Sites

The following sites are identified as having potential for the location of in-building waste management facilities, subject to detailed planning considerations:

Site ref	Site Name	Area (Ha)
W3a	Raglan Enterprise Park, Raglan	1.5
W3b	Land West of Raglan, Raglan	4.5
W3c	Newhouse Industrial Estate, Chepstow	2.5
W3d	Quay Point, Magor	14
W3e	Gwent Euro Park, Magor	7
W3f	Land Adjoining Oak Grove Farm, Caldicot	6
W3g	Existing Waste Facility - Five Lanes, Caerwent	2.57
W3h	Existing Llanfoist Civic and Transfer Station	1.2
Total		39.27

23.4.2 As noted in paragraph 15.3.4, Gwent Euro Park, Magor is located within the Gwent Levels Site of Special Scientific Interest (SSSI) and also within Flood Risk Zone C1 (Development Advice Map) and Defended Flood. However, the allocation area corresponds with land benefitting from an extant planning permission.

23.4.3 Site W3g Five Lanes, Caerwent lies within the Great Spring Source Protection Zone and on a limestone principal aquifer. This would need to be taken into account in any planning application for further waste related development at the site. Existing Waste Site W3h Llanfoist Civic Transfer Station lies within Flood Zone 2 (Development Advice Map) and Flood Zone 2 Rivers (Flood Map for Planning). These issues would need to be taken into account in any planning application for further waste related development at the site.

Monitoring and Review

- 23.4.4 This section of the RLDP sets out the monitoring framework which will be used to assess whether the Plan's strategy, policies and proposals are being delivered. It also provides an important check on whether the strategy is delivering sustainable development. The presence of clear mechanisms for implementation and monitoring forms one of the tests for assessing the soundness of the plan.
- 23.4.5 In accordance with legislative requirements⁴⁴, local planning authorities are required to develop a monitoring framework to enable the collation of valuable information on the performance of LDP policies. The framework set out below comprises a series of indicators, targets and triggers for further action in relation to each strategic policy and will form the basis for assessing the effectiveness of strategic policies. It also indicates the linkages between the plan themes, objectives and strategic policies. This will provide a basis for the annual monitoring report (AMR).
- 23.4.6 The indicators have been developed in accordance with Welsh Government guidance on monitoring and include the key indicators set out in the Development Plans Manual⁴⁵. In addition, numerous local indicators have been identified which will further assist in assessing the effectiveness of the strategic policies.
- 23.4.7 The indicators are associated with corresponding targets, where relevant, which provide a benchmark for policy implementation. Where appropriate, 'milestone' targets are included in order to determine whether the plan is progressing towards meeting the overall strategy. The Council will investigate any strategic policy that fails to meet its target.
- 23.4.8 Trigger levels have also been included for certain targets in order to identify any potential failings in policy implementation at an early stage. They will provide a clear indication of when policy targets are not being met or insufficient progress is being made towards meeting them. Where a trigger level is reached, a detailed assessment of the related policy will be undertaken to determine whether the policy is functioning effectively.
- 23.4.9 Source data and the monitoring method for each indicator are also provided in the framework. This identifies the sources of information that will be used for consistent data analysis.
- 23.4.10 The ISA identifies the indicators that will be used to monitor progress on sustainability issues and more specifically sustainable development. These are set out in a separate framework which will be used as a tool for monitoring sustainable development in the plan area. Once the plan is adopted these indicators will also be monitored.
- 23.4.11 The information gathered through the monitoring framework and the ISA monitoring framework will be reported in the annual monitoring report (AMR). Local planning authorities are required to produce AMR's following the adoption of LDPs to review the plan's progress and to assess the effectiveness of its policies and proposals. The AMR will identify any actions that need to be taken to resolve any issues raised through the monitoring process. This could include amendments to policies to improve their effectiveness, and in more extreme cases could result in a review of part or of the whole plan. The AMR will report information covering

⁴⁴ PCPA 2004 (sections 61, 76 and 69(1)); LDP regulations 37, 41; SEA regulation 17.

⁴⁵ WG, March 2020

the preceding financial year and will be submitted to the Welsh Government by 31 October each year and will be available to view on the Council’s website.

23.4.12 Irrespective of the AMR’s findings, the Council is required to carry out a review of the whole plan every 4 years from the date of adoption.

23.4.13 The AMR will provide further detail on the assessment of the indicators and set out an appropriate response which could include the following actions.

Continue Monitoring	Monitoring suggests that the Plan’s policies are being implemented effectively and no action is required.
Training Required	Monitoring suggests that the Plan’s policies are not being implemented as intended and officer or Member training is required.
Supplementary Planning Guidance (SPG)	Monitoring suggests that the Plan’s policies are not being implemented effectively and further guidance is required which may include the preparation of additional SPG.
Further Investigation	Monitoring suggests that the Plan’s policies are not being implemented effectively and further investigation is required.
Policy Review	Monitoring suggests that the Plan’s policies are not being implemented/not delivering intended outcomes. A review of the relevant policies may be required.
Plan Review	Monitoring suggests that as the Plan’s strategy and policies are not being implemented/delivered a formal review of the Plan may be required in advance of the 4-year statutory review.

Strategic Policy: S4 Climate Change

RLDP Objectives Supported: 4, 6, 7, 15 and 17. Other RLDP Policies: NZ1, CC1-CC3.

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
To ensure development accords with the principles of sustainable development, and addresses the causes	Key Indicator: Amount of development (by TAN 15 category) permitted in C1 and C2 floodplain areas not meeting all TAN 15 tests.	No applications permitted in C1 and C2 floodplain areas not meeting all TAN 15 tests.	1 or more application permitted for development in C1 and C2 floodplain areas not meeting all TAN 15 test in any 1 year.	
	Local Indicator: Proportion of development on brownfield land	Increase the proportion of development on brownfield land.	Further investigation if no increase in proportion of	Planning applications database.

of, and adapts to the impacts of climate change.	as a percentage of all development permitted**		development on brownfield land for 2 consecutive years.	
	Local Indicator: Delivery of net zero carbon homes.	All new build residential development to meet the standards set out in Policy NZ1.	1 or more new build homes do not meet the standards set out in Policy NZ1 in any 1 year.	Planning applications database and built performance surveys post construction.
	Local Indicator: Number and capacity (MW) of renewable, low and zero energy carbon developments.	Targets for renewable energy resource in accordance with the range set out in Table 3 – Renewable Energy Targets.	No permissions granted within 4 years	Planning applications database / Table 3 – Renewable Energy Targets.

Strategic Policy: S5 Green Infrastructure, Landscape and Nature Recovery

RLDP Objectives Supported: 3, 4, 6, 7, 8, 11, 12, 14 and 17. Other RLDP Policies: GI1-GI2, LC1-LC5, NR1-NR3, PROW1.

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
To maintain, protect and enhance Monmouthshire's green infrastructure, landscape and biodiversity.	Local Indicator: Amount of Greenfield land lost to development which is not allocated in the development plan.	Minimise the loss of non-allocated Greenfield land.	Any loss of non-allocated greenfield land in any 1 year.	Planning applications database.
	Local Indicator: Developments granted planning permission that are within, or likely to adversely effect, internationally/nationally important nature conservation areas.	None adversely affected.	1 or more application permitted for development within, or likely to adversely affect internationally/nationally important nature conservation areas in any 1 year.	Planning applications database /GI Team /Environment Act Section 6 Reporting /Nature & Climate Emergency Reporting.

	<p>Local Indicator: Developments granted permission that cause harm to the overall nature conservation value of locally designated nature conservation sites.</p>	<p>Minimise developments that would cause harm to the overall nature conservation value of locally designated sites.</p>	<p>Further investigation if 1 or 2 developments result in overall harm for 2 consecutive years, or 3 or more developments result in overall harm in any 1 year.</p>	<p>Planning applications database/ GI Team /Environment Act Section 6 Reporting /Nature & Climate Emergency Reporting.</p>
	<p>Local Indicator: Number of new developments granted planning permission delivering net benefit for biodiversity.</p>	<p>All relevant development delivering net benefit for biodiversity.</p>	<p>None.</p>	<p>Planning applications database /S106 Monitoring / GI Team /Planning Condition Monitoring.</p>
	<p>Local Indicator: Number of new developments granted planning permission that provide sufficient on-site GI in accordance with GI SPG.</p>	<p>Sufficient GI provided on development sites to not require off-site compensation.</p>	<p>Proposed or actual reduction in approved GI provision that is separate to SUDs provision.</p>	<p>Planning applications database including discharge of conditions, variations and NMA's / GI Team.</p>
	<p>Local Indicator: Number of new developments granted planning permission where tree, woodland and hedgerow loss are unavoidable that have not successfully applied the PPW12 compensatory ratios.</p>	<p>No new development has led to unavoidable loss.</p>	<p>Proposed or actual loss in trees, woodland or hedgerow.</p>	<p>Planning applications database including discharge of conditions, variations and NMA's / GI Team.</p>

Strategic Policy: S6 Infrastructure

RLDP Objectives Supported: 1, 3, 4, 8, 10, 11, 12, 13, 14 and 17. Other RLDP Policies: IN1.

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
Ensure the delivery of infrastructure to support the RLDP Growth and Spatial Strategy.	Key Indicator: Delivery of infrastructure that underpins the Plan's site allocations.	Infrastructure is delivered in accordance with the Infrastructure Delivery Plan (IDP).	Infrastructure not delivered in accordance with the timescales set out in the IDP.	Planning applications database /S106 Monitoring / Infrastructure Delivery Plan.

Strategic Policy: S7 Affordable Housing Provision

RLDP Objectives Supported: 9, 10, 11, 12 and 13. Other RLDP Policies: H1-H9, S2.

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
To deliver 1,595 to 2,000 affordable homes over the Plan period 2018-2033.	Key Indicator: The level of affordable housing completions monitored against the Plan's overarching target.	Annual affordable housing completions delivered through the planning system in line with the target rate set out within S7.	Variation of 10% from the expected target for 2 consecutive years.	Housing Monitoring/ planning applications database/S106 Monitoring.
	Key Indicator: The tenure of affordable housing completions.	Housing completions to be in line with the Council's approach to affordable housing tenure.	Affordable housing completions deviate from the Council's tenure requirements.	MCC Housing Department.
	Key Indicator: Delivery of the affordable housing policy-thresholds and percentage targets for each sub-market area.	New site allocations – On-site provision of 50% affordable homes on all new site allocations. Sites of 20 homes and over – On-site provision of 50% affordable	Further investigation if the proportion of affordable housing achieved on development sites in each area falls below the	Housing Monitoring / Planning applications database / S106 Monitoring.

		<p>housing on sites within existing settlement boundaries as identified in Tiers 1-3 of Strategic Policy S2.</p> <p>Sites of 5 to 19 homes – On-site provision of 40% affordable housing on sites within existing settlement boundaries as identified in Tiers 1-3 of Strategic Policy S2.</p> <p>Sites of 1 to 4 homes – Financial contributions towards the provision of affordable housing in the local planning authority area in accordance with the Affordable Housing Supplementary Planning Guidance.</p> <p>Conversions and sub-divisions – Financial contributions towards the provision of affordable housing in the local planning authority area in accordance with the Affordable Housing Supplementary Planning Guidance.</p>	requirements set out in Policy S7.	
	Key Indicator: Viability – trends in house prices, land values, build costs.	No target.	No trigger.	Site specific viability assessments/ Home Track / Land Registry.
	Local Indicator: Number of affordable dwellings delivered through affordable housing exception schemes (Policy H9).	No target	No trigger	Planning applications database.

Strategic Policy: S8 Site Allocation Placemaking Principles

RLDP Objectives Supported: 9, 10, 11, 12 and 13. Other RLDP Policies: HA1-HA4

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
To deliver the strategic housing sites in accordance with site allocation policies HA1 to HA4.	Local Indicator: The number of homes permitted on strategic sites as identified in site allocations policies HA1 to HA4.	Planning permission granted for the key strategic sites identified in site allocations policies HA1 to HA4 by the end of 2027.	Planning permission is not granted by the end of 2027 for each of the strategic sites.	Planning applications database/ Housing Monitoring.
To deliver the Strategic Site Land to the East of Abergavenny as identified in Policy HA1.	Key Indicator: Policy HA1: Land to the East of Abergavenny. Number of homes completed. Infrastructure requirements and placemaking principles delivered. Mix-use elements completed.	Dwelling completions delivered in accordance with the agreed housing trajectory. Infrastructure requirements and placemaking principles delivered in accordance with Policy HA1. Completion of the mixed-use elements delivered in accordance with agreed the agreed phasing programme.	Annual dwelling completions fall below the levels set out in the agreed housing trajectory. Infrastructure requirements and placemaking principles not delivered in accordance with Policy HA1. Completion of the mixed-uses not delivered in accordance with the agreed phasing programme.	Planning applications database/Housing Monitoring /S106 Agreement.
To deliver the Strategic Site Land to the East of Caldicot as identified in Policy HA2.	Key Indicator: Policy HA2: Land to the East of Caldicot. Number of homes completed.	Dwelling completions delivered in accordance with the agreed housing trajectory. Infrastructure requirements and placemaking principles delivered in accordance with Policy HA2.	Annual dwelling completions levels fall below the levels set out in the agreed housing trajectory. Infrastructure requirements and Placemaking principles	Planning applications database/ Housing Monitoring / S106 Agreement.

	<p>Infrastructure requirements and placemaking principles delivered.</p> <p>Mix-use elements completed.</p>	<p>Completion of the mixed-use elements delivered in accordance with agreed the agreed phasing programme.</p>	<p>not delivered in accordance with Policy HA2.</p> <p>Completion of mixed-uses delivered in accordance with the agreed phasing programme.</p>	
<p>To deliver the Strategic Site Land at Mounon Road, Chepstow as identified in Policy HA3.</p>	<p>Key Indicator: Policy HA3: Land at Mounon Road, Chepstow</p> <p>Number of homes completed.</p> <p>Infrastructure requirements and Placemaking principles delivered.</p> <p>Mix-use elements completed.</p>	<p>Dwelling completions delivered in accordance with the agreed housing trajectory.</p> <p>Infrastructure requirements and placemaking principles delivered in accordance with Policy HA3.</p> <p>Completion of the mixed-use elements delivered in accordance with agreed the agreed phasing programme.</p>	<p>Annual dwelling completions fall below the levels set out in the agreed housing trajectory.</p> <p>Infrastructure requirements and placemaking principles not delivered in accordance with Policy HA3.</p> <p>Completion of mixed-uses not delivered in accordance with the agreed phasing programme.</p>	<p>Planning applications database/Housing Monitoring /S106 Agreement.</p>
<p>To deliver the Strategic Site Land at Leasbrook, Monmouth as identified in Policy HA4.</p>	<p>Key Indicator: Policy HA4: Leasbrook, Monmouth</p> <p>Number of homes completed.</p> <p>Infrastructure requirements and placemaking principles delivered.</p>	<p>Dwelling completions delivered in accordance with the agreed housing trajectory.</p> <p>Infrastructure requirements and Placemaking principles delivered in accordance with Policy HA4.</p>	<p>Annual dwelling completions fall below the levels set out in the agreed housing trajectory.</p> <p>Infrastructure requirements and placemaking principles not delivered in accordance with Policy HA4.</p>	<p>Planning applications database/Housing Monitoring /S106 Agreement.</p>

Strategic Policy: S9 Gypsy and Travellers

RLDP Objectives Supported: 9, 10, 11, 12 and 13. Other RLDP Policies: GT1.

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
To meet the identified needs of the Gypsy Traveller Accommodation Assessment (GTAA).	Key Indicator: The completion of Gypsy and Traveller site(s) to meet identified needs.	Gypsy Traveller site(s) identified in Policy S9 to be completed within the Plan period to meet the identified need set out in the GTAA 2021.	Planning permission not granted for the allocated Gypsy Traveller site(s) identified in Policy S9 during the Plan period, where an identified unmet need still exists.	Planning applications database.
	Local Indicator: Meet any new arising need for Gypsy and Traveller sites arising outside of the GTAA.	No Target.	No Trigger.	Gypsy and Traveller Accommodation Assessment (GTAA) / Planning applications database.

Page 249

Strategic Policy: S10 Employment Site Provision

RLDP Objectives Supported: 1, 9, 11, 12, 14 and 15. Other RLDP Policies: EA1-EA2, E1-E2.

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
To ensure a sufficient supply of employment land and to protect	Key Indicator: Net employment land development and take-up against allocations.	Take-up rate of employment land identified in Policy EA1.	No employment land take-up on allocated employment sites identified in Policy EA1 for 2 consecutive years.	Employment Land Monitoring.

the County's employment land.	Key Indicator: Enable job growth.	Deliver up to 416 additional jobs per annum.	No permission for developments that create jobs (including Use Class B jobs) in any 1 year.	Economic Insights Team / ONS Data.
	Local Indicator: Net employment land supply.	Maintain sufficient employment land to meet the identified take-up rate of 1.9ha per annum.	Insufficient employment land available to meet the identified take-up rate of 1.9ha per annum.	Employment Land Monitoring.
	Local Indicator: Planning permission granted for new development (by type) on allocated employment sites as identified in Policy EA1.	No specific target	No planning permissions granted on strategic employment sites identified in Policy EA1 for 2 consecutive years.	Employment Land Monitoring.
	Local Indicator: Planning permissions granted for employment use (i.e. B1, B2, B8 uses) by settlement.	No specific target.	None.	Employment Land Monitoring.
	Local Indicator: Amount of employment land lost to non-employment uses (i.e. non B1, B2, B8 uses).	Minimise the loss of employment land to non B1, B2 and B8 uses.	Further investigation if loss of any B1, B2 or B8 employment land in any 1 year.	Employment Land Monitoring / planning application database.

Strategic Policy: S11 Rural Economy

RLDP Objectives Supported: 1, 3, 6, 7, 9, 11, 12, 13 and 15. Other RLDP Policies: RE1-RE6.

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
Encourage and support diversification of the rural economy.	Local Indicator: Number of rural enterprise and diversification schemes approved.	No target.	None.	Planning applications database.

Strategic Policy: S12 Visitor Economy

RLDP Objectives Supported: 1, 3, 11, 12, 13, 15, 16 and 17. Other RLDP Policies: T1-T2.

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
Encourage and support high quality sustainable tourism schemes/facilities.	Local Indicator: Number of tourism schemes approved.	No target.	None.	Planning applications database.
	Local Indicator: Number of tourism facilities lost through development, change of use or demolition.	Minimise the loss of tourism facilities.	Further investigation if there is a loss of any 1 tourism facility in any 1 year.	Planning applications database.

Strategic Policy: S13 Sustainable Transport

RLDP Objectives Supported: 1, 8, 9, 11, 12, 13, 14, 15 and 17. Other RLDP Policies: ST1-ST6.

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
To increase sustainable forms of transport in accordance with the LTS.	Local Indicator: Progression of Local Transport Strategy (LTS) schemes detailed in Policy ST5 in accordance with the LTS delivery timetable.	LTS proposals implemented in accordance with the LTS delivery timetable.	Further investigation if the LTS proposals detailed in Policy ST5 are not being implemented in accordance with the LTS delivery timetable.	Planning applications database/ LTS delivery programme.

Page 252

Strategic Policy: S14 Town, Local and Neighbourhood Centres

RLDP Objectives Supported: 1, 2, 8, 9, 11, 12, 13, 14, 15 and 16. Other RLDP Policies: RC1-RC4.

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
Direct new retail and commercial development to the County's Central Shopping and Commercial Areas (CSCAs) and local centres and seek to enhance their vitality, attractiveness, and viability.	Local Indicator: Amount of retail and commercial development permitted within the CSCAs and local centres as a proportion of all retail and commercial development permitted.	New retail and commercial floorspace to be located within the County's CSCAs and local centres.	Any new retail and commercial floorspace is developed outside the County's CSCAs and local centres.	Annual Retail Survey / planning applications database.
	Local Indicator: Percentage of vacant units within the CSCAs of each town and local centre.	No increase in the number of vacant units.	Further investigation if the vacancy rate in CSCAs / local centres increases for 2 consecutive years.	Annual Retail Survey.

	Local Indicator: Percentage of A1 uses in the primary shopping frontages (PSF) of Abergavenny, Caldicot, Chepstow and Monmouth.	Percentage of A1 uses no less than the percentage targets for the identified primary shopping frontages, set out in the PSF SPG.	Further investigation if the percentage figures for the primary shopping frontages fall below the targets set out in the PSF SPG.	Annual Retail Survey / planning applications database.
--	--	--	---	--

Strategic Policy: S15 Community Facilities, Outdoor Recreation and Allotment / Community Growing

RLDP Objectives Supported: 3, 8, 9, 11, 12 and 14. Other RLDP Policies: CI1-CI4.

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
To retain existing Community Facilities, Outdoor Recreation and Allotment / Community Growing and seek to develop additional facilities.	Local Indicator: Number of Community Facilities, Outdoor Recreation and Allotment / Community Growing spaces granted planning permission.	No Target.	None.	Planning applications database.
	Local Indicator: Number of Community Facilities, Outdoor Recreation and Allotment / Community Growing spaces lost to other uses.	Minimise the loss of Community Facilities, Outdoor Recreation and Allotment / Community Growing spaces.	Further investigation if there is a loss of any 1 Community Facilities, Outdoor Recreation and Allotment / Community Growing spaces in any 1 year.	Planning applications database.
	Local Indicator: Areas of Amenity Importance (AAI) lost to development.	No loss of AAI to development.	Further investigation if any loss of AAI in any 1 year.	Planning applications database.

Strategic Policy: S16 Sustainable Minerals Management

RLDP Objectives Supported: 1, 5, 6, 7, 14 and 17. Other RLDP Policies: M1-M3.

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
Safeguard areas of aggregates resources.	Local Indicator: Aggregate landbank for MCC in years.	A minimum land bank of 10 years to be maintained.	Further investigation if 10 years land bank is not maintained.	SWRAWP Monitoring Report.
	Local Indicator: Number of permitted permanent sterilising non-mineral developments on safeguarded sites.	Minimise the number of permanent non-mineral developments on safeguarded sites.	Further investigation if any such developments permitted	Planning applications database.

Page 254

Strategic Policy: S17 Sustainable Waste Management

RLDP Objectives Supported: 5, 7, 14 and 17. Other RLDP Policies: W1-W3.

Monitoring Aim / Outcome	Indicator	Target	Trigger for Further Investigation	Source Data / Monitoring Method
Meet the County's contribution to local waste facilities.	Local Indicator: Capacity to cater for the County's waste.	Maintain sufficient capacity to cater for the County's waste (to be confirmed at a regional level) in accordance with TAN 21.	Triggers to be established at a regional level in accordance with TAN 21.	South East Wales Waste Monitoring Report.

Appendix 1: RLDP Supporting Documents

A number of additional supporting documents have been prepared to inform the Deposit Plan. These are listed below and should be read alongside the Plan as only their main findings are highlighted in this document given the significant amount of data/information they contain. The documents are available on the Planning Policy page of the Council's website.

Supporting Document	Purpose
RLDP Documents	
The Adopted LDP Review Report (approved by Council March 2018)	Evaluates the extent to which the Adopted LDP is functioning effectively.
RLDP Revised Delivery Agreement October 2024 ⁴⁶	The Delivery Agreement sets out how the RLDP is to be prepared and provides a timetable for Plan preparation along with a Community Involvement Scheme which outlines the Council's principles of community engagement.
Issues, Vision and Objectives Paper (Updated September 2024)	Sets out the key issues, challenges and opportunities facing the County along with the RLDP vision and objectives to address the issues, challenges and opportunities identified.
Preferred Strategy Consultation (December 2022 – January 2023)	Sets out the preferred level of growth (housing and employment) and broad spatial distribution of this growth, along with the preferred strategic site allocations and strategic policies that will deliver and implement the strategy.
Preferred Strategy update (October 2023)	In October 2023 Council endorsed a number of key post-consultation updates to the Preferred Strategy as the basis for the ongoing preparation of the Deposit Plan.
Initial Consultation Report (2024)	Sets out how the Local Planning Authority (LPA) has undertaken public participation and consultation on the Preferred Strategy in accordance with LDP Regulation 16a. The Report identifies the steps taken to

⁴⁶ Original Delivery Agreement was approved by Council and agreed by Welsh Government May 2018. Subsequent revisions to the Delivery Agreement were approved by Council and agreed by Welsh Government in March 2020, October 2020 and December 2022.

publicise plan preparation, in accordance with the CIS, outlining those engaged, summarises the main issues raised and the Council’s response to these.

Integrated Sustainability Appraisal and Habitats Regulations Related Documents

Integrated Sustainability Appraisal (ISA) Scoping Report (Updated November 2022)	This sets out the background for the ISA/SEA process that will be followed throughout the RLDP process and considers the characteristics of the RLDP area through a review of relevant plans, policies and programmes, and baseline information.
Initial Habitats Regulations Assessment (HRA) Screening Report (December 2018)	This outlines the requirement to undertake a HRA in respect of the RLDP and identifies the relevant European sites for consideration within the HRA process.
Initial ISA Report (AECOM, November 2022)	The Initial ISA Report is the second stage of the ISA process and appraises the social, economic, environmental and cultural effects of the RLDP Preferred Strategy. This includes the Vision, Strategic Objectives, Growth and Spatial Options and Preferred Strategy, including the Strategic Policies.
HRA of the Monmouthshire RLDP – Preferred Strategy (AECOM, November 2022)	The HRA Report provides a high level, preliminary assessment of the RLDP Preferred Strategy. At this stage, the aim of the report is to identify European sites which have the potential to be impacted by the RLDP, and to identify potential likely significant effects that the RLDP may have. It also identifies other plans, programmes and projects that may have ‘in-combination’ effects when considered alongside the effects of the RLDP.
ISA Report (AECOM, September 2024)	The ISA Report is the third stage of the ISA process and appraises the social, economic, environmental and cultural effects of the RLDP Deposit Plan and sets out relevant mitigation measures. The ISA is prepared alongside the RLDP as an integrated and iterative process. This process integrates sustainability considerations into all stages of Plan preparation and promotes sustainable development.
HRA of the Monmouthshire RLDP – Deposit Plan (AECOM, September 2024)	The HRA Report provides an assessment of the RLDP Deposit Plan. It determines the likely significant effects of the Plan, either individually or in combination with the effects of other plans and projects, on European sites of nature conservation importance and if applicable, scope what needs ‘appropriate assessment’ (AA) and how it will be undertaken. The HRA is prepared alongside the RLDP as an integrated and iterative process. The RLDP sets out policies and proposals which ensure that the

requirements of the regulations are satisfied, and that the integrity of the European Designated sites are not adversely affected.

Supporting Evidence and Background Papers

Monmouthshire RLDP Updated Demographic Evidence Report produced by Edge Analytics (November 2021)	Edge Analytics was commissioned to prepare a range of up-dated demographic, dwelling and employment growth scenarios using the 2018-based projections as the starting point, updated to take account of the ONS 2020 MYE and housing completion figures up to 2021. The Report applies a range of sensitivity assumptions to address key issues and challenges, to provide a range of growth scenarios for the County. The potential employment growth that could be supported by the demographic and dwelling-led scenarios is also set out using key assumptions on economic activity, unemployment rates and commuting ratio linked demographic and economic change. The report provides a suite of population, housing and economic growth outcomes to consider in the formulation of the RLDP.
Sustainable Settlements Appraisal (Updated December 2022)	Assesses and identifies settlements within Monmouthshire, which are potentially suitable to accommodate future growth in terms of their location, size, role and function and sets out an initial settlement hierarchy arising from the appraisal to inform the RLDP.
Growth and Spatial Options Paper (September 2022)	Provides the background to the growth and spatial option for the RLDP together with a review of the extent to which they will achieve the RLDP objectives.
Housing Background Paper (October 2024)	This paper analyses each component of housing supply in more detail before arriving at a housing allocations provision based on the methodology detailed within the Welsh Government Development Plans Manual Edition 3 (March 2020). It incorporates a Housing Potential Study which aims to identify where windfall sites could potentially be located within the existing settlement areas of Monmouthshire.
Local Housing Market Assessment Update (2024)	Provides a detailed insight into the local housing markets across the County. It includes a quantitative assessment of housing need that are used to inform the housing policies of the RLDP in terms of affordable housing provision, tenures and types of accommodation required.

High Level Viability Assessment (2024)	Assesses the viability of delivering market and affordable housing in Monmouthshire’s housing market areas to inform policy formulation, spatial expression and application.
Gypsy and Traveller Accommodation Assessment – January 2021.	Report assesses the accommodation needs of Gypsy and Traveller families and establishes the number of pitches required to meet the identified need over the Plan period. Submitted to Welsh Government following Cabinet approval January 2021. Approved by Welsh Government in June 2024.
Infrastructure Delivery Plan (Appendix 8 of the Deposit RLDP)	Identifies the key infrastructure needed, anticipated timescales of delivery and potential funding streams to support the delivery of the allocated sites.
Monmouthshire Employment Land Review, BE Group (October 2022)	Evidence base undertaken in line with Welsh Government Guidance. The ELR provides an assessment of the supply and demand for employment land in the County, looking at the available employment allocations and existing employment areas and reviews the property market, consults with local stakeholders and forecasts employment growth to understand employment demand requirements for the Plan period.
Regional Employment Study – Larger Than Local Study, BE Group (March 2020)	The report addresses the issues of employment land on a regional basis and covers five local authorities:- Monmouthshire, Blaenau Gwent, Torfaen, Caerphilly and Newport. It provides an economic evidence base, reviews the property and employment land market and recommends employment sites of regional significance for consideration in each of the constituent local authority areas.
MCC Economies of the Future Reports, BE Group (2018)	The MCC Economies of the Future Reports informed the development of the revised Economic Growth and Inward Investment Strategy for the Council. The analysis is also a fundamental piece of work that provides evidence to support the Monmouthshire RLDP.
Monmouthshire 2040: Our Economic Growth and Ambition Statement (November 2019)	The Economic Growth and Ambition Statement sets out the economic ambition for the County and will work alongside the RLDP in identifying suitable employment sites and premises, to enable existing businesses to grow and to attract inward investment from new businesses in key growth sectors.

<p>Inward Investment Prospectus 2020: Growing your Business in Monmouthshire (March 2020)</p>	<p>This document supports the Monmouthshire 2040: Our Economic Growth and Ambition Statement (Nov 2019) noted above. The prospectus sets our aspirations to raise the economic profile of Monmouthshire with priorities to explore business opportunities and attract funding, while being sensitive to Monmouthshire’s landscape.</p>
<p>Monmouthshire Economy, Employment and Skills Strategy (2023)</p>	<p>The EESS sets out the Council’s aspirations to foster a diverse, fairer, greener and circular economy, generating sustainable employment growth and creating conditions for shared prosperity. It focuses on four key priority themes: Place – A vibrant, greener Monmouthshire; Enterprise – A thriving ambitious Monmouthshire; People – A fairer, more successful Monmouthshire; and Infrastructure – A well connected Monmouthshire attracting business investment. This Strategy, together with the RLDP and Local Transport Strategy, will support sustainable economic growth/job creation through a range of mechanisms and interventions.</p>
<p>Employment Land Background Paper (May 2022)</p>	<p>Provides an annual assessment of employment land take up across allocated and protected employment sites as identified in the Adopted LDP.</p>
<p>Regional Assessment of Future Growth and Migration for the Cardiff Capital Region (2024)</p>	<p>This report undertakes a regional assessment of future growth and migration for the Cardiff Capital Region (CCR). It aims to review how each LPA could contribute towards increasing the number of jobs across the region by 2040 and how the increase in jobs corresponds with projected growth in LPAs, the region and Future Wales 2040. It reviews the migration assumptions underpinning the proposed level of population/jobs growth and the potential implications of the spatial distribution of jobs and people on travel patterns. The study provides a policy-off approach to the assessment of potential growth in the region. As such, it sits alongside and complements RDLP evidence prepared by each authority in the region. It is not intended to replace or supersede the detailed consideration of growth potential prepared by individual authorities to inform the RLDP process.</p>
<p>Monmouthshire Landscape Sensitivity Update Study (White Consultants, October 2020)</p>	<p>An update to the Landscape Sensitivity and Capacity Study carried out in 2009, setting out detailed assessments and sensitivity evaluations of local landscape character areas and strategic candidate sites, with a view to establishing the least sensitive areas in terms of landscape for housing growth potential. The study area includes areas and defined candidate sites around primary and secondary settlements and Severnside.</p>

Monmouthshire Retail Study Update (2024)	Evidence base to inform the development of the RLDP policy framework in relation to retail, commercial and town centres.
Retail Background Paper (2024)	Provides an annual retail ‘health check’ of our five main towns (i.e. Abergavenny, Caldicot, Chepstow, Monmouth and Usk).
Renewable and Low Carbon Energy Assessment October 2020	Evidence base to inform the development of renewable and low carbon energy policies for inclusion in the RLDP, undertaken in accordance with the Welsh Government’s <i>Practice Guidance: Planning for Renewable and Low Carbon Energy – A Toolkit for Planners, September 2015</i> . The assessment aims to estimate the scale of renewable energy resource within Monmouthshire in order to provide some focus for setting local spatial policy and targets. Building on the findings of the 2020 report further work will be undertaken with the Carbon Trust to identify Local Search Areas and targets for renewable energy generation for inclusion in the Deposit Plan. These will be informed by industry engagement interviews, stakeholder workshops and further landscape sensitivity assessments.
Strategic Transport Assessment (STA) (2024)	Sets out the findings of transport modelling work undertaken in support of the Monmouthshire Strategic Transport Assessment (STA). The STA involves a high-level strategic transport assessment for Monmouthshire’s proposed housing numbers and locations to determine their impact on the transport network across the County and also within the South East Wales Region. Consideration is given to the potential impact on both the highway and public transport network within the County.
Green Wedge Assessment (2024)	Assesses the Adopted LDP existing green wedges to assess whether these continues to meet the purposes as defined in PPW12. The review also assesses the potential for new green wedge designations in accordance with the provisions of national planning policy that “green wedges may be used to provide a buffer between the settlement edge and statutory designations and safeguard important views into and out of the area.”
Green Infrastructure Strategy (2019)	Provides an overarching framework for positive actions by all stakeholders involved in the future protection, management and enhancement of GI in Monmouthshire and provides a delivery mechanism for actions set out in the Climate and Nature Emergency Strategy and Community and Corporate Plan, and sets out key objectives and priorities for guiding the planning management and delivery of GI in Monmouthshire. It also forms part of the baseline evidence to help inform the Strategic

	Regional Green Infrastructure for Gwent delivered through the Gwent Green Grid Partnership, as well as a positive and proactive approach to the management of Monmouthshire’s GI assets in tandem with the RLDP’s strategy.
Strategic Flood Consequences Assessment (SFCA) (November 2022)	SFCA Stage 1 provides a high-level overview of flood risk. It brings together the policies, plans, strategies and studies relating to flood risk across the study area, and establishes the flood risk and development management objectives and priorities. It includes mapping of the flood risk from all sources.
Background Papers	A range of background papers have been prepared to support the RLDP, providing additional information/evidence in relation to specific topic areas relevant to the Plan.
Self-Assessment of the Deposit Plan against the Tests of Soundness (October 2024)	This sets out an assessment of the Deposit Plan against the Tests of Soundness, together with the Plan’s general conformity with Future Wales 2040; the National Plan.
Candidate Sites	
Candidate Site Register (updated July 2023)	Provides a log of the Candidate Sites submitted during the second call for sites, to be considered for inclusion for development, redevelopment and/or protection in the RLDP.
Candidate Site Assessment Methodology (Updated July 2023)	Sets out the methodology used to assess candidate sites as part of the RLDP process.
Candidate Sites High-level Assessment (Updated July 2023)	Sets out a high-level assessment of Candidate sites submitted during the Second Call for Candidate Sites, based on a site’s compatibility with the Preferred Strategy, insurmountable constraints to development of a site, site size threshold and site viability.
Candidate Sites Assessment Report (October 2024)	Sets out the findings of the Candidate Site Assessment process for the consideration of land for development and protection in the RLDP. It provides an overview of the candidate site assessment process from the Second Call for Candidate Sites to the proposed Deposit Plan allocations and identifies potential sites that are suitable for allocation within the RLDP, as well as those that are not considered suitable for allocation.

Appendix 2: RLDP Key Stages

Key Stages	Timescales	Additional Details
<p>Delivery Agreement – establishes timetable for key stages of the plan preparation and approach to community engagement.</p>	4-week consultation 21 st March – 18 th April 2018.	
	First revision March 2020	Amended to reflect the delays incurred up to the Preferred Strategy stage as a result of the pre-election period preceding the December 2019 General Election, the additional time and work needed to inform the Preferred Strategy and delays associated with joint working with neighbouring local authorities on joint evidence base work.
	Second revision October 2020	Update to reflect unavoidable delays relating to the Covid-19 pandemic, the review of the Issues, Vision, Objectives and Evidence Base, and publication of 2018-based population projections.
	Third Revision December 2022	Updated to reflect revised timescales following the decision to embark on a new Preferred Strategy.
	Fourth Revision, October 2024	Updated to reflect revised timescales given slippage incurred in relation to the preparation of the Deposit Plan.
<p>Issues, Vision & Objectives- Identifies the key issues, challenges and drivers facing the County and sets out the vision and objectives for the RLDP</p>	Consultation January – February 2019	
	Reviewed and amended June 2019.	Updated to reflect relevant feedback from targeted engagement process and the Council's declaration of a climate emergency in May 2019.
	Review undertaken in June 2020 incorporated into the RLDP Review of Issues, Vision and Objectives and Evidence Base in light of Covid 19 (September 2020	Review concluded that a number of issues and objectives are now considered to have increased emphasis and importance in light of Covid-19, consistent with the priorities identified in the Welsh Government Building Better Places document published in July 2020.

	approved by Council October 2020).	
	Updated December 2022	Minor updates to reflect latest position.
<p>Growth and Spatial Options – sets out a number of alternative growth and spatial strategy options for the RLDP having regard to the Plan’s evidence base and policy aspirations.</p>	Non-statutory consultation for four-week period July – August 2019.	Undertaken based on WG 2014-based population and household projections.
	Growth & Spatial Options (December 2020)- Non-statutory consultation on updated options paper January – February 2021	Updated to take account of the 2018-based population and household projections.
	Progressing Monmouthshire’s RLDP Council Report – 27 th September 2022	Approval of the proposed growth and spatial options for progressing the RLDP, having regard to a number of challenges that have arisen including the Welsh Government objection to the Preferred Strategy (June 2021) and phosphate water quality issues in the Rivers Wye and Usk.
<p>Preferred Strategy (alongside the Integrated Sustainability Appraisal (ISA) – first of the statutory consultation stages, providing the strategic direction for the development and use of land for the Plan period 2018-2033. It also identifies how much growth is needed and the broad locations of where this growth is likely to be.</p>	Preferred Strategy (March 2020) – Issued for six-week consultation 9 th March 2020 – 22 nd April 2020.	
	20 th July 2020 – notice of cessation of the Preferred Strategy Consultation due to Covid-19.	Following advice issued in a letter from the Minister for Housing and Local Government (7 th July 2020), the decision was made to cease the RLDP Preferred Strategy consultation. The letter also required Local Planning Authorities to undertake an assessment of the RLDP evidence base, strategy and policies in terms of sensitivity to the consequences of the Covid-19 pandemic before progressing with Plan preparation.

	<p>Preferred Strategy (June 2021) – Issued for eight-week consultation 5th July 2021 – 31st August 2021.</p>	<p>Updated to take account of 2018 population projections and reviewed in light of Covid-19.</p>
	<p>Preferred Strategy (Dec 2022)</p>	<p>Updated to have regard to the Welsh Government objection on the Preferred Strategy June 2021 and phosphate water quality issues in the Rivers Wye and Usk.</p>
	<p>Preferred Strategy Update (October 2023) (non-statutory stage)</p>	<p>Post-consultation key updates to the December 2022 Preferred Strategy as the basis for the ongoing preparation of the Deposit Plan – endorsed by Council 26th October 2023. These key updates included the change in stance to phosphates enabling the identification of a strategic site in Monmouth, the change of the strategic site allocation in Chepstow, an increase in the flexibility allowance and enhancing the sustainability credentials/energy efficiency of new homes to net zero carbon.</p>

Appendix 3: Regional Strategic Partnerships

Monmouthshire is a border county in a strategic location, a “Gateway to Wales”. Our County benefits from its involvement in regional economic partnerships including the Cardiff Capital Region City Deal, The Western Gateway and Marches Forward. Participation in these partnerships enable us to exploit areas of mutual benefit and added value, increase investment prospects, showcase best practice by building strong networks and identify opportunities to share services where it is cost effective.

Cardiff Capital Region City Deal

The Cardiff Capital Region (CCR) City Deal involves UK Government, Welsh Government and the ten regional Southeast Wales Authorities and will transition into the Southeast Wales Corporate Joint Committee (CJC) in March 2024. Its purpose is to build on the region’s sectoral strengths, high skill base and three successful universities. The CCR City Deal seeks to accelerate economic growth and productivity through a series of considered targeted investments in skills, infrastructure, innovation-led scalable projects, businesses, and priority industry sectors including Compound Semi-Conductors and MedTech. It has brought a number of benefits to Monmouthshire, including:

- Partner member for the £50M Innovation Investment Fund;
- Shareholder in CCR Energy Ltd i.e., part ownership of the former Aberthaw Power Station which is being re-purposed as a green energy park;
- Lead partner in the deployment of c£4M InFuSe programme
- Co-agent on the Challenge Fund Food Security project (£2.4M) with Cardiff Council
- Circa £2M funds (debt finance) to Creo Medical – creating 40 high value jobs
- Recipient of c£1.5M funds for Metro Plus Scheme at Severn Tunnel Junction leveraging match contributions from the Local Transport Fund
- ULEV monies for roll-out of CCR Electric Vehicle Charging facilities.

The Western Gateway

The Western Gateway is a pan regional partnership for South Wales and Western England involving Local Authorities, City Regions, Local Enterprise Partnerships, UK and Welsh Governments. The purpose of the strategic partnership is to promote and maximise economic growth across South Wales and the West of England to create jobs, boost prosperity and support the world-renowned universities and businesses of the region.

This Gateway Partnership has set out the following ambitions:

- ‘Net Zero’ - Working to become the UK’s first Green Energy Super Cluster by capitalising on the area’s significant natural assets in solar, tidal, marine, and wind and leading capabilities in hydrogen, nuclear and industrial decarbonisation.
- ‘Supporting Innovation’ - Connecting the area’s highly innovative sectoral clusters in Advanced Engineering, Creative Industries, Digital Connectivity (mobile telecommunications) and Data Solutions (businesses that create wealth from data such as fintech and space) to create a super-cluster with the scale to compete on the global stage.
- ‘Connecting Communities’ - Mapping the area’s strategic transport plans to identify where there are gaps and use the information to help highlight where we need better connections that provide better transport and digital links to unlock ‘net zero’ potential.

- Investment – utilising its advantage of being a global gateway, the Partnership wishes to attract inward investment and grow exports by £4 billion.

Marches Forward Partnership

‘Marches Forward’ is a unique strategic cross border partnership between neighbouring local authorities in Herefordshire, Powys, Monmouthshire and Shropshire. Its key aims are:

- To tackle cross border shared interests, drive the best deal for our geography and boost investment into the region;
- To establish areas where there is mutual benefit and added value;
- To focus on the economy and green growth with other shared interests to include transport and digital transformation nature, energy and climate change, health, housing and skills, food, rural development and the visitor economy.

The Partnership provides a flexible umbrella framework for joint working which supports local service delivery, based around how people and places function, rather than being confined within organisational or geographical boundaries. It enables us to harness the unique value of our cross-border location, supporting a shared understanding of ‘life on the borders’ as a focus for strategic joint working and to unlock additional investment into the area.

The priority themes of the Marches Forward Partnership are to work jointly as follows:

- Nature, Energy and Climate Adaptation.
- Transport and Digital Transformation.
- Health, Housing and Skills.
- Food, Rural Development and the Economy.

Appendix 4: Legislative and Policy Context

The RLDP has been prepared in the context of relevant national legislation and plans, policies and strategies at the national, regional and local level, details of which are set out below. Other topic specific legislation or policy documents are also be referenced throughout the RLDP, where relevant.

Legislative Context	
Well-being of Future Generations Act (Wales) 2015	The Wellbeing of Future Generations Act focuses on improving the economic, social, environmental and cultural well-being of Wales. It sets the framework for improving the well-being of Wales by ensuring that sustainable development is at the heart of government and public bodies. The Act is underpinned by seven well-being goals and sets out five ways of working needed for public bodies to achieve these goals.
Part 6 of the Planning and Compulsory Purchase Act 2004	This provides for a system of local development plans in Wales.
Planning (Wales) Act 2015	Sets out a series of legislative changes to deliver reform of the planning system in Wales, including strengthening the Plan-led approach to planning. The Act also introduces a legal basis for the preparation of a National Development Framework (NDF) and Strategic Development Plans (SDP).
Environment (Wales) Act 2016	Provides the legislation needed to plan and manage Wales' natural resources in a more proactive, sustainable and joined up way, providing an iterative framework which ensures that managing Wales' natural resources sustainably will be a core consideration in decision-making.
Active Travel (Wales) Act 2013	Seeks to instil a lasting transformation of how developments are planned to incorporate walking and cycling infrastructure from the outset as well as encouraging long term behavioural change. Makes provision for the mapping of active travel routes and related facilities in connection with Active Travel Network Maps.
A More Equal Wales - The Socio-economic Duty Equality Act 2010 (2021)	Supports the common purpose and ways of working put in place through the Well-being of Future Generations Act (Wales) 2015. Requires specified public bodies to consider how their decisions might help to reduce the inequalities associated with socio-economic disadvantage.

<p>The Town and Country Planning (Local Development Plans, Wales) Regulations 2005 (as amended 2015)</p>	<p>The regulations establish a system for local development plan (LDPs) in Wales. These regulations prescribe the form and content of LDPs along with the procedures for LDP preparation.</p>
<p>Environmental Assessment of Plans and Programmes (Wales) Regulations 2004</p>	<p>These transpose into law the EU Strategic Environmental Assessment Directive in Wales. They set the procedures that must be followed and the information that must be contained in the Integrated Sustainability Assessment.</p>
<p>Conservation of Habitats and Species Regulations 2017 (as amended)</p>	<p>The need for an assessment of impacts on European sites is set out in the Conservation of Habitats and Species Regulations 2017 (as amended). To establish whether the integrity of any European sites will be affected, competent authorities must undertake a Habitats Regulations Assessment of the plan or project in question, including an Appropriate Assessment if necessary, before approving it.</p>
<p>National Policy Context</p>	
<p>Future Wales – The National Plan 2040 (Welsh Government, February 2021)</p>	<p>Published in February 2021, Future Wales is the National Development Framework for Wales and sets out the Welsh Government’s land use priorities and provides a national land use framework for SDPs and LDPs, with a requirement for SDPs and LDPs to be in general conformity with Future Wales. It focusses on land use issues of national significance, setting out 11 outcomes which collectively are a statement of where the Welsh Government want Wales to be in 20 years’ time.</p>
<p>Planning Policy Wales Edition 12 (Feb 2024)</p>	<p>Sets out the land use planning policies and overarching sustainable development goals for Wales. PPW12 secures a presumption in favour of sustainable development and considers a Plan-led approach to be the most effective means of securing sustainable development through the planning system. A strong focus on promoting placemaking is considered instrumental to achieving sustainable places, delivering socially inclusive development and promoting more cohesive communities. The latest iteration of PPW (ed 12) incorporates further clarification in relation Green Infrastructure and securing net benefit for biodiversity through the application of the step-wise approach.</p>
<p>Technical Advice Notes (TANs) and Minerals Technical Advice Notes (MTANs)</p>	<p>PPW is supported by Technical Advice Notes (TANs) and Minerals Technical Advice Notes (MTANs). They provide additional clarification on land use planning policies on a topic/issue basis and should be taken into account in the preparation of development plans.</p>

<p>Welsh National Marine Plan (2019)</p>	<p>Sits alongside Future Wales in identifying opportunities and guiding development both inshore and offshore. Contains plans and policies which will support the Welsh Government vision for clean, healthy, safe and diverse seas, guide future sustainable development and support the growth of marine space and natural resources ('blue growth'). Ensuring that coastal areas are planned in a socially, environmentally, culturally and economically sustainable way.</p>
<p>Llwybr Newydd: the Wales Transport Strategy 2021</p>	<p>Sets out the vision for how the transport system can help deliver the priorities for Wales and create a more prosperous, green and equal society. To achieve this vision it sets out three priorities that will improve health, tackle poverty and open the transport system to all, in particular for those without access to a car and those living in rural areas. This is supported by nine mini-plans explaining how these priorities will be delivered for different transport modes and sectors.</p>
<p>Local Development Plans Manual – Edition 3 March 2020</p>	<p>The Local Development Plans Manual contains practical guidance on how to prepare, monitor and revise a development plan, underpinned by robust evidence to ensure that plans are effective and deliverable.</p>
<p>Prosperity for All: A Low Carbon Wales, 2019</p>	<p>Prosperity for All: A Low Carbon Wales is a plan to achieve an 80% reduction of carbon emissions against a 1990 baseline by 2050. The plan is a collection of 100 policies and proposals that will help Wales meet its 2016 to 2020 carbon budget and 2020 emission reduction targets. It also sets out Welsh Government's commitment to respond to the impacts from climate change.</p>
<p>Regional Policy Context</p>	
<p>Strategic Development Plan for South East Wales</p>	<p>The preparation of Strategic Development Plans (SDP) is intended to provide a regional spatial framework for the future development and use of land within a defined region. This will allow larger than local issues such as housing demand, search areas for strategic employment sites and supporting transport infrastructure, which cut across a number of local planning authorities, to be considered and planned for in an integrated and comprehensive way. Monmouthshire is part of the South East Wales region.</p>
<p>Cardiff Capital Region (CCR) City Deal</p>	<p>Cardiff Capital Region comprises ten local authorities across the South East Wales region, including Monmouthshire, who are working collaboratively on projects and plans for the area. The authorities have entered into a City Deal to fund projects aimed at boosting the competitiveness of the region over the next 20 years. The CCR City Deal seeks to accelerate economic growth and productivity through a series of targeted</p>

	investment in skills, infrastructure, innovation-led projects, businesses and priority industry sectors including compound semi-conductors and MedTech.
Cardiff Capital Region (CCR) Industrial and Economic Growth Plan	The CCR Growth Plan’s two objectives are to boost competitiveness and tackle inequalities throughout the region by working collaboratively with public and private stakeholders within the CCR and with its neighbouring authorities.
Cardiff Capital Region (CCR) Strategic Business Plan and Wider Investment Fund	The purpose of this Business Plan is to establish policies that will attract new investment, improve connectivity, and develop the region’s skills and education. It proposes a Strategic Sites Programme to address challenges facing the CCR relating to a shortage of good quality employment sites and premises.
The Western Gateway	The Western Gateway is a pan regional partnership for South Wales and Western England involving Local Authorities, West of England Combined Authority, City Regions, Local Enterprise Partnerships, UK and Welsh Governments. Its purpose is to promote and maximise economic growth across South Wales and the West of England to create jobs, boost prosperity and support the universities and businesses for the region. The Gateway Partnership has set the following ambitions: Net Zero; Support Innovation; Connecting Communities; and Investment.
Marches Forward Partnership	‘Marches Forward’ is a strategic cross border partnership between neighbouring local authorities in Herefordshire, Powys, Monmouthshire and Shropshire. Its priority themes are to work jointly on the following: nature, energy and climate adaption; transport and digital transformation; health, housing and skills; and food, rural development and the economy.
South-East Wales Regional Transport Plan	The Local Government and Elections (Wales) Act 2021 transferred the duty to develop a Transport Plan to the new Corporate Joint Committees (CJCs) in Wales. MCC is a member of the south east Wales CJC, which has the responsibility of preparing the Regional Transport Plan (RTP). The RTP will describe the key transport challenges and opportunities relevant to the region and set out policies and interventions for the local authorities to deliver in the five year period 2025 to 2030, as well as medium and longer term aspirations up to 2050.
South-East Wales Metro	The South Wales Metro will be an integrated network of bus, rail and walking and cycling routes that will improve connectivity, facilitating sustainable travel across south Wales. Improvements to Severn Tunnel Junction station, increased metro services along the Chepstow line, a new station at Magor and Undy and rail frequency enhancements are amongst the long term priorities of the South Wales Metro programme.

<p>South-East Wales Area Statement</p>	<p>The South East Wales Area Statement area covers the local authorities of Blaenau Gwent, Caerphilly, Monmouthshire, Newport and Torfaen. It outlines the key challenges facing the locality, what we can all do to meet those challenges and how we can better manage our natural resources. In the South East a landscape scale approach has been taken to producing the Area Statement, considering where and why we want to build ecosystem resilience in terms of the special and distinctive landscape areas of South East Wales. The Statement covers four themes – Linking Our Landscapes; Climate Ready Gwent; Healthy Active Connected; Ways of Working.</p>
<p>Shoreline Management Plan (SMPs)</p>	<p>Shoreline Management Plans (SMPs) set out a strategic approach for managing the coastline from coastal flooding and erosion risks. In some areas there is a need to continue to defend the coastline from flooding and erosion. In other areas, sections of coast will be allowed to evolve naturally to adapt to changing environmental conditions. Monmouthshire’s coastline is within the Severn Estuary Coastal Group (Shoreline Management Plan 19).</p>
<p>Gwent Public Services Board (PSB) Well-Being Plan for Gwent (2023)</p>	<p>The five separate Public Service Boards (PSBs) in the Gwent region (Blaenau Gwent, Caerphilly, Newport, Monmouthshire and Torfaen) have joined together to form the Gwent PSB. The Well-being Plan sets out what the PSB could do over the next five years to tackle the social, economic, environmental and cultural issues which can affect well-being in Gwent. The Plan contains two main objectives; to create a fairer, more equitable and inclusive Gwent for all and a climate-ready Gwent, where our environment is valued and protected, benefitting our well-being now and for future generations.</p>
<p>Neighbouring Local Planning Authorities: Joint Working and Collaboration</p>	<p>As a border County adjoins both Welsh and English Local Authorities. Monmouthshire is committed to working collaboratively with its neighbouring authorities. As part of collaboration with neighbouring authorities, regard has been given to national guidance which requires consideration of a collaborative approach to the site selection process to promote the development of previously developed land and to the development of a joint evidence base.</p>
<p>Regional Assessment of Future Growth and Migration for the Cardiff Capital Region (2024)</p>	<p>This report undertakes a regional assessment of future growth and migration for the Cardiff Capital Region (CCR). It aims to review how each LPA could contribute towards increasing the number of jobs across the region by 2040 and how the increase in jobs corresponds with projected growth in LPAs, the region and Future Wales 2040. It reviews the migration assumptions underpinning the proposed level of population/jobs growth</p>

	and the potential implications of the spatial distribution of jobs and people on travel patterns. The study provides a policy-off approach to the assessment of potential growth in the region. As such, it sits alongside and complements RDLP evidence prepared by each authority in the region. It is not intended to replace or supersede the detailed consideration of growth potential prepared by individual authorities to inform the RLDP process.
Minerals Regional Technical Statement – 2nd Review for South Wales (September 2020) & Welsh Government RTS Clarification Letter – 11th November 2021	Minerals Technical Advice Note 1 (2004) requires the preparation of Regional Technical Statements (RTS) for the areas covered by both the South Wales and North Wales Regional Aggregates Working Parties (RAWPs). A revised RTS – 2 nd Review for South Wales was published in September 2020 with an accompanying Welsh Government Clarification Letter published November 2021. These make recommendations for the apportionments necessary to ensure an adequate supply of crushed rock, including the nationally recommended minimum provision of 7 and 10 years, are available for the entire duration of the RLDP.
The South East Wales Waste Planning Report – 2018- 2019 (published 2020)	PPW11 and TAN 21: Waste, establish regional monitoring arrangements to inform the preparation of LDPs and assist in the determination of planning applications. The report assesses the need for additional landfill capacity and waste management facilities at a regional level.
Local Policy Context	
The Monmouthshire Well-being Plan (Public Service Board) February 2018 and Well-Being Plan Annual Report 2022	In May 2018 the Monmouthshire Well-being Plan was adopted by the Public Service Board (PSB), which is made up of public bodies such as Aneurin Bevan university Health Board, Gwent Police, MCC and South Wales Fire and Rescue Service. The Plan sets out what public services will work on together to address issues that matter to local communities. In 2022, the fourth annual report was published, reporting on the progress towards delivering the objectives of the Well-being Plan. The Monmouthshire Well-Being plan set the direction until 2023 when a new Gwent wide well-being plan was agreed as noted above.
Monmouthshire County Council Taking Monmouthshire Forward – Community and Corporate Plan, 2022-2028	The Monmouthshire County Council Community and Corporate Plan sets out the ambition for the Council and the county of Monmouthshire. It establishes the Council’s purpose is for Monmouthshire to be “a zero-carbon county, supporting well-being, health and dignity for everyone at every stage of life”. It sets out the objectives and values that will be adhered to and the actions needed to meet this purpose.
Monmouthshire County Council	In 2019 MCC declared a climate emergency. Since that date, the Council had published a climate emergency action plan, including an update in 2021 increasing the focus on the nature emergency. In 2022 the Council

<p>Climate and Nature Emergency Strategy May 2024</p>	<p>declared a Motion for the Rivers and Ocean with a view to try and improve water quality in our rivers. This strategy aims to tie together the focus on all these areas of work and forms a high level strategy under which four actions plans sit, addressing Council Emissions, Nature Recovery, Rivers and Ocean and Communities and Climate.</p>
<p>Monmouthshire County Council Vision Monmouthshire 2040: Our Economic Growth and Ambition Statement (November 2019)</p>	<p>This statement identifies some of the challenges facing Monmouthshire that need to be addressed to strengthen its economy so that it can provide for future generations. A key aim is to attract investment and funding which will generate the right conditions for an ‘inclusive economy’ - one that is equitable, sustainable, stable, participatory and growing.</p>
<p>Monmouthshire County Council Inward Investment Prospectus 2020: Growing your Business in Monmouthshire</p>	<p>The prospectus builds on Vision Monmouthshire 2040 with the aim of attracting businesses to grow in Monmouthshire. It identifies some key focus areas that should be prioritised and advocates the provision of B use class employment land and a network of quality sites with varied characteristics in a mix of private and public ownership.</p>
<p>Monmouthshire County Council Economy, Employment & Skills Strategy (EESS) (2023)</p>	<p>The EESS sets out the Council’s aspirations to foster a diverse, fairer, greener and circular economy, generating sustainable employment growth and creating conditions for shared prosperity. It focuses on four key priority themes: Place – A vibrant, greener Monmouthshire; Enterprise – A thriving ambitious Monmouthshire; People – A fairer, more successful Monmouthshire; and Infrastructure – A well connected Monmouthshire attracting business investment. This Strategy, together with the RLDP and Local Transport Strategy, will support sustainable economic growth/job creation through a range of mechanisms and interventions.</p>
<p>Monmouthshire Local Transport Strategy</p>	<p>A new Local Transport Strategy (LTP) has been produced to accompany the RLDP. The Strategy establishes a strategic framework for the development of the transport network in Monmouthshire. It identifies the key transport issues relevant to the County, the high-level interventions needed to address these and the specific priorities for Monmouthshire. Its aim is to facilitate and support the development of a modern, accessible, integrated and sustainable transport system, which increases opportunity, promotes prosperity for all and protects the environment; where walking, cycling, public transport and sustainable freight provide real travel alternatives.</p>
<p>Active Travel Network Maps (ATNMs)</p>	<p>In line with the Active Travel Act 2013 and the Welsh Government Travel Act Guidance 2021, the Council has produced Active Travel Network Maps (ATNMs) identifying the walking, cycling and wheeling routes required to</p>

Page 274

	create fully integrated networks. Proposed new developments are required to have regard to ATMNs and provide additional linkages where appropriate.
Green Infrastructure (GI) Strategy 2019	The GI Strategy sets out Monmouthshire’s approach to the delivery of green infrastructure in the County. It promotes an integrated and joined up approach to delivering GI that takes into account the needs of Monmouthshire’s communities, environment and economy.
Climate and Nature Emergency Action Plan (May 2024)	In May 2024 the Climate and Nature Emergency Strategy was published to update and combine previous strategies and better reflect the Community and Corporate Plan. The updated overarching strategy is underpinned by four work streams and action plans: Council Emissions, Nature Recovery, Rivers and Ocean and Communities and Climate.

Appendix 5: Regional Collaboration and Linkages with Neighbouring Local Authorities

The Plan has been prepared with regard to and where appropriate in co-operation with neighbouring authorities, in accordance with the tests of soundness as set out in the Development Plans Manual. Future Wales 2040 has brought further requirements to embrace regional planning and cross boundary working with neighbouring Local Authorities. The Council has therefore had regular and close contact with neighbouring LPAs and the wider South East Wales region, as well as English border authorities in preparing the RLDP.

This requires an understanding of existing and emerging potential linkages, strategies and policies in adjoining areas as well as active engagement in their development. Suitable consultation processes are in place to ensure that the existing and evolving planning policy context of neighbouring LPAs has been considered in the preparation of the RLDP, as well as regional collaboration through various regional groups.

In accordance with the requirements of soundness Test 1 'Does the plan fit? the Council must be able to demonstrate that the RLDP is consistent with other plans, (i.e. is it compatible with the plans of neighbouring LPAs? and has the LPA demonstrated it has exhausted all opportunities for joint working and collaboration on both plan preparation and the evidence base?). Monmouthshire adjoins 8 other LPA areas, all of which are at varying stages of their development plan production and are required to engage with the Council as part of their development plan preparation. As such, MCC has worked in collaboration with neighbouring LPAs throughout the different stages of the RLDP preparation process which has included engagement meetings to discuss and review the different stages of respective development plans – see Table X below. Considering the different timelines for the preparation of these local development plan, all neighbouring LPAs agreed that joint plans were not possible/appropriate. However, regional collaboration has enabled joint working, constructive discussions and shared information/experience between the LPAs which has minimised the risk of conflicting strategies/policy frameworks and an appropriate level of collaboration.

At the regional level, collaboration between the 10 LPAs in South East Wales takes place via various regional groups including South East Wales Strategic Planning Group (SEWSPG), South East Wales Planning Officer Society (SEWPOS) and South Wales Regional Aggregates Working Party (SWRARWP). Of note, through SEWSPG the LPAs have been working collaboratively on the preparation of a joint evidence base to inform RLDPs and the emerging SDP, details of which are set out in Table 2 below. SEWSPG/SEWPOS also facilitates the preparation and submission of joint responses to key consultation documents, including those published by Welsh Government. This demonstrates an appropriate level of collaboration at the regional level to inform the local development plan process, prior to formal regional collaboration on the preparation of the South East Wales SDP.

Table 1 sets out the regional collaboration work which has been undertaken and, where appropriate, has informed the RLDP process to date.

Table 1: Status of LDPs within neighbouring Local Planning Authorities

Local Authority	Current Adopted LDP	RLDP Plan Period	Context
Newport	2011-2026	2021-2036 Commenced preparation of a RLDP. The Preferred Strategy was consulted upon in 2023.	<p>Newport is situated to the south west of Monmouthshire and acts as an important service and employment centre, in particular for the Severnside area of Monmouthshire, given the close proximity and good transport links between the settlements.</p> <p>Newport's Preferred Strategy seeks to prioritise the redevelopment and regeneration of land in the urban area, including the continued regeneration of the former Llanwern Steelworks at Glan Llyn and the former Whitehead Works, as well as edge of settlement development at appropriate locations on the edge of the urban area. The Council are proposing a mixed strategy of brown and greenfield sites.</p> <p>This is due to not enough brownfield land to meet their growth and there is therefore a need to develop some greenfield sites, some which have been identified towards the east of Newport's settlement near the M4 and A48 transport network.</p> <p>Monmouthshire collaborated with Newport and discussed whether we are able to utilise any their brownfield land to accommodate any of Monmouthshire's growth over the Plan period. However, it was concluded that Newport has no surplus brownfield land within the authority to accommodate growth from elsewhere.</p> <p>Monmouthshire will continue to work collaboratively with Newport as we progress with our respective RLDPs to ensure that any cross-boundary issues are fully considered.</p>
Blaenau Gwent	2006- 2021	2018 – 2033 Commenced preparation of the RLDP. The	<p>Blaenau Gwent has a small portion of county bordering the northwest of Monmouthshire in close proximity to Monmouthshire's primary settlement of Abergavenny.</p> <p>Blaenau Gwent's Preferred Strategy seeks to focus the growth based on the sustainable settlement hierarchy with the majority of development directed to their principal settlement of</p>

Local Authority	Current Adopted LDP	RLDP Plan Period	Context
		Preferred Strategy was consulted upon in 2020.	<p>Ebbw Vale, and remaining growth directed to main settlements in the Heads of the Valleys Area, maximising the use of brownfield land and ensuring development is located in more viable areas.</p> <p>Regard has been given to Blaenau Gwent’s Preferred Strategy, however, it does not propose significant development in close proximity to Monmouthshire’s border and therefore does not appear to generate any cross-border issues.</p> <p>Monmouthshire will continue to work collaboratively with Blaenau Gwent as we progress with our respective RLDPs to ensure that any cross-boundary issues are fully considered.</p>
Torfaen	2013 – 2021	<p>2022- 2037</p> <p>Commenced preparation of the RLDP. Currently preparing the Preferred Strategy, with consultation expected in 2024.</p>	<p>Torfaen adjoins the western boundary of Monmouthshire, with the urban centre of Cwmbran providing a service centre for some of the western part of Monmouthshire, such as Little Mill, Penperlleni and Usk.</p> <p>Torfaen’s Preferred Strategy is currently being prepared and it is therefore not known where new growth will be directed. Under the current adopted plan Mamhilad is identified for 1,700 homes and employment use. Given its proximity to the western parts of Monmouthshire this proposal may bring benefits of an expanding residential market and employment prospects.</p> <p>Monmouthshire will continue to work collaboratively with Torfaen as we progress with our respective RLDPs to ensure that any cross-boundary issues are fully considered.</p>
Powys	2011-2026	<p>2022 – 2037</p> <p>Commenced preparation of the</p>	<p>Powys lies to the north west of Monmouthshire, however, the area adjoining Monmouthshire forms part of the BBNP and it is therefore under the National Park planning authority’s jurisdiction. In view of this, development plan proposals in Powys are unlikely to generate any</p>

Local Authority	Current Adopted LDP	RLDP Plan Period	Context
		RLDP. Currently preparing the Preferred Strategy with consultation is expected August-October 2024.	significant cross border issues. The Council however will continue to be involved in Powys's LDP process through stakeholder engagement and wider consultation process.
Bannau Brycheiniog National Park (BBNP)	2007-2022	First RLDP withdrawn. New DA expected April 2025	<p>Bannau Brycheiniog National Park (BBNP) is located to the north western area of Monmouthshire with some of Monmouthshire's settlements, namely Govilon and Gilwern, falling within Monmouthshire's the BBNP planning area. The BBNP's boundary lies to the north and west above the Primary Settlement of Abergavenny and Llanfoist. Abergavenny and Llanfoist are therefore recognised for their role in serving the south eastern areas of the National Park.</p> <p>BBNP's RLDP (2018-2033) was withdrawn in June 2024. A new Delivery Agreement is expected by April 2025. As such, it is not known where new growth will be directed, albeit within the National Park known for its special landscape quality, growth is traditionally low. As identified within the current plan and Future Wales 20240, Brecon is key settlement for regional growth.</p> <p>Monmouthshire will continue to work collaboratively with BBNP as we progress with our respective RLDPs to ensure that any cross-boundary issues are fully considered.</p>
Cardiff	2006-2026	2021 – 2036 Commenced preparation of the RLDP. The Preferred Strategy	<p>Cardiff, as the capital city of Wales is, and will remain a key strategic settlement of the south east Wales region, and due to the good transport links and close proximity with Monmouthshire acts as an important service and employment centre for Monmouthshire's residents.</p> <p>Cardiff's Preferred Strategy, which indicates a large land bank (21,400 homes) seeks to prioritise the redevelopment and regeneration of land in the urban area. All new allocations proposed are currently allocated within the existing LDP (and therefore effectively rolled forward).</p>

Local Authority	Current Adopted LDP	RLDP Plan Period	Context
		was consulted upon in 2023.	Monmouthshire will continue to work collaboratively with Cardiff as we progress our respective RLDPs.
Forest of Dean (FoD)	2018-2026	2021 – 2041 Commenced preparation of the Local Development Plan. The Preferred Option was consulted upon in 2022, with consultation on the Draft (Deposit) Plan in summer 2024.	<p>The Forest of Dean adjoins the eastern boundary of Monmouthshire, in close proximity to the settlement of Chepstow.</p> <p>FoD’s Draft Plan 2024 indicates strategic growth in the settlement of Lydney, which is located in close proximity to Chepstow connected by the A48 Trunk road. As part of the consultation for this growth Monmouthshire has been working with FoD LPA to ensure cross-boundary issues, including transport and air quality, are fully considered and addressed.</p> <p>Monmouthshire will continue to work collaboratively with the Forest of Dean as we progress with our respective RLDPs to ensure that any cross-boundary issues are fully considered.</p>
South Gloucestershire	2006-2027	2025-2040 Commenced preparation of the Local Development Plan. Currently preparing for the Preferred Spatial Strategy consultation. The	<p>South Gloucestershire lies to the east of Monmouthshire linked by the Severn Bridge crossings. The current adopted Plan recognises the importance of the South Glos Severnside area as a strategically important location for employment uses, however, the focus for new growth is the Bristol north fringe and the east fringe areas. Accordingly, the planned growth does not create any significant cross boundary planning issues for Monmouthshire.</p> <p>South Gloucestershire’s Preferred Spatial Strategy is currently being prepared and it is therefore not known where new future growth will be directed.</p>

Local Authority	Current Adopted LDP	RLDP Plan Period	Context
		DA sets out that this is expected in 2024.	Monmouthshire will continue to work collaboratively with the South Gloucestershire as we progress with our respective RLDPs to ensure that any cross-boundary issues are fully considered.
Bristol	2006 – 2026	2025- 2040 Commenced preparation of the Local Plan review. The Plan review has been submitted for examination in April 2024.	As with Cardiff, Bristol acts as a key employment service centre for Monmouthshire residents. High levels of out commuting from the County to Bristol are evident as well as Bristol resident relocating to Monmouthshire to live. This has been exacerbated with the abolishment of the Severn Bridge Tolls. A Key Focus of Bristol’s Plan is to deliver a thriving economy and as such Bristol is likely to remain a key employment and service area for Monmouthshire. Monmouthshire will continue to work collaboratively with Bristol as we progress our respective local development plans.
Herefordshire	2011-2031	2021-2041 Commenced preparation of the Local Plan review. Consultation on the Draft revised Plan took place in Spring 2024.	Herefordshire is situated to the north of Monmouthshire in close proximity to the settlement of Monmouth. Under the current adopted plan the nearest settlement to Monmouth, Ross-on Wye, has been identified for 900 homes and employment use. Given its proximity to Monmouth this proposal may bring benefits of an expanding residential market and employment prospects. Monmouthshire will continue to work collaboratively with Herefordshire as we progress with our respective RLDPs to ensure that any cross-boundary issues are fully considered

Table 2: Regional Collaboration as part of the RLDP Preparation Process

Regional Joint Work		LPAs	Purpose
Sustainable Settlement Assessment Methodology December 2022		SEWSPG	Developed a standardised methodology with the Sustainable Settlement Appraisal Paper to ensure consistency when assessing the sustainability of settlements across the region.
Regional Strategic Flood Consequences Assessment (Stage 1) November 2022		SEWSPG	Regional strategic flooding study to undertake a broad assessment of broad assessment of potential flood risks across the entire study area from all sources of flooding. The study identifies areas at potential high risk from flooding, as well as providing details of historical flood events and any details of any flood risk management structure or procedures present.
Green Wedge Methodology, February 2023		SEWSPG	Study to develop a standardised methodology for the identification and justification of green wedge designations in future LDPs.
Regional Assessment of Future Growth and Migration for the Cardiff Capital Region, July 2024		SEWSPG /SEWPOS	This study aims to review how each LPA could contribute towards increasing the number of jobs across the region by 2040 and how the increase in jobs corresponds with projected growth in LPAs, the region and Future Wales 2040. The study provides a policy-off approach to the assessment of potential growth in the region. As such, it sits alongside and complements RDLP evidence prepared by each authority in the region. It is not intended to replace or supersede the detailed consideration of growth potential prepared by individual authorities to inform the RLDP process.
SEWSPG Joint Working		SEWSPG	SEWSPG joint working is ongoing and includes: Viability toolkit Regional Gypsy Traveller Transit Sites Study

Appendix 6: RLDP Issues

Full details are set out in the Issues, Visions and Objectives Paper (Updated September 2024). The table below provides an extract of the issues facing the County and how the RLDP can influence these issues. The RLDP issues have been reviewed and updated throughout the RLDP process, as appropriate. The issues have been grouped in accordance with the seven well-being goals as set out in the Well-being of Future Generations (Wales) Act 2015 to ensure that they are framed within this context. This allows for the appreciation of social, economic and environmental matters to be embedded into the Plan.

A Prosperous Wales (Well-being Goal 1)

Employment & Economy

Issue

Page 283

Issue 1 - There has been a slow uptake of employment land in the past. There is subsequently a need to consider whether existing available land is suitably located and fit for purpose. There is also a need to consider potential future demand for employment land along with Council aspirations for innovation across Monmouthshire and regional partnerships including the Cardiff Capital Region City Deal (CCRC), Marches Forward Partnership and The Western Gateway. Opportunities associated with such partnership working include economic investment/innovation and transport and digital connectivity.

Issue 2 - While unemployment is low there is a net-outflow of commuters, both levels of out commuting and distances travelled to work are relatively high. There is a need to provide support for inward investment and local employment growth/opportunities to reduce the need to travel to work.

Issue 3 - Wage levels available for local jobs are lower than the average for Wales and the UK. Evidence continues to suggest that the income for economically active women who both live and work within the County is significantly lower than that of men within the same category. This coupled with high property prices makes it difficult for young people and future generations to live and work locally. Additional employment opportunities for young people are required to help reduce the numbers of this age group leaving the County.

Issue 4 - Monmouthshire has a dual economy. The qualifications, skills and earnings of the residents are above the regional and national average, however, for those working in the area earnings are lower and employment is relatively less skilled.

Issue 5 - The increasingly ageing population and shrinking working age population is limiting employment growth within Monmouthshire and social sustainability of communities. This is exacerbated by limited job opportunities and affordable housing availability.

Issue 6 - There is a need to sustain and regenerate the County's rural economy. There is current uncertainty regarding the impact of Brexit on agricultural subsidies.

Issue 7 - Higher levels of those in employment work at home compared to the Welsh average (2021 Census). Efficient digital infrastructure is essential to support home working and the general connectivity of the County's rural areas and to support economic growth.

Issue 8 - The role of high streets is changing due to out of town retail such as Cribbs Causeway, the increase in internet shopping, changing shopping habits (e.g. top-up grocery shopping), austerity, business rates and the cost of living crisis. As a result, vacancy rates in some of the County's town centres have increased. There is a leakage of expenditure out of the County and a need to protect and restore the vitality and viability of the County's town and local centres.

Issue 9 - Tourism plays a significant part in the Monmouthshire economy particularly in assisting in the diversification of the rural economy and in sustaining the County's historic town centres. In 2022 2.34 million visitors came to Monmouthshire, having an overall economic impact of £285 million. Staying visitors generate a higher economic impact than day visitors at £216 million in 2022 compared to £140 million in 2021 (Monmouthshire STEAM Report August 2023) highlighting the continued need for visitor accommodation. Changes relating to second homes and proposals for a tourist tax in Wales could affect this sector.

How can the RLDP influence these Issues?

A(i) The RLDP encourages a vibrant economy within the County, specifically by ensuring that sufficient employment sites are suitably located in attractive, accessible and sustainable locations and are of an appropriate size and type to meet the needs of the market/key employment/growth sectors, including, through support of start-up and growing businesses to help diversify the economy.

A(ii) The RLDP aims to ensure that there is a portfolio of sites available which is appropriate to market conditions and the needs of the Monmouthshire economy along with the wider Cardiff Capital Region. Consideration can be given to using CPO powers to ensure sites come forward.

A(iii) The RLDP ensures that, wherever possible, jobs and homes are located in close proximity to each other to provide greater opportunity for people to work and live locally. The RLDP will also ensure a range and choice of homes are available, in new developments, particularly where there is a need for affordable housing, to assist in regaining a balanced population.

A(iv) The RLDP takes a role in strengthening the local economy, ensuring an appropriate economic base to enable people to live and work in the County.

A(v) The RLDP contains policies that support the diversification of the rural economy.

A(vi) The RLDP helps to address digital exclusion by seeking to support the improvement of rural broadband and delivery of high speed connections.

A(vii) The RLDP contains policies that protect the vitality and viability of existing town centres, providing additional retail, commercial and social development opportunities where appropriate, including in relation to the regeneration of Caldicot and Usk, and ensures that the distribution of development supports these main centres in order to retain retail expenditure.

A(viii) The RLDP has reviewed the towns' primary shopping frontages (PSF) and related policies to have regard to the evolving role of the high street as a centre for a variety of retail, leisure and community uses. Sustainably located and well-connected development can support town centres.

A(ix) The RLDP contains policies that encourage tourism development while at the same time ensuring that the natural and built heritage that attracts visitors to the area is preserved and enhanced.

A Resilient Wales (Well-being Goal 2)

Air

Issue

Issue 10 - While air pollution is not a major problem throughout Monmouthshire, it can cause significant problems for people's health and there are localised problems in Chepstow and Usk, each having an Air Quality Management Area. The greatest problems associated with air quality in the County are caused by vehicle emissions.

How can the RLDP influence these Issues?

B(i) The RLDP seeks to minimise any polluting effects that might arise from new development in the County by ensuring it is sustainably located and well-connected to amenities. This can support modal shift to reduce the usage of private vehicles and to allow for increased walking, cycling and use of public transport. It also takes measures to ensure that the location of new development does not worsen conditions in existing Air Quality Management Areas or result in new ones. It supports the provision of ultra-low emission vehicle charging infrastructure.

Green Infrastructure, Biodiversity & Landscape

Issue

Issue 11 - Monmouthshire is renowned for its beautiful landscapes and major biodiversity resources including River SACs. The best of these assets should be protected, managed and enhanced for future generations.

Issue 12 - There is a need to improve connectivity within the landscape through protecting and improving existing wildlife networks and corridors, including both green and blue infrastructure, and creating new linkages to allow species to move and adapt to climate change impacts. GI is also beneficial to human well-being.

How can the RLDP influence these Issues?

C(i) The RLDP ensures that new development is sustainable, does not cause harm to international, national and locally protected sites and species and, that where appropriate, necessary mitigation measures are taken to avoid any such adverse effects. The River Wye and River Usk water bodies within the County are currently experiencing water quality issues, specifically in relation to phosphate levels. The RLDP places a requirement for development to achieve phosphate neutrality or betterment in the River Usk and River Wye.

C(ii) The RLDP must ensure biodiversity is considered in any development in order to protect any interest on the site and delivers Net Biodiversity Benefit.

C(iii) An Integrated Sustainability Appraisal (ISA) and Habitats Regulations Assessment have been produced alongside the RLDP to ensure that any cumulative effects of development in Monmouthshire and adjoining areas does not result in harm to internationally designated nature conservation sites.

C(iv) The RLDP contains policies to protect and enhance the green and blue infrastructure networks across the County.

Flooding

Issue

Issue 13 - Parts of the County are vulnerable to flooding. Climate change is likely to increase the risk of flooding, so mitigating climate change and ensuring building resilience is crucial.

How can the RLDP influence these Issues?

D(i) The RLDP ensures new built development is located away from flood risk areas and has a role to play in terms of reducing the risk from present day flood risk, as well as in relation to climate change adaptation and resilience. The provision of green open spaces and SUDs drainage features help reduce the risk of flooding.

Minerals & Waste

Issue

Issue 14 - Monmouthshire has made good progress in the promotion of the recycling and composting of waste, and the elimination of waste to landfill. Monmouthshire also has to make an appropriate contribution to the regional requirement for waste management.

Issue 15 - Mineral extraction plays a limited role in Monmouthshire's economy but there is a need to safeguard the County's resources in order to make an appropriate contribution to the sustainable supply of aggregates to the South Wales economy as a whole.

How can the RLDP influence these Issues?

E(i) The RLDP identifies sites that are appropriate for waste management or disposal facilities to meet local or regional requirements.

E(ii) The RLDP ensures that mineral resources are safeguarded and exploited in a sustainable fashion that also enables Monmouthshire to meet its obligation to make a contribution to the requirements of the South Wales region.

Land

Issue

Issue 16 - There are limited opportunities for brownfield development within the County's existing urban areas.

Issue 17 - Monmouthshire has a significantly high percentage of best and most versatile agricultural land (i.e. Grade 1, 2 or 3a). While there is a need to conserve these resources, there are limited opportunities within the County for brownfield development and development on lower grades of agricultural land (i.e. Grade 3b, 4 and 5). Welsh Government clarification of policy priorities of protecting BMV land over renewable energy development has had implications in the findings of the Renewable Energy Assessment.

How can the RLDP influence these Issues?

F(i) The RLDP will seek to prioritise the use of previously developed land where opportunities arise.

F(ii) The RLDP seeks to protect best and most versatile agricultural land whilst at the same time recognising that this will not always be possible where there is an overriding need for development.

A Healthier Wales (Well-being Goal 3)

Human Health

Issue

Issue 18 - While Monmouthshire performs relatively well on indicators relating to health, there is a need to promote opportunities for healthy living particularly in the context of an ageing population.

Issue 19 - While an ageing population brings many opportunities, it also brings challenges, increases in the number of people living with long term conditions can create pressures on existing health care provision.

Issue 20 - On the whole Monmouthshire's residents have good access to public open space, however, there are deficiencies in many of the County's communities in relation to community and formal recreational facilities. This can contribute to rural isolation in certain areas.

Issue 21 - Obesity is a growing problem throughout Wales. Although obesity rates in Monmouthshire are below the Welsh average consideration should be given to promoting healthy lifestyles.

How can the RLDP influence these Issues?

G(i) The RLDP can assist in creating a healthier Monmouthshire by ensuring sufficient policies are in place to support the provision of blue and green infrastructure and retention and/or improvement of the existing resource.

G(ii) The RLDP provides policies to ensure health care provision is supported.

G(iii) The RLDP helps ensure the provision of public open space and recreation facilities are protected by designating Areas of Amenity Importance as well as requiring new development to make a contribution to the provision of additional/improved facilities.

A More Equal Wales (Well-being Goal 4)

Population

Issue

Issue 22 - Monmouthshire is a predominantly rural County with almost half (47%) of the total population living in wards defined as being in rural areas (i.e. with a population of less than 10,000).

Issue 23 - The population of Monmouthshire at the time of the 2021 census was 92,961 an increase of 1.8% since 2011, a slower rate of growth than seen previously over previous census periods, although still higher than the Welsh average at 1.4%. This growth is being fuelled by in-migration.

Issue 24 - Monmouthshire has a significantly higher proportion of older age groups (65+) and lower proportion of young adults (16 – 44) compared to the Welsh average, the sharpest decline of which is in the working age population. The relative absence of young adults is often linked to the affordability of housing across the County and has an impact on future prospects of economic growth.

How can the RLDP influence these Issues?

H(i) The RLDP must decide on the level of growth appropriate for Monmouthshire and the spatial distribution of this growth between different urban and rural communities to address the challenges we face (including demography and affordability), balancing the greater sustainability of urban settlements with the difficulties of maintaining services in rural areas.

H(ii) There is a need to achieve a more balanced population structure to ensure there is a sufficient population of working aged people to support the Monmouthshire economy and to provide more opportunities for young people to both to stay within and move to the area. Due to the County's population shrinking due to more deaths than births, inward migration is essential to ensure communities are socially and economically sustainable. The RLDP plays a role in strengthening the local economy, ensuring an appropriate economic base to enable people to live and work in the County and ensuring that demand for homes is satisfied by providing good quality affordable homes for those who need them.

H(iii) The RLDP can help to address issues surrounding the ageing population through facilitating the provision of accessible services supported by connective infrastructure to meet local population growth needs.

A Wales of Cohesive Communities (Well-being Goal 5)

Housing

Issue

Issue 25 - Average house prices in the County are high at £400,496 when compared to the Welsh average of £238,871 (Hometrack, May 2024)⁴⁷. The most significant increases have been experienced in recent years.

Issue 26 - House prices are also high in relation to earnings and there is a pressing need for additional affordable housing in the County in both urban and rural areas to assist in ensuring a balanced population.

Issue 27 - A range and choice of housing is needed to both meet the needs of an ageing population and to attract and retain the younger age groups.

Issue 28 - There is limited scope for significant or long-term expansion of the existing urban areas within the County due to a mix of physical, environmental and policy constraints.

How can the RLDP influence these Issues?

I(i) The RLDP affects the amount of housing to be provided by both deciding on overall levels of growth/spatial options and by setting thresholds and proportions to determine the amount of this residential development that is affordable. It also helps ensure a range and choice of homes are available in new developments and influences the type, tenure and nature of housing built within the County.

I(ii) The RLDP will have to resolve the amount of housing to be built in rural areas, balancing the need to sustain rural settlements by supporting services and enabling people to remain in their communities with the need to protect the countryside and ensure sustainable patterns of development.

I(iii) The RLDP enables provision of urgently needed affordable housing within exemplar, mixed, sustainable and well-connected places.

⁴⁷ Based on sales and valuations over six month period October 2023 – March 2024. Sales only over same period related to £360,465 for Monmouthshire and £230,710 for Wales. Data accessed on 13/05/2024.

Infrastructure

Issue

Issue 29 - Poor access to community facilities and declining local service provision is a particular issue for rural communities.

Issue 30 - Limited public transport, particularly in rural areas, makes it harder to access jobs, services and facilities, which could be exacerbated by rising fuel prices. There are nevertheless future opportunities for investment in public transport through the Cardiff Capital Region City Deal and advances in technology.

Issue 31 - There is a need to ensure that adequate physical, digital and social infrastructure is provided to support new development. This includes broadband infrastructure, the provision of sufficient water and sewerage infrastructure, transport infrastructure and active travel to support non-car modes of travel.

How can the RLDP influence these Issues?

J(i) The RLDP allocates land for housing and employment in rural areas in an attempt to sustain existing rural community facilities and services, weighing this against the need to avoid unsustainable travel patterns.

J(ii) The RLDP helps ensure adequate provision of infrastructure to serve new development and contains policies to enable improvements or enhancements for existing development, e.g. provision of ultra-low emission vehicles (ULEV) charging, broadband connectivity and renewable energy.

J(iii) The RLDP contains the policy framework to support the priorities of the local transport strategy.

A Wales of Vibrant Culture & Thriving Welsh Language (Well-being Goal 6)

Cultural Heritage

Issue

Issue 32 - Monmouthshire has a significant built heritage resource in terms of Scheduled Ancient Monuments, Listed Buildings, Conservation Areas, Historic Parks and Gardens, Historic Landscapes and Archaeologically Sensitive Areas that, together with their settings, require protection and enhancement.

Issue 33 - There is a need to protect, promote and enhance the best of our landscape and heritage which are an important part of our culture and play a key role in tourism and economic growth, along with providing support for the Welsh Language to ensure it is safeguarded and supported.

Issue 34 - The distinctive settlement pattern of Monmouthshire relates to historic towns and villages and their relationship with the surrounding rural areas. There has nevertheless been substantial suburban expansion in the South of the County, particularly adjacent to the M4 corridor. This area continues to receive further pressure for growth following the removal of the Severn Bridge Tolls in 2018 and the ambitions and opportunities associated with regional partnerships such as the Cardiff Capital Region City Deal (CCRCD), Marches Forward Partnership and The Western Gateway, which include economic investment/innovation and transport and digital connectivity.

How can the RLDP influence these Issues?

K(i) The RLDP contains measures to preserve and enhance the built heritage and best of the historic environment of Monmouthshire.

K(ii) The RLDP helps protect, promote and enhance the best of our landscape and heritage which are an important part of our culture and plays a key role in tourism and economic growth, along with providing support for the Welsh Language to ensure it is safeguarded and supported.

K(iii) Community involvement provides an opportunity to seek views on how Welsh language and culture interact with RLDP policies and proposals. The future of the Welsh language depends on a range of factors beyond the planning system, particularly education, demographic change, community activities and a sound economic base to maintain thriving sustainable communities. The planning system can contribute to the future well-being of the Welsh language by creating conditions for well-paid employment opportunities and a range of quality housing options resulting in sustainable communities. Planning policies must not seek to control housing occupancy on linguistic grounds⁴⁸.

K(iv) The RLDP plays a key role in promoting good quality sustainable design that enables new development and future growth to respect and enhance the existing distinctive character of Monmouthshire.

⁴⁸ Technical Advice Note 20 paragraphs 1.7.3, 2.2 and 2.6.4

Landscape

Issue

Issue 35 - Monmouthshire has a rich and diverse landscape that brings wider benefits to the local economy particularly through tourism and health and well-being. Monmouthshire as a whole incorporates parts of the Wye Valley National Landscape (AONB), the Bannau Brycheiniog National Park (BBNP) and the Blaenavon Industrial Landscape World Heritage Site.

How can the RLDP influence these Issues?

L(i) The RLDP seeks to protect high quality landscapes throughout the County, paying particular attention to those contained in the Wye Valley National Landscape (AONB), the Blaenavon World Heritage Site and in the setting of the Bannau Brycheiniog National Park (BBNP).

A Globally Responsible Wales (Well-being Goal 7)

Climatic Factors

Issue

Issue 36 - The volume of traffic in the County continues to increase (StatsWales, July 2024). There is a pattern of relatively long travel to work distances, high levels of car ownership and reliance on the private car.

Issue 37 - Small Scale and Local Authority wide Renewable Energy schemes are generally supported across Monmouthshire.

Issue 38 - Monmouthshire's rurality, limited public transport, high levels of car ownership and the subsequent reliance on the private car, combined with high energy consumption and waste management can all contribute to carbon emissions. MCC recognises that we are in a climate and nature emergency and has committed to strive to limit the increase in global temperatures to 1.5°C.

How can the RLDP influence these Issues?

M(i) Concerns about climate change require that efforts are made to reduce the reliance on the private car and the consequent impact of carbon dioxide emissions. The RLDP provides for appropriate development that promotes a safe, efficient, accessible and sustainable transport system providing opportunities for walking and cycling and encourages active travel in order to support carbon reduction. The RLDP provides a mix of employment and housing allocations with the aim of reducing the need to travel, acknowledging however that the reasons why people live where they do is complex.

M(ii) A renewable energy assessment has been completed. The RLDP provides a positive policy framework to support renewable energy schemes.

M(iii) The RLDP considers ways to support carbon reduction through a variety of measures including the use of renewable energy, the design and location of new development, the requirement for all new homes to be net zero carbon, encouraging balanced job and population growth to reduce out-commuting, the provision of broadband connectivity to reduce the need to travel, the provision of ultra-low emission vehicle charging infrastructure to reduce emissions and improve air quality, and the provision of quality Green and Blue Infrastructure. Proposals will be considered against our commitment to strive to limit the increase in global temperatures to 1.5°C.

Appendix 7: Housing Supply Components

Housing Supply Component	Number of Homes	Notes
Housing Provision	6,210	RLDP Housing Requirement – 5,400 +15% flexibility allowance
Less Commitments		
2018 – 24	2,220	Comprises 1,780 homes on large sites and 435 homes on small sites.
Existing Land Supply Commitments	798	Sites have only been included if construction is already underway or they have planning permission as at 01/04/2024 and they are expected to come forward during the Plan period.
Less Allowances		
Windfall Allowance (>10)	230	The windfall allowance is based on the number of homes estimated to be achievable on sites included within the Housing Potential Study. An allowance of 230 homes is included. Windfalls for the first 5 years of the plan are included within the completions (2018-2024). Windfalls with current permissions are included in the existing commitments. To avoid double counting the first 5 years of the remaining plan period are excluded from the calculations (2024-2029)
Small Site Allowance (<10)	657	If the small site allowance is calculated on the basis of a 10-year average over the remaining Plan period, an allowance of 761 homes would need to be included. However, a 15% reduction has been applied to the average to reflect considerations including a reduction in the trend in recent years, fewer infill/conversion opportunities and the impact phosphate mitigation measures have had on planning applications.
Allocations		
LDP Rollover Allocations	175	Rollover Allocations are Adopted LDP large sites which do not currently benefit from planning permission, but there is evidence to demonstrate deliverability. Three sites make up the 'rollover' allocations component.

New Allocations	2,130	New allocations identified in the RLDP.
Total Allocations Provision	2,305	Rollover Allocations and New RLDP Allocations.

Appendix 8: Infrastructure Delivery Plan

Schedule of Infrastructure Projects

Land to the East of Abergavenny

Policy HA1: Land to the East of Abergavenny

Site Area	Allocation Type	Total Homes	Phasing Tranche
Total Site: Circa 35.9ha	Strategic Mixed-Use Development including: Residential Mixed Use Commercial Hub Park & Ride B Use Class Uses	Total Homes: 500 Open Market: 250 Affordable Homes: 250	Years 11 to 15
Site Description			
<p>The site is located on the eastern edge of Abergavenny and is bounded by the A465 and railway line to its western boundary and the footslopes of the Ysgryd Fach (Little Skirrid) to the east. Development here will expand the built-up area of the town beyond the railway line and A465 which currently form a hard development boundary to the town. The site will form a well-connected mixed-use urban expansion to Abergavenny.</p>			
Key site issues and constraints		Key policy requirements	
<ul style="list-style-type: none"> Integration of the site with Abergavenny and identifying and implementing connection crossings across the railway line and the A465. Access and junction arrangements on to the A465. Development to reflect character of historic Abergavenny and Abergavenny Conservation Area and respect surrounding landscape 		<ul style="list-style-type: none"> 50% affordable homes on site. Net zero carbon homes. Minimum of 1ha B1 Use Class uses. Neighbourhood centre. Green infrastructure. Sustainable transport/Active travel Park and ride facility serving Abergavenny Railway Station. 	

and views including Bannau Brycheiniog National Park (BBNP), Usk Valley and Blaenavon Industrial Landscape World Heritage site.

- The site is also within the River Usk phosphorus sensitive catchment area.

Key Infrastructure requirements (including broad costs where known):

Infrastructure requirements	Estimated cost	Funding sources	Delivery body	Phasing/ delivery period	Notes
<p>Active Travel Routes to include:</p> <ul style="list-style-type: none"> • To/from the site to the Railway Station and Abergavenny. 	TBC	Developer	Developer	Prior to first occupation	To be delivered in accordance with the submitted connectivity strategy, Transport Assessment and Masterplan and informed by the WelTAG Abergavenny East Severence study. Internal layout and active travel routes within the site will be determined at the planning application stage in collaboration with active travel colleagues.
<p>Highways and Sustainable Travel to include:</p> <ul style="list-style-type: none"> • A465 reconfiguration to provide safe and accessible crossings. • Means of access and appropriate crossings over the railway line. • Off-site highway infrastructure improvements as necessary including, emergency secondary 	TBC	Developer/ Welsh Government/ Transport for Wales/ Network Rail	Developer/ Welsh Government/ SEWTRA/ Transport for Wales/ Network Rail	TBC	Details to be determined through Transport Assessment and Masterplanning.

access onto Garth Road and accesses and junction onto the A465.					
Public transport financial contributions.	Circa £1,250,000	Developer	Regional and local bus providers	TBC	Financial contributions towards improved public transport and bus frequency. Cost may be subject to change, to be determined at the planning application stage.
Network Rail financial contributions	TBC	Developer	Network Rail	TBC	Financial contributions may be required towards improvements at Abergavenny Station. To be determined at the planning application stage.
Education – Primary and Secondary Schools	TBC	Developer	Developer	TBC	Education suggests there is currently capacity in both primary and secondary schools within the area. This will be reviewed at the planning application stage to determine whether any costs are required. There may also be a need for school transport costs, the cost of which will be determined at the planning application stage.
Green Infrastructure	TBC GI to be provided on-site as part of detailed	Developer	Developer / Monmouthshire County Council.	TBC	To be provided on site. GI includes informal open space, amenity green space, parks and

	<p>masterplanning of the site in accordance with Policy GI1.</p> <p>Commuted sum TBC (see notes).</p>				<p>gardens, natural and semi natural space, community orchards and community growing. Land to the East of Caldicot/North of Portskewett

Page 304

Policy HA2: Land to the East of Caldicot/North of Portskewett

Site Area	Allocation Type	Total Homes	Phasing Tranche
Circa 64ha	Strategic Mixed-Use Development including: Residential Primary School Mixed use Local Centre B1 Use Class Employment Strategic public open space	Total Homes: 770 Open Market Homes: 385 Affordable Homes: 385	Years 6 to 15

Site Description

The site is located to the north-east of Caldicot adjacent to the Crick Road, Portskewett site, to the south of a Council owned solar farm. The site includes previously developed land comprising a commercial equestrian centre, with much of the remainder being greenfield Council-owned land.

Key site issues and constraints	Key policy requirements
<ul style="list-style-type: none"> • Location to the north of Caldicot Castle Scheduled Ancient Monument, the Caldicot Castle Country Park, Conservation Area and Area of Amenity Importance – no built development to take place in these areas. • Crick Road must be incorporated into the site as an active street frontage providing cohesion and a gateway for the development as a whole. • Proximity to Neddern Brook wetlands SSSI. • Site is located within the 12.6km Core Recreational Catchment Zone for the Severn Estuary European Marine Site, financial contributions may therefore be required as part of a mitigation strategy. 	<ul style="list-style-type: none"> • 50% affordable homes on site. • Net zero carbon homes. • Minimum of 1ha B1 Use Class uses. • Primary School. • Local centre. • Sustainable transport/Active travel • Green infrastructure.

Key Infrastructure requirements (including broad costs where known):

Infrastructure requirements	Estimated cost	Funding sources	Delivery body	Phasing/ delivery period	Notes

Mounton Road, Chepstow

Policy HA3: Mounton Road, Chepstow

Site Area	Allocation Type	Total Homes	Phasing Tranche
Circa 12.8ha	Strategic Mixed Use development including: Residential Commercial uses such as Class C1 Hotel and Class C2 Residential care home	Total Homes: 146 Open Market Homes: 73 Affordable Homes: 73	Years 6 to 15

Site Description

Land at Mounton Road is located off the western edge of Chepstow's existing settlement boundary, west of the A466 (St Lawrence Road), north of the A48 and south of the highway Mounton Road

Key site issues and constraints

- Location in close proximity to Chepstow's air quality management area (AQMA) at Hardwick Hill and the potential effects of increased vehicular movement on the Highbeech Roundabout.
- Location in close proximity to the setting of the Wye Valley National Landscape (AONB) and Mathern's Conservation Area. The site is within the parkland setting of Grade II Listed St Lawrence House. There are groups of mature woodland and mature hedgerows which contain several important natural ecological habitats.
- Location within the 12.6km Core Recreational Catchment Zone for the Severn Estuary European Marine Site, financial contributions may therefore be required as part of a mitigation strategy.

Key policy requirements

- 50% affordable homes on site.
- Net zero carbon homes.
- Commercial uses such as Class C1 Hotel and Class C2 Residential care home.
- Green infrastructure.
- Sustainable transport/Active travel

Key Infrastructure requirements (including broad costs where known):

Infrastructure requirements	Estimated cost	Funding sources	Delivery body	Phasing/ delivery period	Notes

Tudor Road, Monmouth

Policy HA8: Tudor Road, Monmouth

Site Area	Allocation Type	Total Homes	Phasing Tranche
Circa 2.1ha	Residential	Total Homes: 50 Open Market Homes: 25 Affordable Homes: 25	Years 6 to 10

Site Description

The Tudor Road site is located on the eastern side of Wyesham in Monmouth. Existing residential properties are located to the south and west of the site with agricultural land to the north and east. The site is located adjacent to the Wye Valley National Landscape (AONB).

Key site issues and constraints

- Linear hedgerow feature to be retained due to importance with foraging and commuting bats associated with the Wye Valley and Forest of Dean Bat Sites SAC.
- Adjacent to the Wye Valley National Landscape (AONB).
- Re-engineering of the existing Tudor Road junction is required, providing access to 7-19 Tudor Road along with relocation of the associated residents' off-street parking.
- Overland water flows from land above site, management of these flows must be incorporated into the scheme.
- Site is located within the River Wye phosphorus catchment area.

Key policy requirements

- 50% affordable homes on site.
- Net zero carbon homes.
- Sustainable transport/Active travel
- Green infrastructure.

Key Infrastructure requirements (including broad costs where known):

Land at former MoD, Caerwent

Policy HA9: Land at former MoD land, Caerwent

Site Area	Allocation Type	Total Homes	Phasing Tranche
Circa 4.2ha	Mixed-Use Residential Commercial B1	Total Homes: 40 Open Market Homes: 20 Affordable Homes: 20	Years 6 to 10

Site Description

Land at the former Ministry of Defence Site is a brownfield site on the north-eastern edge of Caerwent, north of the A48. The site is surrounded by agricultural land with two farms either side of the site. There is an existing large derelict red brick building and other utilitarian buildings within the site.

Key site issues and constraints

- The site which has been unoccupied for several years has been neglected and as such has regenerating scrubland/overgrown vegetation within the site and along the boundary with the A48. Protected and priority species and habitats have been identified within the site including a maternity roost for lesser horseshoe bats.
- Location within the 12.6km Core Recreational Catchment Zone for the Severn Estuary European Marine Site, financial contributions may therefore be required as part of a mitigation strategy.

Key policy requirements

- 50% affordable homes on site.
- Net zero carbon homes.
- Sustainable transport/Active travel
- Green infrastructure.

Key Infrastructure requirements (including broad costs where known):

Infrastructure requirements	Estimated cost	Funding sources	Delivery body	Phasing/ delivery period	Notes
Active Travel Routes	TBC	Developer	Developer	Prior to first occupation	Details to be determined through Transport Assessment and Masterplanning. Internal layout and active travel routes within the site will be determined at the planning application stage in collaboration with active travel colleagues.
Highways and Sustainable Travel to include: <ul style="list-style-type: none"> • Access onto A48 • Off-site highway infrastructure contributions as necessary including, local and strategic highway network improvements. 	TBC	Developer	Developer	TBC	Details to be determined through Transport Assessment and Masterplanning.
Public transport financial contributions.	Circa £100,000	Developer	Regional and local bus providers	TBC	Financial contributions towards improved public transport and bus frequency. Cost may be subject to change, to be determined at the planning application stage.
Education – Primary and Secondary Schools.	TBC	Developer	Developer	TBC	MCC Education suggests there is currently capacity in both primary and secondary schools in the locality. This will be reviewed at the planning application stage to determine whether any costs are required. There may also be a need for school transport costs, the cost of which also to be determined at the planning application stage.

<p>Green Infrastructure</p>	<p>TBC</p> <p>GI to be incorporated into site as part of detailed masterplanning of the site in accordance with Policy GI1.</p> <p>Commuted sum TBC (see notes).</p>	<p>Developer</p>	<p>Developer / Monmouthshire County Council.</p>	<p>TBC</p>	<p>To be provided on site.</p> <p>GI includes informal open space, amenity green space, parks and gardens, natural and semi natural space, community orchards and community growing. See policies GI1 and CI2 for further detail.</p> <p>The Councils preference is for GI is to be adopted by MCC a commuted sum will therefore apply – details to be determined at the planning application stage.</p> <p>PPW12 Chapter 6 indicates mitigation ratios for individual tree, hedgerow and woodland loss.</p> <p>Net biodiversity benefits e.g. bird/bat boxes to be provided on every home at the current cost of £100 per home. Further details to be determined at the planning application stage.</p>
<p>Nature Recovery</p>	<p>TBC</p> <p>Net Benefit for biodiversity to be provided on site as part of detailed master planning in accordance</p>	<p>Developer</p>	<p>Developer/ Monmouthshire County Council</p>	<p>TBC</p>	<p>To be provided on site, as far as is possible.</p> <p>Net Benefit for biodiversity relating to any loss or degradation and required compensation or net benefit and associated monitoring, management and maintenance in accordance with policy NR1.</p> <p>This is additional to the requirements outlined under GI as it relates directly to existing ecological interests impacted by development.</p>

	with policy NR1 Commuted sum TBC, if necessary				Of note here is the lesser horseshoe maternity roost that will need to be retained and managed in perpetuity by the developer.
Severn Estuary European Marine Site – financial contribution	TBC	Developer	Monmouthshire County Council	TBC	Site is located in the 12.6km core recreational catchment zone for the Severn Estuary European Marine Site, a financial contribution may be required as part of the mitigation strategy for the protected site to reduce recreational pressure on the features of the Estuary.
Public Right of Way enhancements and connections	TBC	Developer	Developer	TBC	Details to be determined through Transport Assessment and Masterplanning.
Recreation and Open Space	TBC Allotment and open space to be provided on site. Off-site contribution towards existing play area at Lawrence Crescent	Developer	Developer / Monmouthshire County Council	TBC	Exact level and type of provision will be determined as part of Masterplanning and will account for existing local provision, including any deficiencies. Recreation and Open Space includes childrens play areas, formal pitches and other outdoor sports, see Policy CI2 for further detail. Off-site contributions only required if sufficient public open space, play areas and adult recreation provision is not included within the site. The Councils preference is for Recreation and Open Space to be adopted by MCC and therefore a

	<p>(Based on current indicative cost circa £40,000).</p> <p>Further off-site contributions may be required in accordance with the standards set out in Policy CI2.</p> <p>Commuted sum TBC (see notes).</p>				<p>commuted sum will be required. This is to be calculated at the time of the planning application based on the layout and amount of open space.</p>
Drainage	TBC	Developer	Developer	TBC	<p>Details to be determined at the planning application stage.</p>
Water Supply/Sewerage	TBC	Developer	Developer	TBC	<p>DCWW note there are no issues with water supply network being accommodated for this site at the Caerwent WwTW. The foul flows would however overload the Caerwent WwTW and there are no reinforcement works proposed within the current AMP7. As such, for this site to progress then it will be necessary for a Developer Impact Assessment to be</p>

undertaken on the WwTW which will conclude any reinforcement works required.

Key supporting information to include:

Water Supply/Sewerage	N/A	N/A	N/A	N/A	DCWW note there are no issues with water supply network or foul flows being accommodated for this site at the Raglan WwTW. From a phosphorus perspective, NRW have completed the Environmental Permit review process and this proposal would be accommodated within the existing capacity of the permit.

Key supporting information to include:

- Heritage Assessment
- Agricultural Land Classification Report
- Flood Consequence Assessment and Drainage Strategy
- Transport Assessment including Active Travel links and public transport enhancements.
- Utilities Note
- Ecological Assessments.
- Green Infrastructure and Landscape Assessments.
- Green Infrastructure Statement.
- Environmental Health Assessments including Noise Assessment, Land Contamination Strategy and Air Quality Assessment.

Further reports/surveys as necessary to accompany planning application.

Land east of Burrium Gate, Usk

Policy HA11: Land east of Burrium Gate, Usk

Site Area	Allocation Type	Total Homes	Phasing Tranche
Circa 2.6ha	Residential	Total Homes: 40 Open Market Homes: 20 Affordable Homes: 20	Years 6 to 10

Site Description

Land east of Burrium Gate is located at the eastern edge of Usk, north of Monmouth Road. To the west and south of the site are existing residential properties with agricultural fields to the north and east.

Key site issues and constraints

- Proximity to Usk's air quality management area (AQMA).
- The site's impact on overland drainage flow.
- Site is located within the River Usk phosphorus catchment area.

Key policy requirements

- 50% affordable homes on site.
- Net zero carbon homes.
- Green infrastructure.
- Sustainable transport/Active travel

Key Infrastructure requirements (including broad costs where known):

Infrastructure requirements	Estimated cost	Funding sources	Delivery body	Phasing/ delivery period	Notes
Active Travel Routes	TBC	Developer	Developer	Prior to first occupation	Details to be determined through Transport Assessment and Masterplanning. Internal layout and active travel routes within the site will be determined at the planning application

					stage in collaboration with active travel colleagues.
Highways and Sustainable Travel to include: <ul style="list-style-type: none"> • Access point onto Monmouth Road. • Speed limit revisions on Monmouth Road • Off-site highway infrastructure contributions as necessary including, local and strategic highway network improvements. 	TBC	Developer	Developer	TBC	Details to be determined through Transport Assessment and Masterplanning.
Public transport financial contributions.	Circa £100,000	Developer	Regional and local bus providers	TBC	Financial contributions towards improved public transport and bus frequency. Cost may be subject to change, to be determined at the planning application stage.
Education – Primary and Secondary Schools.	Circa £117,624	Developer	Developer	TBC	MCC Education suggests there is currently capacity in primary schools within the locality. Additional provision required for 8 x secondary school pupils at Monmouth Comprehensive School. This sum and costs are indicative and will be reviewed at the planning application stage.

<p>Green Infrastructure</p>	<p>TBC</p> <p>GI to be incorporated into site as part of detailed masterplanning of the site in accordance with Policy GI1.</p> <p>Commuted sum TBC (see notes).</p>	<p>Developer</p>	<p>Developer / Monmouthshire County Council.</p>	<p>TBC</p>	<p>To be provided on site.</p> <p>GI includes informal open space, amenity green space, parks and gardens, natural and semi natural space, community orchards and community growing. See policies GI1 and CI2 for further detail.</p> <p>The Councils preference is for GI is to be adopted by MCC a commuted sum will therefore apply – details to be determined at the planning application stage.</p> <p>PPW12 Chapter 6 indicates mitigation ratios for individual tree, hedgerow and woodland loss.</p> <p>Net biodiversity benefits e.g. bird/bat boxes to be provided on every home at the current cost of £100 per home. Further details to be determined at the planning application stage.</p>

Further reports/surveys as necessary to accompany planning application.

Land west of Trem yr Ysgol, Penperlleni

Policy HA12: Land west of Trem yr Ysgol, Penperlleni

Site Area	Allocation Type	Total Homes	Phasing Tranche
Circa 3.4ha	Residential	Total Homes: 42 Open Market Homes: 21 Affordable Homes: 21	Years 11 to 15

Site Description

Land west of Trem yr Ysgol is located on the south-western edge of Penperlleni. An existing residential development is located to the east of the site with agricultural land to the south and west. The A4042 is located to the north of the site with agricultural land beyond in the backdrop of the Bannau Brycheiniog National Park (BBNP).

Key site issues and constraints

- The site is bounded by the Ffynnon Ddu watercourse along the eastern and southern boundaries.
- The site is also within the River Usk phosphorus sensitive catchment area.

Key policy requirements

- 50% affordable homes on site.
- Net zero carbon homes.
- Sustainable transport/Active travel
- Green infrastructure.

Key Infrastructure requirements (including broad costs where known):

Infrastructure requirements	Estimated cost	Funding sources	Delivery body	Phasing/ delivery period	Notes
Active Travel Routes	TBC	Developer	Developer	Prior to first occupation	Details to be determined through Transport Assessment and Masterplanning. Land north of Little Mill

Policy			
Site Area	Allocation Type	Total Homes	Phasing Tranche
Circa 0.87ha	Residential	Total Homes: 15 Open Market Homes: 7 Affordable Homes: 8	Years 6 to 10
Site Description			
The site is situated at the northern edge of Little Mill. Residential development borders the southern edge of the site, with a railway line to the north-west and grazing land to the north and east. This allocation is a continuation of an Adopted LDP allocation for 60% affordable homes.			
Key site issues and constraints		Key policy requirements	
<ul style="list-style-type: none"> The site is within the Usk Glacial Terminal Moraine Regionally Important Geodiversity Site (RIGS). Public footpath along the site's eastern boundary. Noise and vibration mitigation measures required due to the site's proximity to the adjacent railway line. Site is located within the River Usk phosphorus catchment area. 		<ul style="list-style-type: none"> Site has planning permission for 15 homes, 60% of which are affordable homes in accordance with the LDP allocation. 	

Key Infrastructure requirements (including broad costs where known):

Infrastructure requirements	Estimated cost	Funding sources	Delivery body	Phasing/ delivery period	Notes
Education – Primary and Secondary Schools.	TBC	Developer	Developer	N/A	Education suggests there is currently capacity in both primary and secondary schools within the area. No costs required.
Green Infrastructure	To be incorporated into site.	Developer	Developer / Monmouthshire County Council.	TBC	To be provided on site.
Water Supply/Sewerage	N/A	N/A	N/A	N/A	DCWW note there are no issues with foul flows or the water supply network being accommodated for this site at the Little Mill WwTW. From a phosphorus perspective, NRW have completed the Environmental Permit review process and this proposal would be accommodated within the existing capacity of the permit.

Land adjacent to Llanellen Court Farm, Llanellen

Policy HA17: Land adjacent to Llanellen Court Farm, Llanellen

Page 381

Site Area	Allocation Type	Total Homes	Phasing Tranche
Circa 1.56ha	Residential	Total Homes: 26 Open Market Homes: 13 Affordable Homes: 13	Years 11 to 15

Site Description

The site is located adjacent Llanellen Court Farm, to the north-west of the A4042. Existing residential development is located to the north of the site with agricultural land to the west and east.

Key site issues and constraints

- Protect, buffer and maintain existing TPO trees and other trees and hedgerows.
The creation of accessible pedestrian access to the bus stop on Elm Drive, a shared-use path to link to the Monmouthshire and Brecon Canal and exploration of better links to the village centre.
- Site is located within the River Usk phosphorus catchment area.

Key policy requirements

- 50% affordable homes on site.
- Net zero carbon homes.
- Sustainable transport/Active travel as appropriate.
- Green infrastructure.

Key Infrastructure requirements (including broad costs where known):

Infrastructure requirements	Estimated cost	Funding sources	Delivery body	Phasing/ delivery period	Notes
Active Travel Routes	TBC	Developer	Developer	Prior to first occupation	Details to be determined through Transport Assessment and Masterplanning. Internal layout and active travel routes within the site will be determined at the planning application stage in collaboration with active travel colleagues.
Highways and Sustainable Travel to include: <ul style="list-style-type: none"> Off-site highway infrastructure contributions as necessary including, local and strategic highway network improvements 	TBC	Developer	Developer	TBC	Details to be determined through Transport Assessment and Masterplanning.
Public transport financial contributions.	Circa £65,000	Developer	Regional and local bus providers	TBC	Financial contributions towards improved public transport and bus frequency. Cost may be subject to change, to be determined at the planning application stage.
Education – Primary and Secondary Schools.	TBC	Developer	Developer	TBC	Education suggests there is no capacity in catchment primary school so would need to attend alternative schools in the cluster but quantum of children not sufficient to increase capacity and therefore no

					contribution currently required. MCC Education suggests there is currently capacity in secondary schools in the locality. This will be reviewed at the planning application stage to determine whether any costs are required.
Green Infrastructure	TBC GI to be incorporated into site as part of detailed masterplanning of the site in accordance with Policy GI1. Commuted sum TBC (see notes).	Developer	Developer / Monmouthshire County Council.	TBC	To be provided on site. GI includes informal open space, amenity green space, parks and gardens, natural and semi natural space, community orchards and community growing. See policies GI1 and CI2 for further detail. The Councils preference is for GI is to be adopted by MCC a commuted sum will therefore apply – details to be determined at the planning application stage. PPW12 Chapter 6 indicates mitigation ratios for individual tree, hedgerow and woodland loss. Net biodiversity benefits e.g. bird/bat boxes to be provided on every home at the current cost of £100 per home. Further details to be determined at the planning application stage.
Nature Recovery	TBC Net Benefit for biodiversity to be provided on site as part of	Developer	Monmouthshire County Council	TBC	To be provided on site, as far as is possible. Net Benefit for biodiversity relating to any loss or degradation and required compensation or net benefit and associated monitoring, management and maintenance in accordance with policy NR1.

	<p>detailed master planning in accordance with policy NR1</p> <p>Committed sum TBC, if necessary</p>				<p>This is additional to the requirements outlined under GI as it relates directly to existing ecological interests impacted by development.</p>
Public Right of Way enhancements and connections	TBC	Developer	Developer	TBC	<p>Details to be determined through Transport Assessment and Masterplanning.</p>
Recreation and Open Space	<p>Open space to be provided on site.</p> <p>Off-site contribution towards existing play area at Owain Glyndwr playing field (Based on current indicative cost circa £26,000).</p> <p>Further off-site contributions may be required</p>	Developer	Developer / Monmouthshire County Council	TBC	<p>Exact level and type of provision will be determined as part of Masterplanning and will account for existing local provision, including any deficiencies.</p> <p>Recreation and Open Space includes childrens play areas, formal pitches and other outdoor sports, see Policy CI2 for further detail.</p> <p>Off-site contributions only required if sufficient public open space, play areas and adult recreation provision is not included within the site.</p> <p>The Councils preference is for Recreation and Open Space to be adopted by MCC and therefore a commuted sum will be required. This is to be calculated at the time of the planning application based on the layout and amount of open space.</p>

	in accordance with the standards set out in Policy CI2. Commuted sum TBC (see notes).				
Drainage	TBC	Developer	Developer	TBC	Details to be determined at the planning application stage.
Water Supply/Sewerage	N/A	N/A	N/A	N/A	DCWW note there are no issues with water supply network or foul flows being accommodated for this site at the Llanellen WwTW. From a phosphorus perspective, NRW have completed the Environmental Permit review process and this proposal would be accommodated within the existing capacity of the permit.

Further reports/surveys as necessary to accompany planning application.

Land west of Redd Landes, Shirenewton

Policy HA18 Land west of Redd Landes, Shirenewton:

Page 386

Site Area	Allocation Type	Total Homes	Phasing Tranche
Circa 1.76ha	Residential	Total Homes: 26 Open Market Homes: 13 Affordable Homes: 13	Years 6 to 10

Site Description

Land west of Redd Landes is located on the western edge of Shirenewton with existing residential properties to the east and agricultural land to the north and west. The site is located opposite a recreation ground, play area and recreation hall.

Key site issues and constraints

- Additional hedgerow and tree planting required to boundaries to respond to its edge of settlement location.
- Connections to the road frontage on the eastern part of the site to provide ease of access to the recreation hall and grounds.
- Site is located within the 12.6km Core Recreational Catchment Zone for the Severn Estuary European Marine Site, financial

Key policy requirements

- 50% affordable homes on site.
- Net zero carbon homes.
- Sustainable transport/Active travel as appropriate.
- Green infrastructure.

contributions may therefore be required as part of a mitigation strategy.

Key Infrastructure requirements (including broad costs where known):

Infrastructure requirements	Estimated cost	Funding sources	Delivery body	Phasing/ delivery period	Notes
Active Travel Routes	TBC	Developer	Developer	Prior to first occupation	Details to be determined through Transport Assessment and Masterplanning. Internal layout and active travel routes within the site will be determined at the planning application stage in collaboration with active travel colleagues.

Appendix 11: Supplementary Planning Guidance Schedule

The RLDP will be supported by Supplementary Planning Guidance (SPG) to cover a range of policy areas, including those set out below, which will be prepared following adoption of the RLDP. A number of existing SPGs which were prepared to support the adopted LDP will be updated as relevant to reflect and support the updated RLDP policy framework. This list is not exhaustive.

SPG Topic	Timescale
Planning Obligations	Within 12 months of adoption
Affordable Housing	Within 12 months of adoption
Placemaking and Design	Within 12 months of adoption
Net Zero Carbon Homes	Within 12 months of adoption
Rural Conversions to Residential and Tourism Use	Within 12 months of adoption
Replacement Dwellings in the Open Countryside and Extension of Rural Dwellings	Within 12 months of adoption
Conversion of Agricultural Buildings Design Guide	Within 12 months of adoption
Sustainable Tourism	Within 12 months of adoption
Primary Shopping Frontages	Within 12 months of adoption
Green Infrastructure	Within 12 months of adoption
Trees, Woodland and Hedgerows	Within 12 months of adoption
Nature Recovery and Geodiversity	Within 12 months of adoption
Severn Estuary European Marine Site: Recreational Disturbance	Within 12 months of adoption
Dark Skies and Lighting	Within 12 months of adoption

Appendix 12: Glossary of terms

Adopted Plan	The final version of the RLDP.
Adoption	The final stage of Local Development Plan preparation where the RLDP becomes the statutory development plan for the area it covers.
Affordable Housing	Housing where there are secure mechanisms in place to ensure that it is accessible to those who cannot afford market housing, both on first occupation and for subsequent occupiers.
Annual Monitoring Report (AMR)	A yearly report to monitor the effectiveness of the RLDP and ultimately determines whether any revisions to the Plan are necessary. It assesses the extent to which the RLDP strategy and objectives are being achieved and whether the RLDP policies are functioning effectively.
Area of Outstanding Natural Beauty (AONB)	An Area of Outstanding Natural Beauty (AONB) is designated for conservation due to its significant landscape value. In Monmouthshire the Wye Valley National Landscape is designated as an AONB.
Baseline	A description of the present state of an area.
Blue Infrastructure	Blue infrastructure is an element of GI and refers to water features, including ponds, lakes, streams, rivers and storm water provision, swales, rain gardens, wetlands and canals and their banks
Brownfield Site	See definition for Previously Developed Land.
Candidate Site	A site nominated by an individual with an interest in land (i.e. landowner, developer, agent or member of the public) to be considered for inclusion in the RLDP. All Candidate Sites will be assessed for suitability for inclusion as potential allocations.
Central Shopping and Commercial Area (CSCA)	Central Shopping and Commercial Areas (CSCA) are designated through the RLDP as retail and commercial centres. There are CSCAs in Monmouthshire in Abergavenny, Caldicot, Chepstow, Monmouth, Magor and Usk.
Community	People living in a defined geographical area, or who share other interests and therefore form communities of interest.
Conservation Area	An area designated by the LPA which is of a special architectural or historic interest that the distinctive character or appearance of which is desirable to preserve or enhance. There are 31 Conservations in Monmouthshire.
Consultation	A formal process in which comments are invited on a particular topic or draft document usually within a defined time period.

Council	Monmouthshire County Council (excluding for planning purposes the Brecon Beacons National Park administrative area that falls within Monmouthshire).
Delivery Agreement (DA)	A document comprising the local planning authority's timetable for the preparation of a Local Development Plan, together with its Community Involvement Scheme, submitted to the Welsh Government for agreement.
Deposit Plan	This is a full draft of the RLDP which undergoes a formal consultation period prior to it being submitted to the Welsh Government for public examination.
Development Plans Manual (DPM)	The Development Plans Manual, 'The Manual', is an online reference document for practitioners who are responsible for, or contribute to, the preparation and implementation of development plans. It contains practical guidance on how to prepare, monitor and revise a development plan, underpinned by robust evidence to ensure that plans are effective and deliverable and contribute to placemaking, as defined in national policy set out in Planning Policy Wales (PPW).
Engagement	A proactive process that seeks to encourage the involvement and participation of the community and other groups in the decision making process.
Evidence Base	Information and data that provides the basis for the preparation of the RLDP vision, objectives, policies and proposals and justifies the soundness of the policy approach of the RLDP.
Examination	The examination involves public examination of the Deposit RLDP, the Deposit representations, the report of consultation, evidence base/background documents and the Integrated Sustainability Appraisal Report. This is carried out by the PEDW on behalf of the Welsh Government.
Green Infrastructure (GI)	Green infrastructure (GI) is the network of natural and semi-natural features, green spaces, rivers and lakes that intersperse and connect places. GI functions at landscape, local and smaller scales and can include entire ecosystems, GI networks, local parks, natural green spaces, fields, woodland, allotments, verges and SUDs.
Habitat Regulations Assessment (HRA)	Habitats Regulations Assessment (HRA) relates to the assessment of the impacts of a Plan (or project) against the nature conservation objectives of European designated sites for any likely significant effects. HRA also ascertains whether the proposed Plan would adversely affect the integrity of the site.
Indicator	A measure of variables over time, often used to measure progress in the achievement of objectives, targets and policies.

Infrastructure Delivery Plan (IDP)	The Infrastructure Delivery Plan (IDP) identifies key infrastructure needed to support the development of sites allocated within the plan.
Inspector's Report	The Report prepared by an independent Inspector who examines the RLDP. The Inspector's Report contains recommendations on the content of the final RLDP and is binding upon the Council. The Council must adopt the RLDP in the manner directed by the Inspector.
Local Development Plan (LDP)	A land use plan which includes a vision, strategy, area wide policies for development types, land allocations, and policies and proposals for key areas of change and protection. Allocations and certain policies are shown geographically on the Proposals Map forming part of the Plan. The LDP is a statutory development plan that each local planning authority area is required to produce in Wales.
Local Nature Reserve (LNR)	Local Nature Reserves (LNR) are non-statutory local nature conservation designations and relate to areas of natural heritage of local importance.
Local Planning Authority (LPA)	In the case of Monmouthshire, this is Monmouthshire County Council (excluding the Brecon Beacons National Park administrative area where the local planning authority is the National Park).
Monmouthshire County Council (MCC)	This is the name of the Local Planning Authority preparing the RLDP.
National Nature Reserve (NNR)	National Nature Reserves (NNR) are statutory national nature conservation designations relating to wildlife, habitats and geological features of special interest.
Objective	A statement of what is intended, specifying the desired direction of change in trends.
Partners	Other local authority departments and statutory bodies where the RLDP will help to deliver some of the objectives of their strategies. Partners may be expected to contribute in the formulation of relevant parts of the Plan.
Plan Period	The period of time the plan is in effect, after which it no longer ceases to provide the planning policy framework for a given area, the Monmouthshire RLDP covers the plan period of 2018 – 2033.
Planning and Environment Decisions Wales (PEDW)	PEDW are an independent body who will be responsible for the formal examination of the RLDP.
Planning Policy Wales (PPW)	Planning policy guidance for Wales produced by the Welsh Government is set out in this document

Preferred Strategy	This sets out the broad strategic direction for the RLDP. This includes the preferred level of growth along with the spatial strategy for distributing the growth. It also includes the vision, issues and objectives of the Plan.
Previously Developed Land	Previously developed land is also known as brownfield land and generally relates to land that is or has been occupied by a permanent structure and associated fixed surface infrastructure. A full definition of previously developed land is provided in PPW including exclusions.
Primary Shopping Frontages (PSF)	Primary Shopping Frontages (PSF) are designated in the RLDP to cover areas in the County's main town centres where retail uses (Use Class A1) predominate. These are located in Abergavenny, Caldicot, Chepstow and Monmouth.
Public Right of Way (PROW)	Paths that the public have a right to pass such as footpaths, bridleways and byways.
Ramsar Site	A Ramsar Site is a wetland of international importance and a statutory international nature conservation designation.
Replacement Local Development Plan (RLDP)	The Replacement Local Development Plan replaces the Adopted Local Development Plan for a given area. See Local Development Plan definition for further information.
Representations	Comments received in relation to the RLDP, either in support of, or in opposition to.
Regionally Important Geological/ Geomorphological Sites (RIGs)	Regionally Important Geological/Geomorphological Sites (RIGs) are non-statutory sites selected for their scientific, educational, historical and aesthetic features.
Section 106 Agreement (S106)	A legal agreement between the LPA and applicant/developer to ensure a development is carried out in a certain way and/or monetary contributions are collected to support different needs associated with the site. S106 are also known as planning obligations.
Site of Importance for Nature Conservation (SINC)	Site of Importance for Nature Conservation (SINC) are non-statutory local nature conservation designations recognised for their importance for wildlife.
Site of Special Scientific Interest (SSSI)	Sites of Special Scientific Interest (SSSI) are statutory national nature conservation designations protected to safeguard the range, quality and variety of habitats, species and geological features.
Soundness Tests	In order to adopt a RLDP it must be determined to be 'sound' by the Planning Inspector. The Tests of Soundness are set out in the Development Plans Manual (Edition 3, March 2020). There are three tests to make that

	judgement in relation to the Plan as a whole. A framework for assessing the soundness of LDPs has been developed by the Planning Inspectorate.
Special Area of Conservation (SAC)	Special Areas of Conservation (SAC) are statutory international nature conservation designations protected for a wide range of habitats and species other than birds.
Special Protection Area (SPA)	Special Protection Areas (SPA) are statutory international nature conservation designations and are of importance due to rare or migratory birds and their habitats.
Strategic Environmental Assessment (SEA)	Generic term used internationally to describe environmental assessment as applied to policies, Plans and programmes. The European Strategic Environmental Assessment Directive (2001/42/EC) requires a formal “environmental assessment of certain Plans and programmes, including those in the field of planning and land use”.
Strategic Development Plan (SDP)	A Strategic Development Plan is a tool for regional planning to cover cross-boundary issues such as housing and transport. It will be prepared by a Strategic Planning Panel across a region. LPA’s must have regard to the SDP when developing their RLDPs.
Supplementary Planning Guidance (SPG)	Provide more detailed or site specific guidance on the application of RLDP Policies. They provide supplementary information in respect of the policies in a LDP. SPG does not form part of the RLDP and is not subject to independent examination.
Integrated Sustainability Appraisal (ISA)	Tool for appraising policies, including LDPs, to ensure they reflect sustainable development objectives (i.e. social, environmental and economic factors). Each LPA is required by Section 62(6) of the Act to undertake SA of their Local Development Plan. This form of sustainability appraisal fully incorporates the requirements of the Strategic Environmental Assessment Directive.
Well-being of Future Generations (Wales) Act (2015)	The Well-being of Future Generations (Wales) Act 2015 is legislation that requires public bodies, such as local authorities, to put long term sustainability at the forefront of their thinking to make a difference to lives of people in Wales. Local authorities must work towards the seven well-being goals and enact the five ways of working set out in the Act.

1.0 Introduction

Revised Delivery Agreement October 2024

- 1.1 The Replacement Local Development Plan (RLDP) Delivery Agreement was first approved by Welsh Government on 14th May 2018. Since then, several challenges have arisen¹ meaning that progress on the preparation of the RLDP has been delayed and updates to the Delivery Agreement have been required.
- 1.2 The timetable in the latest Delivery Agreement (December 2022) set out that political reporting and subsequent public engagement/consultation on the Deposit RLDP would take place in Spring 2024. However, given the time needed to prepare the Deposit Plan (including the preparation of the evidence base), as well as the timing of the UK General Election, this stage of the process will now take place in Autumn 2024, with subsequent stages moved on accordingly. As this constitutes more than a three-month slippage to the Plan's timescale, there is a need to amend the Delivery Agreement timetable as set out in this document.

LDP Review

- 1.3 A full review of the Monmouthshire Local Development Plan 2011 – 2021 (adopted 27th February 2014) has been undertaken, the findings of which are set out in the LDP Review Report (March 2018). The Review Report provides an overview of the issues that have been considered as part of the full review process and subsequently identified any changes that are likely to be needed to the LDP, based on evidence. It concludes by recommending that the Council commences the preparation of a RLDP following the full revision procedure. The final Review Report was published alongside the Draft Delivery Agreement (May 2018). The Council has commenced preparation of the Replacement LDP which will cover the Plan period 2018-2033.
- 1.4 The adopted Monmouthshire Local Development Plan (February 2014) covers the period 2011-2021. The risks associated with the LDP expiry date legislation for the adopted LDP have dissipated following the publication of a letter from the Minister received in September 2020². This clarified that the provisions in the Planning (Wales) Act 2015 relating to LDP expiry dates do not apply to LDPs adopted prior to that Act coming into force (4th January 2016). This means that our current LDP, adopted in February 2014, remains an extant development Plan for decision-making purposes until the RLDP is adopted. Although policies in the Adopted LDP may be superseded by more recent national policy or evidence after December 2021, the Minister's clarification provides much needed clarity to all stakeholders and removes a

¹ These challenges include the publication of updated Welsh Government 2018-based population projections, the Covid-19 pandemic, an objection from Welsh Government to the July 2021 Preferred Strategy, and phosphate water quality issues in the River Wye and River Usk catchment areas.

² Minister for Housing and Local Government Letter to Local Authority Leaders and Chief Executives National Park Authority Chief Executives 24th September 2020

considerable risk of having a policy vacuum. This clarification does not, however, change the urgent need for the Council to make timely progress on its RLDP and to get the new Plan adopted as soon as realistically possible to address our key issues to ensure a Plan-led system is in place.

Purpose of a Delivery Agreement

1.5 The RLDP will cover the 2018-2033 period. Preparation of a Delivery Agreement³ is a key requirement in preparing a replacement Plan. This document provides details of the various Plan-making stages, the time each part of the process is likely to take, and the resources that the Council will commit to Plan preparation. It also sets out the way in which the Council proposes to involve the local community and other stakeholders in the preparation of the RLDP. The RLDP will be examined by an independent Inspector to test whether the Plan is sound and has been prepared in accordance with its Delivery Agreement.

1.6 The Delivery Agreement is split into two key parts:

- The **Timetable** for producing the RLDP. This provides a clear indication of when each stages of Plan preparation will take place. Definitive dates are provided up to the deposit stage with indicative dates for later stages. A project management approach will continue to be taken to ensure that the Plan is adequately resourced and delivered on time. The timetable is included in *Part 2* of this Revised Delivery Agreement and has been updated to reflect the delays incurred to the process, as above.
- The **Community Involvement Scheme** outlines the Authority's principles of community engagement; its approach in relation to who, how and when it intends to engage with the community and stakeholders, how it will respond to representations and how these representations will inform later stages of Plan preparation. This is included as *Part 3* of this Revised Delivery Agreement.

1.7 A glossary of terms can be found in Appendix 4.

Preparation of the Replacement LDP

1.8 In preparing the RLDP the Council will aim to achieve the following key outcomes⁴:

- Support sustainable development and quality places based around the National Sustainable Placemaking Outcomes, be aligned with national policy set out in Planning Policy Wales (PPW) and Future Wales: the National Plan 2040 and integrated with an SA/SEA/HRA, including Welsh language and the requirements of the Well-being of Future Generations Act 2015.
- Be based on and underpinned by early, effective and meaningful community involvement in order to understand and consider a wide range of views, with the

³ Section 63 (1) Planning and Compulsory Purchase Act 2004 & Regulations 5 – 10 LDP (Wales) Regulations (as amended 2015)

⁴ Welsh Government Development Plans Manual (Edition 3, March 2020).

aim of building a broad consensus on the spatial strategy, policies and proposals of the RLDP.

- Be based on a robust understanding of the role and function of the Monmouthshire area including the functional linkages to areas beyond our administrative boundaries.
- Be distinctive by having plans setting out clearly how Monmouthshire will develop and change, giving certainty for communities, developers and businesses.
- Be resilient to climate change, reflecting the Council's climate and nature emergency declaration and Community and Corporate Plan priority. We will adhere to the principles of Placemaking, the Sustainable Transport Hierarchy and the Energy Hierarchy as set out in PPW.
- Ensure the sustainable management of natural resources in accordance with the Environment (Wales) Act 2016 and other relevant legislation.
- Deliver what is intended through deliverable and viable plans, taking into account necessary infrastructure requirements, financial viability and other market factors.
- Be proactive and responsive, kept up-to-date and flexible to accommodate change.

1.9 The RLDP will be prepared with regard to a wide range of legislation, policies and other initiatives at the European, national, regional and local level. The Gwent PSB Well-Being Plan (GWBP) will be of particular importance at the local level. The GWBP relates to the economic, social, environmental and cultural well-being of the sub region and has clear links with the RLDP where it relates to land use planning.

Integrated Sustainability Appraisal (ISA) incorporating Strategic Environmental Assessment (SA/SEA)

1.10 An Integrated Sustainability Appraisal⁵, (ISA) incorporating Strategic Environmental Assessment⁶ (SEA), is a statutory requirement of LDP preparation in order to assess the environmental, social and economic implications of the Plan's strategy and policies. The ISA process fulfils the requirements and duties for Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA), Equalities Impact Assessment (EqIA), Health Impact Assessment (HIA), Welsh Language Impact Assessment (WLIA) and Well-being of Future Generations (WCFG) and is utilised to ensure that policies in the RLDP reflect sustainable development principles and take into account the significant effects of the Plan on the environment.

1.11 The Council will continue to adopt an integrated approach to the SA/SEA of the RLDP, ensuring that the Plan is internally consistent, with economic and social issues considered alongside other matters. The appraisal process will run concurrently with the Plan making process and forms an iterative part of plan preparation.

1.12 The ISA, incorporating the SEA, will be undertaken as follows:

⁵ Section 62 (6) Planning and Compulsory Purchase Act 2004

⁶ European Union Directive 2001/42/EC & Environmental Assessment of Plans and Programmes (Wales) Regulations 2004

- An Integrated Sustainability Appraisal Scoping Report identifies the existing sustainability issues in the Monmouthshire area and provides baseline information along with a review of plans, policies, programmes and strategies. The existing SA indicators and objectives will be revised and updated as necessary. A revised Sustainability Framework will be produced.
- An Initial Integrated Sustainability Appraisal Report (ISAR) predicts and evaluates the effects of the LDP options, spatial strategy and strategic policies on the social, environmental and economic objectives as set out in the Scoping Report. The Initial ISAR will be published at the same time as the Preferred Strategy and updated when the Deposit Plan is prepared.
- A Final Integrated Sustainability Appraisal Report will bring together all elements of the ISA and take into account the binding recommendations of the Planning Inspector. The Final ISAR will be published following receipt of the Inspector's Report.
- An Integrated Sustainability Appraisal Adoption Statement will be published to explain how the sustainability considerations and the Sustainability Assessment have been taken into consideration in the production of the RLDP.

Habitats Regulations Assessment (HRA)

- 1.13 The Habitats Directive⁷ requires that land use plans, including LDPs, are subject to an additional Habitats Regulations Assessment where there are sites of European significance for nature conservation purposes. Monmouthshire contains a range of international nature conservation designated sites such as Special Areas of Conservation and a RAMSAR site. Habitats Regulations Assessment will be undertaken alongside ISA/SEA to ensure an integrated approach to assessment. It is intended that the process will again run concurrently with the Plan making process and form an iterative part of Plan preparation.
- 1.14 There are two stages of Habitats Regulation Assessment:
- Screening
 - Habitats Regulations Assessment

Evidence Base Assessments

- 1.15 As outlined in each of the published Annual Monitoring Reports, and the Review Report, there is a need to update and undertake various evidence base assessments throughout the preparation of the RLDP which will include:
- Needs assessments in relation to population, housing, employment and retail
 - Additional land allocations to meet the chosen growth strategy for the new Plan period
 - Affordable Housing Viability Assessment

⁷ 92/43/EC

- Local Housing Market Assessment Update
- Sustainable Settlement Assessment
- Employment Land Review and Regional Employment Study
- Amenity Open Space Survey
- Settlement Boundary Review
- Renewable Energy Assessment
- Infrastructure Plan
- Green Wedge Review
- Landscape Sensitivity Study Update

This is not a definitive list and additional evidence base update requirements may emerge as the replacement Plan progresses.

Well-being of Future Generations Act

- 1.16 The Well Being of Future Generations (Wales) Act (WBFG) gained Royal Assent in April 2015. The Act aims to make a difference to lives of people in Wales in relation to seven well-being goals and also sets out five ways of working. The seven well-being goals relate to; a prosperous Wales, a resilient Wales, a healthier Wales, a more equal Wales, a Wales of cohesive communities, a Wales of vibrant culture and Welsh language, and, a globally responsible Wales. The five ways of working are long-term, integration, involvement, collaboration and prevention. Given that sustainable development is the core underlying principle of the LDP (and SEA), there are clear associations between both the LDP and the WBFG Act. As a requirement of the Act a Well-being Plan (WBP) must be produced, which considers economic, social, environmental and cultural well-being and has clear links with the RLDP. Both the WBFG Act and the WBP will be considered fully throughout the preparation of the RLDP, which will follow the five ways of working.

Tests of Soundness

- 1.17 ‘Soundness’ is an integral part of the LDP system and is an important principle by which it may be demonstrated as to whether the LDP shows good judgement and is able to be trusted. If the RLDP is found not to be sound then the Welsh Government could require the Council to take necessary action to remedy the situation. This may involve returning to the very early stages of Plan preparation thereby causing considerable delay in the preparation of the Plan.
- 1.18 The Council must submit the RLDP to the Welsh Government for examination. An independent Inspector is appointed by the Welsh Government to undertake this examination to determine whether the Plan is fundamentally sound. The Inspector will assess whether the preparation of the Plan has been undertaken in accordance with legal and regulatory procedural requirements, and complies with the Community

Involvement Scheme. The Inspector must also determine whether the Plan meets the three soundness tests⁸:

- **Test 1 – Does the Plan fit?** (i.e. is it clear that the RLDP is consistent with other Plans?)
- **Test 2 – Is the Plan appropriate?** (i.e. is the Plan appropriate for the area in the light of the evidence? Does it address the key issues? Is the vision and strategy positive and sufficiently aspirational?)
- **Test 3 – Will the Plan deliver?** (i.e. is it likely to be effective?)

1.19 The conclusions reached by the Inspector will be binding and, unless the Welsh Government intervenes, the Council must accept the changes required by the Inspector and adopt the RLDP.

⁸ Development Plans Manual Edition 3 (Welsh Government, March 2020)

2.0 Timetable

- 2.1 The Council established a timetable in the original Delivery Agreement (May 2018) summarising the key stages in Plan preparation (Table 1), which while challenging, was considered to provide a realistic timeframe for preparation of the RLDP having regard to the resources available. In preparing the timetable, regard was had to the WG's expectation that a replacement Plan can be prepared in considerably less than 4 years, taking into account the resources available and the extent of changes required (Planning Policy Wales Edition 9, November 2016 provided the relevant guidance at that time). Moreover, it had regard to the fact that the current LDP was due to expire in December 2021 and there was a pressing need to maintain plan coverage. However, as noted above, a recent Ministerial letter has confirmed that the LDP end date legislation will not apply to those LDPs adopted prior to 4th January 2016 meaning that the Adopted LDP will remain in force until the RLDP is adopted.
- 2.2 Work commenced at pace on the RLDP following the approval of the original Delivery Agreement in May 2018, however, since that time several challenges have arisen which have impacted on the progress of the RLDP. This includes the publication of updated Welsh Government 2018-based population projections, the Covid-19 pandemic, an objection from Welsh Government to the June 2021 Preferred Strategy, and phosphate water quality issues in the River Wye and River Usk catchment areas.
- 2.3 Following consultation on the revised Preferred Strategy in December 2022-January 2023, the Council has proceeded with the preparation of the Deposit Plan. However, given the scope of the evidence base and detailed work needed to prepare/inform the Deposit Plan, together with the timing of the UK General Election, the timetable for political reporting and subsequent consultation on the Deposit Plan set out in the December 2022 Delivery Agreement has slipped beyond the three-month allowance set by Welsh Government. Accordingly, there is a need to further amend the Delivery Agreement timetable as set out in this document. The revised RLDP timetable is set out in Table 1 and Appendix 2.
- 2.4 Table 1 is split into definitive and indicative stages:
- **Definitive Stages** – This part of the timetable provides information up to and inclusive of the statutory Deposit stage. The progress of the Plan over this period is under the direct control of the Council (subject to external risks) and therefore the revised target dates, while still challenging, are considered realistic and every effort will be made to adhere to these dates.
 - **Indicative Stages** – This part of the timetable provides for the stages of Plan preparation beyond the statutory Deposit stage. These stages are increasingly dependent on a wide range of external factors (e.g. the number of representations received, number of examination hearing sessions, time taken to receive the Inspector's Report) over which the Council has limited control.

These dates will be reconsidered after reaching the Deposit stage when definitive timings for the remaining stages will be prepared.

Table 1 - Key Stages in the Preparation of the RLDP (Updated October 2024)

Key Stages	Timescale
Definitive	
Revised Delivery Agreement (October 2024)	October 2024
	Full Council – October 2024 Submission to Welsh Government for agreement – October 2024
Pre-Deposit Participation	June 2022 - November 2022
	Report to Council on revised draft Preferred Strategy – December 2022
Preferred Strategy (Pre-Deposit) Consultation.	December 2022
	Preferred Strategy – statutory 8-week consultation (December 2022 – January 2023) Informal consultation on the Candidate Site Register (December 2022 – January 2023) Report to Council with summary Consultation Report to endorse post-consultation updates to the Preferred Strategy (October 2023)
Statutory Deposit Plan Consultation	November – December 2024
	Report to Council on draft Deposit Plan – October 2024 Deposit Plan - 6-week statutory consultation November – December 2024 Analyse consultation responses and prepare consultation report – January – May 2025 Report to Council on any suggested/focused changes and submission of Deposit Plan to Welsh Government – June/July 2025
Stages	Timescale
Indicative	
Submission of RLDP to Welsh Government	July 2025
Independent Examination	September – November 2025
Inspector’s Report	March /April 2026
Adoption	May 2026 (must be adopted within 8 weeks of receiving the Inspector’s binding report)

2.5 A revised detailed project Plan outlining the timescale for each of the stages of Plan preparation is included in Appendix 2.

Resources

- 2.6 The Head of Placemaking will be responsible for the overall delivery of the RLDP, with the Planning Policy Manager responsible for the day-to-day project management. The Planning Policy Team will lead in the preparation and delivery of the RLDP with Member engagement and political reporting at appropriate stages. The existing staff resources are set out in Table 2 below, approximately 80% of officer time will be dedicated to the RLDP to account for day-to-day involvement in liaison with colleagues in development management and also to account for regional working. Additional time will be dedicated by the Head of Placemaking to ensure the efficient delivery of the RLDP. It will also be necessary to call upon staff resources from other internal departments to assist in undertaking various evidence base updates/assessments. This is likely to include officer support from: Development Management, Heritage, Housing, Highways, Business and Enterprise, Green Infrastructure, Education, Democratic Services and Legal Services.

Table 2 – Planning Policy Staff Resources

Officer Job Title	Number of posts
Planning Policy Manager	1
Principal Planning Policy Officer	1
Senior Planning Policy Officer	2
Planning Policy Officer	1
Trainee Planning Policy Officer (fixed term post)	1

- 2.7 The Council recognises that additional professional specialist services will also be required to progress and establish a robust evidence base to inform the RLDP. While it is anticipated that a considerable amount of evidence base work will be undertaken by MCC officers, predominately Planning Policy, the use of external consultants will be necessary, particularly in relation to highly technical/specialist elements of the evidence base. Financial resources have been secured accordingly.
- 2.8 The Delivery Agreement has been prepared on the basis of a Monmouthshire RLDP only. Work is, however, on-going on a regional basis and collaboration with neighbouring authorities will continue to be fundamental to the preparation of the RLDP, particularly with regard to a joint evidence base, where appropriate. The South East Wales Strategic Planning Group (SEWSPG) has progressed a set of regionally agreed methodologies for key topic areas to ensure a consistent evidence base throughout the Cardiff Capital Region. South East Wales Planning Officers Society (SEWPOS) and SEWSPG have also commissioned a range of evidence base studies to inform RLDPs. In addition, on a sub-regional basis Monmouthshire, Torfaen, Blaenau Gwent, Newport and Caerphilly Councils have jointly procured a number of joint

evidence base studies. Liaison also continues with our neighbours in England as they progress their Development Plans.

- 2.9 A sufficient budget is available to progress the RLDP to adoption within the proposed timetable. It is anticipated that this will cover expenditure relating to all elements of preparation of the RLDP and the Independent Examination.

Risk Management and Analysis

- 2.10 While the original timetable for preparation of the RLDP was considered to be realistic, it was acknowledged that it would also be challenging. It was recognised that there are a number of factors that could result in Plan preparation deviating from the proposed timetable. The original timetable allowed for flexibility through a degree of tolerance of up to 3 month delay, before a formal revision to the Delivery Agreement is required. Appendix 3 sets out a risk assessment including a number of potential issues that could cause difficulties in keeping to the proposed timetable, together with the Council's proposed approach to managing them.

- 2.11 The unavoidable delays to the Plan preparation process experienced as a consequence of the numerous challenges set out above has necessitated a further revision to the RLDP timetable, which has been updated to reflect a realistic timescale for further key stages of the RLDP process. The revised timetable identifies the RLDP being adopted in Spring 2026 and is set out in Appendix 2. The process continues to allow for a delay in the plan preparation timetable of up to 3 months before a further revision to the Delivery Agreement is required.

Supplementary Planning Guidance (SPG)

- 2.12 The RLDP will contain sufficient policies to provide the basis for determining planning applications. However, Supplementary Planning Guidance (SPG) has an important supporting role in providing more detailed or site-specific guidance on the way in which RLDP policies will be applied. While SPG does not form part of a development plan it should be derived from and be consistent with the relevant LDP. The SPG should also be clearly cross referenced to the policies and proposals it supplements.

- 2.13 Since the adoption of the current Adopted LDP, a total of nine Supplementary Planning Guidance documents and one Planning Advice Note have been prepared and adopted to support existing LDP policies. The SPG cover the following topic areas:

- Green Infrastructure, April 2015
- Conversion of Agricultural Buildings Design Guide SPG April, 2015
- LDP Policies H5 & H6 Replacement Dwellings in the Open Countryside and Extension of Rural Dwellings SPG, April 2015
- Affordable Housing SPG, July 2019
- Renewable Energy and Energy Efficiency SPG, March 2016
- Primary Shopping Frontages Supplementary Planning Guidance, April 2016
- Sustainable Tourism Accommodation SPG, November 2017

- Rural Conversions to Residential or Tourism Use, November 2017
- Infill Development SPG, November 2019
- Planning Advice Note – Archaeology, August 2020
- Conservation Area Appraisals (to date 18 appraisals have been approved as Supplementary Planning Guidance).

2.14 It is anticipated that many of the SPG topics listed above will continue to be necessary and relevant, and will be updated to support the RLDP, and/or the updated evidence base.

2.15 For example it is recognised that updated viability testing is essential to inform the RLDP which could result in changes to existing policy, particularly affordable housing. Accordingly, the Affordable Housing SPG will need to be revised to reflect such changes. It is anticipated that this will be revised alongside the preparation of the RLDP. It should nevertheless be noted that SPG to the RLDP cannot be formally adopted until after the Inspector’s Report has been received and it is clear that there are no changes to the policy approach set out in the Replacement Plan. Of note, most new/additional SPG will not be prepared or consulted on in parallel with the RLDP, primarily due to the challenging timescales associated with Plan preparation.

Monitoring and Review

2.16 The Council will continue to monitor and regularly review progress of the RLDP against the requirements of the Delivery Agreement to ensure the timetable is being adhered to and the public engagement as set out in the CIS is being met. As noted above, the timetable allows for a marginal degree of flexibility, however, any significant amendments to the DA will require approval by the Council prior to Welsh Government agreement. The DA may need to be amended if the following circumstances, which are beyond the LPA’s control, occur:

- Significant change to the resources available to undertake the preparation of the RLDP.
- Preparation of the RLDP falls behind schedule by more than 3 months at a key stage.
- Significant changes to European, UK or Welsh legislation directly affecting the RLDP preparation process.
- Any other change in circumstances that will materially affect the delivery of the RLDP in accordance with the DA.
- Significant changes to the Community Involvement Scheme.

2.17 Given the unavoidable delays incurred during the Plan preparation process to date (as detailed above), the Delivery Agreement timetable has been further revised to reflect a more realistic timescale for future key stages of the RLDP process.

2.18 An updated timetable will be submitted to the Welsh Government following the Deposit stage. This will provide certainty of the timescales for the remaining stages (i.e. replacing indicative stages with definitive stages).

3.0 Community Involvement Scheme

- 3.1 The Community Involvement Scheme sets out how the Council proposes to proactively involve the community and stakeholders in the preparation of the RLDP. While ultimately it is the Council that is responsible for the content of the RLDP, one of the aims of the LDP system is that Plan production is based on effective community involvement in order that a range of views can be considered as part of a process of building a wide consensus on the Plan's strategy and policies. The five ways of working prescribed by the Well-Being of Future Generations (Wales) Act are integral to the CIS, namely long-term, integration, involvement, collaboration and prevention. The CIS describes the ways in which the community can influence the RLDP at the different stages of the Plan preparation process.
- 3.2 Monmouthshire County Council's core purpose of becoming a zero-carbon county, supporting well-being, health and dignity for everyone at every stage of life⁹ is intrinsically linked to land use Planning and is therefore key to the delivery of the RLDP. Accordingly, the CIS is based on Monmouthshire County Council's five values; openness, fairness, flexibility, teamwork and kindness.

Openness. *We are open and honest. People have the chance to get involved in decisions that affect them, tell us what matters and do things for themselves/their communities. If we cannot do something to help, we'll say so; if it will take a while to get the answer we'll explain why; if we can't answer immediately we'll try to connect you to the people who can help – building trust and engagement is a key foundation.*

Fairness. *We provide fair chances, to help people and communities thrive. If something does not seem fair, we will listen and help explain why. We will always try to treat everyone fairly and consistently. We cannot always make everyone happy, but will commit to listening and explaining why we did what we did.*

Flexibility. *We will continue to change and be flexible to enable delivery of the most effective and efficient services. This means a genuine commitment to working with everyone to embrace new ways of working.*

Teamwork. *We will work with you and our partners to support and inspire everyone 'fixers' or problem-solvers, but we will make the best of the ideas, assets and resources available to make sure we do the things that most positively impact our people and places.*

Kindness: *We will show kindness to all those we work with putting the importance of relationships and the connections we have with one another at the heart of all interactions.*

⁹ The Community and Corporate Plan 2022 sets out the Council's core purpose, principles, and priorities

3.3 Monmouthshire County Council is also committed to ensuring the ten national principles for public engagement in Wales are utilised. Public engagement in the preparation of the RLDP will take place in accordance with the guidelines set out in the CIS. The Council recognise that engagement must be designed to make a difference. The main objectives for involving the community in the RLDP preparation process can be identified as:

- To involve people at the earliest opportunity, in time to shape Plan preparation work
- That consultation takes place before decisions are made and that such decisions are made in an open and transparent manner
- To provide an accessible consultation process and adapt this as necessary to account for individual needs
- To encourage and enable everyone with the opportunity to be involved, if they so choose
- Adopt alternative approaches to ensure seldom heard groups are involved from the outset
- Draw on local knowledge to improve decision making and help the realistic implementation of decisions
- That the planning system should help implement the community's vision for the area
- To seek consensus and strengthen community involvement
- To engage as full a spectrum of the community as possible in strategic issues
- To provide two way dialogue by responding to and publishing comments received at formal consultation stages (Preferred Strategy and Deposit) in a report of consultation.

Welsh Language and Bilingual engagement

3.4 The Welsh Language Standards place a legal duty on Councils to make it easier for people to use services through the medium of Welsh. The Council has published a Welsh Language Strategy for 2022 - 2027; the requirements of both the corporate strategy and Welsh Language Standards will be maintained at each stage of the RLDP. Bilingual engagement will be carried out in the following ways:

- We welcome correspondence in both Welsh and English. Where correspondence is received in Welsh and a reply is necessary, this will be sent in Welsh.
- All comments forms, public notices (including site notices) and Easy Read documents will be bilingual. Stakeholders on the RLDP database will be sent RLDP correspondence in their preferred language.
- Any pages on the Replacement Local Development Plan website and social media posts will be bilingual.
- Any public meetings will be conducted bilingually where a request has been made ahead of time. Prior notification is required in order to provide a translation service.

- Draft RLDP documents can be made available in Welsh if requested. The Adopted RLDP will be available in both Welsh and English format.

How will we involve you?

3.5 We will seek to publicise the RLDP process at every stage and reach as much of the community as possible, as well as other stakeholders, to advise people about the RLDP and how they can get involved. This will be done by:

- Direct contact with statutory consultees and those stakeholders who have asked to be included on the RLDP database (1000+ contacts) (contact and language preference are as indicated by the stakeholder through consultation).
- Through use of social media platforms including via Monmouthshire County Council's X and Facebook accounts.
- Engagement with Members through specific workshops, Member drop-in sessions and in reports to appropriate Council meetings.
- Engagement with Town and Community Councils
- All RLDP information and documents will be made available on the Council's website, which will be updated regularly.
- Deposit of documents at the Council's headquarters and Community Hubs where possible¹⁰.
- Press releases for the local media, where appropriate.
- Producing Easy Read summary documents for key stages of the RLDP process.
- Public information exhibitions, engagement sessions ('drop-in sessions') and meetings in accessible and neutral locations.
- Virtual engagement and consultation via web based technological tools.
- Site notices will be displayed regarding proposed land allocations at Deposit stage and letters will be sent to adjacent properties (excluding Candidate Sites submitted as these relate to submissions for consideration rather than proposals).

Who will we involve?

Individuals who have registered an interest through the RLDP Database

3.6 A database has been maintained to include members of the public, interested persons and any individual organisations who have requested to be kept informed at each stage of the RLDP process. The primary purpose of this database is to allow for those who are not included on the Welsh Government list of consultees for Local Development Plans to be involved and informed throughout the RLDP process. Anyone can request for their details to be included on the database. Anyone who makes representations at any of the stages of RLDP process will be automatically added to the database in order for them to receive updates on progress and allow

¹⁰ If some of these venues are temporarily closed during a consultation period we will endeavour to identify alternative outlets and communicate this to all stakeholders via the means set out here.

them to be adequately informed of further opportunities to participate at a later date. It should be noted that the General Data Protection Regulation (GDPR) came into force in May 2018. By commenting on the RLDP, individuals and stakeholders give their consent for their details to be held by the Council throughout the RLDP process and for a period of 6 years following adoption.

- 3.7 If you wish for your details to be added to the RLDP database, please contact the Planning Policy Team by email, phone or in writing using the contact details as set out in paragraph 3.28.

County Councillors

- 3.8 It is recognised that the involvement of Members of Monmouthshire County Council throughout the RLDP preparation will be of key importance. Members have a unique position as not only do they represent the communities within their individual ward, they also represent public interest and are involved in decisions for the wider benefit of the County as a whole. Accordingly, Members will play an essential role in the RLDP process by providing information to local residents, informing us of issues/opportunities within their local area and more fundamentally making decisions on matters affecting the Monmouthshire area as a whole.
- 3.9 The Cabinet Member for Planning and Economic Development, Deputy Leader has responsibility for Planning policy, including the RLDP. Liaison with the Cabinet Member and all other Members is essential throughout the process. All-Member workshops will be held when deemed necessary, particularly at key stages of the RLDP including but not limited to; the Growth and Spatial Options, Preferred Strategy, Deposit RLDP and at Adoption. Topic-specific Member workshops will also be held throughout the Plan preparation process. Key stages of Plan preparation will go to the Place Scrutiny Committee for pre-decision scrutiny. Members will be fully informed throughout the process and notified prior to every participation/consultation stage.

Town and Community Councils

- 3.10 Town and Community Councils also play a key role in disseminating information to the residents within their area on matters of local importance and will be a key link to communities across Monmouthshire. Town and Community Councils will be consulted at every stage of the RLDP process and through their individual communication methods will help raise awareness of the RLDP to local communities. They also have the ability to provide up to date local information, opinions on any proposals within their areas and more importantly are able to provide detail of any land use based aspirations they have for their community.

Partnership Groups

- 3.11 Existing partnership groups are seen as an important means of engaging the wider community in the preparation of the RLDP, particularly in the early stages of public participation when structured discussion is desirable.
- 3.12 Liaison with the Gwent Public Service Board and partners will be of particular importance to ensure the RLDP aligns with the Gwent PSB Well-being Plan. We will also work closely with the Council's Community Development Team who operate as a bridging mechanism between partners, Town & Community Councils and the community. The Community Development Team is also central to the delivery of the PSB Gwent Wellbeing Plan.

Members of the Public, Businesses, Land Owners, Developers and Agents

- 3.13 As outlined previously extensive engagement will be undertaken at each key stage of the RLDP process. Efforts will be made to engage with the business community at an early stage which could be achieved through liaison with the individual Chambers of Commerce across the County. We will also engage with planning agents who are regular customers of Monmouthshire's Planning Service. As noted above, anyone can request for their details to be included on the RLDP database. Landowners, agents and prospective developers who wish to put land forward to be considered for development will therefore also be included on the RLDP database.
- 3.14 The Candidate Site process provided the opportunity for those who have an interest in land to submit sites to be considered for development. A common methodology has been established across the South East Wales region for local planning authorities to utilise for their respective RLDPs. Reflecting this, we adopted a two-stage Call for Candidate Sites. The Initial Call for Candidate Sites took place over a 16-week period from the 30th July 2018 to 19th November 2018. The Second Call for Candidate Sites took between 5th July 2021 to 31st August 2021, alongside consultation on the 2021 Preferred Strategy. The dates for these calls for site were advertised extensively using the methods set out above. This ensured submissions were made at the appropriate time.

Additional Consultation Bodies

- 3.15 Appendix 1 provides a list of the specific and general consultation bodies along with UK Government departments and other consultees. The specific consultees¹¹ comprise of the Welsh Government and those bodies with specific functions that apply to the revised Plan area, for example the Aneurin Bevan Health Board who cover the Monmouthshire area and Dŵr Cymru Welsh Water, the local water undertaker. The Authority must also consult UK Government Departments where aspects of the Plan appear to affect their interests. These consultation bodies will be engaged throughout the RLDP process at each of the formal stages and informally, as appropriate.

¹¹ As defined in LDP Regulation 2. Full list provided in Appendix 1.

Seldom Heard Groups

- 3.16 Seldom heard groups are those who have not traditionally taken part or been included in the Plan preparation process. Additional effort will therefore be required to ensure these groups are engaged in the RLDP process. A flexible approach will need to be undertaken in relation to engagement with these groups, albeit within the parameters of the specified participation/consultation periods. Engagement with these groups may be achieved by using existing partnerships and groups wherever possible. It is nevertheless recognised that the very principle of a seldom heard group is that they may not be involved in existing groups and that this may not therefore always be achievable. Trusted intermediaries will also be used, as appropriate, in order to gain the views of particular groups of people who do not have the confidence to engage directly in the process.
- 3.17 The following groups are identified as not having been sufficiently engaged in Plan preparation previously and will subsequently be actively encouraged to participate in the RLDP process:
- Young People – Monmouthshire Youth Council¹² will be invited to participate as appropriate in the RLDP process. This will ensure the voices of young people are heard and enable young people to share their views on a wide range of issues that they consider important to them and their local area.
 - Disabled People – we will seek to engage with an appropriate stakeholder group(s) at relevant stages, in order to gain the views of those living with disabilities in Monmouthshire. We understand that the Access for All forum has been disbanded but we will seek input from relevant stakeholders to offer an opportunity for people with disabilities to influence the policies and decisions that affect them.
 - Gypsy and Travellers – we will seek to engage with an appropriate stakeholder group(s) at relevant stages to ensure the Gypsy and Traveller community are engaged. Work has been undertaken via the People Scrutiny Committee and led by the Council’s Housing team to identify sites for inclusion in the RLDP to meet the County’s identified site need. This work includes Gypsy and Traveller community representatives.
- 3.18 In addition to the above groups, there are other seldom heard voices who are considered to have been under-represented previously in LDP preparation. This includes (but is not exclusive to) those seeking affordable housing in the County, small house-builders and small and medium-sized enterprises. Accordingly, we will endeavour to reach out to these groups by utilising existing mutual points of contact wherever possible.

¹² Youth Workers and pupils from King Henry VIII School, Caldicot School, Chepstow School and Monmouth School

What we expect from you

- 3.19 In order to ensure any comments and representations on the RLDP are considered, they must be submitted within the prescribed timescales. The Delivery Agreement sets out the timetable of relevant stages and provides a guideline of when we will seek your involvement. This will ensure that individual views are considered and taken into account throughout the RLDP preparation process.
- 3.20 It is also of **importance that stakeholders notify the Planning Policy team should their contact details change during the RLDP process** in order for us to keep them fully informed of progress. With regard to Candidate Sites, it is noted that land ownership changes may also occur during the process and it is imperative that these are communicated to the Planning Policy team in order to ensure progress is not delayed.

Building Consensus

- 3.21 The Council will seek to build consensus through the various engagement and consultation methods set out within the CIS. Consensus building can only be achieved if the community and other interested parties are kept fully informed and effectively engaged throughout the preparation of the RLDP, which will be of particular importance in the early stages of Plan preparation. Elected Member support is essential in achieving this. It is nevertheless recognised that there will be occasions where consensus cannot be achieved and a difference in opinion between certain parties occurs. A clear audit trail of decisions will be maintained in order to ensure that there is transparency in the decision making process, and, to provide assurances to those that disagree that the decisions have been made in an informed and balanced way. However, decisions made will not be revisited via subsequent consultation opportunities, so participants are requested to focus their input on the matter being considered at that stage.

Late representations

- 3.22 Responses are required by the specified deadline of the specific consultation period in order for them to be considered. Any late comments/representations will not be logged as 'duly made' as they were not made in accordance with the published timescales. There may be exceptional circumstances where a representation is submitted late and it will be at the Council's discretion as to whether such late representations can be accepted. Evidence will be required to highlight why the representation was delayed and that a genuine attempt was made to submit within the prescribed deadline. The timescale to produce the RLDP continues to be challenging, the acceptance of late representations could result in further delay which would not be acceptable.

Availability of Documents

- 3.23 The RLDP documents will be made available at each of the relevant stages. All documents will be available electronically on the Planning Policy pages of the Council's

website at <http://www.monmouthshire.gov.uk/Planning-policy>. Public access computers are available at our Community Hubs listed below.

3.24 In addition to online availability, key documents will also be available in paper copies in the following locations:

- Planning Reception, Monmouthshire County Council, County Hall, The Rhadyr, Usk, NP15 1GA (open to the public Monday to Thursday)
- Abergavenny Community Hub, Town Hall, Cross Street, Abergavenny, NP7 5EU
- Caldicot Community Hub, Woodstock Way, Caldicot, NP26 5DB
- Chepstow Community Hub, Manor Way, Chepstow, NP16 5HZ
- Monmouth Community Hub, Rolls Hall, Whitecross Street, Monmouth, NP15 3BY
- Usk Community Hub, 35 Maryport Street, Usk, NP15 1AE
- Gilwern Library, Common Road, Gilwern, NP7 0DS

3.25 Other than in exceptional circumstances, paper copies of documents will not be sent out during the RLDP process as they will be made publicly available in the locations listed above, as well as being made available electronically. Exceptional circumstances will be assessed on a case by case basis depending on the specific needs of the relevant individual. If one of the buildings listed above is temporarily closed during a consultation period, we will endeavour to identify alternative outlets and communicate this to all stakeholders. Where alternative outlets are not available, we will seek to provide information to stakeholders via electronic means.

Timetable and proposed Methods of Engagement

- 3.26 The following table sets out the detailed timetable for community engagement and the proposed engagement methods for the key stages in the RLDP preparation process. The list is not exhaustive and may be adapted to ensure the community and stakeholders are suitably involved at each stage. The proposed methods of engagement will vary dependent on the stage of Plan preparation, subject matter, preference of those involved and the resources available at the time, recognising that the proposed timetable and methods should not hinder Plan preparation.
- 3.27 Further details on the precise nature of the consultation and engagement arrangements for future key consultation stages will be detailed on the Planning Policy website and in future correspondence to all those on the RDLP database prior to the start of any consultation process. A mixture of public events and virtual engagement mechanisms will be utilised throughout the remainder of the Plan preparation process.

Table 3 - Community Involvement Timetable and Proposed Methods of Engagement

Definitive Stage: Delivery Agreement						
Summary of key steps	ISA/SEA & HRA	Who will be involved	Methods of engagement	Outcome	Type of reporting required	LDP Regulations

Appendix 1 – List of Consultation Bodies

The Council will consult the following specific consultation bodies at all stages in the preparation of the RLDP.

Specific Consultation Bodies¹³ (including UK Government Departments):

- Welsh Government (Planning division will co-ordinate consultations)
- Natural Resources Wales
- Network Rail
- Office of Secretary of State for Wales
- Telecommunication Operators - EE, Vodaphone and O2, Openreach, Virgin Media
- Aneurin Bevan Health Board
- Gas and Electricity Licencees - National Grid, Wales & West Utilities
- Sewerage and Water undertakers – Dŵr Cymru Welsh Water
- Department for Transport (including Secretary of State for functions previously exercised by the Strategic Rail Authority)
- UK Government Departments- Department of Business, Energy and Industrial Strategy
- Home Office
- Ministry of Defence

Neighbouring local authorities:

- Blaenau Gwent County Borough Council
- Bannua Brycheiniog National Park Authority
- Bristol City Council
- Cardiff Capital Region and, once established, the Corporate Joint Committees
- Forest of Dean District Council
- Gloucestershire County Council
- Herefordshire County Council
- Newport City Council
- Powys County Council
- South Gloucestershire Council
- Torfaen County Borough Council

Town and Community Councils in the Monmouthshire area:

- Abergavenny Town Council
- Caerwent Community Council
- Caldicot Town Council
- Chepstow Town Council
- Crucorney Community Council
- Devauden Community Council
- Gobion Fawr Community Council
- Goetre Fawr Community Council
- Grosmont Community Council
- Llanarth Fawr Community Council
- Llanbadoc Community Council

¹³ As defined in LDP Regulation 2.

- Llanelly Community Council
- Llanfoist Fawr Community Council
- Llangybi Fawr Community Council
- Llantilio Pertholey Community Council
- Llantrisant Fawr Community Council
- Magor with Undy Town Council
- Mathern Community Council
- Mitchel Troy United Community Council
- Monmouth Town Council
- Portskewett Community Council
- Raglan Community Council
- Rogiet Community Council
- Shirenewton Community Council
- Skenfrith Community Council
- St Arvans Community Council
- Trellech United Community Council
- Usk Town Council
- Whitecastle Community Council
- Wye Valley Community Council

General Consultation Bodies

The Council will consult the following general consultation bodies, where appropriate, in accordance with this Delivery Agreement. This list is not exhaustive and may be added to as appropriate:

(i) Voluntary bodies whose activities benefit any part of the authority's area, including:

- Age Concern Gwent
- Sight Cymru (formerly known as Gwent Association for the Blind and Sight Support)
- Gwent Association of Voluntary Organisations Monmouthshire (GAVO)
- Gwent Wildlife Trust
- Royal Voluntary Service (RVS)

(ii) Bodies representing the interests of different racial, ethnic or national groups in the authority's area, including:

- Citizen's Advice Cymru
- Ethnic Minority Foundation
- Friends, Families and Travellers
- Travelling Ahead TGP Cymru

(iii) Bodies which represent the interests of different religious groups in the authority's area, including.

- The Representative Body of the Church in Wales

(iv) Bodies which represent the interests of disabled persons in the authority's area.

- Downs Syndrome Association

- Sight Cymru (formerly known as Gwent Association for the Blind and Sight Support)
- Mencap Cymru
- Mind Cymru
- Royal National Institute for Deaf People
- Wales Council for Deaf People
- Wales Council for the Blind
- Disability Wales

(v) Bodies which represent the interests of persons carrying on business in the authority's area, including.

- Abergavenny Community Enterprise Partnership
- Renewable UK (formerly known as British Wind Energy Association)
- Confederation of British Industry (Wales)
- Homemakers Community Recycling
- South East Wales Energy Agency
- Viridor Waste Management

(vi) Bodies which represent the interests of Welsh culture in the authority's area, including.

- Cadw
- Glamorgan Gwent Archaeological Trust Ltd
- Royal Commission on Ancient and Historic Monuments
- Mentrau Iaith Cymru

Other Consultees

The Council will consult the following other consultees, where appropriate, in accordance with the Delivery Agreement. This list is not exhaustive and may be added to as appropriate:

- Abergavenny Local History Society
- Abergavenny Transition Town
- Arriva Trains Wales
- British Aggregates Association
- British Geological Survey
- Business Wales (South Wales Regional Centre)
- Campaign for Real Ale (Camra)
- Campaign for the Protection of Rural Wales (CPRW)
- Caldicot Town Team
- Cardiff Capital Region City Deal
- Chambers of Trade & Commerce – Abergavenny, Chepstow, Monmouth and Usk
- Charter Housing Association
- Chartered Institution of Waste Management Wales
- Chepstow Society
- Civic Societies – Abergavenny & District, Monmouth and Usk
- Community Land Advisory Service Cymru (CLAS)
- Country Landowners and Business Association Cymru (CLA)

- Design Commission for Wales
- Disability Advice Project
- Disability Rights Commission Wales
- Disability Wales
- Disabled Persons Transport Advisory Committee
- Energy Saving Trust Wales
- Farmers Union of Wales (FUW)
- Federation of Master Builders Cymru
- Federation of Small Businesses in Wales
- Fields in Trust
- Friends of the Earth – Abergavenny & Crickhowell and Chepstow
- Gwent Badger Group
- Gwent Police
- Gwent Young Farmers Clubs
- Health and Safety Executive (Wales)
- Home Builders Federation
- Institute of Directors Wales
- Joint Council for Wales
- Llanarth Estate
- Llangybi Estate
- Llanover and Coldbrook Estate
- Logistics UK (formerly known as the Freight Transport Association)
- Member of Parliament for Monmouth
- Member of Parliament for Newport East
- Member of Senedd for Monmouth
- Member of Senedd for Newport East
- Magor with Undy Sports and Leisure Association
- Mineral Products Association
- Monmouth Archaeological Society
- Monmouth, Brecon and Abergavenny Canals Trust
- National Air Traffic Services
- National Farmers Union Cymru (NFU)
- National Trust
- National Health Service (NHS) Wales
- Newport Harbour Commissioners
- One Voice Wales
- Open Spaces Society
- Planning Aid Wales
- POBL (formerly known as Charter Housing Association)
- Pontypool Park Estate Office
- Public Health Wales
- Rail Freight Group
- Ramblers Cymru
- RSPB Cymru

- Rural Housing Enabler
- Shelter Cymru
- Society for the Protection of Ancient Buildings
- South Wales Fire and Rescue Service
- Sports Council for Wales
- Sustrans Cymru
- The Canal and River Trust
- The Chepstow Society
- The Coal Authority
- The National Library of Wales
- PEDW
- The Theatres Trust
- Transition Chepstow
- Transition Monmouth
- Transport for Wales (TfW)
- Wales Co-operative Centre
- Wales Council for Voluntary Action (WCVA)
- WEA Cymru (Adult Learning Wales)
- Wales Environment Link
- Welsh Environmental Services Association
- Welsh Historic Gardens Trust
- Welsh Language Commissioner
- Woodland Trust Wales (Coed Cadw)
- Wye Valley National Landscape (AONB)
- Wye Valley Society

Appendix 3 – Risk Assessment

Issue	Potential Risk(s)	Mitigation	Probability and Impact
Gap in major applications coming forward until the RLDP is adopted.	While the 2020 Ministerial letter has confirmed that the Adopted LDP will remain in force until the RLDP is adopted, there will be a delay in major applications coming forward until RLDP adoption. This will impact on the Council’s ability to address/deliver the RLDP issues and objectives, including the demographic and affordability challenges facing the County, until the RLDP is adopted, and puts pressure on the deliverability of the housing and employment figures over the Plan period, with more reliance on delivery towards the end of the Plan period.	Progression of the RLDP in a timely manner will ensure that the Council has an adopted RLDP in place as soon as possible in 2025, minimising the negative implications associated with the delay in major applications coming forward.	<div style="background-color: #FFD700; padding: 5px; text-align: center;">Medium Likelihood</div> <div style="background-color: #FFD700; padding: 5px; text-align: center;">Medium Impact</div>
Objection from Welsh Government to the Preferred Strategy and/or Deposit Plan	Programme slippage	Collaboration with WG officials in accordance with WBFGA five ways of working.	<div style="background-color: #008000; padding: 5px; text-align: center;">Low Likelihood</div> <div style="background-color: #FF0000; padding: 5px; text-align: center;">High Impact</div>
	Programme slippage.		<div style="background-color: #FFD700; padding: 5px; text-align: center;">Medium Likelihood</div>

Issue	Potential Risk(s)	Mitigation	Probability and Impact
Change in staff resources available to assist with RLDP preparation.		Consider additional resources (including support from other sections within the Council) and ensure robust structure.	High Impact
Staff turnover in small team.	Programme slippage.	Ensure RLDP process maintains highest level corporate priority.	Medium Likelihood
			High Impact
Reduction and lack of financial resources.	Programme slippage. Delay in securing information required to progress Plan.	Ensure Plan preparation process is adequately costed with in-built capacity for unforeseen costs.	Medium Likelihood
			High Impact
Council decision making structure/ political reporting cycle.	Programme slippage.	Streamline decision-making procedures and ensure timetable is realistic.	Medium Likelihood
			Medium Impact
Political Change/ Elections.	Programme slippage.	Early Member training.	Low Likelihood

Issue	Potential Risk(s)	Mitigation	Probability and Impact
			Medium Impact
Lack of consensus throughout the organisation and/ or lack of support from officers/other departments in production of the evidence base.	Programme slippage.	Ensure organisation wide support of Plan process and timetable from outset.	Low Likelihood Medium Impact
Challenging timetable to prepare RLDP due to greater than anticipated workload (e.g. greater number of representations received, ISA/SEA/HRA requirements).	Programme slippage.	Realistic timetabling for each stage of Plan preparation, adequate resources and careful project management with adequate contingencies/flexibility. If appropriate reconsider timetable and resources.	High Likelihood High Impact

Issue	Potential Risk(s)	Mitigation	Probability and Impact
National Issues			
Additional requirements arising from the issue of new legislation and/or national guidance. e.g. general conformity with Future Wales, alignment with revised Planning Policy Wales and LDP Manual, revised TAN15, water quality.	Programme slippage.	Monitor emerging legislation/guidance; report and respond early to changes as necessary. Continued collaboration with key partners.	<div data-bbox="1850 376 2092 638">High Likelihood</div> <div data-bbox="1850 638 2092 778">High Impact</div>
Involvement in preparation of Strategic Development Plan (SDP)	Programme slippage. Resource implications, extent of input to the SDP currently unknown.	Ensure sufficient resources are available and corporate support of SDP process and timetable from outset.	<div data-bbox="1850 916 2092 1107">Medium Likelihood</div> <div data-bbox="1850 1107 2092 1278">Medium Impact</div>

Issue	Potential Risk(s)	Mitigation	Probability and Impact
Direction from Welsh Government Cabinet Secretary to prepare a Joint Plan.	Work on individual LDP to date would be abortive.	Cannot be mitigated, full justification of the Council’s approach to produce an individual Monmouthshire LDP has been provided.	<div data-bbox="1848 293 2092 488" style="background-color: #00b050; color: white; text-align: center; padding: 5px;">Low Likelihood</div> <div data-bbox="1848 488 2092 639" style="background-color: #ff0000; color: white; text-align: center; padding: 5px;">High Impact</div>
Ability of statutory consultees and/or PEDW to respond within set timescales.	<p>Programme slippage. Key milestones are not met.</p> <p>Examination and/or Receipt of Inspectors Report delayed.</p>	Maintain close liaison with statutory consultees and PEDW to ensure early identification of potential problems.	<div data-bbox="1848 639 2092 815" style="background-color: #ffcc00; text-align: center; padding: 5px;">Medium Likelihood</div> <div data-bbox="1848 815 2092 991" style="background-color: #ffcc00; text-align: center; padding: 5px;">Medium Impact</div>
Local Issues			
Insufficient information to undertake ISA/SEA.	Programme slippage.	<p>Identify expectations of consultation bodies.</p> <p>Consider additional resources.</p>	<div data-bbox="1848 1070 2092 1174" style="background-color: #00b050; color: white; text-align: center; padding: 5px;">Low Likelihood</div> <div data-bbox="1848 1174 2092 1294" style="background-color: #ffcc00; text-align: center; padding: 5px;">Medium Impact</div>

Issue	Potential Risk(s)	Mitigation	Probability and Impact
Large volume and /or highly significant levels of objection to proposals e.g. site allocations.	Programme slippage. Plan cannot be submitted for examination without significant work.	Ensure close liaison and early/continued involvement of the community, statutory bodies & stakeholders throughout the Plan preparation process.	Medium Likelihood
			Medium Impact
Review of RLDP resulting from a requirement to align with a Strategic Development Plan.	Programme slippage.	Ensure involvement in progress of regional work. Early response to potential local implications.	Low Likelihood
			Low Impact
Plan fails the test of 'soundness'.	Programme slippage. Part of the Plan is excluded or changed. Additional work needs to be carried out before the Plan can be adopted. The Plan could be withdrawn.	Ensure RLDP has a robust evidence base, properly subjected to ISA/HRA, with well audited community and stakeholder engagement.	Low Likelihood

Issue	Potential Risk(s)	Mitigation	Probability and Impact
		Maintain liaison with Welsh Government on preparation procedures.	High Impact
Legal Challenge.	Programme slippage. Adopted Plan quashed in whole or part. Additional work/time/ financial requirements.	Good knowledge of statutory requirements to ensure compliance.	Low Likelihood Medium Impact

Appendix 4 – Glossary of terms

Adopted Plan	The final version of the RLDP.
Adoption	The final stage of Local Development Plan preparation where the RLDP becomes the statutory development plan for the area it covers.
Annual Monitoring Report (AMR)	A yearly report to monitor the effectiveness of the RLDP and ultimately determines whether any revisions to the Plan are necessary. It assesses the extent to which the RLDP strategy and objectives are being achieved and whether the RLDP policies are functioning effectively.
Baseline	A description of the present state of an area.
Candidate Site	A site nominated by an individual with an interest in land (i.e. landowner, developer, agent or member of the public) to be considered for inclusion in the LDP. All Candidate Sites will be assessed for suitability for inclusion as potential allocations.
Community	People living in a defined geographical area, or who share other interests and therefore form communities of interest.
Community Involvement Scheme (CIS)	The Community Involvement Scheme forms part of the Delivery Agreement. It outlines the principles of engagement and provides detail on how the local planning authority will involve communities and stakeholders (including businesses and developers) in the preparation of the Local Development Plan.
Consensus Building	A process of dialogue with the community and other interested parties to understand relevant viewpoints and to seek agreement where possible.
Consultation	A formal process in which comments are invited on a particular topic or draft document usually within a defined time period.
Council	Monmouthshire County Council (excluding for planning purposes the Brecon Beacons National Park administrative area that falls within Monmouthshire).
Delivery Agreement (DA)	A document comprising the local planning authority's timetable for the preparation of a Local Development Plan, together with its Community Involvement Scheme, submitted to the Welsh Government for agreement.
Deposit Consultation	A formal stage in which individuals and organisations can make representations on the RLDP. Representations that relate to whether the Plan is 'sound' can then be examined by an Inspector.
Deposit Plan	This is a full draft of the RLDP which undergoes a formal consultation period prior to it being submitted to the Welsh Government for public examination.
Duly Made	Representations to the development plan which are made in the correct manner and within the specified consultation time period.

Engagement	A proactive process that seeks to encourage the involvement and participation of the community and other groups in the decision making process.
Evidence Base	Information and data that provides the basis for the preparation of the RLDP vision, objectives, policies and proposals and justifies the soundness of the policy approach of the LDP.
Examination	The examination involves public examination of the Deposit RLDP, the Deposit representations, the report of consultation, evidence base/background documents and the Integrated Sustainability Appraisal Report. This is carried out by the PEDW on behalf of the Welsh Government.
Habitats Regulations Assessment (HRA)	Habitats Regulations Assessment (HRA) relates to the assessment of the impacts of a Plan (or project) against the nature conservation objectives of European designated sites for any likely significant effects. HRA also ascertains whether the proposed Plan would adversely affect the integrity of the site.
Indicator	A measure of variables over time, often used to measure progress in the achievement of objectives, targets and policies.
Inspector's Report	The Report prepared by an independent Inspector who examines the RLDP. The Inspector's Report contains recommendations on the content of the final RLDP and is binding upon the Council. The Council must adopt the RLDP in the manner directed by the Inspector.
Involvement	Generic term relating to community involvement that includes both participation and consultation techniques.
Local Development Plan (LDP)	A land use plan which includes a vision, strategy, area wide policies for development types, land allocations, and policies and proposals for key areas of change and protection. Allocations and certain policies are shown geographically on the Proposals Map forming part of the Plan. The LDP is a statutory development plan that each local planning authority area is required to produce in Wales.
Local Planning Authority (LPA)	In the case of Monmouthshire, this is Monmouthshire County Council (excluding the Brecon Beacons National Park administrative area where the local planning authority is the National Park).
Monmouthshire County Council (MCC)	This is the name of the Local Planning Authority preparing the RLDP.
Objective	A statement of what is intended, specifying the desired direction of change in trends.
Participation	A process rather than a single event that provides opportunity for direct engagement with the community and stakeholders to input into decision making.

Partners	Other local authority departments and statutory bodies where the RLDP will help to deliver some of the objectives of their strategies. Partners may be expected to contribute in the formulation of relevant parts of the Plan.
Planning and Environment Decisions Wales (PEDW)	PEDW are an independent body who will be responsible for the formal examination of the RLDP.
Planning Policy Wales (PPW)	Planning policy guidance for Wales produced by the Welsh Government is set out in this document
Pre-Deposit	Stages of preparation and consultation of the RLDP before the Deposit Plan is finalised and approved by the Council.
Preferred Strategy	This sets out the broad strategic direction for the RLDP. This includes the preferred level of growth along with the spatial strategy for distributing the growth. It also includes the vision, issues and objectives of the Plan.
Press Releases	Sent to Welsh media, including newspapers, radio and television news stations as appropriate. Media may choose not to print or broadcast an item.
Regulation	Regulations are set out in Welsh Statutory Instruments. They provide the framework for the preparation of the RLDP.
Report of Consultation	A Consultation Report is one of the documents required to be submitted for independent examination. An initial consultation report is also required for the pre-deposit stage.
Representations	Comments received in relation to the RLDP, either in support of, or in opposition to.
Review Report	The Review Report provides an overview of the issues that have been considered as part of the full review process and identifies changes that are likely to be needed to the RLDP, based on evidence. It also sets out the type of revision procedure to be followed in revising the LDP.
Scoping	The process of deciding the scope and level of detail of an integrated sustainability appraisal (SA), including the sustainability effects and options which need to be considered, the assessment methods to be used and the structure and contents of the SA Report.
Soundness Tests	In order to adopt a RLDP it must be determined to be 'sound' by the Planning Inspector. The Tests of Soundness are set out in the Development Plans Manual (Edition 3, March 2020). There are three tests to make that judgement in relation to the Plan as a whole. A framework for assessing the soundness of LDPs has been developed by the Planning Inspectorate.
Stakeholders	People whose interests are directly affected by a RLDP (and/ or Integrated Sustainability Appraisal/ Strategic Environmental

	Assessment) and whose involvement is generally through representative bodies.
Strategic Environmental Assessment (SEA)	Generic term used internationally to describe environmental assessment as applied to policies, Plans and programmes. The European Strategic Environmental Assessment Directive (2001/42/EC) requires a formal “environmental assessment of certain Plans and programmes, including those in the field of planning and land use”.
Strategic Development Plan (SDP)	A Strategic Development Plan is a tool for regional planning to cover cross-boundary issues such as housing and transport. It will be prepared by a Strategic Planning Panel across a region. LPA’s must have regard to the SDP when developing their RLDPs.
Submission	When the RLDP, ISAR and HRA are formally submitted to the Welsh Government for independent examination by a Welsh Government appointed Inspector.
Supplementary Planning Guidance (SPG)	Provide more detailed or site specific guidance on the application of RLDP Policies. They provide supplementary information in respect of the policies in a LDP. SPG does not form part of the RLDP and is not subject to independent examination.
Integrated Sustainability Appraisal (ISA)	Tool for appraising policies, including LDPs, to ensure they reflect sustainable development objectives (i.e. social, environmental and economic factors). Each LPA is required by Section 62(6) of the Act to undertake SA of their Local Development Plan. This form of sustainability appraisal fully incorporates the requirements of the Strategic Environmental Assessment Directive.
Integrated Sustainability Appraisal Report (SAR)	A document required to be produced as part of the Integrated Sustainability Appraisal process to describe and appraise the likely significant effects on sustainability of implementing a LDP, which meets the requirements for the Environmental Report under the SEA Directive. Section 62(6) of the Act requires each LPA to prepare a report of the findings of the SA of the LDP. It is an integral part of the development Plan making process.
Timetable	Sets out the dates by which key stages and processes of RLDP preparation are expected to be completed. These are definitive for stages up to the deposit of the RLDP and indicative for the remaining stages after.
Well-being of Future Generations (Wales) Act (2015)	The Well-being of Future Generations (Wales) Act 2015 is legislation that requires public bodies, such as local authorities, to put long term sustainability at the forefront of their thinking to make a difference to lives of people in Wales. Local authorities must work towards the seven well-being goals and enact the five ways of working set out in the Act.

Replacement Local Development Plan 2018-2033

Deposit Plan - Summary
October 2024

Page 485

What is the Replacement Local Development Plan (RLDP)?

Land for Homes and Jobs and Protecting our Environment

Monmouthshire County Council is preparing a Replacement Local Development Plan (RLDP) for the period from 2018-2033. The RLDP will allocate land for sustainable development, designate land for protection and contain policies to provide the basis for decisions on planning applications. It will cover the whole county except for the area within the Bannau Brecheiniog National Park (BBNP).

It supports the delivery of the Council's core purposes of becoming a net zero carbon county, supporting well-being, health and dignity for everyone at every stage of life.

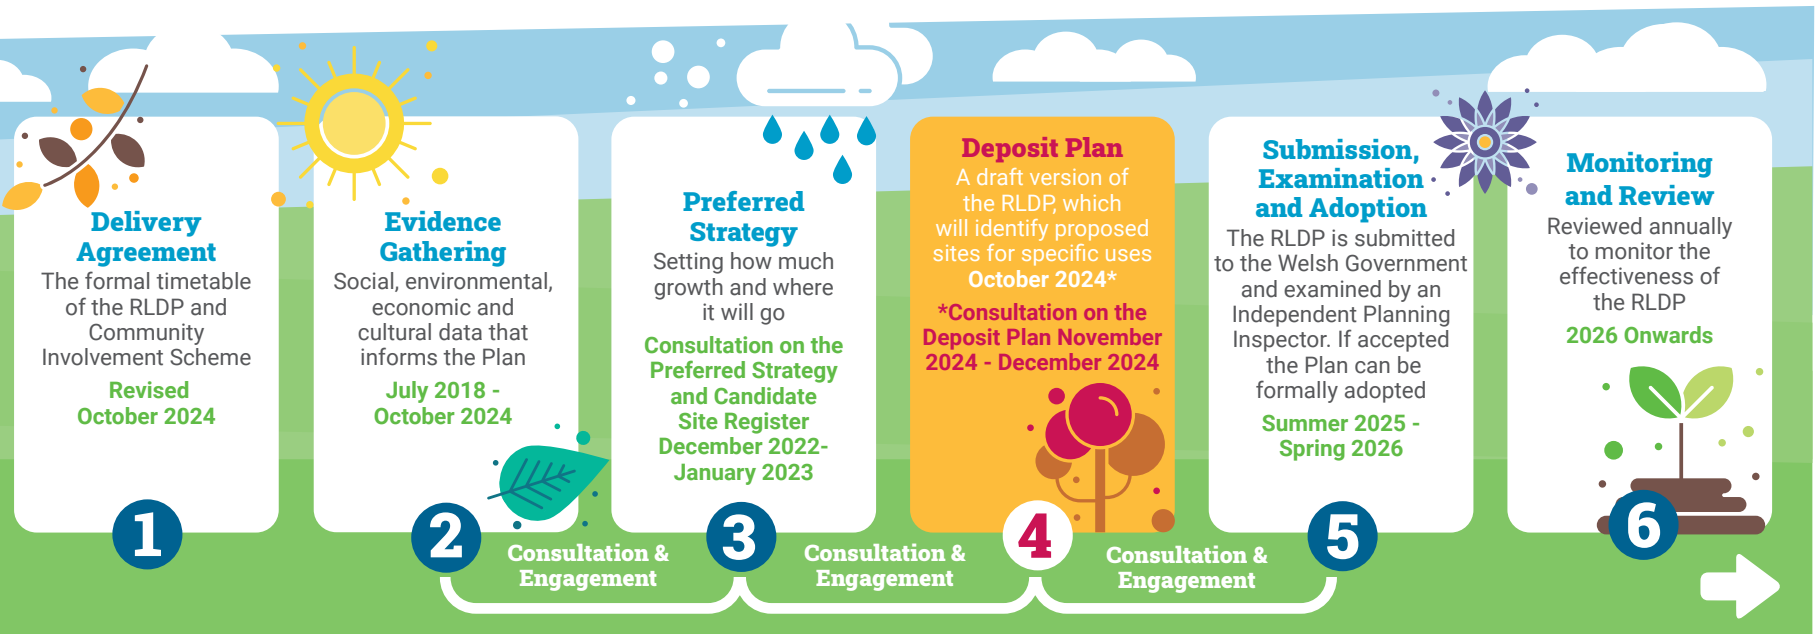

It will assist in delivering the Council's core objectives and addressing the core issues of:

- Providing essential **affordable homes** at pace and scale.
- Responding to the **climate emergency** by delivering net zero carbon homes in exemplar well connected places.
- Responding to the **nature emergency** with policies that protect and enhance Monmouthshire's special environment and biodiversity.
- Ensuring **communities are socially and economically sustainable** by attracting and retaining younger people to rebalance our ageing demographic.
- Supporting our **economic prosperity** by providing a range of good quality employment land opportunities to encourage business growth and attract inward investment.

The RLDP Process:

Preparing the RLDP is a step-by-step process. We are currently in the Deposit Plan stage of the process.

These are the key steps to the RLDP:

What is the Deposit Plan?

The Deposit Plan is a key stage in the preparation of the RLDP. It progresses the evidence gathering and stakeholder engagement undertaken to date and sets out the strategy, proposals and detailed policies for the future use and development of land in Monmouthshire from 2018-2033.

The Deposit RLDP is accompanied by the following maps:

Proposals Map: This illustrates the geographical location and extent of the site-specific development and protection that are designated in the RLDP.

Constraints Map: This shows the geographical location and extent of development constraints created by legislation outside of the development plan process, for example,

Scheduled Ancient Monuments, flood plains and Sites of Special Scientific Interest (SSSI). Although this does not form part of the RLDP, regard must be given to the constraints map when considering development proposals. The Constraints Map includes designations made by statutory bodies other than the Council and will be updated as necessary.

The Deposit RLDP will be supported by two independent assessments:

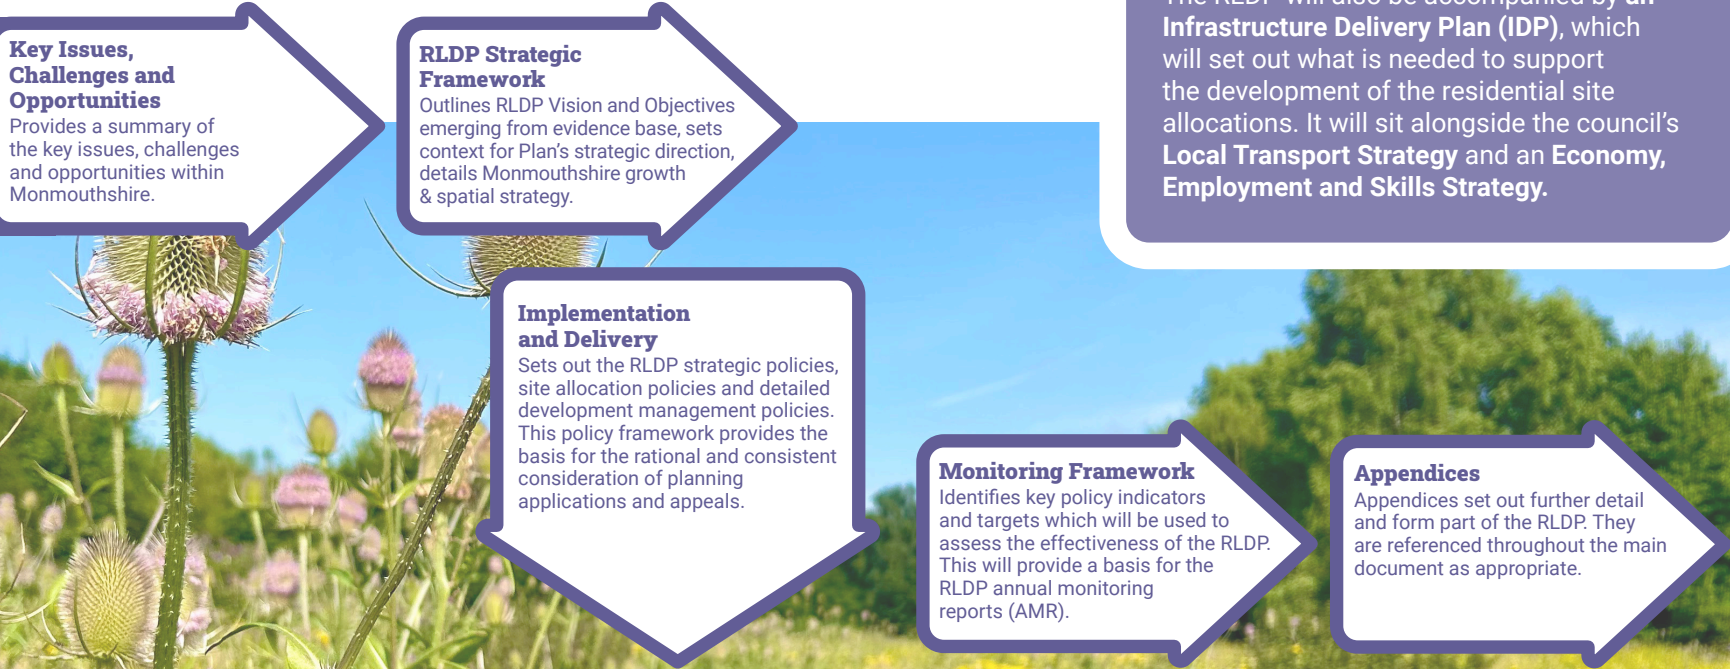

Integrated Sustainable Appraisal (ISA): assesses the extent to which the Plan's strategy and policies will help achieve the wider environmental, economic, social and cultural objectives of the RLDP. The ISA also assesses the Plan's impact on health, equality and the Welsh Language..

Habitats Regulations Assessment (HRA): assesses whether the Plan proposals would have any significant adverse effects on designated sites, including Special Areas of Conservation (SACs) and Special Protection Areas (SPAs).

The RLDP will also be accompanied by an **Infrastructure Delivery Plan (IDP)**, which will set out what is needed to support the development of the residential site allocations. It will sit alongside the council's **Local Transport Strategy** and an **Economy, Employment and Skills Strategy**.

Page 487

The Deposit Plan consists of a written statement detailing the strategy, proposals and policies, along with a proposals map on a geographical base. Its structure and format is as follows:

Our Key Issues, Challenges and Opportunities

To assist in delivering the council's core purpose of becoming a net zero carbon county, supporting well-being, health and dignity for everyone at every stage of life, a number of key issues and challenges have been identified.

1. Delivering essential affordable homes at pace and scale with exemplar well connected places for both existing and future residents.

2. Responding to our climate and nature emergency with policies requiring new homes to be net zero carbon, and supportive policy framework to incorporate renewable energy generation and technologies where appropriate. The Plan also includes protection policies that safeguard and enhance Monmouthshire's unique environment.

3. Ensuring our communities are socially and economically sustainable by providing accessible places to live and work and a choice and range of homes to retain and attract younger people and rebalance our ageing demography.

4. Support our economic prosperity by providing a range of good quality employment land opportunities to encourage business growth and attract inward investment. The Plan also includes supportive policy frameworks for our agricultural, tourism and retail economies.

Lack of affordable housing:
There are **2,064 households in housing need**
(MCC Local Housing Market Assessment Refresh 2022-2037)

Opportunities associated with the removal of Severn Bridge tolls, Cardiff Capital Region City Deal and South East Wales Metro

High level of out commuting:
Net out commute of some **2,800 residents**
(ONS 2021 annual population survey)

The need to tackle climate change, carbon reduction and pollution
MCC passed a motion to tackle climate change in May 2019
We have an urgent need to tackle water quality and phosphate pollution in our rivers

The ageing population and relative absence of 20-40 year olds which impact our economic base and future economic prospects

High average house prices: £400,496
(based on sales and valuations October 2023 - March 2024)

The protection of our landscapes and heritage that make Monmouthshire a unique, special and attractive place to live

The challenges of rural isolation and sustaining rural communities

Our Vision for Monmouthshire

By 2033, Monmouthshire will be home to well-connected, exemplar affordable housing-led, net zero carbon places that provide employment and support demographically balanced sustainable and resilient communities for all, where:

Page 489

Communities

People live in inclusive, equal, safe, cohesive, prosperous and vibrant communities. Urban and rural areas are well-connected and have better access to local services, facilities, open spaces and employment opportunities.

Economy

Communities and businesses are part of an economically thriving, ambitious and well-connected county.

Environment

The best of the county's built heritage, countryside, biodiversity, landscape and environmental assets have been protected and enhanced to retain its distinctive character.

Connected

People enjoy healthier, more sustainable lifestyles with improved access to public transport and active travel opportunities and have a minimised impact on the global environment, supporting our ambitions for a zero carbon county.

What goals do we need to set to achieve Our Vision?

Aspirational yet achievable objectives for the RLDP have been set to meet our key issues, and deliver the vision.

Housing

To provide urgently needed affordable housing within exemplar, mixed, sustainable and well-connected places for both existing and future residents.

Demography

To increase opportunities for the younger population to live and work within Monmouthshire, creating a more balanced demography and socially and economically sustainable communities.

Climate and Nature Emergency

To strive to limit the increase in global temperatures to 1.5°C, supporting carbon reduction through a variety of adaptation measures including, facilitating resilient ecosystems and nature recovery, the use of renewable energy, net zero carbon homes, the design and location of new development, encouraging balanced job and population growth to reduce out commuting, the provision of broadband connectivity to reduce the need to travel, the provision of ultra-low emission vehicle charging infrastructure to reduce emissions and improve air quality, and the provision of quality green infrastructure.

Green Infrastructure, Biodiversity & Landscape

To protect, enhance and manage the resilience of Monmouthshire's natural environment, biodiversity and ecosystems and the connectivity between them, while at the same time maximising benefits for the economy, tourism, health and well-being. This includes the Wye Valley National Landscape (AONB), the county's other high quality and distinctive landscapes, protected sites, protected species and other biodiversity interests.

Economic growth/employment

To support a thriving, well-connected, diverse economy, which provides a range of good quality employment opportunities to enable and encourage indigenous business growth and attract inward investment and competitive innovative businesses, including the provision of start-ups and grow on spaces.

Our core underpinning objectives are:

- 
1. Delivering essential affordable homes at pace and scale with exemplar well connected places for both existing and future residents.
- 
2. Responding to our climate and nature emergency with policies requiring new homes to be net zero carbon, and supportive policy framework to incorporate renewable energy generation and technologies where appropriate. The Plan also includes protection policies that safeguard and enhance Monmouthshire's unique environment.
- 
3. Ensuring our communities are socially and economically sustainable by providing accessible places to live and work and a choice and range of homes to retain and attract younger people and rebalance our ageing demography.
- 
4. Support our economic prosperity by providing a range of good quality employment land opportunities to encourage business growth and attract inward investment. The Plan also includes supportive policy frameworks for our agricultural, tourism and retail economies.

Our goals continued...

Placemaking

To create exemplar sustainable places through design, layout and a mix of uses that enhance the character and identity of Monmouthshire's settlements and landscape; create attractive, safe and accessible places to live, work and visit; and promote people's prosperity, health, happiness and well-being.

Infrastructure

To ensure that appropriate physical and digital infrastructure (including community and recreational facilities, education, sewerage, water, transport, health care and broadband, etc.) is in place or can be provided to accommodate new development.

Accessibility

To seek to reduce the need to travel by promoting a mix of land use allocations and improved internet connectivity, and where travel is required, to provide opportunities for active travel and integrated sustainable transport above the use of the private car.

Communities

To ensure Monmouthshire is a connected place where people feel part of a community, are valued and have good access to education, employment, shops, housing, public transport, active travel, healthcare, community and cultural facilities.

Rural Communities

To sustain existing rural communities as far as possible by providing affordable homes and development opportunities of an appropriate scale and location in order to assist in building sustainable rural communities and strengthening the rural economy.

Health and Well-being

To improve access to recreation, sport, leisure activities, open space and the countryside and to enable healthier lifestyles. To support the Health Board to improve health infrastructure to meet community needs.

Town and Local Centres

To sustain and enhance the centres of Abergavenny, Caldicot, Chepstow, Magor, Monmouth and Usk as vibrant and attractive centres serving the needs of their population and those of their surrounding hinterlands. Supporting the adaptation to meet the needs of the evolving role of the high street.

Our core underpinning objectives are:

- 
1. Delivering essential affordable homes at pace and scale with exemplar well connected places for both existing and future residents.
- 
2. Responding to our climate and nature emergency with policies requiring new homes to be net zero carbon, and supportive policy framework to incorporate renewable energy generation and technologies where appropriate. The Plan also includes protection policies that safeguard and enhance Monmouthshire's unique environment.
- 
3. Ensuring our communities are socially and economically sustainable by providing accessible places to live and work and a choice and range of homes to retain and attract younger people and rebalance our ageing demography.
- 
4. Support our economic prosperity by providing a range of good quality employment land opportunities to encourage business growth and attract inward investment. The Plan also includes supportive policy frameworks for our agricultural, tourism and retail economies.

Our goals continued...

Culture, Heritage & Welsh Language

To protect and enhance Monmouthshire's built environment, culture and heritage for the future while maximizing benefits for the economy, tourism and social well-being, including supporting and safeguarding the Welsh Language.

Land

To promote the efficient use of land, including the need to:

- Maximise opportunities for development on previously developed land whilst recognising that brownfield opportunities are limited in Monmouthshire.
- Protect the best and most versatile (BMV) agricultural land while recognising that this will not always be possible given the high proportion of BMV land in the County and the limited opportunities for brownfield development.
- Support the adaptation and re-use of existing sustainably located buildings.

Natural Resources

To ensure the efficient use of natural resources, including providing increased opportunities for water efficiency, energy efficiency, renewable energy, recycling and waste reduction.

Flood Risk

To ensure that new developments consider the risk of flooding, both current and future, avoiding inappropriate development in areas at risk from flooding or that may increase the risk of flooding elsewhere. Development should be designed using natural flood management measures to manage flood risk and surface water run-off appropriately.

Minerals & Waste

To meet the county's regional and local obligations to manage and dispose of its waste and to safeguard and exploit its mineral resource sustainably.

Our core underpinning objectives are:

 **1. Delivering essential affordable homes at pace and scale** with exemplar well connected places for both existing and future residents.

 **2. Responding to our climate and nature emergency** with policies requiring new homes to be net zero carbon, and supportive policy framework to incorporate renewable energy generation and technologies where appropriate. The Plan also includes protection policies that safeguard and enhance Monmouthshire's unique environment.

 **3. Ensuring our communities are socially and economically sustainable** by providing accessible places to live and work and a choice and range of homes to retain and attract younger people and rebalance our ageing demography.

 **4. Support our economic prosperity** by providing a range of good quality employment land opportunities to encourage business growth and attract inward investment. The Plan also includes supportive policy frameworks for our agricultural, tourism and retail economies.

How much growth Between 2018-2033 The Sustainable and Resilient Communities Strategy aims to:

- Grow Monmouthshire by up to **6,210 homes***
This includes the provision of up to **2,000 affordable homes**
- Support a level of job growth that supports our housing growth and grows Monmouthshire's economy. To support our job growth we will allocate a minimum of **38ha of employment land** in accessible and sustainable locations and provide a supportive policy framework to encourage business growth.

*There are currently approximately 4,080 homes in Monmouthshire's Housing landbank. This means that we will need to allocate land to provide **2,130 new homes** including **1,065 new affordable homes**.

The RLDP Sustainable and Resilient Communities Strategy

Our Key Issues, Vision and Objectives, along with community consultation and engagement sessions, have informed how much growth (homes and jobs) is needed in the county over the Plan period and where that growth is located.

Housing Supply Component	No. of Homes	
Housing growth figure	6,210	RLDP Housing Requirement – 5,400 +15% flexibility allowance (as per Welsh Government guidance).
Existing Commitments 2018-2024	3,018	Homes that have been built and/or have planning permission between 2018-2024.
Windfall Allowance	887	The predicted amount of unplanned housing anticipated within settlement boundaries for example single plots, or sites that have a change of use.
Existing LDP Rollover sites	175	Existing LDP sites which do not currently benefit from planning permission. Three sites, two in Monmouth and one in Little Mill make up the 'rollover' allocations component.
New Allocations	2,130	New allocations identified in the RLDP.

Housing supply component:

Because the Plan period has already begun (2018) most of the housing growth has already taken place as homes have already been built/are under construction/ or have planning permission. This growth is termed 'existing commitments'.

The housing growth figure also takes into account:

- Windfall housing' (unplanned housing that is predicted to be built within existing settlements between 2018-2033); and 'Rollover Sites' (sites allocated from the previous plan but have not obtained planning permission).

Where will the growth go?

Growth will focus on the county's most sustainable **Primary Settlements of Abergavenny, Chepstow, Monmouth and Caldicot, including Severnside.**

Focusing growth in the most sustainable settlements will limit the impact of climate change and ensure good placemaking principles of attractive, accessible places to live and work that reduce the need to travel and have access to sustainable transport links and walking routes to town centres.

A smaller proportion of growth is allocated in our **Secondary Settlements of Usk, Raglan and Penperlleni** and our most sustainable **Main Rural Settlements.** Growth in rural locations will deliver much needed affordable homes for local people and help to address rural inequality and rural isolation in these areas by sustaining communities.

The sites selected have been informed by the consultation responses received on the 2021 Preferred Strategy and the December 2022 Preferred Strategy, as well as our evidence base.

Growth in Primary Settlements

Abergavenny
(Inc. Llanfoist, Chepstow, Monmouth)

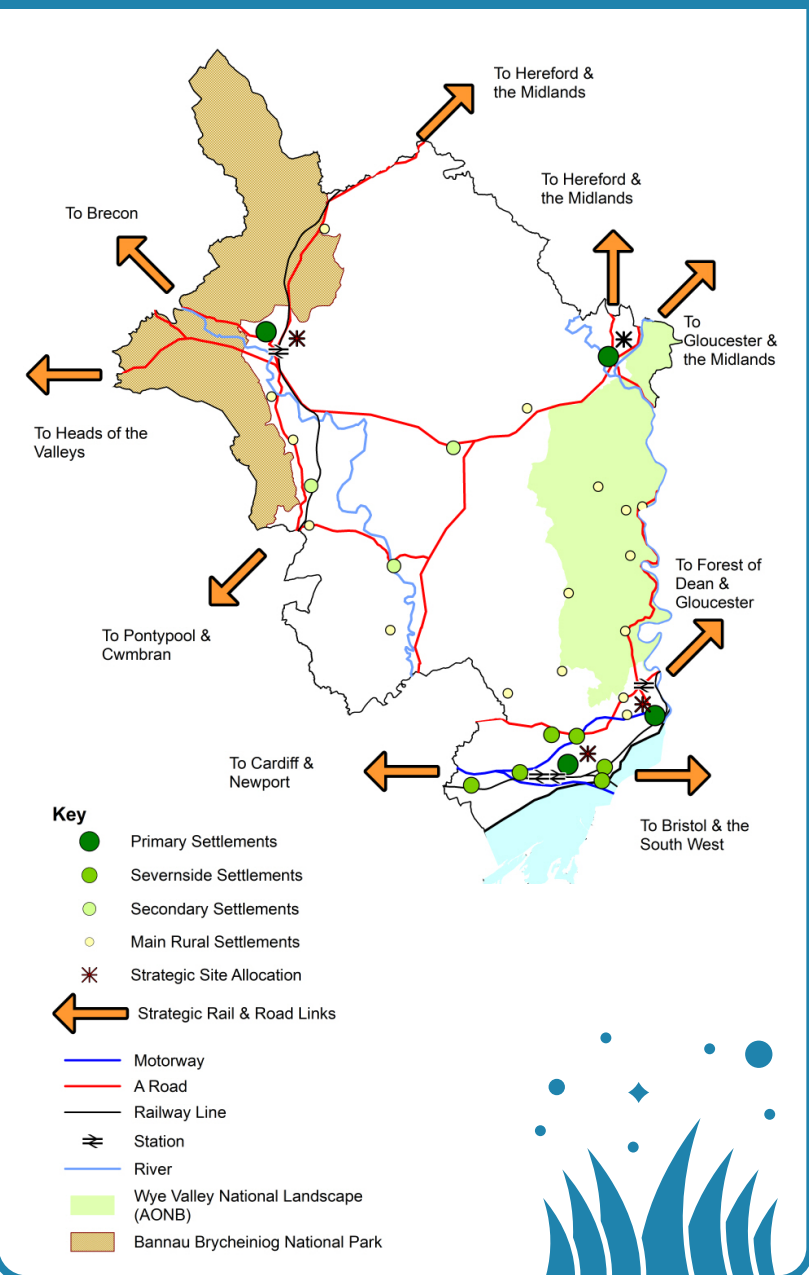

Caldicot
(Inc. Severnside area: Caerwent, Crick, Magor and Undy, Rogiet, Portskewett and Sudbrook)

Growth in Secondary Settlements
Penperlleni, Raglan, Usk

Growth in Rural Settlements

Page 494

Our Spatial Strategy is illustrated in our Key Strategic Diagram

How will we deliver exemplar affordable homes at pace and scale?

The RLDP has identified housing land to meet the growth required to deliver Monmouthshire's new homes including, our ambition to deliver affordable homes at pace and scale.

Page 495

Growth in Primary Settlements

Abergavenny
(Inc. Llanfoist, Chepstow, Monmouth)

Caldicot
(Inc. Severnside area: Caerwent, Crick, Magor and Undy, Rogiet, Portskewett and Sudbrook)

Growth in Secondary Settlements
Penperlleni, Raglan, Usk

Growth in Rural Settlements

Primary Settlements

Site Name	Settlement	Allocation Type	Site Area (ha)	Approximate No. of Total Homes in Plan Period	50% of which will be Affordable Homes
Land to the East of Abergavenny	Abergavenny	Strategic Mixed-use Development including: • Residential • Neighbourhood Centre • Park and Ride • B1 Use employment	35.9	500	250
Land to the East of Caldicot/North of Portskewett	Caldicot	Strategic Mixed-use Development including: • Residential • Primary school • Neighbourhood Centre • B1 Use Class employment • Strategic public open space	64	770	385
Land at Mounton Road	Chepstow	Strategic Mixed-use Development including: • Residential • Commercial uses such as C1 Use Class Hotel • C2 Use Class residential care home	12.8	146	73
Land at Leasbrook	Monmouth	Strategic Residential	11	270	135
Land at Penlanlas	Abergavenny	Residential	6.17	100	50
Land at Rockfield	Monmouth	Residential	1.5	60	30
Land at Drewen Farm	Monmouth	Residential (rollover site)	6.6	110	55
Tudor Road, Wyesham	Monmouth	Residential (rollover site)	2.1	50	25
Land at Former MoD	Caerwent	Mixed-use • Residential • B1 Use employment	4.2	40	20

The geographical locations of the housing land identified in the table is set out on the Deposit Plan's Proposals Map.

How will we deliver exemplar affordable homes at pace and scale?

Page 496

Growth in Primary Settlements

(Inc. Llanfoist, Chepstow, Monmouth)

Caldicot
(Inc. Sevenside area: Caerwent, Crick, Magor and Undy, Rogiet, Portskewett and Sudbrook)

Growth in Secondary Settlements
Penperlleni, Raglan, Usk

Growth in Rural Settlements

Secondary Settlements

Site Name	Settlement	Allocation Type	Site Area (ha)	Approximate No. of Total Homes in Plan Period	50% of which will be Affordable Homes
South of Monmouth Rd	Raglan	Residential	4.5	54	27
Land East of Burrium Gate	Usk	Residential	2.6	40	20
Land West of Trem yr Ysgol	Penperlleni	Residential	3.4	42	21

Rural Settlements

Site Name	Settlement	Allocation Type	Site Area (ha)	Approximate No. of Total Homes in Plan Period	50% of which will be Affordable Homes
Land adjacent to Piercefield Public House	St Arvans	Residential	1.1	16	8
Land at Churchfields	Devauden	Residential	1	20	10
Land East of Little Mill	Little Mill	Residential	1.68	20	10
Land North of Little Mill	Little Mill	Residential (rollover site)	0.87	15	8
Land adjacent to Llanellen Court Farm	Llanellen	Residential	1.56	26	13
Land West of Redd Landes	Shirenewton	Residential	1.76	26	13

The geographical locations of the housing land identified in the table is set out on the Deposit Plan's Proposals Map.

How will we deliver exemplar affordable homes at pace and scale?

Why were these sites selected?

- These sites have provided sufficient evidence of viability and deliverability to demonstrate that the homes will be delivered by 2033.
- In accordance with the PPW12's site search sequence, preference has been given to the development of previously developed land (brownfield land). It is, however, recognised that there are limited opportunities for further significant brownfield development in Monmouthshire. While growth is focused in the most sustainable settlements, it must be recognised that landscape quality and agricultural land quality are high throughout the county. As such, these challenges cannot be avoided via a different spatial option.
- The Plan allocates those sites that are the best connected, most sustainable, deliver placemaking benefits and are least harmful, which has required balanced planning considerations and decisions with a preference for promoting the most sustainable sites.

How will these sites be delivered?

- The homes will be built to Net Zero Carbon standards, incorporating renewable energy generation technologies, low carbon heating systems and ULEV charging points.
- 50% of the homes for each site will be affordable housing comprising a mix of housing types and tenures to meet local needs.
- The developments will all be required to meet the placemaking principles of the RLDP. This ensures well-connected, green infrastructure led, balanced communities that are not only respectful but also protective of Monmouthshire's natural and historic environment.
- The sites will be required to provide high quality, usable open space and appropriate green spaces according to the agreed standards set out in the RLDP.
- The design of the sites must prioritise connections and active travel to local trip attractors and public transport facilities, and they must contribute towards any necessary infrastructure improvements.

Growth in Primary Settlements

Abergavenny
(Inc. Llanfoist, Chepstow, Monmouth)

Caldicot

(Inc. Severnside area: Caerwent, Crick, Magor and Undy, Rogiet, Portskewett and Sudbrook)

Growth in Secondary Settlements

Penperlleni, Raglan, Usk

Growth in Rural Settlements

How will we support economic prosperity?

The RLDP has identified the following **Employment Land*** in accessible and sustainable locations. This will support job growth, allow residents to live and work in Monmouthshire, and reduce levels of out-commuting.

What is Employment Land?

* **Employment land** relates to 'B use classes' in planning terms, which is land for industry such as light industry, research and development (B1), manufacturing (B2) and storage and distribution (B8).

Site Name	Area (Ha)	Use Class
Land at Nantgavenny Business Park, Abergavenny	0.59	B1
Poultry Units, Rockfield Road, Monmouth	1.3	B1
Land North of Wonastow Road, Monmouth	4.5	B1, B2, B8
Newhouse Industrial Estate, Chepstow	2.5	B1, B2, B8
Land adjoining Oak Grove Farm, Caldicot	6	B1, B2, B8
Quay Point, Magor	14	B1, B2, B8
Rockfield Farm, Undy	3.2	B1
Gwent Euro Park, Magor	7	B1, B2, B8
Raglan Enterprise Park, Raglan	1.5	B1, B2, B8
Land West of Raglan	4.5	B1, B2, B8
Land to the East of Abergavenny	1	B1
Land at Former MoD Site, Caerwent	1	B1
Land to the East of Caldicot	1	B1

- There are new employment opportunities on our mixed-use allocations: Land to the East of Abergavenny, Land to the East of Caldicot/North of Portskewett and Land at the Former MoD Site Caerwent.
- Demand for physical employment land/space is changing. However, not all employment sectors, such as manufacturing and distribution can work from home. Therefore, the RLDP must allocate sufficient employment land (B use class) to meet the employment needs of such businesses.
- Many other jobs within Monmouthshire will be delivered through other foundational sectors such as **agriculture, tourism, retail and leisure**. The RLDP plans positively for these sectors through complimentary and supportive policies.

Our Supportive Economy Policies

Policy S11 supports Monmouthshire's **rural economy** to enable rural enterprise uses and the diversification of the rural economy subject to scale and type being compatible with the surrounding area. Conversion of existing buildings within the countryside is encouraged over new build.

Policy S12 supports Monmouthshire's **visitor economy** and supports **sustainable forms of tourism**, such as camping and glamping, that can demonstrate minimal impact on the surrounding environment. The Policy also supports exceptional tourism proposals that can demonstrate significant economic benefits and protects the visitor economy from the loss of facilities.

Policy S14 protects the **retail hierarchy** and core uses of Monmouthshire's historic market towns and local centres to ensure a wide range of uses including leisure and cultural as well as a **Primary Frontage core retail**.

This will ensure Monmouthshire's towns retain and enhance their retail and social appeal to attract residents and visitors and that they continue to remain vibrant and attractive. The Policy supports proposals that will enhance the vitality and vibrancy of our retail economy. It does not support uses that undermine the vibrancy of our town centres, such as ground floor residential and does not support 'out of town' retail uses.

The geographical location of the employment land identified is set out on the Deposit Plan's Proposal Map.

Strategic Allocations: Land to the East of Abergavenny

Strategic Mixed-Use Development including:

- Residential
- Mixed use Neighbourhood Centre
- Park & Ride
- B Use Class Uses

Land to the East of Abergavenny:
Circa 35.9 ha

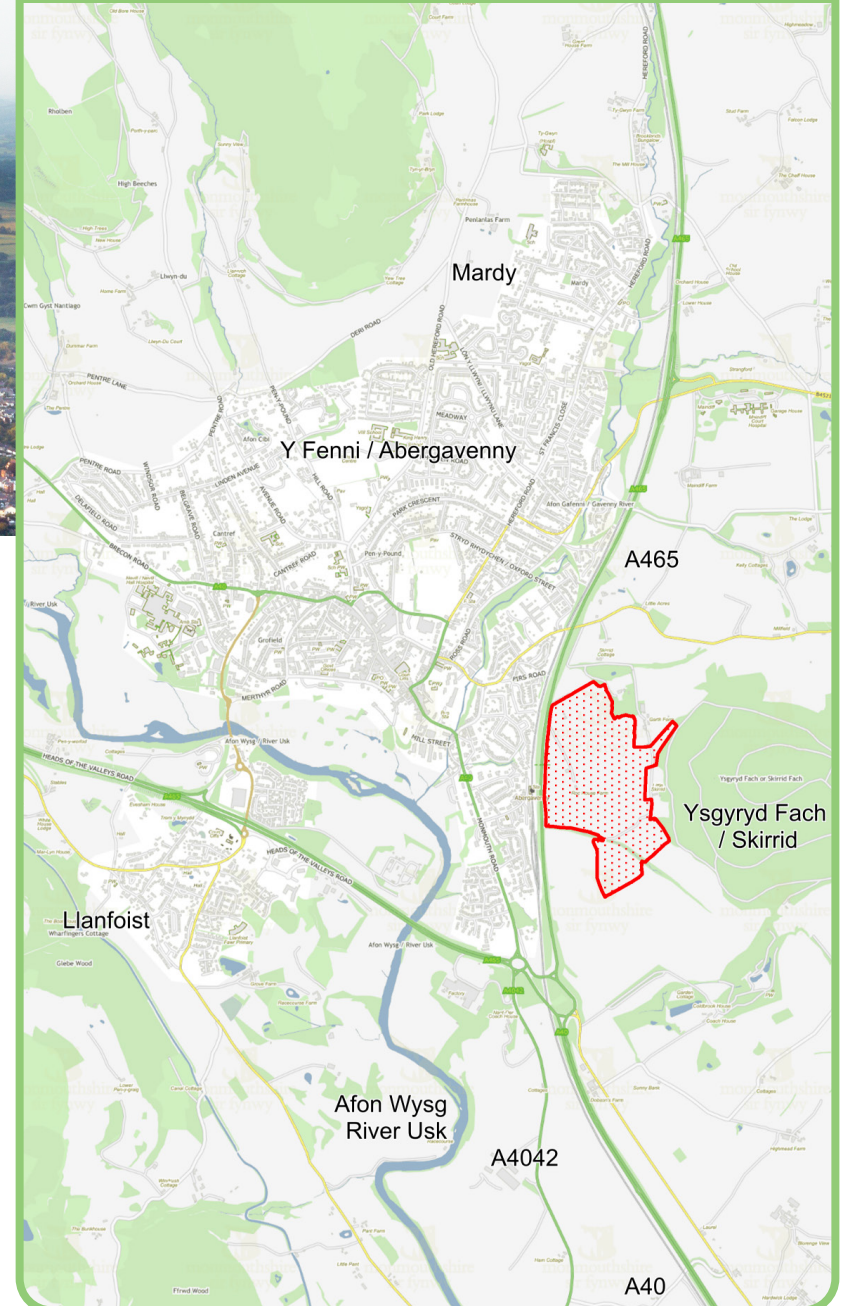

Approx. No. of Total Homes: 500
Of which Open Market: 250
Of which Affordable Homes: 250

What this includes:

- This strategic site allocation is a sustainably located edge of settlement site. The site is located on the eastern edge of Abergavenny and is bordered by the A465 and railway line to its western boundary and the footslopes of the Ysgyryd Fach (Little Skirrid) to the east.
- The site will form an exemplar well-connected mixed-use urban expansion to Abergavenny containing a mix of residential uses alongside employment/commercial uses, associated facilities and services.
- The allocation represents the intended future direction of development in the Abergavenny area with the longer-term intention for further growth beyond the Plan period.
- Integrating the strategic site with the existing settlement is a key principle in the site's development. Identifying connection links that provide crossings across the railway line and the A465 is a key focus for the site.
- The site's western end plays an important role in integrating the new neighbourhood with the railway station and wider Abergavenny. It offers the potential to provide a 'community hub' serving both the urban extension and the railway station area, a park and ride facility for the railway station, and linkages to and from the allocation to the station and Abergavenny.

Site Location

Page 500

Land to the East of Abergavenny

Indicative Masterplan

-  REDLINE BOUNDARY
-  RESIDENTIAL DEVELOPMENT
-  NEIGHBOURHOOD CENTRE
(including Community Buildings, Cycle Hire/ Parking and Electric Vehicle Charging)
-  PROPOSED B1 ZONE
-  PARK AND RIDE
-  PROPOSED TREES
-  VEHICULAR ACCESS
-  PEDESTRIAN/ CYCLE ACCESS
-  EXISTING TREES
-  PROPOSED ACTIVE FRONTAGES
-  PUBLIC RIGHT OF WAY
-  PROPOSED ATTENUATION FEATURE
-  PROPOSED PEDESTRIAN/ CYCLE ROUTE
-  EMERGENCY SERVICE ACCESS
-  EXISTING BUS STOP
-  POTENTIAL PLAY AREA

Strategic Allocations: Land to the East of Caldicot/ North of Portskewett

Strategic Mixed-Use Development including:

- Residential
- Primary School
- Mixed use Neighbourhood Centre
- B1 Use Class Employment
- Strategic public open space

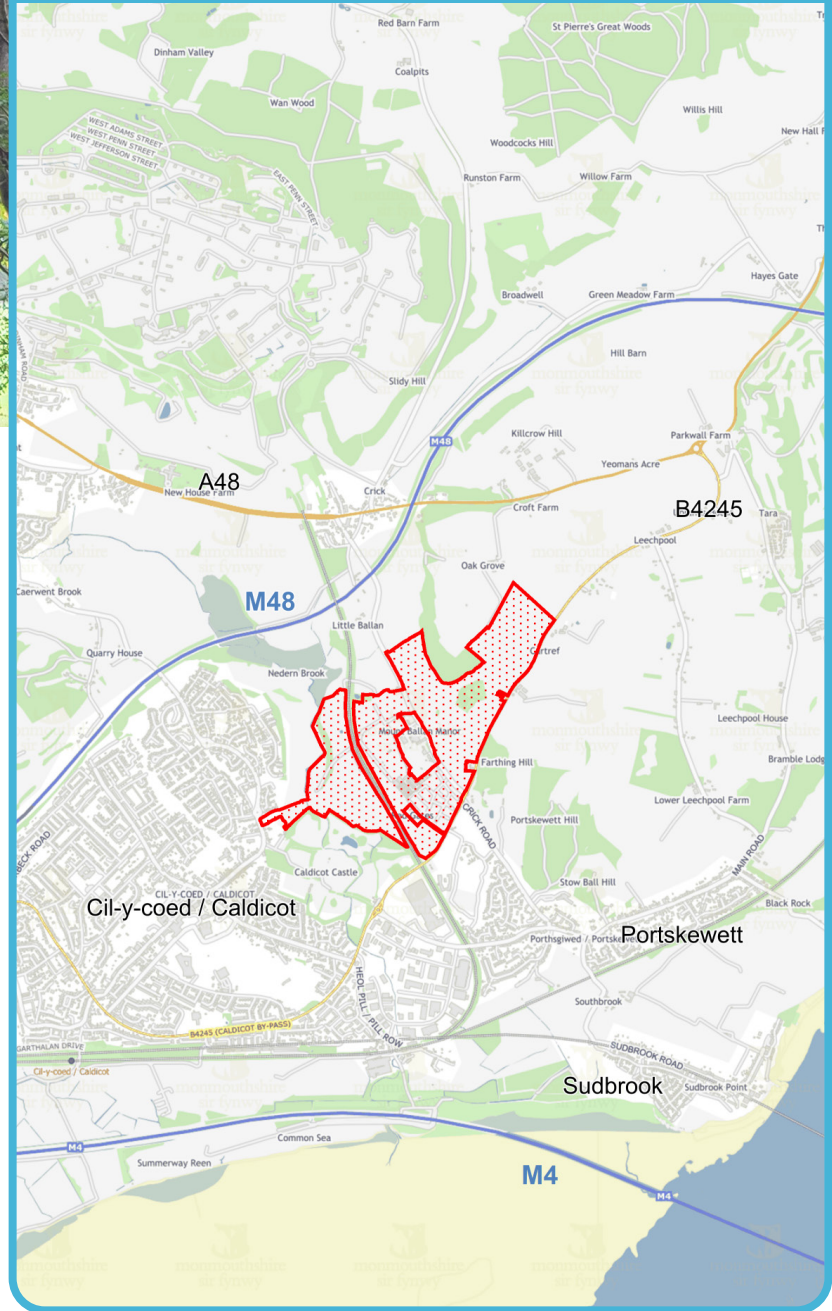

Land to the East of Caldicot:
Circa 64 ha

Approx. No. of Total Homes: 770
Of which Open Market: 385
Of which Affordable Homes: 385

What this includes:

- Land to the East of Caldicot/North of Portskewett is a sustainably located edge of settlement site. Development here will extend the settlement of Caldicot to the north-east, adjacent to the Crick Road, Portskewett site. Development will be placed north of the Caldicot Castle Country Park, a Conservation Area and Area of Amenity Importance. No built development will take place in these sensitive areas.
- The site is located to the south of a council-owned solar farm, and opportunities to link the site with this renewable energy resource are being explored. The site includes previously developed land comprising a commercial equestrian centre, with much of the remainder being greenfield Council-owned land. The inclusion of such suitable land is supported by Future Wales Policy 3 which supports public leadership and the use of public land to deliver on ambitious affordable housing targets.
- The site will form a new neighbourhood of Caldicot with links to Portskewett to the south east. The primary school will benefit the wider community by serving the new development and the nearby homes in Caldicot and Portskewett. The school and the local centre will provide a key focal point of the site.
- Crick Road provides a central spine through the development and will be incorporated into the site as an active frontage, providing legibility for the community across the site. This will act as a gateway to the site as a whole and ensure the development of either side of the road is integrated cohesively. Permeability is key to enabling integration both within the site and the surrounding area.

Strategic Allocations: Land at Mouton Road Chepstow

Strategic Mixed-Use Development including:

- Residential
- Commercial uses such as Class C1 Hotel and Class C2 Residential care home

Land at Mouton Road Chepstow:
Circa 12.8 ha

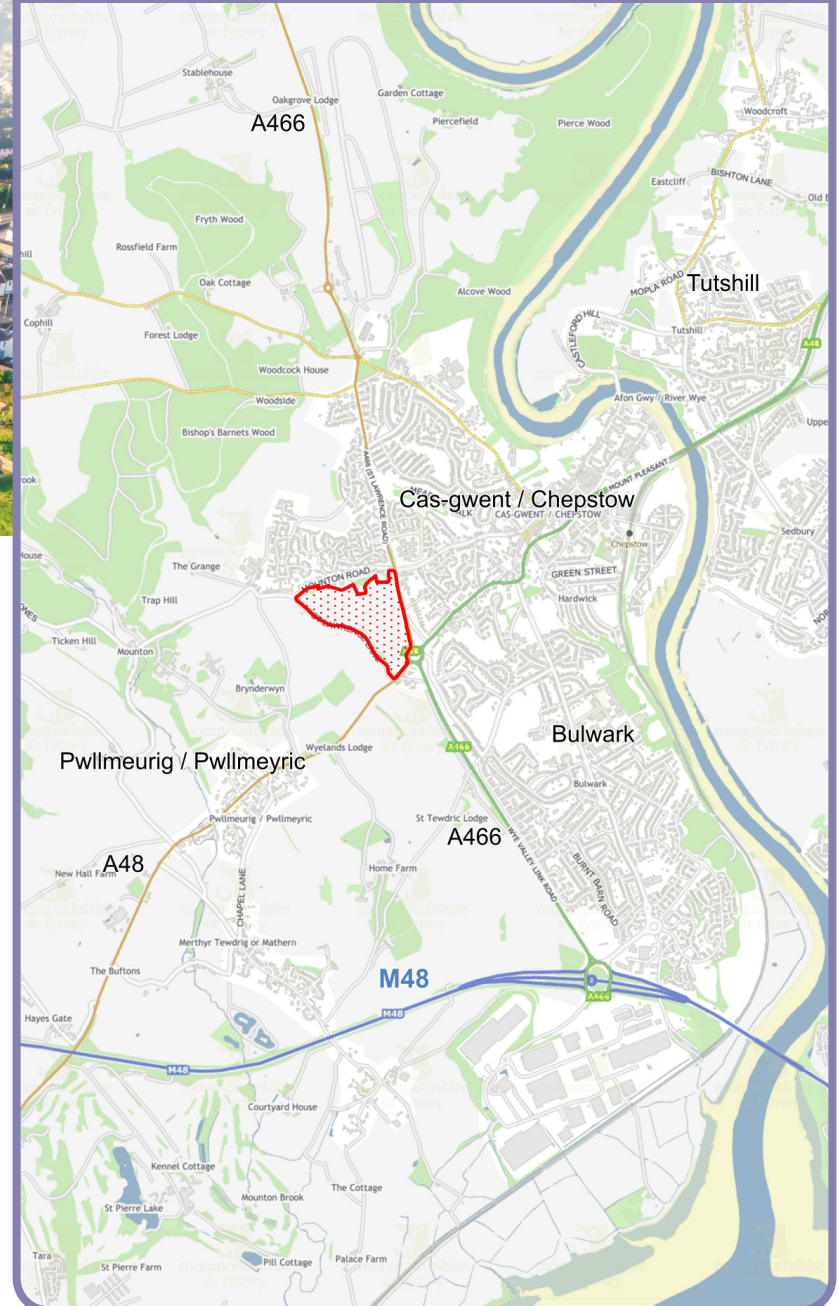

Approx. No. of Total Homes: 146
Of which Open Market: 73
Of which Affordable Homes: 73

Page 50

What this includes:

- Land at Mouton Road is a sustainably located edge of settlement located to the western edge of Chepstow, west of the A466 (St Lawrence Road), north of the A48 and south of Mouton Road.
- The mixed-use development proposal, which includes a care home and hotel, provides a unique opportunity to locate homes and jobs together and boost Chepstow's local opportunities.
- Key considerations will be integrating the site with the existing settlement, identifying connection links and a design interface that provides crossings across the A466 and ensuring land is safeguarded for potential future improvements to the Highbeech Roundabout.
- The proposal will also be required to provide a publicly accessible community parkland that respects the setting of the nearby Grade II listed St Lawrence House and creates opportunities for recreation and leisure.

Strategic Allocations: Land at Leasbrook Monmouth

Strategic
Residential
Development

Land at Leasbrook
Monmouth:
Circa 11 ha

Approx. No. of Total Homes: 270
Of which Open Market: 135
Of which Affordable Homes: 135

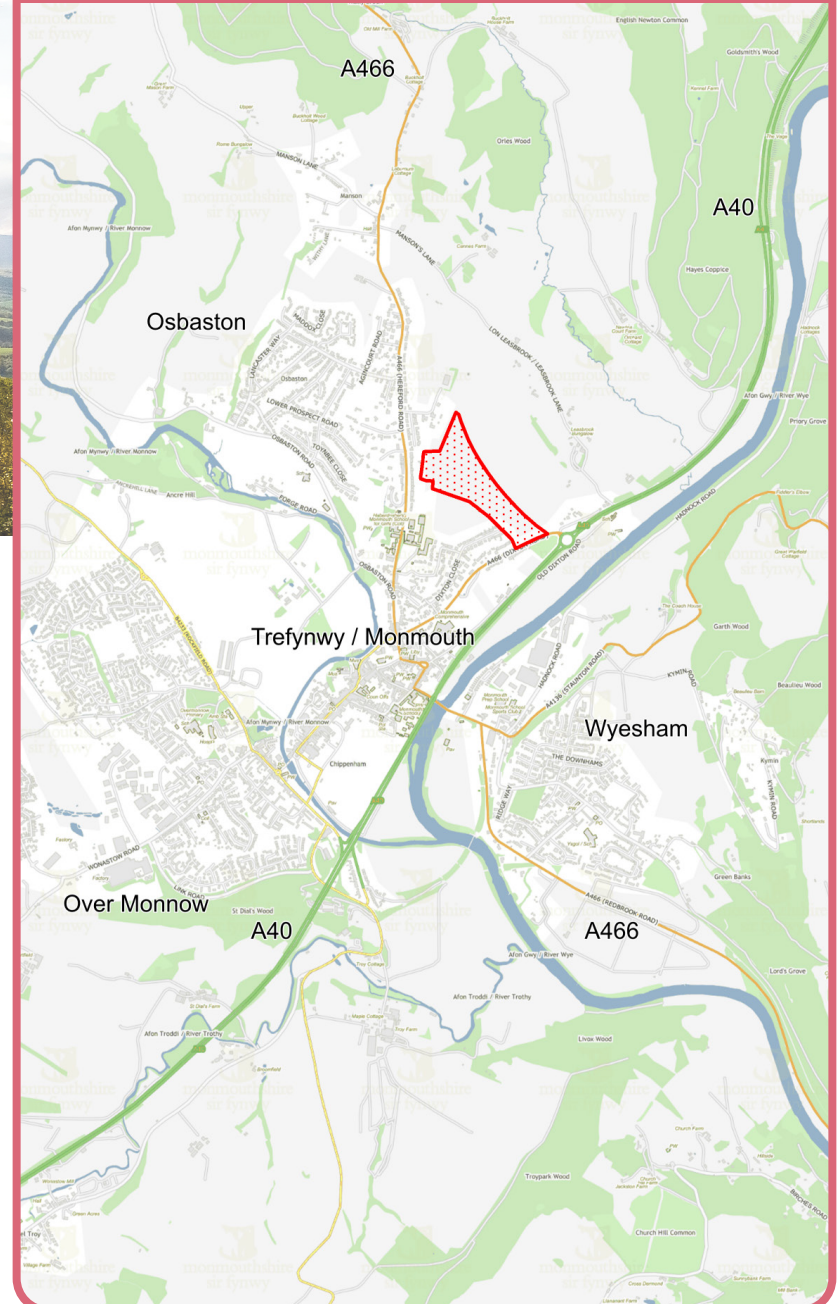

Page 50

What this includes:

- Land at Leasbrook is a sustainably located edge of settlement site, north of Dixon Road. The site is adjacent to developments at Dixon Close and Hereford Road, including Haberdashers' Monmouth School's playing pitches to the west.
- The site offers the opportunity to create an exemplar residential and GI-led development, which is important due to the gateway location of the site at the entrance to Monmouth from the north.
- Key considerations for the site's development include a footpath link to Dixon Close and along Dixon Road, allowing links to wider active travel links in Monmouth, and the need for an emergency secondary access onto Hereford Road.
- A green buffer is also required to minimise any potential landscape impact on the adjacent Dixon Conservation Area and the Lower Wye Valley Landscape of Historic Interest.

How the Plan will respond to our Climate Emergency?

To address and actively respond to one of our core issues - the **Climate Emergency** - the Deposit Plan contains several policies to tackle Climate Change.

Our supportive Climate Protection Policies

Climate Change (Strategic Policy S4) sets out the key ways the Plan will do this which includes locating development outside of flood risk areas, promoting energy efficiency through the design of buildings, using land efficiently to minimise the need to travel, providing ultra-low emission vehicles (ULEV) charging infrastructure and utilising sustainable construction techniques and local supplies where possible.

Net Zero Carbon Homes (Policy NZ1) requires that new homes be built to the highest energy efficiency standards, which are higher than the current Building Regulations standards. This includes space heating demand of less than 25KWh/m2/annum, energy consumption generated by renewables on the dwelling (or via the overall development), and new homes that cannot connect to the gas grid with all heating provided through low carbon heating systems.

Renewable Energy Allocation (Policy CC2) identifies land at Raglan Enterprise Park as having potential for ground mounted solar development within the county. This provides an opportunity to contribute to local and national renewable energy targets and potentially provide direct-access energy sources to adjoining existing and proposed employment uses.

Renewable Energy Generation (Policy CC3) includes Renewable Energy Targets and a supportive policy framework for new renewable energy generation schemes, such as ground mounted solar arrays, roof mounted solar panels, onshore wind and heat pumps. The policy and other protection policies within the Plan ensure renewable energy schemes have no unacceptable adverse impacts on Monmouthshire's landscape, historic features, biodiversity and residential amenities. It is made clear within the policies that renewable energy schemes are only acceptable if they do not compromise Monmouthshire's distinct identity.

Sustainable Transport (Policy S3) ensures development proposals are located and designed to reduce the need to travel and promote a shift away from the private car. The Policy promotes active travel, safe access and efficient capacity of the transport network and requires proposals to demonstrate solutions to rural transport issues when appropriate to do so. The policy, however, recognises that Monmouthshire is predominantly a rural county. While development is directed to the county's most sustainable settlements, the Plan also supports appropriate development within Monmouthshire's rural locations where the car is the only realistic mode of transport.

How the Plan will address our Nature Emergency?

The Deposit Plan contains numerous **protection policies** that will address Monmouthshire's '**Nature Emergency**' by protecting and enhancing Monmouthshire's special and unique spaces, landscapes and biodiversity.

Our supportive Nature Recovery and Protection Policies:

Green Wedge Designations (Policy GW1) protects land to avoid the coalescence of some of Monmouthshire's settlements, safeguards the countryside from encroachment and protects the setting of an urban area. Green Wedge designations have also been designated as buffers between the settlement edge of Abergavenny and the Bannau Brycheiniog National Park. The designations are set out on our Proposals Map.

Landscape Protection (Policies LC1, LC2, LC3, LC4, LC5) protect and enhance the unique landscape character of Monmouthshire, including our statutory landscapes Blaenavon Industrial Landscape World Heritage Site, Bannau Brycheiniog National Park, Wye Valley National Landscape (AONB) and our Dark Skies from light pollution.

Green Infrastructure (GI) (Policies, GI1, GI2) ensure the protection and enhancement of all of Monmouthshire's GI, which is defined as a network of green spaces that connect places. It includes landscape levels such as uplands, valleys, river corridors and coastlines, and local smaller levels such as woodlands, trees, hedges, parks and street verges.

Nature Recovery (Policies NR1, NR2, NR3) ensures the protection of locally* protected species, nature sites and water resources and sets out the requirement for **net benefit biodiversity gain**, whereby all proposals will need to demonstrate how they have improved biodiversity due to the development. Monmouthshire's Severn Estuary is to be protected from increased recreational pressure from activities such as dog walking.

** National and International designations, such as Sites of Special Scientific Interest (SSSI) are protected with National Planning Policy*

Public Open space and Areas of Amenity Importance (AAI) designations (Policies C13, C14) protect these public spaces, including sports pitches, play areas, parks, informal green spaces, grasslands and woodlands. Areas of Public Open Space and AAIs are set out on the Proposals Map.

How will the Plan protect and enhance our distinctive built environment?

Monmouthshire is renowned for its distinctive identity and the high quality of its natural, historic and built environment. The Deposit Plan will protect and enhance Monmouthshire's built environment with placemaking policies that seek high quality design and place people, **natural resources and the natural environment at the heart of the design process**. This achievement will depend upon identifying and understanding the local characteristics which are distinctive to an area.

Placemaking and High Quality Design (Policies S3 ,PM1 and PM2) set out detailed criteria of how development will protect and enhance Monmouthshire's built environment by having a **green infrastructure-led approach** that respects local distinctiveness, incorporating a safe and inclusive design that offers access for all. All designs should be of high quality, respect existing surroundings, such as scale, height massing, and materials, and maintain reasonable levels of privacy and amenity for neighbouring occupiers.

Monmouthshire's Historic Environment

Monmouthshire has a rich built heritage and historic environment, which includes 31 Conservation Areas, 48 Historic Parks and Gardens, 3 Landscapes of Outstanding Historic Interest, approximately 164 Scheduled Ancient Monuments (SAMs) and 2,145 Listed Buildings. The preservation and enhancement of our historic assets are covered in the National Planning Policy.

The Plan contains local **Policies HE1 and HE2**, which set out Monmouthshire's specific guidance on protecting and enhancing our Conservation Areas in relation to their unique settings and distinctive qualities. **Policy HE3** protects and preserves our unique Roman Town of Caerwent settlement to ensure that the significant archaeological remains remain undisturbed and its historic open character is preserved.

Consultation Process

Page 510

- A six-week consultation will take place on the Deposit Plan from 4th November 2024 – 16th December 2024.
- The consultation will allow the public and interested stakeholder to submit their views in writing to the Council. All representations received during the consultation will be recorded and reported to the Council.
- During the consultation period, we will hold virtual engagement and drop-in sessions in various locations across the county.
- For further information, please visit the Planning Policy Website:
www.monmouthshire.gov.uk/planning-policy

Integrated Sustainability Appraisal (ISA) for the Monmouthshire Replacement Local Development Plan

Introduction

1. Introduction

- 1.1 AECOM is commissioned to lead on Integrated Sustainability Appraisal (ISA) in support of Monmouthshire County Council's Replacement Local Development Plan (RLDP). ISA fulfils the requirements and duties for Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA), Equalities Impact Assessment (EqIA), Health Impact Assessment (HIA), Welsh Language Impact Assessment (WLIA) and Well-being of Future Generations (WCFG).
- 1.2 ISA is a mechanism for considering and communicating the likely effects of an emerging plan, and alternatives in terms of key sustainability issues. The aim of ISA is to inform and influence the plan-making process with a view to avoiding and mitigating negative impacts and maximising positive impacts. Through this approach, the ISA for the RLDP seeks to maximise the developing plan's contribution to sustainable development.
- 1.3 As identified above, the ISA seeks to fulfil the requirements and duties for SA, SEA, EqIA, HIA, WLIA and WCFG. The approach is to fully integrate these components to provide a single assessment process to inform the development of the RLDP. A description of each of the various components and their purposes is provided below.
- 1.4 The ISA Report¹ and this NTS are published alongside the Deposit Plan. They lead on from the Initial ISA Report published in November 2022, taking into consideration feedback from consultation and the subsequent updates to the RLDP. Any representations received will be considered when the Plan is finalised for submission.
- 1.5 ISA reporting essentially involves answering the following questions in turn:
- What has plan-making/ ISA involved up to this point?
 - Including in relation to 'reasonable alternatives'.
 - What are the appraisal findings at this current stage?
 - i.e. in relation to the Deposit Plan.
 - What happens next?
 - What steps will be taken to finalise (and monitor) the plan?
- 1.6 Each of these questions is answered in turn below. Firstly though there is a need to set the scene further by answering the questions i) What is the plan trying to achieve?; and ii) What is the scope of the SA?

What is the RLDP seeking to achieve?

- 1.7 Monmouthshire County Council (MCC) is in the process of preparing a Replacement Local Development Plan (RLDP) for the County (excluding the area within the Brecon Beacons National Park). The RLDP will cover the period 2018-2033 and will be the statutory land use plan to support delivery of

¹ See **Appendix I** for further explanation of the regulatory basis for answering certain questions within the SA Report; and a 'checklist' explaining more precisely the regulatory basis for presenting certain information.

the Council's purpose of becoming a zero-carbon County, supporting well-being, health and dignity for everyone at every stage of life.

- 1.8 The RLDP will set out land use development proposals for the County and will identify where and how much new development will take place over the Replacement Plan period. It will also identify areas to be protected from development and provide policies against which future planning applications will be assessed. The RLDP builds upon the current adopted LDP which covers the period 2011-2021.

Vision

- 1.9 The RLDP Vision outlines how the County is planned to develop, change, or be conserved up to 2033, and provides the framework for the Plan's strategy and policies. The Vision set out in the adopted LDP 2011-2021 has been reviewed and updated to take account of the issues, challenges and opportunities facing the County, key elements of the Gwent PSB Well-being Plan (August 2023) and MCC's Taking Monmouthshire Forward - Community and Corporate Plan 2022-2028 (April 2023).

By 2033 Monmouthshire will be home to well-connected, exemplar affordable housing-led, net zero carbon places that provide employment and support demographically balanced sustainable and resilient communities for all, where:

- **People are living in inclusive, equal, safe, cohesive, prosperous, and vibrant communities. Both urban and rural areas are well-connected with better access to local services and facilities, open space, and employment opportunities.**
- **Communities and businesses are part of an economically thriving, ambitious, and well-connected County.**
- **The best of the County's built heritage, countryside, biodiversity, landscape, and environmental assets have been protected and enhanced to retain its distinctive character.**
- **People enjoy healthier, more sustainable lifestyles with improved access to public transport and active travel opportunities and have a minimised impact on the global environment, supporting our ambitions for a zero-carbon County.**

Objectives

- 1.10 To address the key issues/ challenges and deliver the vision, 17 objectives have been developed for the RLDP, which build upon the Adopted LDP objectives. The objectives are kept under review and updated as necessary as part of the continued development of the RLDP evidence base.
- 1.11 The objectives are set out in **Table 1.1** overleaf and have been grouped to align with the 7 wellbeing goals set out in the Wellbeing of Future Generation (Wales) Act 2015, and the RLDP issues, as well as the main policy themes identified in Planning Policy Wales (PPW12), the Gwent PSB Wellbeing Plan steps, and the Council's Community and Corporate Plan.

Table 1.1: RLDP objectives and their contributions to wellbeing goals

RLDP Objective	Headline	RLDP Objective	RLDP issues addressed ²	Main PPW12 theme	Gwent PSB Well-being Plan Steps	Community & Corporate Plan Objectives
A Prosperous Wales (Well-being Goal 1)						
Objective 1	Economic Growth/ Employment	To support a thriving, well-connected, diverse economy, which provides a range of good quality employment opportunities to enable and encourage indigenous business growth and attract inward investment and competitive innovative businesses in appropriate growth sectors, including through the provision of start-ups and grow on spaces.	1, 2, 3, 4, 5, 6, 7, 24	Productive and enterprising places	Take action to reduce the cost-of-living crisis in the longer term.	A Thriving and Ambitious Place.
Objective 2	Town and Local centres	To sustain and enhance the centres of Abergavenny, Caldicot, Chepstow, Magor, Monmouth, and Usk as vibrant and attractive centres serving the needs of their population and those of their surrounding hinterlands, and supporting adaptation to meet the needs of the evolving role of the high street.	8	Active and social places	Take action to address inequities, particularly in relation to health, through the framework of the Marmot Principles. Enable and support people, neighbourhoods,	A Thriving and Ambitious Place.

² See Appendix 1 of the Preferred Strategy for the full list of RLDP issues.

RLDP Objective	Headline	RLDP Objective	RLDP issues addressed ²	Main PPW12 theme	Gwent PSB Well-being Plan Steps	Community & Corporate Plan Objectives
A Resilient Wales (Well-being Goal 2)						
Objective 3	Green Infrastructure, Biodiversity and Landscape	To protect, enhance and manage the resilience of Monmouthshire’s natural environment, biodiversity and ecosystems and the connectivity between them, while at the same time maximising benefits for the economy, tourism, health, and well-being. This includes the Wye Valley National Landscape (AONB), the County’s other high quality and distinctive landscapes, protected sites, protected species and other biodiversity interests.	11, 12, 35	Distinctive and natural places	Take action to reduce our carbon emissions, help Gwent adapt to climate change, and protect and restore our natural environment.	A Green Place to Live.
Objective 4	Flood risk	To ensure that new development takes account of the risk of flooding, both existing and in the future, including the need to avoid inappropriate development in areas that are at risk from flooding or that may increase the risk of flooding elsewhere and the need	12, 13	Distinctive and natural places	Take action to reduce our carbon emissions, help Gwent adapt to climate change, and protect and restore	A Green Place to Live.

		place or can be provided to accommodate new development.			connected, thriving and safe.	A Connected Place Where People Care. A Learning Place.
Objective 15	Accessibility	To seek to reduce the need to travel by promoting a mix of land use allocations and improved internet connectivity, and where travel is required, to provide opportunities for active travel and integrated sustainable transport above use of the private car.	10, 30, 36	Active and social places	Enable and support people, neighbourhoods, and communities to be resilient, connected, thriving and safe.	A Green Place to Live. A Thriving and Ambitious Place.
Page 22 Wales of Vibrant Culture & Thriving Welsh Language (Well-being Goal 6)						
Objective 16	Culture, Heritage and Welsh Language	To protect and enhance the built environment, culture and heritage of Monmouthshire for the future while maximising benefits for the economy, tourism and social well-being, including supporting and safeguarding the Welsh Language.	9, 32, 33, 34, 35	Distinctive and natural places	Enable and support people, neighbourhoods, and communities to be resilient, connected, thriving and safe.	A Fair Place. A Thriving and Ambitious Place. A Connected Place Where People Care.

RLDP Objective	Headline	RLDP Objective	RLDP issues addressed ²	Main PPW12 theme	Gwent PSB Well-being Plan Steps	Community & Corporate Plan Objectives
A Globally Responsible Wales (Well-being Goal 7)						
Objective 17	Climate and Nature Emergency	To strive to limit the increase in global temperatures to 1.5°C, supporting carbon reduction through a variety of adaptation measures including facilitating resilient ecosystems and nature recovery, the use of renewable energy, net zero homes, the design and location of new development, encouraging balanced job and population growth to reduce out-commuting, the provision of broadband connectivity to reduce the need to travel, the provision of ultra-low emission vehicle charging infrastructure to reduce emissions and improve air quality, and the provision of quality green infrastructure.	10, 12, 36, 37, 38	Distinctive and natural places	Take action to reduce our carbon emissions, help Gwent adapt to climate change, and protect and restore our natural environment.	A Green Place to Live. A Thriving and Ambitious Place. A Safe Place to Live.

Page 524

What is the scope of the ISA?

1.12 The scope of the ISA is essentially reflected in a list of sustainability objectives – grouped under ten ISA theme headings – established through scoping, considering context/ baseline review, identified key issues and responses from statutory consultees. Taken together, these ISA themes and objectives provide a methodological ‘framework’ for appraisal.

Table 1.2: ISA Framework

ISA theme	ISA objective
Economy and Employment	Deliver sustainable economic growth by strengthening the local economy, promote tourism and enhance the vitality and viability of town centres.
	Increase the range and quality of employment opportunities within Monmouthshire to meet identified needs.
Population and Communities	Provide a sufficient quantity of good quality housing in a range of types and tenures that allows people to meet their housing needs and supports economic growth and prosperity.
	Through place-making and sustainable design maintain and enhance the visual character and distinctiveness of the built environment to create great places to live. Support and promote the distinctive character of local communities.
Health and well-being	To improve physical and mental health and wellbeing by encouraging healthier lifestyles, quality living environments and community safety.
Equalities, diversity, and social inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.
Transport and Movement	To improve access for all to jobs, services and facilities in a way that reduces reliance on car use through improving infrastructure and promoting active travel, whilst also ensuring access to high quality digital communications and utilities.
Natural Resources (Air, Land, Minerals and Water)	To reduce all forms of air pollution in the interests of improving local air quality.
	To use land efficiently by prioritising development on previously developed land, using existing land efficiently and protecting where possible higher grade agricultural land.
	To ensure that primary materials and minerals are managed in a sustainable way, including through the implementation of a circular economy by waste reduction, re-use, and recycling.

ISA theme	ISA objective
	To maintain and improve the quality of ground, surface and coastal waters and the quantity of water available including potable water supplies, ground water and river levels.
Biodiversity and Geodiversity	To conserve, protect and enhance biodiversity and geodiversity within and surrounding Monmouthshire.
Historic Environment	To conserve and enhance the significance of the County's historic environment, cultural assets (including the use of the Welsh language) and heritage assets and their settings.
Landscape	To protect and enhance the quality and character of the best of Monmouthshire's landscape, including its contribution to the setting and character of settlements.
Climate Change	To promote and encourage energy generation from renewable sources and energy efficiency.
Flood Risk	Ensure that new development is designed and located to avoid the risk of flooding and ensure the risk of flooding is not increased elsewhere.

Part 1: What has plan-making/ ISA involved up to this point?

2. Plan-making/ ISA up to this point

2.1 A review of the LDP has been underway since 2018, with a wide range of evidence produced to inform plan-making. **Table 2.1** below sets out the key RLDP and ISA documents published to date, along with dates for consultation. The RLDP documents and the evidence base (including the ISA Reports) can be viewed and downloaded on the Council's website.³

³ [Replacement Local Development Plan \(RLDP\) - 2018-2033 - Monmouthshire](#)

- 2.2 With a number of Initial ISA Reports published to date, this part of the NTS sets out the work that has been undertaken to develop and appraise reasonable alternatives, considering feedback from consultation at each stage and subsequent changes to the preferred strategy.
- 2.3 This includes how reasonable alternatives have been established considering the available evidence and feedback from consultation; a summary of the appraisal of reasonable alternatives; whilst **Chapter 3** explains the Council's reasons for selecting the preferred approach.

Establishing the reasonable alternatives

Level of growth

Level of growth options (2020)

- 2.4 In early development stages of the RLDP, Monmouthshire, Torfaen, and Blaenau Gwent County Councils jointly commissioned Edge Analytics to prepare a range of demographic, housing, and employment growth scenarios to inform the RLDP. A total of 20 different demographic-led, housing-led, and employment-led scenarios were generated for Monmouthshire. From these, eight growth options were selected for consultation, comprising of 2 low, 3 medium, and 3 high growth options, as set out in the Growth and Spatial Options Paper (June 2019), which was published for consultation from July to August 2019.
- 2.5 The Council took time to consider these options, consultation responses received, and informal feedback from Welsh Government officials; which indicated a lack of confidence in economic-led projections and a concern regarding ambitious LDPs. A decision was subsequently taken to commission Edge Analytics to model an additional demographic-led scenario. This scenario sought to address two of the key issues/ challenges facing the County in relation to retaining/ attracting younger adult population age groups and improving labour force retention.
- 2.6 The eight growth options identified in the June 2019 Consultation Paper together with the additional scenarios modelled by Edge Analytics (Growth Option 5A and Option 5A+) were assessed through the ISA in early 2020. For the purposes of the ISA process, the ten growth options were grouped together into three distinct options (Option 1 (Low Growth), Option 2 (Medium Growth), and Option 3 (High Growth)) to allow for a proportionate and meaningful appraisal to be carried out. An appraisal of the three grouped options were presented in the Initial ISA Report and consulted upon in March 2020.

Level of growth options (2021)

- 2.7 The Council revisited the Growth and Spatial Options stage of the RLDP process later in 2020 due to the publication of updated key evidence. Namely, in August 2020 the Welsh Government published corrected 2018-based population and household projections.
- 2.8 The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, form a fundamental part of the RLDP evidence base. These were considered together with other key evidence in relation to

issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area.

- 2.9 The 2020 publication of corrected Welsh Government 2018-based population and household projections comprised important new evidence that required consideration to ensure that the evidence base for the RLDP is robust and based on the most up to date information.
- 2.10 To take account of the latest evidence, an Updated Demographic Evidence Report (November 2021) was prepared by Edge Analytics, which set out a range of updated growth options for the RLDP.⁴
- 2.11 A total of fourteen different scenarios were generated for Monmouthshire, together with further sensitivity testing for all of the demographic and dwelling-led scenarios with regard to household formation and commuting ratios. From these fourteen different scenarios, six growth options were selected for further testing through the ISA. In addition to the initial modelling, all six selected options were the subject of additional testing to establish the impact on demography, dwellings, and household formation and employment of an affordable-housing policy-led strategy.
- 2.12 The six growth options identified in the Growth and Spatial Options Paper (December 2020) were assessed through the ISA in early 2021. The assessment of these options was presented in the Initial ISA Report which accompanied the consultation on the 'Sustainable and Resilient Communities Preferred Strategy' in Summer 2021.⁵

Level of growth options (2022)

- 2.13 Following consultation on the Preferred Strategy in 2021, a number of challenges arose which impacted on the progression of the RLDP and required further consideration. In terms of the level of growth, Welsh Government (WG) raised significant concerns regarding the proposed level of growth and the Strategy's 'general conformity' with policies 1 and 33 of Future Wales: The National Plan 2040. This suggested that growth in Monmouthshire would undermine growth in the national growth area of Cardiff, Newport, and the Valleys.
- 2.14 WG's consultation response took the unprecedented step of prescribing a maximum growth of 4,275 dwellings for Monmouthshire to 2033. This is considerably lower than the Preferred Strategy dwelling requirement that was consulted on (7,605 dwellings) and would result in barely any new housing allocations over RLDP period due to the existing housing landbank.
- 2.15 MCC considered that this approach would fail to deliver on key locally evidenced issues and objectives including affordable housing delivery, economic growth/prosperity and rebalancing the demography, to the detriment of the sustainability of the County's communities. MCC also felt it would fail to accord with policies 4, 5 and 7 of Future Wales: The National Plan 2040, which

⁴ <https://www.monmouthshire.gov.uk/planning-policy/development-of-an-evidence-base/>

⁵ AECOM (2021) ISA for the Monmouthshire Replacement Local Development Plan
<https://www.monmouthshire.gov.uk/app/uploads/2021/07/Monmouthshire-Initial-ISA-Report-NTS-June-2021.pdf>

specifically support rural communities and seek to increase the delivery of affordable homes throughout Wales.

- 2.16 On 14th December 2021, a special meeting of the Council's Economy and Development Select Committee considered the implications of the WG Planning Division's response on Monmouthshire's communities and on addressing the locally evidence-based outcomes and objectives.
- 2.17 MCC considered that the WG letter poses a significant challenge for the Preferred Strategy. Namely, that an amended RLDP that follows the letter's requirements would not meet the tests of soundness at examination because it would not address the evidence-based issues or achieve the required outcomes. Conversely, proceeding as originally proposed would also be a high-risk strategy.
- 2.18 Consequently, MCC considered revised growth options which support lower dwelling requirements. These options were subject to appraisal in the Initial ISA Report 2022, alongside the growth strategy consulted on in 2021. These options are summarised below:
- **Option 1:** Existing Preferred Strategy growth level of 7,605 new dwellings over the entire plan period alongside the creation of 7,215 new jobs.
 - **Option 2:** Demographic led strategy growth level of 5,400 new dwellings over the entire plan period alongside the creation of 6,240 new jobs.
 - **Option 3:** WG prescribed growth level of 4,280 new dwellings over the entire plan period alongside the creation of 4,290 new jobs.

Feedback from consultation and level of growth options in 2024

- 2.19 In 2022, the Council's preferred approach was Option 2 as this would reduce the level of growth proposed compared to the 2021 Preferred Strategy which WG objected to, whilst also ensuring that the RLDP delivers on the Council's objectives and addresses the core issues of delivering much needed affordable housing and retaining young people with access to new jobs.
- 2.20 At this stage (in 2024) no new evidence has emerged or is being considered that changes the alternatives developed in 2022 and these three options remain valid and up to date for the purposes of this ISA Report. The summary of the appraisal of these options is presented in Chapter 6.

Location of growth

Location of growth options (2020)

- 2.21 A total of eight Spatial Options were initially considered and included in the long list of spatial options (set out in Appendix 4 of the Growth and Spatial Options Consultation Paper, July 2019) but three were discounted prior to consultation as they were not considered to be genuinely realistic options. Accordingly, five spatial options were consulted on as part of the Growth and Spatial Options Consultation. Subsequent to this, as with the growth options, two additional spatial options were identified in light of consultation responses and emerging national policy at the time. Following on from this, a total of seven spatial options were considered through the ISA process in early 2020.

Location of growth options (2021)

- 2.22 As highlighted above, the Council revisited the Growth and Spatial Options stage of the RLDP process in 2020 following the publication of the corrected Welsh Government 2018-based population and household projections (August 2020). The RLDP spatial options considered in 2020 were reassessed to identify suitable options for consideration as part of this process. Two of the options considered in the 2020 consultation included a new settlement. These options were subsequently discounted as the Welsh Government deemed them contrary to national policy set out in PPW (Edition 11), which states new settlements should only be proposed as part of a joint LDP, SDP or the NDF. An additional option, focusing growth in the north of the County, was subsequently included as a result of consultation responses on the 2020 Growth and Spatial Options.
- 2.23 A total of four broad Spatial Distribution Options were therefore taken forward as realistic options for ISA in 2021 which explored a continuation of the existing LDP strategy, proportionately distributed growth, growth focused on the M4 corridor, and growth focused in the north of the County. The assessment of these options was presented in the Initial ISA Report which accompanied the consultation on the 'Sustainable and Resilient Communities Preferred Strategy' in Summer 2021.⁶

Location of growth options (2022)

- 2.24 Following consultation on the Preferred Strategy in 2021, a number of challenges arose which impacted on the progression of the RLDP and require further consideration. In terms of the spatial strategy, this specifically referred to the environmental impacts of phosphate in watercourses.
- 2.25 In light of new evidence, Natural Resources Wales (NRW) adopted tighter targets for the water quality of watercourses and conducted an assessment of the nine riverine Special Areas of Conservation (SAC) in Wales. This assessment established that phosphorus breaches are widespread within Welsh SAC rivers with over 60% of waterbodies failing against the new targets. Within Monmouthshire, NRW identified that within the River Usk, 88% of the river's water bodies failed to meet the required target and within the River Wye, 67% of the river's water bodies failed to meet the required target.
- 2.26 In response, NRW issued detailed planning guidance to ensure that the environmental capacity of the rivers does not deteriorate any further. Any proposed development within the affected catchment areas of the rivers Usk and Wye that might increase phosphate levels need to clearly evidence that the development can demonstrate phosphate neutrality or betterment in its design and/ or its contribution to the water body. This issue affects the upper (non-tidal) parts of the two rivers.
- 2.27 The phosphates water quality issue affecting the River Wye and River Usk had implications for the progression of the RLDP as the Preferred Strategy that was consulted on in 2021 directed future growth to a number of key sustainable settlements within these affected catchment areas. Further consideration was,

⁶ AECOM (2021) ISA for the Monmouthshire Replacement Local Development Plan
<https://www.monmouthshire.gov.uk/app/uploads/2021/07/Monmouthshire-Initial-ISA-Report-NTS-June-2021.pdf>

therefore, given as to how the RLDP can progress in light of this issue, carefully balancing the need for growth with the climate and nature emergency.

- 2.28 Following discussions with Dŵr Cymru/ Welsh Water (DCWW) and NRW, MCC realised that whilst a workable solution to this water quality issue is achievable for the Llanfoist Waste Water Treatment Works (WWTW) (River Usk catchment), there was no identified strategic solution for phosphate mitigation at the Monmouth WWTW (River Wye catchment) in 2022 that could be implemented during the Plan period.
- 2.29 Without an identified deliverable solution, it would not be possible to demonstrate at examination that sites in the Upper Wye Catchment are deliverable. This means that new site allocations for future growth could not be directed to settlements within the affected Wye catchment area, including the primary settlement of Monmouth, until a feasible solution is identified that can be implemented within a timescale that facilitates development within the Plan period. The restrictions on new housing and employment development in this area during the Plan period had obvious implications for the RLDP spatial strategy.
- 2.30 Consideration was therefore given to how to progress the RLDP having regard to the above challenges, whilst also ensuring that the RLDP delivers on the Council's objectives and core issues.
- 2.31 MCC subsequently developed a spatial option which did not direct growth to settlements within the affected Wye catchment area, including the primary settlement of Monmouth. This option, alongside the spatial strategy consulted on in 2021, were subject to appraisal in the Initial ISA Report 2022. The two options are summarised below:
- **Option 1:** Distribute growth proportionately across the County's most sustainable settlements.
 - **Option 2:** Focus growth in the County's most sustainable settlements of Abergavenny, Chepstow, and Caldicot, including Severnside, supported by lower growth in the most sustainable rural settlements (excluding those settlements in the Upper Wye catchment area).

Strategic growth areas

Strategic growth areas (2022)

- 2.32 In 2020, the Council identified potential strategic growth areas for each of the Primary Settlements and Severnside. To inform these possible strategic growth areas a preliminary high-level assessment of sites submitted during the Initial Call for Candidate Sites was undertaken by the Council to identify those sites which could contribute to delivering the level of growth (housing and jobs) required to deliver the Preferred Strategy. Only strategic sites and sustainable urban extensions of around 8ha in size and above were considered.
- 2.33 The identified strategic growth areas were considered by the Council to have the potential to underpin the Spatial Strategy, by accommodating growth and focusing development within those settlements and areas which are identified as the most sustainable locations.

2.34 The potential strategic growth options were assessed through the Initial ISA Report 2021 and reproduced in the Initial ISA Report 2022. The strategic growth options were located in Abergavenny and Llanfoist, Chepstow, Monmouth, and Severnside.

Feedback from consultation and location of growth options in 2024

2.35 Since 2022, DCWW have identified strategic improvements at the Monmouth Wastewater Treatment Works that can be implemented by 31st March 2025 which has provided WG with sufficient certainty to allow for new growth allocations in the Upper Wye Catchment, including at Monmouth. On this basis, there is no need to continue to assess or develop options that avoid growth in settlements in the Upper Wye Catchment area. The four options developed for ISA in 2021 are therefore considered to be representative of the choices available to the Council at this stage, supported by an assessment of the strategic growth locations which remain the same as reported on in 2021 and 2022.

Summary of options (2024)

2.36 In summary, the discussion in this chapter has identified no new options for assessment at this stage, and previously assessed options are reproduced as the representative choices for the Council in terms of their preferred approach and reasonable alternatives. The choices that are taken forward for assessment in Chapter 6 are:

Level of growth

- **Option 1:** Existing Preferred Strategy growth level of 7,605 new dwellings over the entire plan period alongside the creation of 7,215 new jobs.
- **Option 2:** Demographic led strategy growth level of 5,400 new dwellings over the entire plan period alongside the creation of 6,240 new jobs.
- **Option 3:** WG prescribed growth level of 4,280 new dwellings over the entire plan period alongside the creation of 4,290 new jobs.

Location of growth

- **Option 1:** Continuation of the existing LDP Strategy – distributing growth around the County with a particular focus on Main Towns, with some development in Severnside and some development in the most sustainable rural areas.
- **Option 2:** Proportionately distributed growth – growth would be distributed across the County’s most sustainable settlements with the level of growth proportionate to that settlement’s size and existing amenities, as well as the identified affordable housing need and capacity for growth.
- **Option 3:** Growth focused on the M4 corridor – focusing growth in the south of the County in the Severnside area close to the M4/ M48, to capitalise on its strategic links to the Cardiff Capital Region and South West England.
- **Option 4:** Growth focused in the north of the County – focusing growth in most sustainable settlements in the north of the County to capitalise on its strategic links to the Heads of the Valleys and wider Cardiff Capital Region via the A465, and towards Herefordshire via the A449 and A40.

Strategic growth locations

- **Abergavenny and Llanfoist:**
 - **Option A:** Land north of Abergavenny.
 - **Option B:** Land to the east of the A465; and
 - **Option C:** Land between the B4246 and Heads of the Valleys Road.
- **Chepstow:**
 - **Option D:** Land north of the Bayfield Estate.
 - **Option E:** Land between the Bayfield Estate and A48; and
 - **Option F:** Land between the A48 and M48.
- **Monmouth:**
 - **Option G:** Land west of Monmouth.
 - **Option H:** Land in central Monmouth; and
 - **Option I:** Land north-east of Monmouth.
- **Severnside:**
 - **Option J:** Land north-east of Caldicot.
 - **Option K:** Land north-west of Caldicot.
 - **Option L:** Land west of Caldicot/ east of Rogiet; and
 - **Option M:** Land east of Caerwent.

Appraising the reasonable alternatives

2.37 The strategic options identified above were subject to a comparative appraisal under each ISA theme and the detailed findings are presented below.

2.38 For each of the strategic options, the assessment has examined likely significant effects on the baseline, drawing on the sustainability objectives and themes identified through scoping (see **Table 2.1**) as a methodological framework. Based on the evidence available a judgement is made if there is likely to be a significant effect. Where it is not possible to predict likely significant effects based on reasonable assumptions, efforts are made to comment on the relative merits of the alternatives in more general terms and to indicate a rank of preference. The number indicates the rank and does not have any bearing on likely significant effects. This is helpful, as it enables a distinction to be made between the alternatives even where it is not possible to distinguish between them in terms of 'significant effects'. For example, if an option is ranked as 1 then it is judged to perform better against that ISA theme compared to an option that is ranked 2 or 3 or so on.

Level of growth

2.39 The three growth level options were subject to a comparative appraisal under each ISA theme and the summary findings are presented overleaf.

Table 2.2: Summary findings for level of growth options

ISA theme	Rank/ significant effects	Option 1	Option 2	Option 3
Economy and employment	Rank	1	2	3
	Significant effect?	Yes - positive	Yes - positive	No
Population and communities	Rank	1	2	3
	Significant effect?	Yes - positive	Yes - positive	No
Health and wellbeing	Rank	1	2	3
	Significant effect?	Yes - positive	Yes - positive	No
Equalities, diversity, and social inclusion	Rank	1	2	3
	Significant effect?	Yes - positive	Yes - positive	No
Transport and movement	Rank	1	2	3
	Significant effect?	No	No	No
Natural resources (air, land, minerals, and water)	Rank	3	2	1
	Significant effect?	Uncertain	Uncertain	Uncertain
Biodiversity and geodiversity	Rank	3	2	1
	Significant effect?	Uncertain	Uncertain	Uncertain
Historic environment	Rank	3	2	1
	Significant effect?	Uncertain	Uncertain	Uncertain

ISA theme	Rank/ significant effects	Option 1	Option 2	Option 3
Landscape	Rank	3	2	1
	Significant effect?	Uncertain	Uncertain	Uncertain
Climate change (including flood risk)	Rank	1	2	3
	Significant effect?	No	No	No

- 2.40 For ISA themes relating to natural resources, biodiversity, the landscape, and historic environment; the nature and significance of effects will be dependent on where growth is located and how development is designed/ implemented. As the level of growth increases so does the likelihood that impacts will occur, and negative effects will arise. Residual effects in this respect are uncertain and will be better informed by consideration of the location of growth, the sensitivity of receptors in these areas, and the potential mitigation measures available. The lowest growth option (Option 3) is ultimately ranked most favourably in respect of the potential environmental impacts, though it is also recognised that higher levels of development proposed through Option 1, followed by Option 2, have further potential to deliver environmental enhancements/ improvements that could lead to positive effects.
- 2.41 At this stage there is no evidence to conclude that the higher levels of growth would result in a significant negative effect on biodiversity/ geodiversity, the landscape and historic environment (in the absence of known development locations). However, given the limited brownfield resource in the County, development is likely to be primarily delivered through settlement expansion on greenfield land, with residual negative effects likely. The significance of the effects is likely to increase as the level of growth increases. There is uncertainty in terms of impact on important mineral resources and agricultural land until the location of growth is more defined.
- 2.42 Similarly, for the transport ISA theme, Options 1 and 2 proposing a higher level of growth are more likely to result in impacts on the local road network through increased traffic and congestion; however, no evidence suggests impacts are likely to be of significance. Recent increases in homeworking because of the pandemic is considered likely to prevail as a longer-term trend which will continue to support reduced congestion. Further, higher growth presents an increased potential to deliver accessibility and infrastructure improvements and result in more self-contained communities. This could lead to reduced levels of out commuting and modal shift, the importance of which have all been highlighted during the pandemic. As a result, higher growth Option 1, followed by Option 2, are ranked more favourably than Option 3 overall.
- 2.43 Option 3 is noted for potential negative effects in relation to the ISA themes of economy and employment, population and communities, health and wellbeing, and equalities, diversity, and social inclusion. However, there is a level of uncertainty, with effects unlikely to be significant in most cases. Particular concern relates predominantly to limited growth restricting opportunities to address a likely resultant demographic imbalance, which in turn would not support sustainable economic growth. Under this option, limited opportunities for the younger population to live and work in the County would negatively impact communities, exacerbating inequality and rural isolation. This is particularly relevant to certain groups with protected characteristics, such as the young, elderly, and disabled, who tend to be disproportionately affected by accessibility issues and the negative effects of transport infrastructure. Further, under Option 3 there would be a limited opportunity to secure additional market or affordable housing, limiting the range and choice of homes (housing mix) which could drive up house prices and exacerbate affordability issues.
- 2.44 High growth Option 1 is identified as best performing against ISA themes relating to the economy and employment, population and communities, health/ wellbeing and equalities as the additional growth provides an opportunity to

deliver a greater range of new housing, employment opportunities and community infrastructure to meet the needs of the County. Option 2 performs slightly less positively than Option 1 given the level of growth proposed is less, however similar positive effects are predicted under this Option, providing a more balanced demographic and more sustainable communities than predicted under Option 3.

Spatial strategy

2.45 The four spatial strategy options were subject to a comparative appraisal under each ISA theme. The summary findings are presented overleaf.

Table 2.3: Summary findings for location of growth options

ISA theme	Rank/ significant effects	Option 1	Option 2	Option 3	Option 4
Economy and employment	Rank	1	1	2	2
	Significant effect?	Yes - Positive	Yes - Positive	Uncertain	Uncertain
Population and communities	Rank	1	1	2	2
	Significant effect?	Yes - Positive	Yes - Positive	Uncertain	Uncertain
Health and wellbeing	Rank	1	1	3	2
	Significant effect?	Yes - Positive	Yes - Positive	Uncertain	Uncertain
Equalities, diversity, and social inclusion	Rank	1	1	2	2
	Significant effect?	Yes - Positive	Yes - Positive	Uncertain	Uncertain
Transport and movement	Rank	1	1	2	3
	Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain
Natural resources (air, land, minerals, and water)	Rank	1	1	3	2

ISA theme	Rank/ significant effects	Option 1	Option 2	Option 3	Option 4
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative	Yes - Negative
Biodiversity and geodiversity	Rank	3	3	1	2
	Significant effect?	Yes – Negative	Yes - Negative	Uncertain	Yes - Negative
Historic environment	Rank	=	=	=	=
	Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain
Landscape	Rank	2	2	1	2
	Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain
Climate change (including flood risk)	Rank	2	2	1	2
	Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain

- 2.46 The appraisal found that there is little to differentiate between the options at this stage regarding the historic environment ISA theme. This is given that all options have the potential to result in negative effects by directing development to areas that are sensitive in terms of heritage constraints, albeit in different areas of the County. However, it is recognised that mitigation could be provided, and that development also has the potential to deliver positive effects environmental improvement/ enhancement measures secured at the project scale. The nature and significance of effects will be dependent on the precise scale and location of development.
- 2.47 Similar conclusions can also be drawn in relation to biodiversity given the presence of international, national, and local designations throughout the County, though options can be differentiated between in relation to nutrient neutrality implications on the River Wye and River Usk SACs. Whilst solutions are available the options are ranked according to the mitigation requirements. Options 1 and 2, which direct growth to these Primary Settlements (followed by Option 4), therefore are worst performing overall.
- 2.48 In terms of the landscape and climate change themes, Option 3 directs development to areas of lower flood risk and that are less sensitive in landscape terms and is therefore considered to perform better compared to the other options. All other options focus development in areas that are of high flood risk (though it is anticipated that high flood risk areas would be avoided in line with national policy and sequential testing) and near landscape designations with a higher likelihood of negative effect arising. Given that the precise location of growth is not known, and further evidence base work is being carried out around landscape sensitivity, all of the options are found to have uncertain effects in relation to the landscape and climate change themes.
- 2.49 In terms of natural resources, it is difficult to identify any significant differences between the options in relation to water resources and quality. Options 1, 2 and 4, are best performing in terms of utilising brownfield land and protecting Best and Most Versatile (BMV) agricultural land and ensuring that air quality is not reduced throughout the County. However, it is recognised that there are limited opportunities for the regeneration of brownfield land so ultimately most growth will be on greenfield and potentially agricultural land. Option 3 performs less well given it may also lead to the loss of significant greenfield/ BMV land and has the potential to adversely impact upon the Limestone Mineral Safeguarding Area present to the south of the County. All the Options have the potential for a significant negative effect against the natural resources theme through the potential loss of BMV agricultural land, although it is acknowledged that there is an element of uncertainty at this stage until the precise location of development is known.
- 2.50 Options 1 and 2 perform more positively and are found to have the potential for significant long term positive effects against ISA themes relating to population/ communities, health/ wellbeing, economy/ employment, and equalities compared to the other options. They focus growth at the most sustainable Settlements where there is greater need and better access to public transport, existing employment, and facilities/ services. The importance of high levels of local accessibility to open space, services and facilities have been highlighted through the current pandemic. It should be noted that there are some small differences between Options 1 and 2 in terms of how growth is distributed during the Plan period, but these differences are not significant enough to

warrant one option being ranked higher or lower than the other against the ISA themes referred to earlier in this paragraph.

- 2.51 Option 3 capitalises upon opportunities associated with the Cardiff Capital Region City Deal, the South East Wales Metro, and the continuing economic growth of the Bristol/ South West region. Whereas Option 4 focuses growth to the most sustainable Settlements to the North of the County capitalising upon opportunities associated with the Cardiff Capital Region City Deal, the A465, and towards Herefordshire via the A449 and A40 along with rail links to Newport, Cardiff and the North via the Welsh Marches line. However, limited growth to the rest of the County under Option 3 and Option 4 would restrict economic growth in the wider County, and would not assist in sustaining Monmouthshire's existing communities, exacerbating existing demographic issues and levels of out-commuting.
- 2.52 Consideration is also given throughout the appraisal to Future Wales National Plan 2040 (National Development Framework (NDF) 2021) which indicates a desire to designate a Green Belt "around Newport and eastern parts of the region". This is anticipated to include a large part of South Monmouthshire which, although it does not include any of Monmouthshire's main towns, if implemented would significantly constrain future growth in this part of the County. Option 4 would accord with the direction of the Future Wales document, and therefore performs positively in terms of facilitating growth consistent with emerging National policy. PPW notes that longer term needs should be considered when considering the boundaries of a Green Belt. Conversely Option 3 would direct growth to the south where the Green Belt is proposed through the Future Wales document. As all other options seek to disperse growth throughout the County, and a defined location has not yet been established for the Green Belt, it is difficult to make any definitive conclusions on the nature and significance of effects at this stage.

Strategic growth areas

- 2.53 Strategic growth options have been identified across the four settlement areas of Abergavenny and Llanfoist, Chepstow, Monmouth, and Severnside. A summary of the assessment of these options is provided below.

Abergavenny and Llanfoist

- **Option A:** Land north of Abergavenny.
- **Option B:** Land to the east of the A465; and
- **Option C:** Land between the B4246 and Heads of the Valleys Road.

Figure 2.1: Strategic growth options in Abergavenny and Llanfoist

Table 2.4: Summary findings for Abergavenny and Llanfoist strategic growth options

ISA theme	Rank/ Significant effects	Option A	Option B	Option C
Economy and employment	Rank	1	2	3
	Significant effect?	No	No	No
Population and communities	Rank	1	2	3
	Significant effect?	Yes - Positive	Yes - Positive	Yes - Positive
Health and wellbeing	Rank	1	2	2
	Significant effect?	No	No	No
Equalities, diversity, and social inclusion	Rank	2	3	1
	Significant effect?	No	No	No
Transport and movement	Rank	=	=	=
	Significant effect?	No	No	No
Natural resources	Rank	1	2	3
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative
Biodiversity and geodiversity	Rank	1	1	2
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative
Historic environment	Rank	2	1	3
	Significant effect?	Uncertain	Uncertain	Uncertain
Landscape	Rank	3	1	2
	Significant effect?	Yes - Negative	Yes - Negative	Uncertain

ISA theme	Rank/ Significant effects	Option A	Option B	Option C
Climate change (including flood risk)	Rank	2	1	3
	Significant effect?	Uncertain	Uncertain	Uncertain

- 2.54 No significant differences have been identified between Options for the Transport and Movement ISA theme.
- 2.55 All Options perform positively against the Population and Communities, Health and Wellbeing, Equalities, Diversity and Social Inclusion, and Transport and Movement ISA themes, given Options are connected with reasonable distance to Abergavenny town centre, its services and facilities, and sustainable travel. Option A performs most positively of the Options for the majority of ISA Themes discussed above given this Option is most well located in this respect; with Options B and C dissected from the town centre by the A465. However, Option C performs most positively against the Equalities, diversity, and social inclusion ISA theme as this Option best supports deprived communities to the west of the town.
- 2.56 All Options perform negatively against the Natural Resources ISA theme given all Options would result in the loss of greenfield and BMV agricultural land and would not contribute towards promoting the use of brownfield land. However, it is recognised that there are limited opportunities within the County for brownfield development and development on lower grades of agricultural land. Option A is best performing against this ISA theme as it has the greatest access to the town centre.
- 2.57 In terms of the Biodiversity ISA theme, Options are constrained in terms of internationally/ nationally/ designated assets/sites, with the potential for significant long term negative effects. Whilst solutions are now available, the mitigation requirements need implementing and the potential for negative effects in their absence are noted at this stage. Supporting policy requirements will reduce the extent of these effects. In terms of ranking the Options, Option C is the worst performing theme as it is within 200m of the River Usk SAC/ SSSI, however given the additional impact pathways identified through the HRA for the SAC (recreation and water quantity, level, and flow), it is considered that Options A and B also have the potential to impact upon this European designated site.
- 2.58 Options are also constrained in terms of internationally/ nationally/ designated assets/sites under the Landscape and Historic Environment ISA themes. As with biodiversity, Option C is worst performing against the Historic Environment ISA theme given its proximity to the Blaenavon Industrial WHS and potential to affect internationally and nationally designated heritage landscapes. Option A also has the potential to lead to negative effects in this respect. In terms of Landscape, Option A is worst performing due to the potential impact on the Brecon Beacons National Park, its open character and hillside setting. Option A is also worst performing given its 'high/medium' sensitivity to residential development, as set out in the Monmouthshire Landscape Sensitivity Update

Study (2020). Option B is also identified as having 'high/medium' sensitivity to residential development.

2.59 The overall significance of effects against the Biodiversity, Landscape and Historic Environment ISA themes is uncertain at this stage and will be dependent on the design/ layout and implementation of specific mitigation measures. Specifically, in relation to the issue of nutrient neutrality in the River Usk SAC, all residential development coming forward in the hydrological catchment of these riverine SACs will have to be phosphorus neutral and supported by nutrient budgets. It is also noted that there is the potential for positive effects to be delivered, i.e., through improved accessibility to, and enhancement of, designated assets.

2.60 Option C is worst performing of the Options in relation to the Climate Change ISA theme, given that a significant proportion of Option C is located within areas at higher risk of flooding, with the potential for long term negative effects. However as above, for all Options, effects against Climate Change are uncertain at this stage. Uncertainty could be reduced by supporting policy mitigation.

Chepstow

- **Option D:** Land north of the Bayfield Estate.
- **Option E:** Land between the Bayfield Estate and A48; and
- **Option F:** Land between the A48 and M48.

Figure 2.2: Strategic growth options in Chepstow

Table 2.5: Summary findings for Chepstow strategic growth options

ISA theme	Rank/ Significant effects	Option D	Option E	Option F
Economy and employment	Rank	3	2	1
	Significant effect?	No	No	No

ISA theme	Rank/ Significant effects	Option D	Option E	Option F
Population and communities	Rank	=	=	=
	Significant effect?	Yes - Positive	Yes - Positive	Yes - Positive
Health and wellbeing	Rank	=	=	=
	Significant effect?	No	No	No
Equalities, diversity, and social inclusion	Rank	2	1	3
	Significant effect?	No	No	No
Transport and movement	Rank	=	=	=
	Significant effect?	No	No	No
Natural resources	Rank	=	=	=
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative
Biodiversity and geodiversity	Rank	1	2	3
	Significant effect?	Uncertain	Uncertain	Uncertain
Historic environment	Rank	1	1	2
	Significant effect?	Uncertain	Uncertain	Yes - Negative
Landscape	Rank	2	1	3
	Significant effect?	Uncertain	Yes - Negative	Yes - Negative
Climate change (including flood risk)	Rank	=	=	=
	Significant effect?	Uncertain	Uncertain	Uncertain

2.61 No significant differences have been identified between Options for the Population and Communities, Transport and Movement, Health and Wellbeing, Natural Resources, and Climate Change ISA themes.

- 2.62 All Options perform positively against the Economy and Employment ISA theme, Population and Communities, Health and Wellbeing, Equalities, Diversity and Social Inclusion and Transport and Movement ISA theme. In terms of Economy and Employment, Option F performs most positively given it is well connected with the M4 corridor, the Severn Bridge, and employment opportunities to the south of the town. In terms of Equalities, Diversity and Social Inclusion, Option E is best performing as it provides improved access for vulnerable groups to the town centre; supporting improved levels of deprivation.
- 2.63 All Options perform negatively against the Natural Resources ISA theme given all Options would result in increased vehicular use within Chepstow AQMA, and the permeant loss of BMV agricultural land /greenfield land. However, it is recognised that there are limited opportunities within the County for brownfield development and development on lower grades of agricultural land.
- 2.64 In terms of the Biodiversity, Landscape, and Historic Environment ISA themes; all Options are constrained in terms of internationally/ nationally/ designated assets/ sites, with the potential for significant long term negative effects. In terms of biodiversity, given the impact pathways identified through the HRA (2019), all Options perform equally in terms of impact on the Wye Valley Woodland SAC/ SSSI/ National Nature Reserve and the River Wye SAC/ SSSI. Option F is the worst performing against the Biodiversity ISA theme as there are areas of Ancient Woodland (and other habitats and associated species) present within the Option, impacts upon which have the potential for long term negative effects.
- 2.65 Option F is the most sensitive in terms of the historic environment as the growth area falls within a conservation area and contains 16 listed buildings. It is not possible to identify any significant differences between Options D and E at this stage in terms of the Historic Environment ISA theme; however, they are considered to be less likely to result in residual significant effects compared to Option F.
- 2.66 All of the options have the potential for a significant negative effect on the Landscape ISA them. Assuming that the same scale/ type of development would be delivered within the strategic growth areas, the differences identified between them at this stage mainly reflect the Landscape Sensitivity Update Study (2020) and findings. Option F is worst performing, given its 'high' sensitivity to residential development; followed by Option D given it is identified as having medium landscape sensitivity and located adjacent to the AONB.
- 2.67 For all Options, effects against Climate Change are uncertain at this stage. Uncertainty could be reduced by supporting policy mitigation.

Monmouth

- **Option G:** Land west of Monmouth.
- **Option H:** Land in central Monmouth; and
- **Option I:** Land north-east of Monmouth.

Figure 2.3: Strategic growth options in Monmouth

Table 2.6: Summary findings for Monmouth strategic growth options

ISA theme	Rank/ Significant effects	Option G	Option H	Option I
Economy and employment	Rank	2	1	3
	Significant effect?	No	No	No
Population and communities	Rank	2	1	1
	Significant effect?	Yes - Positive	Yes - Positive	Yes - Positive
Health and wellbeing	Rank	1	1	1
	Significant effect?	No	No	No
Equalities, diversity, and social inclusion	Rank	=	=	=
	Significant effect?	No	No	No

ISA theme	Rank/ Significant effects	Option G	Option H	Option I
Transport and movement	Rank	=	=	=
	Significant effect?	No	No	No
Natural resources	Rank	1	2	3
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative
Biodiversity and geodiversity	Rank	1	1	2
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative
Historic environment	Rank	1	2	3
	Significant effect?	Uncertain	Uncertain	Uncertain
Landscape	Rank	1	2	2
	Significant effect?	Uncertain	Yes - Negative	Yes - Negative
Climate change (including flood risk)	Rank	=	=	=
	Significant effect?	Uncertain	Uncertain	Uncertain

2.68 No significant differences have been identified between Options for the Equalities, Diversity and Social Inclusion, Transport and Movement, and Climate Change ISA themes.

2.69 All Options perform positively against the Economy and Employment ISA theme, Population and Communities, Health and Wellbeing, Equalities, Diversity and Social Inclusion, and Transport and Movement ISA themes, given Options are connected with reasonable distance to Monmouth town centre, its services and facilities, and sustainable travel. Option H performs most positively of the Options for Economy and Employment, Population and Communities, and Health and Wellbeing ISA Themes given this Option is most well located in this respect. Option G also performs well due to its location adjacent to the Wonastow Estate employment site.

2.70 All Options perform negatively against the Natural Resources ISA theme given all Options would result in the loss of greenfield and BMV agricultural land and would not contribute towards promoting the use of brownfield land. However, it is recognised that there are limited opportunities within the County for brownfield development and development on lower grades of agricultural land. Option G is best performing in this respect as it is the least constrained Option

in terms of BMV agricultural land coverage. Option I is worst performing given it would result in the loss of higher quality agricultural land in comparison with Option H.

- 2.71 In terms of the Biodiversity ISA themes; all Options are constrained in terms of internationally/ nationally/ designated assets/ sites, with the potential for significant long term negative effects. Whilst solutions are now available to address nutrient neutrality issues, the mitigation requirements need implementing and the potential for negative effects in their absence are noted at this stage. Supporting policy requirements will reduce the extent of these effects. In terms of ranking the Options, given the proximity of Option I to the River Wye SAC/ SSSI and the Wye Valley Woodland SAC/ SSSI/ National Nature Reserve, and the biodiversity present at the Option itself, Option I is worst performing overall.
- 2.72 All Options are also constrained in terms of internationally/ nationally/ designated assets/ sites under the Landscape and Historic Environment ISA themes. As above in relation to biodiversity, Option I is worst performing against the Historic Environment ISA theme as there are numerous heritage assets present in close proximity to the Option (Monmouth (Dixton) Conservation Area to the south east of the Option (which contains two scheduled monuments and five listed buildings), and the listed buildings to the north west of the Option on the other side of the A466).
- 2.73 Options I and J perform equally against the Landscape ISA theme given both are identified as having high/medium sensitivity to residential development, and both are constrained by landscape designations (Option I is located adjacent to a Landscape of Outstanding or Special Historic Interest, while Option H is designated in the current adopted LDP as an 'Area of amenity importance).
- 2.74 The overall significance of effects against the Biodiversity, Landscape and Historic Environment ISA themes is uncertain at this stage and will be dependent on the design/ layout and implementation of specific mitigation measures. Specifically, in relation to the emerging issue of nutrient neutrality in the River Wye SAC, Natural Resources Wales and Natural England advise that all residential development coming forward in the hydrological catchment of these riverine SACs will have to be phosphorus neutral and supported by nutrient budgets. It is also noted that there is the potential for positive effects to be delivered, i.e., through improved accessibility to, and enhancement of, designated assets.
- 2.75 For all Options, effects against Climate Change are uncertain at this stage. Uncertainty could be reduced by supporting policy mitigation.

Sevenside

- **Option J:** Land north-east of Caldicot.
- **Option K:** Land north-west of Caldicot.
- **Option L:** Land west of Caldicot/ east of Rogiet; and
- **Option M:** Land east of Caerwent.

Figure 2.4: Strategic growth options in Severnside

Table 2.7: Summary findings for Severnside strategic growth options

ISA theme	Rank/ Significant effects	Option J	Option K	Option L	Option M
Economy and employment	Rank	2	2	1	3
	Significant effect?	No	No	No	No
Population and communities	Rank	1	2	1	3
	Significant effect?	Yes - Positive	Yes - Positive	Yes - Positive	Yes - Positive
Health and wellbeing	Rank	2	2	1	3
	Significant effect?	No	No	No	No
Equalities, diversity, and social inclusion	Rank	2	3	1	4

ISA theme	Rank/ Significant effects	Option J	Option K	Option L	Option M
	Significant effect?	No	No	No	No
Transport and movement	Rank	2	2	1	3
	Significant effect?	No	No	No	No
Natural resources	Rank	2	2	1	2
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative	Yes - Negative
Biodiversity and geodiversity	Rank	3	2	3	1
	Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain
Historic environment	Rank	3	2	1	2
	Significant effect?	Uncertain	Uncertain	No	Uncertain
Landscape	Rank	3	3	2	1
	Significant effect?	Yes - Negative	Yes - Negative	Uncertain	Uncertain
Climate change (including flood risk)	Rank	1	1	3	2
	Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain

2.76 All Options perform positively against the Population and Communities, Health and Wellbeing, Equalities, Diversity and Social Inclusion, and Transport and Movement ISA themes, given Options have good to reasonable access to services and facilities throughout the Severnside area (notably Caldicot town centre), and access to the strategic transport network. Options have the potential to capitalise upon sustainable travel opportunities in the key Severnside settlements (namely Caldicot and the Severn Tunnel Junction rail station in Rogiet), in addition to utilising the M4 corridor. This will provide access to wider employment markets, including opportunities associated with the Cardiff Capital Region City Deal and the South East Wales Metro. While positive effects are anticipated through all Options, Option M performs least well of the Options given its comparatively poor access to Severnside centres,

services and facilities, and relatively limited potential to capitalise upon the strategic road network.

- 2.77 In terms of differentiating between Options J-L for the above ISA themes, Option L is best performing given its location along the M4 corridor, nestled between Caldicot and Rogiet, and its ability to capitalise upon sustainable transport infrastructure and encourage modal shift. Option J and K perform relatively on a par, given reasonable access to services, facilities, and the strategic road network/ sustainable transport opportunities.
- 2.78 All Options perform negatively against the Natural Resources ISA theme given all Options would result in the loss of greenfield and BMV agricultural land and would not contribute towards promoting the use of brownfield land. However, it is recognised that there are limited opportunities within the County for brownfield development and development on lower grades of agricultural land. Option L is best performing against this ISA theme as it is well located in terms of potential to utilise sustainable travel and improve air quality; is the least constrained in terms of Grade 1 agricultural land coverage.
- 2.79 In terms of the Biodiversity, Landscape, and Historic Environment ISA themes; Options are constrained in terms of internationally/ nationally/ designated assets/ sites, with the potential for significant long term negative effects. Options J and L are worst performing against the Biodiversity ISA theme given the presence of the Severn Estuary SPA/ SAC/ Ramsar site/ SSSI within 900m and 1.2km of the Options, respectively. Option M is identified as best performing, given it is the least constrained of the Options in terms of potential impact on biodiversity designated sites, and overall biodiversity value.
- 2.80 Option J is also worst performing against the Historic Environment ISA theme given it may lead to some development within the Caldicot Conservation Area, which also contains Caldicot Castle Grade I listed building and Scheduled Monument; and would result in the loss of large areas of greenfield/ open space in the setting of the castle which is also a Country Park. Option L is the least sensitive in terms of the historic environment. Options J and K are worst performing in terms of landscape, given both have been identified through the Landscape Sensitivity Update Study (2020) as having 'medium-high sensitivity for housing development. Option K would extend development northwest of the M48 into the open landscape; while Option J would extend the settlement of Caldicot to the northeast, towards the settlement of Crick and extend development north of the Caldicot Castle Country Park (which is also a conservation area). Option L has medium sensitivity to residential development, and may lead to coalescence between Caldicot and Rogiet, resulting in the loss of a multi-functional open space and designated 'Green Wedge'. Option M is best performing in this respect, although there remains the potential for residual minor negative effects.
- 2.81 The potential for Options to lead to significant effects against the Biodiversity, Landscape, and Historic Environment ISA themes is uncertain at this stage and will be dependent on the design/ layout and implementation of specific mitigation measures. It is also noted that there is the potential for positive effects to be delivered, i.e., through biodiversity net-gain, and the enhancement of designated assets.

2.82 Option L is worst performing of the Options in relation to the Climate Change ISA theme, given that a significant proportion of Option L is located within Flood Zones B/C, with the potential for long term negative effects. However as above, for all Options, effects against Climate Change are uncertain at this stage. Uncertainty could be reduced by supporting policy mitigation.

3. Developing the preferred strategy

- 3.1 This Chapter presents the Council's response to the alternatives appraisal and the Council's reasons for selecting its preferred approach in light of alternatives appraisal and other factors.

The Council's outline reasons for choosing the preferred strategy

Preferred growth and spatial option

- 3.2 The options appraisal concluded that Growth Option 2 and Spatial Option 2 combined were the most appropriate options for the 2022 Preferred Strategy and Deposit Plan.
- 3.3 While Growth Option 2 reduces the level of growth proposed compared to the 2021 Preferred Strategy it is considered the best option to respond to challenges, namely the Welsh Government objection to the level of growth set out in the 2021 Preferred Strategy, whilst also ensuring that the RLDP delivers on the Council's objectives and addresses the core issues of delivering much needed affordable housing at pace and scale, responding to the climate and nature emergency by delivering zero carbon ready new homes for our communities, and ensuring our communities are socially and economically sustainable. Similarly, Spatial Option 2 would address our locally evidence-based issues and objectives including in relation to the delivery of affordable homes, rebalancing our demography and responding to the climate and nature emergency, and as such is considered the most appropriate spatial strategy option.
- 3.4 The Preferred Growth Strategy is based on a demographic-led scenario with added policy assumptions⁷. It provides a level of growth (homes and jobs) that maximises the extent to which we address our local evidence-based issues, including in relation to the delivery of affordable homes, sustainable economic growth, rebalancing our demography by ensuring that young people can choose to live in the County while responding to the climate and nature emergency. The ISA analysis identifies that Growth Option 2 performs slightly less positively than Growth Option 1 given the level of growth proposed is less, however similar positive effects are predicted under this option. This growth option performs well against ISA themes relating to the economy and employment, population and communities, health/wellbeing and equalities as the additional growth provides an opportunity to deliver a range of new housing, employment opportunities and community infrastructure to meet the needs of the County providing a more balanced demographic and sustainable communities. While Growth Option 1 is identified as best performing against ISA themes relating to the economy and employment, population and communities, health/wellbeing and equalities it performs least favourably against ISA themes relating to Natural Resources, Biodiversity and Geodiversity, Historic Environment and Landscape. In addition, Welsh Government raised significant concerns in relation to this Growth Option

⁷ Demographic-led option for the LPA area (i.e. excludes the BBNP area within Monmouthshire) using ONS 2020 MYE base and applying assumptions in relation to migration, household membership rates and commuting ratio, as set out in the Housing Background Paper.

suggesting the level of growth in Monmouthshire would undermine growth in the national growth area of Cardiff, Newport and the Valleys and as a result would not be in general conformity with policies 1 and 33 of Future Wales: the National Plan 2040. Growth Option 1 has therefore been discounted. Further to this, Growth Option 3 performs negatively to RLDP objectives relating to Economic Growth/Employment, Demography, Housing, Place-making, Communities, Rural Communities, Infrastructure and Accessibility. It is also noted for potential negative effects in relation to the ISA themes of economy and employment, population and communities, health and wellbeing, and equalities, diversity, and social inclusion. Option 3 would not deliver on the Council's core objectives of delivery of affordable housing and rebalancing our demography and has subsequently been rejected. For further details on Growth Options 1 and 3 refer to the Growth and Spatial Strategy Options Appraisal as set out in Appendix 1.

3.5 Spatial Option 2 and Spatial Option 1 perform positively against ISA themes, in relation to population/ communities, health/ wellbeing, economy/ employment, and equalities. The Preferred Growth and Spatial Option would best achieve sustainable balanced deliverable outcomes by:

- Delivering a level of growth (homes and jobs) that addresses our locally evidence-based issues and objectives, including in relation to the delivery of affordable homes, rebalancing our demography and responding to the climate and nature emergencies, whilst having regard to WG officer concerns regarding alignment with Future Wales: The National Plan 2040.
- Maximising affordable housing delivery on new housing allocations, reflecting the Council's commitment to deliver 50% affordable homes on new housing sites which would help to tackle Monmouthshire's housing need, homelessness, and social inequality. This approach would also enable the Council to consider alternative mechanisms for delivering affordable homes.
- Providing a wider choice of smaller homes to enable younger people to live and work in Monmouthshire which would make our ageing communities more socially and economically sustainable.
- Requiring new homes to be net zero carbon, reflecting our commitment to responding to and tackling climate change.
- Delivering growth in our most sustainable settlements. This would limit the impacts of climate change and ensure good placemaking principles of attractive, accessible places to live and work that have access to sustainable transport links and reduce the need for journeys by the car.
- Promoting sustainable economic growth by providing policy support to enable and facilitate home/remote working, enabling economic growth through supporting the delivery of the priorities and aims identified in the Council's Economy, Employment and Skills Strategy and climate emergency declaration, maximising opportunities from Cardiff Capital Region City Deal, targeting growth in key economic sectors and providing appropriate employment land in the right locations.

3.6 Overall, it is considered that the Deposit Plan, based on the above preferred growth and spatial options, strikes a compromise between achieving our local evidence-based objectives that underpinned the Preferred Strategy consulted

upon in July 2021 and the Welsh Government's response which objected to the level of growth proposed. In response, the Deposit Plan proposes a lower level of growth that responds to these challenges.

Preferred Strategic Site Allocations

- 3.7 The Preferred Strategic Site Allocations have been selected from a total of 13 Strategic Growth Options located across Abergavenny, Chepstow, Monmouth and Severnside that were previously consulted on in the 2021 and 2022 Preferred Strategy. Site selection has been informed by the assessment of candidate sites and the consultation responses received.
- 3.8 As part of the consultation in July 2021, preferences were cast by members of the public using 'Placecheck'. Although it was made clear at that time that this was not part of the formal consultation, the results provide a helpful indication of public opinion. A total of 3,179 preferences were cast in the process. Table 7.1 below provides further detail. The four Preferred Strategic Site Allocations identified in the Deposit Plan are highlighted.

Table 3.1: Strategic site options

SEA option	Strategic growth area	Up votes	Down votes
Abergavenny A	Land north of Abergavenny	54	184
Abergavenny B	Land to the east of the A465	191	23
Abergavenny C	Land between the B4246	107	47
Chepstow D	Land north of the Bayfield Estate	51	132
Chepstow E	Land between the Bayfield Estate and A48	43	143
Chepstow F*	Land between the A48 and M48	60	143
Monmouth G	Land west of Monmouth	270	175
Monmouth H	Land central Monmouth	255	189
Monmouth I	Land north east Monmouth	318	248
Severnside J	Land north east of Caldicot	74	72
Severnside K	Land north west of Caldicot	48	85
Severnside L	Land west of Caldicot/ east of Rogiet	57	100
Severnside M	Land east of Caerwent	59	51

*Site/ Option F is no longer being put forward for development by the site promoter

- 3.9 The reasons for selection of sites are set out below:

Land to the East of Abergavenny (Option B)

- 3.10 The preferred strategic site allocation is a sustainably located edge of settlement site. Development here would expand the built-up area of the town beyond the A465 which currently forms a hard development boundary to the town. The site has the potential to form a well-connected urban extension to Abergavenny and provides the opportunity to provide a mixed-use

development, containing a mix of residential uses alongside employment/commercial uses, facilities and services.

- 3.11 The proximity of the area to Abergavenny Railway Station (currently an approximately 10-minute walk, 0.5 miles) offers significant benefits to maximise opportunities for a modal shift to more sustainable forms of transport and offers an opportunity for transit-oriented development. The site is just an approximate 16-minute walking distance from the town centre (0.7 miles). Vehicular access would be required from the A465 trunk road. The site has potential to offer park and ride facilities for Abergavenny train station, helping address an existing problem and supporting future modal shift alongside the increased train service frequency proposed as part of the South Wales Metro proposals.
- 3.12 The land is categorised as having high/medium landscape sensitivity to residential development in the Landscape Sensitivity Update. The site is mostly located on an area of predictive grade 2/3a BMV agricultural land. However, when considering the search sequence recommended in PPW12 it is noted that most of the land surrounding Abergavenny is either of BMV status or within floodplain. Moreover, the County's primary settlements are surrounded by either BMV land or flood plain meaning an alternative spatial strategy would not avoid allocating BMV land for development. Development will need demonstrate phosphate neutrality or betterment in its design and/or its contribution to the water body of the River Usk SAC catchment area.
- 3.13 This allocation could helpfully identify the long-term direction of growth for the town. This longer-term potential is advantageous.

Land at Mounton Road, Chepstow (Option E)

- 3.14 The Bayfield Site has not progressed to the Deposit Plan. In October 2023 a report of post consultation Preferred Strategy changes was agreed by Council. This included swapping the strategic site in Chepstow from Bayfield to Land at Mounton Road on the basis that a mixed-use development that includes a care home and proposed hotel had associated job creation and tourism benefits.
- 3.15 The preferred strategic site allocation is a sustainably located edge of settlement site. Development here would expand the existing built-up area west of the A466 (St Lawrence Road), north of the A48 and south of Mounton Road. The site is near the Wye Valley National Landscape (AONB) and on the opposite side of the road to the Mathern Conservation Area. PPW gives National Parks and AONBs equal status in terms of landscape and scenic beauty and requires that both be afforded the highest status of protection from inappropriate developments. Development in this location would need to be carefully designed to ensure that any effects on the setting of the National Landscape are acceptable. The land is categorised as being of high/medium landscape sensitivity to residential development.
- 3.16 The site is approximately 0.9 miles or an approximate 15-minute walking distance from the town centre and Bulwark neighbourhood centre, 0.9 miles (approximately 17-minute walk) from Chepstow Comprehensive School and Leisure Centre, and 1.1 miles (approximately 9-minute walk) from Chepstow railway station. As outlined above, careful consideration will be required regarding the cumulative impact of development on the A466, A48 and Highbeech roundabout.

- 3.17 Circa 72% of the land is predictive grade 2 and 3a BMV agricultural land. However, when considering the search sequence recommended in PPW it is noted that most of the land surrounding Chepstow is either of BMV status or affected by other constraints. Moreover, the County's primary settlements are surrounded by either BMV land or flood plain meaning an alternative spatial strategy would not avoid allocating BMV land for development. Another consideration will include its location in the limestone minerals safeguarding area.

Leasbrook, Monmouth (Option I)

- 3.18 The preferred strategic site allocation in Monmouth relates to a greenfield site to the north-east of Monmouth. The site is a sustainably located edge of settlement site north of Dixon Road. The site is located adjacent to existing development at Dixon Close and Hereford Road, including Haberdashers' Monmouth School's playing pitches to the west, along with agricultural land to the east and north.
- 3.19 Monmouth sits within the River Wye Special Area of Conservation (SAC) catchment area. The strategic site will therefore need to demonstrate phosphate neutrality or betterment in its design and/or its contribution to the water body. A strategic solution to phosphates at the Monmouth Wastewater Treatment Works has been identified by Dŵr Cymru Welsh Water which should be implemented by 31st March 2025.
- 3.20 The site is near the Dixon Roundabout offering good links to locations further afield when public transport and use of the private car is necessary. There is no rail network to encourage sustainable travel by rail, the need to reduce travel/carbon and support active travel options is of importance.
- 3.21 Regarding agricultural land, the site contains a small amount of Grade 2 land with most of the site Grade 3a with Grade 3b. However, when considering the search sequence recommended in PPW it is noted that most of the land surrounding Monmouth is of BMV status. Moreover, the County's primary settlements are surrounded by either BMV land or flood plain meaning an alternative spatial strategy would not avoid allocating BMV land for development.
- 3.22 As a small part of the main access point of the site is located in floodplain, an emergency access will be included to ensure an alternative route in any extreme flooding events on Dixon Road. The site is located within proximity to two Special Areas of Conservation and adjoins the Dixon Conservation Area with a very small portion of the site being located in the Lower Wye Valley Landscape of Historic Interest.
- 3.23 In terms of distance to Monmouth Town Centre the site is located approximately 0.6 miles/13-minutes from the Town Centre with the whole Town Centre being located within 0.9 miles and an 18-minute walk. The site is in very close proximity to Monmouth Comprehensive School 0.4miles/ 7-minutes and the Leisure Centre 0.6miles/ 12-minutes (using the public entrance/route).

Land to the East of Caldicot (Option J)

- 3.24 The preferred strategic site allocation is a sustainably located edge of settlement site. Development here would extend the settlement of Caldicot to the northeast, towards the settlement of Crick and adjacent to the adopted LDP

Crick Road, Portskewett site. The site is north of the Caldicot Castle Country Park, a Conservation Area and an area currently designated as an Area of Amenity Importance under the Adopted LDP.

- 3.25 A small part of the candidate site adjacent to the former railway line is in the floodplain: built development would not be permitted within this part of the site. Part of the site includes previously developed land comprising a commercial equestrian centre, with much of the remainder being on Council-owned land. The inclusion of such suitable land is supported by Future Wales Policy 3 which supports public leadership and the use of public land to deliver on ambitious affordable housing targets.
- 3.26 In terms of agricultural land, the site contains a small area of grade 1 agricultural land, most of which is within a floodplain so would not be built on. The remaining area is classified predominantly as grade 2 agricultural land. However, when considering the search sequence recommended in PPW it is noted that most of the land surrounding Caldicot is either of BMV status or floodplain. Moreover, the County's primary settlements are surrounded by either BMV land or flood plain meaning an alternative spatial strategy would not avoid allocating BMV land for development.
- 3.27 In terms of distance from Caldicot town centre, it is approximately 1.2 miles (from a central point of the growth area) and approximately 22-minutes walking distance. It is approximately a 33-minute walk from Caldicot railway station. The former railway line has recently been purchased by MCC and is being turned into an active travel route, offering a significant benefit in terms of modal shift and leisure provision. Landscape sensitivity to residential development is high/ medium. Part of this site is within the limestone minerals safeguarding area.
- 3.28 This allocation could helpfully identify the long-term direction of growth for the town. This longer-term potential is advantageous.

Part 2: What are the ISA findings at this stage?

4. Appraisal findings at this stage

- 4.1 Part 2 of the ISA Report and this NTS answers the question - what are appraisal findings at this stage? - by presenting an appraisal of the Preferred Strategy Document. Summary findings of the appraisal are presented below.
- 4.2 **Table 4.1** overleaf sets out a summary of the appraisal findings against each ISA theme. At this later stage of plan-making no recommendations are identified, recognising that earlier iterations of the ISA have informed plan development.

Table 4.1: Summary of the appraisal findings

ISA theme	Conclusion
Economy and employment	Overall, the employment land protections and provisions, alongside well-connected housing and town / local centre development are considered likely to lead to significant positive effects for this ISA theme. Additional provisions that seek to improve the local environment and sustainable and active travel connections will also bolster positive effects and support the rural economy and tourism growth.
Population and communities	Considering the above, it is anticipated that implementation of the RLDP will likely lead to significant positive effects . This is due to its support of building sustainable and resilient communities across Monmouthshire and tackling the affordable housing challenge. This also reflects the focus of the RLDP on bringing forward different housing development (various types and tenures) in well-connected areas to meet the varying needs of the population.
Health and wellbeing	Overall, it is considered that the RLDP will have significant positive effects on the health and wellbeing of Monmouthshire's population. This is through supporting development within proximity to key services and facilities in the higher tier settlements of Monmouth, Abergavenny, Chepstow and Caldicot. It also reflects the focus of the wider policies on bringing forward new infrastructure to support physical and mental health, for example green and blue infrastructure. This will ensure a continued high-quality service of resources in Monmouthshire.
Equalities, diversity, and social inclusion	Considering the above, it is anticipated that significant positive effects will come forward as a result of the RLDP for this ISA theme. This is due to the focus on protecting existing and supporting new infrastructure in the neighbourhood area, thereby safeguarding, and improving access to important services and facilities. It also reflects policy requirements for development that promotes accessible and inclusive places. The strategic allocations for housing development also contribute to equalities, diversity, and social inclusion – linked to their ability to provide a significant number of affordable houses that are supported by existing infrastructure within the primary settlements.

ISA theme	Conclusion
Transport and movement	<p>Considering the above, significant positive effects are concluded likely for the transportation and movement ISA theme under the RLDP. This reflects the focus on bringing forward strategic allocations in settlements with a good distribution of services and facilities and transportation infrastructure.</p> <p>Furthermore, there is a focus on prioritising existing public rights of way and active transportation infrastructure and enhancing the network where appropriate. This will likely contribute to reducing the reliance on private vehicles to move around the area and will help support the transportation network in Monmouthshire.</p>
Natural resources (air, land, minerals and water)	<p>In summary, the plan includes a good level of provision for mineral safeguarding and water quality and works well to reduce impacts on air quality. However, it is noted there is a need to conserve greenfield sites. It is recognised there are limited brownfield opportunities within Monmouthshire, and the plan works well to allocate strategic sites within settlement boundaries and adjacent to built up areas. However, at this time, significant negative effects are concluded likely for the impact on natural resources, due to the substantial (and unavoidable) loss of greenfield and agricultural land.</p>
Biodiversity and geodiversity	<p>Considering the above and with nutrient neutrality solutions now in place, minor positive effects are considered most likely for the biodiversity and geodiversity ISA theme under the RLDP. This is due to the policy framework avoiding adverse impacts on important sites for biodiversity, and the focus of the plan on bringing forward net gains and improving ecological connectivity.</p>
Historic environment	<p>At this time, minor negative effects are concluded most likely under the RLDP for this ISA theme. This reflects the proximity of site allocations to heritage features, and their potential to impact upon the historic environment where the design and layout of development will be crucial to minimise negative effects, as guided by the Deposit Plan policies. There are also notable policy provisions included under the RLDP, which will directly and indirectly benefit the historic environment by protecting specific features and enhancing the wider setting they are located within.</p>
Landscape	<p>At this time, minor negative effects are considered most likely in relation to the landscape ISA theme. Whilst development will impact upon landscape character and quality in Monmouthshire, the RLDP works well to reduce this impact by allocating sites within settlement boundaries and outside of landscape designations. Furthermore, the development policies and wider policy provisions under the RLDP work to maintain and enhance landscape character and quality – for example, through green infrastructure provision and resisting development in the open countryside. Despite this, considerable greenfield loss will impact the landscape cumulatively.</p>

ISA theme	Conclusion
Climate change (including flood risk)	<p>At this time, neutral effects are considered most likely in relation to climate change adaptation. This reflects the allocation of strategic sites at little to no risk of flooding. This conclusion is also based on the policy provisions of the RLDP, including those under Strategic Policy S4 (Climate Change), which seek to reduce flood risk across Monmouthshire.</p> <p>In terms of climate change mitigation, minor negative effects are concluded most likely at this time. Though the RLDP includes policy stipulations to help reduce emissions (including active and public transportation, green infrastructure provision, and encouraging containment within settlements), the level of growth proposed through the housing policies is significant and will increase emissions across Monmouthshire.</p>

Part 3: What happens next?

5. Next steps and monitoring

5.1 Part 3 of the SA Report and this NTS explains the next steps in the plan-making/ SA process.

Next steps

5.2 This ISA Report will accompany the Deposit Plan for public consultation. Any comments received will be reviewed and considered as part of the iterative plan-making and ISA process and inform the submission RLDP.

Monitoring

5.3 **Table 5.1** below outlines the proposed monitoring for the RLDP. This will be refined in the ISA Adoption Statement.

Table 5.1 Proposed ISA monitoring programme for the RLDP

ISA theme	Proposed monitoring measure
Economy and employment	<ul style="list-style-type: none"> • Overall employment and unemployment rate. • Net additional employment floorspace. • Net additional floorspace of commercial development by location. • Net improved quality employment floorspace. • Annual tourism income. • Net additional tourism development by location and type.
Population and communities	<ul style="list-style-type: none"> • Five-year housing land supply. • Number of pitches for travellers and travelling showpeople provided. • Regular updates to the Gypsy, Traveller and Travelling Showpeople Accommodation Assessment. • Number of affordable homes completed in the reporting year. • Number of homes completed by type and bedroom size in the reporting year. • Number of homes completed providing specialist accommodation in the reporting year. • Number of self-build/ custom build homes completed in the reporting year.
Health and wellbeing	<ul style="list-style-type: none"> • Area of new accessible natural spaces provided through development proposals. • Areas of improved access to natural green spaces provided through development proposals. • New active travel connections by location. • Loss/ gain of public open space by type. For example, park, children's playground, allotments.
Equalities, diversity, and social inclusion	<ul style="list-style-type: none"> • Indices of multiple deprivation scorings.

ISA theme	Proposed monitoring measure
Transport and movement	<ul style="list-style-type: none"> • Road junction improvements. • Improvements in accessibility scoring by location for walking and cycling. • Improvement in public transport networks. • Transport Plans agreed by location and land use type. • Additional kilometres of Public Rights of Way.
Natural resources (air, land, minerals, and water)	<ul style="list-style-type: none"> • Continued air quality monitoring data at air quality monitoring locations. • AQMA revocations. • Area of contaminated land remediated in reporting year. • Number and location of schemes implemented with sustainable drainage serving existing as well as new development. • Number and location of development including watercourse re-naturalisation or flood storage areas. • Number and location of development schemes affecting mineral safeguarding areas. • Area and location of brownfield redevelopment in the reporting year. • Loss of agricultural land by grade. • Area of greenfield development in the reporting year. • Number and location of developments contributing to maintenance of water infrastructure. • Number and location of non-domestic schemes achieving a reduction in water usage over the baseline.
Biodiversity and geodiversity	<ul style="list-style-type: none"> • Action Plan targets that monitor and manage the impacts of growth on internationally designated sites (SACs/ SPAs/ Ramsar) • Net gains/ losses of buffer land and alternative green space by function that reduce pressures of growth designated sites. • Net gain/ loss of habitat arising from development proposals. • New linkages between habitats by location.
Historic environment	<ul style="list-style-type: none"> • Number, type, and location of approved development impacting on a heritage asset. • Number of heritage assets improved and raised out of the 'at risk' category.
Landscape	<ul style="list-style-type: none"> • Positive landscape impact assessments on proposals approved. • Negative landscape impact assessments on proposals refused.
Climate change (including flood risk)	<ul style="list-style-type: none"> • New developments containing electric vehicle charging points by land use type. • Number, location, and type of proposals achieving low carbon design.

ISA theme**Proposed monitoring measure**

- Number of decentralised low carbon and renewable energy schemes approved in development.
 - Approvals of development in Flood Risk Zones 2, 3a, and 3b by use class and flood risk compatibility.
 - Refusals of development in Flood Risk Zones 2, 3a, and 3b.
-

1. Introduction

1.1 Background

1.1.1 AECOM is commissioned to lead on Integrated Sustainability Appraisal (ISA) in support of Monmouthshire County Council's Replacement Local Development Plan (RLDP). ISA fulfils the requirements and duties for Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA), Equalities Impact Assessment (EqIA), Health Impact Assessment (HIA), Welsh Language Impact Assessment (WLIA) and Well-being of Future Generations (WCFG).

1.2 ISA Explained

1.2.1 ISA is a mechanism for considering and communicating the likely effects of an emerging plan, and alternatives in terms of key sustainability issues. The aim of ISA is to inform and influence the plan-making process with a view to avoiding and mitigating negative impacts and maximising positive impacts. Through this approach, the ISA for the RLDP seeks to maximise the developing plan's contribution to sustainable development.

1.2.2 As identified above, the ISA seeks to fulfil the requirements and duties for SA, SEA, EqIA, HIA, WLIA and WCFG. The approach is to fully integrate these components to provide a single assessment process to inform the development of the RLDP. A description of each of the various components and their purposes is provided below.

1.3 Sustainability Appraisal (SA)

1.3.1 SA is undertaken to address the procedures prescribed by the Environmental Assessment of Plans and Programmes (Wales) Regulations 2004 (the SEA Regulations) which transpose into national law the EU Strategic Environmental Assessment (SEA) Directive¹. It also widens the scope of the assessment from focusing largely on environmental issues to further consider social and economic issues. SA is a legal requirement for Local Development Plans under Section 19(5) of the Planning and Compulsory Purchase Act 2004.

1.3.2 In line with the requirements of the SEA Directive, the two key steps in SA are that:

1. When deciding on 'the scope and level of detail of the information' which must be included in the SA Report there is a consultation with nationally designated authorities concerned with environmental issues; and
2. A report (the 'SA Report') is published for consultation alongside the Draft Plan that presents an assessment of the Draft Plan (i.e. discusses 'likely significant effects' that would result from plan implementation) and reasonable alternatives.

¹ Directive 2001/42/EC

- 1.3.3 The LDP Manual Edition 3 (2020) states that SA, incorporating SEA, plays an important part in demonstrating that the LDP is sound by ensuring that it reflects the legislative requirements and achieves sustainable development.

1.4 Equalities Impact Assessment (EqIA)

- 1.4.1 As a public-sector organisation, Monmouthshire Council has a duty under the Equality Act 2010² and associated Public Sector Equality Duty (PSED) to ensure that the objectives and policy options within the RLDP avoid unlawful discrimination (direct and indirect), instead, advancing equality of opportunity and fostering good relations between those with protected characteristics³ and all others.
- 1.4.2 In March 2021 the Socio-economic Duty commenced, which compliments the Equalities Act and PSED by further contributing towards Wales' long term well-being goals, in particular "A more equal Wales" and "A Wales of cohesive communities". Further strengthening social partnership arrangements and advancing fair work ambitions.⁴
- 1.4.3 An Equality Impact Assessment (EqIA) is often used by public sector organisations to demonstrate how this duty has been met.

1.5 Health Impact Assessment (HIA)

- 1.5.1 The Public Health (Wales) Act 2017 contains a provision to require a Health Impact Assessment (HIA) to be carried out to assess the likely effect of the proposed development plan on health and mental well-being and inequality. The HIA process provides a systematic yet flexible and practical framework that can be used to consider the wider effects of LDP policies and how they, in turn, may affect people's health.

1.6 Welsh Language Impact Assessment (WLIA)

- 1.6.1 The Welsh Government is committed to supporting the Welsh Language so that it can thrive and grow across Wales. The Welsh Language must be considered from the outset of the development plan process. It is a legislative requirement that the SA must include an assessment of the likely effects of the plan on the use of the Welsh language (The Planning (Wales) Act 2015 (Section 11)).
- 1.6.2 Planning Policy Wales (PPW) (2024) sets the policy requirements for Welsh language. Technical Advice Note 20: Planning and the Welsh Language provides guidance on the consideration of Welsh language as part of the development plan process. The TAN provides advice on incorporating the Welsh language in development plans through the SA and the policy approach to anticipated windfall development. In summary, planning authorities must consider the likely effects of their development plans as part of the SA process and include a statement within the Deposit Plan on how this has been considered and or addressed within the development plan.

² Equality Act 2010 [online] available at: <http://www.legislation.gov.uk/ukpga/2010/15/contents>

³ Protected characteristics under the Equality Act 2010 include age, sex, marital status, disability, gender reassignment, ethnicity, religion, pregnancy and maternity, sexual orientation and deprived/disadvantaged groups.

⁴ Welsh Government (2020) A more equal Wales: strengthening social partnership white paper [online] available at: <https://gov.wales/more-equal-wales-strengthening-social-partnership-white-paper>

The ISA process is the mechanism for considering how the scale and location of growth, the vision, objectives, policies and proposals individually and in combination, impact on the Welsh language. Where evidence indicates a detrimental impact on the use of the Welsh language the LPA can assess whether the strategy should be amended or mitigation measures should be identified.

1.7 Wellbeing of Future Generations (Wales) Act 2015

- 1.7.1 The Planning (Wales) Act 2015 sets out the definition of sustainable development for the planning system in Wales, mirroring the definition in the Well-being of Future Generations (Wales) Act 2015 (WBFGA).
- 1.7.2 “Sustainable development means the process of improving the economic, social, environmental and cultural well-being of Wales by taking action, in accordance with the sustainable development principle, aimed at achieving the well-being goals”.
- 1.7.3 The WBFGA sets seven well-being goals which all public bodies are required to achieve:
- A prosperous Wales;
 - A resilient Wales;
 - A healthier Wales;
 - A more equal Wales;
 - A Wales of cohesive communities;
 - A Wales of vibrant culture and thriving Welsh language; and
 - A globally responsible Wales.
- 1.7.4 The Act also identifies five ways of working which public bodies need to demonstrate they have carried out when undertaking their duty to achieve sustainable development. These are: involvement, collaboration, integration, prevention and long term factors. The well-being goals and the five ways of working can be used to inform and structure the ISA framework.

1.8 This ISA Report

- 1.8.1 This ISA Report⁵ is published alongside the Deposit Plan. It leads on from the Initial ISA Report published in November 2022, taking into consideration feedback from consultation and the subsequent updates to the RLDP. Any representations received will be considered when the Plan is finalised for submission.

⁵ See **Appendix I** for further explanation of the regulatory basis for answering certain questions within the SA Report; and a ‘checklist’ explaining more precisely the regulatory basis for presenting certain information.

2. What is the RLDP Seeking to Achieve?

2.1 Background

2.1.1 Monmouthshire County Council (MCC) is in the process of preparing a Replacement Local Development Plan (RLDP) for the County (excluding the area within the Brecon Beacons National Park). The RLDP will cover the period 2018-2033 and will be the statutory land use plan to support delivery of the Council's purpose of becoming a zero-carbon County, supporting well-being, health and dignity for everyone at every stage of life. The RLDP will set out land use development proposals for the County and will identify where and how much new development will take place over the Replacement Plan period. It will also identify areas to be protected from development and provide policies against which future planning applications will be assessed. The RLDP builds upon the current adopted LDP which covers the period 2011-2021.

2.2 Issues, Challenges, and Opportunities

2.2.1 The key issues, challenges and opportunities/ drivers facing the County (economic, environmental, social, and cultural) are set out in the RLDP Issues, Vision, and Objectives Paper (updated September 2024). The Issues have been grouped to align with the seven Well-being Goals as set out in the Well-being of Future Generations (Wales) Act 2015 to ensure that they are framed within this context. A summary of the key issues and challenges as set out by the Council are presented below:

- We have the highest average house prices in Wales. This means a large proportion of people cannot afford to buy a home so either leave the County, or have to live with their parents or in shared housing for longer. We have 2,064 households identified as being in need of affordable housing¹⁶. The RLDP explores opportunities to increase the number of affordable homes and ensure a range and choice of homes, both market and affordable, are incorporated within new developments.
- Our population is getting older. By 2033 we will have more people over the age 65+ living in the County but fewer young people. The 2021 Census identifies that nearly 26% of the population in Monmouthshire is over 65 (compared to 21% in Wales), with 16% under the age of 16 (18% in Wales) and just over 58% of working age (16-64) (61% in Wales). An older population changes the kind of services our communities will need, but also reduces the number of people using and financially supporting businesses and services. We will have a smaller economically active population making Monmouthshire a less attractive place for businesses to locate. This impacts on our future economic prospects. By increasing the supply of affordable housing we can retain a larger number of younger people in the County, increasing the sustainability of our economy and public services.
- The Council has declared a climate and nature emergency and has set out a commitment to strive to reduce its own carbon emissions to net zero

in line with the Welsh Government target of 2030, together with a strengthened emphasis on nature recovery. The RLDP provides the land use policy framework to address the climate and nature emergency together, seeking outcomes that recognise the role resilient ecosystems can play in tackling carbon emissions and mitigating the impact of climate change. The RLDP establishes policy to support and enable renewable energy generation and sets out the requirements for net zero carbon developments and other sustainable development principles such as active travel, green infrastructure and local food production. These sit alongside and integrate with policies for protection of sites designated for biodiversity, habitats and species and deliver on Net Biodiversity Benefit. The requirement that all future housing is net zero carbon is intended to reduce overall carbon emissions. The requirement that new strategic sites for housing are within walking distance of existing town centres is also intended to reduce carbon emissions.

- We have an urgent need to tackle water quality and phosphate pollution in our rivers. Natural Resources Wales (NRW) has adopted tighter targets for river water quality and have put in place a requirement to achieve phosphate neutrality or betterment in the River Usk and River Wye. In recognition of the water quality issues in the County, the Climate and Nature Emergency Strategy and associated action plans outline steps the Council will take to protect our rivers and ocean.
- There is a need to consider whether existing employment land is suitably located and fit for purpose, along with the potential increase in agile and home working and the impact this may have on employment land demand/requirements. We also need to consider future demand in line with Council aspirations and the opportunities that a shift in working behaviour could create with businesses given greater flexibility over where to locate.
- Monmouthshire benefits from its involvement in regional partnerships including the Cardiff Capital Region City Deal, Marches Forward Partnership and The Western Gateway. Opportunities associated with such partnership working include economic investment/innovation and transport and digital connectivity. Further details are provided in Appendix 3.
- Unemployment levels are low; however, Monmouthshire has a dual economy. The qualifications, skills and earnings of the residents are above the regional and national average, however, for those working in the area earnings are lower and employment is relatively less skilled. Monmouthshire has a net-outflow of commuters. Those who commute out of the County are higher earners than those who commute into the County. To address these issues there is a need to provide support for inward investment and local employment growth/opportunities as identified in the Economy, Employment and Skills Strategy.
- Vacancy rates in some of the County's town and local centres have increased¹⁷ due to changing shopping habits including internet shopping and economic factors such as inflation diminishing the disposable income of many households.

- There are challenges of rural isolation and sustaining rural communities, including regenerating the rural economy. The pandemic emphasised the value and importance of having locally accessible services and facilities.
- We want to protect the landscapes and heritage that make Monmouthshire a unique and attractive place to live. The RLDP recognises the value and importance of placemaking and the provision of locally accessible open/spaces for health and well-being and recreation.
- Tourism plays a significant part in the Monmouthshire economy particularly in assisting in the diversification of the rural economy and in sustaining the County's historic town centres. According to figures supplied by tourism economic indicator STEAM (Scarborough Tourism Economic Activity Monitor), the sector brought in £285m to Monmouthshire in 2022 and supported the equivalent of 3,356 full-time jobs (STEAM report 2022).

2.2.2 The key opportunities to realising some of the issues/ challenges are set out overleaf.

Future Wales: The National Plan 2040 (February 2021)

2.2.3 Future Wales sets out the national development framework and direction for development in Wales to 2040, it contains a number of policies that are considered to be of particular relevance to Monmouthshire providing the national policy context to address key issues facing Monmouthshire.

2.2.4 Policy 3 – Supporting Urban Growth and Regeneration - Public Sector Leadership - sets out that Welsh Government will play an active role in the delivery of growth and urban regeneration, working with local authorities to unlock the potential of public land and support local authorities to take an increased development role. Of note Policies 4 – Supporting Rural Communities and Policy 5 – Supporting the Rural Economy, provide the policy framework to consider how age balanced communities can be achieved, where depopulation should be reversed and allowing for sustainable, appropriate and proportionate economic growth. Policy 7 – Delivering Affordable Homes, also addresses the key issue of affordable housing prices in the County and provides the framework to address this through affordable housing led developments. These policies are considered to provide significant opportunities to address a number of the key issues facing the County.

Building Better Places: The Planning System Delivering Resilient and Brighter Futures. Placemaking and the Covid-19 Recovery (July 2020)

2.2.5 The Covid-19 pandemic has resulted in many challenges, but it has also resulted in some significant changes in how we operate our daily lives and use the neighbourhood spaces around us. Welsh Government's Building Better Places Covid-19 recovery policy document recognises this, and the opportunity it has created to continue with some of the shifts in behaviour and the increased importance on placemaking that have been highlighted as a result of Covid-19. In this respect, the RLDP is recognised as a key mechanism in delivering the planning policy priorities identified in the

Building Better Places document to assist in the Covid-19 recovery and maintaining and enabling the sustainable improvements that have arisen from the situation. Examples include greater emphasis on creating neighbourhoods that enable residents to stay and move locally to access most services and amenities through revitalised town centres and the provision of locally accessible green spaces. Similarly, the importance of digital connectivity and necessity to incorporate sufficient infrastructure in developments from the outset has been highlighted, particularly in rural areas.

Climate and Nature Emergency and Motion for the Rivers and Ocean

- 2.2.6 In May 2019, the Council declared a Climate Emergency and published an updated Climate and Decarbonisation Strategy and Action Plan in November 2021, with strengthened emphasis on nature recovery in recognition of the nature emergency. This sets out key actions the Council will take to reduce its own carbon emissions to net zero in line with Welsh Government's target of 2030, but also make a commitment to work with partners and organisations to develop and implement best practice in limiting global warming to less than 1.5°C. As recognised by PPW12 and Building Better Places, the RLDP and its policy framework and allocations provide a significant opportunity to address the causes and effects of climate change. It is recognised that efforts to tackle climate change are wide-ranging and will require a co-ordinated approach to development including aspects such as active travel, green infrastructure, effective use of land and resources and flood resilience.
- 2.2.7 In recognition of urgent need to address water quality in the County the Climate Emergency Action Plan November 2021 update, included the addition of an action on addressing water quality, establishing the requirement to prepare an action plan specifically on water quality. In March 2022 the Motion for the Rivers and Ocean was agreed by Council with the associated Action Plan agreed in September 2022. This sets out measures and to tackle river quality and the partnerships in place to provide a co-ordinated approach to the issue. Of particular relevance to the RLDP is the ongoing work with NRW and Welsh Water and continued involvement with the Wye Nutrient Management Board and the Usk Catchment Partnership to identify and implement options for delivering improvements in water quality.

Cardiff Capital Region City Deal

- 2.2.8 The overarching economic objectives of the City Deal are to create 25,000 new jobs and leverage £4 billion in private sector investment across the region. Key themes have been identified to focus the approach: Connecting the Region; Regeneration and Infrastructure; Skills and Employment. These strategic themes present opportunities for the RLDP including:
- Connecting the Region – Digital Strategy: this aims to create a smart region, driving innovation and solutions to attract private sector partnership and investment, including Welsh and regional connectivity, mobile 5G access and maximising open data.

- Metro – the South East Wales Metro Project provides much needed opportunities to increase train service frequency, improve inter-modal connectivity and coordination, streamline ticketing and improve bus services.
- Regeneration and Infrastructure – the Housing and Investment Fund supports the delivery of more homes across the region. This includes assistance in stimulating the SME sector across the region by providing loan development finance and launching a Customer Build Scheme releasing smaller plots of public sector land with a full package of support for SMEs to deliver new homes.
- Skills and Employment – the Skills for the Future Project provides region-wide school engagement with pupils and parents to offer careers advice and guidance, support for businesses to address barriers of participation, including a skills investment fund and a commitment to support delivery of over 10,000 additional apprenticeships, graduate internships and upskilled employees in the private sector.

Monmouthshire 2040: Our Economic Growth and Ambition Statement and Inward Investment Prospectus 2020: Growing your Business in Monmouthshire

- 2.2.9 The Council's Economic Growth and Ambition Statement and Prospectus set out the aspirations to raise the profile of Monmouthshire as a dynamic place to do business, a credible place to invest and an incredible place to live, visit and stay. It recognises that Monmouthshire's economy needs to grow to help build sustainable and resilient communities and to achieve the Community and Corporate Plan (April 2023) objective of being a thriving and ambitious place, where there are vibrant town centres, where businesses can grow and develop.
- 2.2.10 The Economic Growth and Ambition Statement and accompanying Prospectus and emerging Economic Development Strategy will work alongside the RLDP and will assist in:
- Raising the profile of Monmouthshire as a key investment opportunity for the private sector.
 - Attract funding and investment to Monmouthshire to attract and facilitate economic growth to the County.
 - Increasing the take up of apprenticeships and reducing the number of residents who are not in education, employment or training.
 - Increasing next generation access broadband and mobile phone coverage across the County.

2.3 Vision and Objectives of the RLDP

- 2.3.1 The RLDP Vision outlines how the County is planned to develop, change, or be conserved up to 2033, and provides the framework for the Plan's strategy and policies. The Vision set out in the adopted LDP 2011-2021 has been reviewed and updated to take account of the issues, challenges and opportunities facing the County, key elements of the Gwent PSB Well-being

Plan (August 2023) and MCC's Taking Monmouthshire Forward - Community and Corporate Plan 2022-2028 (April 2023).

By 2033 Monmouthshire will be home to well-connected, exemplar affordable housing-led, net zero carbon places that provide employment and support demographically balanced sustainable and resilient communities for all, where:

- ***People are living in inclusive, equal, safe, cohesive, prosperous, and vibrant communities. Both urban and rural areas are well-connected with better access to local services and facilities, open space, and employment opportunities.***
- ***Communities and businesses are part of an economically thriving, ambitious, and well-connected County.***
- ***The best of the County's built heritage, countryside, biodiversity, landscape, and environmental assets have been protected and enhanced to retain its distinctive character.***
- ***People enjoy healthier, more sustainable lifestyles with improved access to public transport and active travel opportunities and have a minimised impact on the global environment, supporting our ambitions for a zero-carbon County.***

2.3.2 To address the key issues/ challenges and deliver the vision, 17 objectives have been developed for the RLDP, which build upon the Adopted LDP objectives. The objectives are kept under review and updated as necessary as part of the continued development of the RLDP evidence base.

2.3.3 The objectives are set out in Table 2.1 and have been grouped to align with the 7 wellbeing goals set out in the Wellbeing of Future Generation (Wales) Act 2015, and the RLDP issues, as well as the main policy themes identified in Planning Policy Wales (PPW12), the Gwent PSB Wellbeing Plan steps, and the Council's Community and Corporate Plan.

Table 2.1: RLDP objectives and their contributions to wellbeing goals

RLDP Objective	Headline	RLDP Objective	RLDP issues addressed ⁶	Main PPW12 theme	Gwent PSB Well-being Plan Steps	Community & Corporate Plan Objectives
A Prosperous Wales (Well-being Goal 1)						
Objective 1	Economic Growth/ Employment	To support a thriving, well-connected, diverse economy, which provides a range of good quality employment opportunities to enable and encourage indigenous business growth and attract inward investment and competitive innovative businesses in appropriate growth sectors, including through the provision of start-ups and grow on spaces.	1, 2, 3, 4, 5, 6, 7, 24	Productive and enterprising places	Take action to reduce the cost-of-living crisis in the longer term.	A Thriving and Ambitious Place.
Objective 2	Town and Local centres	To sustain and enhance the centres of Abergavenny, Caldicot, Chepstow, Magor, Monmouth, and Usk as vibrant and attractive centres serving the needs of their population and those of their surrounding hinterlands, and supporting adaptation to meet the needs of the evolving role of the high street.	8	Active and social places	Take action to address inequities, particularly in relation to health, through the framework of the Marmot Principles. Enable and support people, neighbourhoods,	A Thriving and Ambitious Place.

⁶ See Appendix 1 of the Preferred Strategy for the full list of RLDP issues.

RLDP Objective	Headline	RLDP Objective	RLDP issues addressed ⁶	Main PPW12 theme	Gwent PSB Well-being Plan Steps	Community & Corporate Plan Objectives
A Resilient Wales (Well-being Goal 2)						
Objective 3	Green Infrastructure, Biodiversity and Landscape	To protect, enhance and manage the resilience of Monmouthshire’s natural environment, biodiversity and ecosystems and the connectivity between them, while at the same time maximising benefits for the economy, tourism, health, and well-being. This includes the Wye Valley National Landscape (AONB), the County’s other high quality and distinctive landscapes, protected sites, protected species and other biodiversity interests.	11, 12, 35	Distinctive and natural places	Take action to reduce our carbon emissions, help Gwent adapt to climate change, and protect and restore our natural environment.	A Green Place to Live.
Objective 4	Flood risk	To ensure that new development takes account of the risk of flooding, both existing and in the future, including the need to avoid inappropriate development in areas that are at risk from flooding or that may increase the risk of flooding elsewhere and the need	12, 13	Distinctive and natural places	Take action to reduce our carbon emissions, help Gwent adapt to climate change, and protect and restore	A Green Place to Live.

A Globally Responsible Wales (Well-being Goal 7)						
Objective 17	Climate and Nature Emergency	To strive to limit the increase in global temperatures to 1.5°C, supporting carbon reduction through a variety of adaptation measures including facilitating resilient ecosystems and nature recovery, the use of renewable energy, net zero homes, the design and location of new development, encouraging balanced job and population growth to reduce out-commuting, the provision of broadband connectivity to reduce the need to travel, the provision of ultra-low emission vehicle charging infrastructure to reduce emissions and improve air quality, and the provision of quality green infrastructure.	10, 12, 36, 37, 38	Distinctive and natural places	Take action to reduce our carbon emissions, help Gwent adapt to climate change, and protect and restore our natural environment.	A Green Place to Live. A Thriving and Ambitious Place. A Safe Place to Live.

3. What is the Scope of the ISA?

3.1 Introduction

3.1.1 The aim here is to introduce the reader to the scope of the ISA, meaning the sustainability issues/ objectives that should be a focus of (and provide a broad methodological framework for) ISA.

3.2 Consultation on the Scope of the ISA

3.2.1 The Regulations require that “*When deciding on the scope and level of detail of the information that must be included in the Environmental Report, the responsible authority shall consult the consultation bodies*”. In Wales, the consultation bodies are Natural Resources Wales and Cadw.⁷ A Scoping Report was sent to the statutory consultees for comment from 26th October to 30th November 2018. The responses received were considered and amendments made to the baseline information and draft ISA Objectives where necessary. Since that time, the ISA scope has evolved as new evidence has emerged and there have been some minor refinements to the ISA objectives - however, the scope remains fundamentally like that agreed through the dedicated scoping consultation in 2018. Baseline updates, such as new Census data, have been considered through the subsequent assessment process.

3.2.2 Further information on the scope of the ISA - i.e., a more detailed review of sustainability issues/ objectives as highlighted through a review of the sustainability ‘context’ and ‘baseline’ – is available to view separately via MCC.

3.3 ISA Objectives

3.3.1 Table 3.1 presents the ISA objectives - grouped under ten theme headings - established through scoping, considering context/baseline review, identified key issues and responses from statutory consultees.

3.3.2 Taken together, the ISA themes and objectives presented in Table 3.1 provide a methodological ‘framework’ for appraisal.

Table 3.1: ISA Framework

ISA theme	ISA objective
Economy and Employment	Deliver sustainable economic growth by strengthening the local economy, promote tourism and enhance the vitality and viability of town centres.
	Increase the range and quality of employment opportunities within Monmouthshire to meet identified needs.

⁷ In accordance with Article 6(3) of the SEA Directive, these consultation bodies were selected because ‘by reason of their specific environmental responsibilities, [they] are likely to be concerned by the environmental effects of implementing plans and programmes.’

ISA theme	ISA objective
Population and Communities	Provide a sufficient quantity of good quality housing in a range of types and tenures that allows people to meet their housing needs and supports economic growth and prosperity.
	Through place-making and sustainable design maintain and enhance the visual character and distinctiveness of the built environment to create great places to live. Support and promote the distinctive character of local communities.
Health and well-being	To improve physical and mental health and wellbeing by encouraging healthier lifestyles, quality living environments and community safety.
Equalities, diversity, and social inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.
Transport and Movement	To improve access for all to jobs, services and facilities in a way that reduces reliance on car use through improving infrastructure and promoting active travel, whilst also ensuring access to high quality digital communications and utilities.
Natural Resources (Air, Land, Minerals and Water)	To reduce all forms of air pollution in the interests of improving local air quality.
	To use land efficiently by prioritising development on previously developed land, using existing land efficiently and protecting where possible higher grade agricultural land.
	To ensure that primary materials and minerals are managed in a sustainable way, including through the implementation of a circular economy by waste reduction, re-use, and recycling.
	To maintain and improve the quality of ground, surface and coastal waters and the quantity of water available including potable water supplies, ground water and river levels.
Biodiversity and Geodiversity	To conserve, protect and enhance biodiversity and geodiversity within and surrounding Monmouthshire.
Historic Environment	To conserve and enhance the significance of the County's historic environment, cultural assets (including the use of the Welsh language) and heritage assets and their settings.
Landscape	To protect and enhance the quality and character of the best of Monmouthshire's landscape, including its contribution to the setting and character of settlements.

ISA theme	ISA objective
Climate Change	To promote and encourage energy generation from renewable sources and energy efficiency.
Flood Risk	Ensure that new development is designed and located to avoid the risk of flooding and ensure the risk of flooding is not increased elsewhere.

4. Plan-making and ISA to Date

4.1 Regulatory Requirements

4.1.1 In line with regulatory requirements, there is a need to explain how work undertaken to date has informed plan-making, in particular, how work has been undertaken to develop and then appraise reasonable alternatives, and how the Council have considered appraisal findings when developing the preferred approach for the RLDP. This information is important given regulatory requirements.⁸

4.2 Structuring the Work to Date

4.2.1 A review of the LDP has been underway since 2018, with a wide range of evidence produced to inform plan-making. Table 4.1 sets out the key RLDP and ISA documents published to date, along with dates for consultation. The RLDP documents and the evidence base (including the ISA Reports) can be viewed and downloaded on the Council's website.⁹

Table 4.1: RLDP and ISA documents published to date

Preferred Strategy, December 2022 Public consultation from December 2022 to January 2023	Initial ISA Report and NTS 2022 Public consultation from December 2022 to January 2023

- 4.2.2 With a number of Initial ISA Reports published to date, this ISA Report sets out the work that has been undertaken to develop and appraise reasonable alternatives, considering feedback from consultation at each stage and subsequent changes to the preferred strategy.
- 4.2.3 For clarity, **Chapter 5** details how reasonable alternatives have been established considering the available evidence and feedback from consultation, **Chapter 6** presents a summary of the appraisal of reasonable alternatives (with detailed appraisals provided in appendices), and **Chapter 7** explains the Council's reasons for selecting the preferred approach.

5. Establishing Reasonable Alternatives

5.1 Introduction

5.1.1 This chapter explains the evidence and work carried out to date to identify strategic options, or reasonable alternatives. To deliver the vision and objectives detailed in Chapter 2, the Council have explored **how much growth** (housing and employment) is required over the plan period (2018-2033) and **where this growth could be located** in the County. Each of these issues are discussed in turn below.

5.2 Level of growth options (2020)

- 5.2.1 In early development stages of the RLDP, Monmouthshire, Torfaen, and Blaenau Gwent County Councils jointly commissioned Edge Analytics to prepare a range of demographic, housing, and employment growth scenarios to inform the RLDP. A total of 20 different demographic-led, housing-led, and employment-led scenarios were generated for Monmouthshire. From these, eight growth options were selected for consultation, comprising of 2 low, 3 medium, and 3 high growth options, as set out in the Growth and Spatial Options Paper (June 2019), which was published for consultation from July to August 2019.
- 5.2.2 The Council took time to consider these options, consultation responses received, and informal feedback from Welsh Government officials; which indicated a lack of confidence in economic-led projections and a concern regarding ambitious LDPs. A decision was subsequently taken to commission Edge Analytics to model an additional demographic-led scenario. This scenario sought to address two of the key issues/ challenges facing the County in relation to retaining/ attracting younger adult population age groups and improving labour force retention.
- 5.2.3 The eight growth options identified in the June 2019 Consultation Paper together with the additional scenarios modelled by Edge Analytics (Growth Option 5A and Option 5A+) were assessed through the ISA in early 2020. For the purposes of the ISA process, the ten growth options were grouped together into three distinct options (Option 1 (Low Growth), Option 2 (Medium Growth), and Option 3 (High Growth)) to allow for a proportionate and meaningful appraisal to be carried out. An appraisal of the three grouped options were presented in the Initial ISA Report and consulted upon in March 2020.

5.3 Level of growth options (2021)

- 5.3.1 The Council revisited the Growth and Spatial Options stage of the RLDP process later in 2020 due to the publication of updated key evidence. Namely, in August 2020 the Welsh Government published corrected 2018-based population and household projections.
- 5.3.2 The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and

the Well-being plan for a plan area, form a fundamental part of the RLDP evidence base. These were considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area.

- 5.3.3 The 2020 publication of corrected Welsh Government 2018-based population and household projections comprised important new evidence that required consideration to ensure that the evidence base for the RLDP is robust and based on the most up to date information.
- 5.3.4 To take account of the latest evidence, an Updated Demographic Evidence Report (November 2021) was prepared by Edge Analytics, which set out a range of updated growth options for the RLDP.¹⁰
- 5.3.5 A total of fourteen different scenarios were generated for Monmouthshire, together with further sensitivity testing for all of the demographic and dwelling-led scenarios with regard to household formation and commuting ratios. From these fourteen different scenarios, six growth options were selected for further testing through the ISA. In addition to the initial modelling, all six selected options were the subject of additional testing to establish the impact on demography, dwellings, and household formation and employment of an affordable-housing policy-led strategy.
- 5.3.6 The six growth options identified in the Growth and Spatial Options Paper (December 2020) were assessed through the ISA in early 2021. The assessment of these options was presented in the Initial ISA Report which accompanied the consultation on the 'Sustainable and Resilient Communities Preferred Strategy' in Summer 2021.¹¹

5.4 Level of growth options (2022)

- 5.4.1 Following consultation on the Preferred Strategy in 2021, a number of challenges arose which impacted on the progression of the RLDP and required further consideration. In terms of the level of growth, Welsh Government (WG) raised significant concerns regarding the proposed level of growth and the Strategy's 'general conformity' with policies 1 and 33 of Future Wales: The National Plan 2040. This suggested that growth in Monmouthshire would undermine growth in the national growth area of Cardiff, Newport, and the Valleys.
- 5.4.2 WG's consultation response took the unprecedented step of prescribing a maximum growth of 4,275 dwellings for Monmouthshire to 2033. This is considerably lower than the Preferred Strategy dwelling requirement that was consulted on (7,605 dwellings) and would result in barely any new housing allocations over RLDP period due to the existing housing landbank.
- 5.4.3 MCC considered that this approach would fail to deliver on key locally evidenced issues and objectives including affordable housing delivery, economic growth/prosperity and rebalancing the demography, to the

¹⁰ <https://www.monmouthshire.gov.uk/planning-policy/development-of-an-evidence-base/>

¹¹ AECOM (2021) ISA for the Monmouthshire Replacement Local Development Plan
<https://www.monmouthshire.gov.uk/app/uploads/2021/07/Monmouthshire-Initial-ISA-Report-NTS-June-2021.pdf>

detriment of the sustainability of the County's communities. MCC also felt it would fail to accord with policies 4, 5 and 7 of Future Wales: The National Plan 2040, which specifically support rural communities and seek to increase the delivery of affordable homes throughout Wales.

- 5.4.4 On 14th December 2021, a special meeting of the Council's Economy and Development Select Committee considered the implications of the WG Planning Division's response on Monmouthshire's communities and on addressing the locally evidence-based outcomes and objectives.
- 5.4.5 MCC considered that the WG letter poses a significant challenge for the Preferred Strategy. Namely, that an amended RLDP that follows the letter's requirements would not meet the tests of soundness at examination because it would not address the evidence-based issues or achieve the required outcomes. Conversely, proceeding as originally proposed would also be a high-risk strategy.
- 5.4.6 Consequently, MCC considered revised growth options which support lower dwelling requirements. These options were subject to appraisal in the Initial ISA Report 2022, alongside the growth strategy consulted on in 2021. These options are summarised below:
- **Option 1:** Existing Preferred Strategy growth level of 7,605 new dwellings over the entire plan period alongside the creation of 7,215 new jobs.
 - **Option 2:** Demographic led strategy growth level of 5,400 new dwellings over the entire plan period alongside the creation of 6,240 new jobs.
 - **Option 3:** WG prescribed growth level of 4,280 new dwellings over the entire plan period alongside the creation of 4,290 new jobs.

5.5 Feedback from consultation and level of growth options in 2024

- 5.5.1 In 2022, the Council's preferred approach was Option 2 as this would reduce the level of growth proposed compared to the 2021 Preferred Strategy which WG objected to, whilst also ensuring that the RLDP delivers on the Council's objectives and addresses the core issues of delivering much needed affordable housing and retaining young people with access to new jobs.
- 5.5.2 At this stage (in 2024) no new evidence has emerged or is being considered that changes the alternatives developed in 2022 and these three options remain valid and up to date for the purposes of this ISA Report. The summary of the appraisal of these options is presented in Chapter 6.

5.6 Location of growth options (2020)

- 5.6.1 A total of eight Spatial Options were initially considered and included in the long list of spatial options (set out in Appendix 4 of the Growth and Spatial Options Consultation Paper, July 2019) but three were discounted prior to consultation as they were not considered to be genuinely realistic options. Accordingly, five spatial options were consulted on as part of the Growth and Spatial Options Consultation. Subsequent to this, as with the growth options, two additional spatial options were identified in light of consultation

responses and emerging national policy at the time. Following on from this, a total of seven spatial options were considered through the ISA process in early 2020.

5.7 Location of growth options (2021)

- 5.7.1 As highlighted above, the Council revisited the Growth and Spatial Options stage of the RLDP process in 2020 following the publication of the corrected Welsh Government 2018-based population and household projections (August 2020). The RLDP spatial options considered in 2020 were reassessed to identify suitable options for consideration as part of this process. Two of the options considered in the 2020 consultation included a new settlement. These options were subsequently discounted as the Welsh Government deemed them contrary to national policy set out in PPW (Edition 11), which states new settlements should only be proposed as part of a joint LDP, SDP or the NDF. An additional option, focusing growth in the north of the County, was subsequently included as a result of consultation responses on the 2020 Growth and Spatial Options.
- 5.7.2 A total of four broad Spatial Distribution Options were therefore taken forward as realistic options for ISA in 2021 which explored a continuation of the existing LDP strategy, proportionately distributed growth, growth focused on the M4 corridor, and growth focused in the north of the County. The assessment of these options was presented in the Initial ISA Report which accompanied the consultation on the 'Sustainable and Resilient Communities Preferred Strategy' in Summer 2021.¹²

5.8 Location of growth options (2022)

- 5.8.1 Following consultation on the Preferred Strategy in 2021, a number of challenges arose which impacted on the progression of the RLDP and require further consideration. In terms of the spatial strategy, this specifically referred to the environmental impacts of phosphate in watercourses.
- 5.8.2 In light of new evidence, Natural Resources Wales (NRW) adopted tighter targets for the water quality of watercourses and conducted an assessment of the nine riverine Special Areas of Conservation (SAC) in Wales. This assessment established that phosphorus breaches are widespread within Welsh SAC rivers with over 60% of waterbodies failing against the new targets. Within Monmouthshire, NRW identified that within the River Usk, 88% of the river's water bodies failed to meet the required target and within the River Wye, 67% of the river's water bodies failed to meet the required target.
- 5.8.3 In response, NRW issued detailed planning guidance to ensure that the environmental capacity of the rivers does not deteriorate any further. Any proposed development within the affected catchment areas of the rivers Usk and Wye that might increase phosphate levels need to clearly evidence that the development can demonstrate phosphate neutrality or betterment in its

¹² AECOM (2021) ISA for the Monmouthshire Replacement Local Development Plan
<https://www.monmouthshire.gov.uk/app/uploads/2021/07/Monmouthshire-Initial-ISA-Report-NTS-June-2021.pdf>

design and/ or its contribution to the water body. This issue affects the upper (non-tidal) parts of the two rivers.

- 5.8.4 The phosphates water quality issue affecting the River Wye and River Usk had implications for the progression of the RLDP as the Preferred Strategy that was consulted on in 2021 directed future growth to a number of key sustainable settlements within these affected catchment areas. Further consideration was, therefore, given as to how the RLDP can progress in light of this issue, carefully balancing the need for growth with the climate and nature emergency.
- 5.8.5 Following discussions with Dŵr Cymru/ Welsh Water (DCWW) and NRW, MCC realised that whilst a workable solution to this water quality issue is achievable for the Llanfoist Waste Water Treatment Works (WWTW) (River Usk catchment), there was no identified strategic solution for phosphate mitigation at the Monmouth WWTW (River Wye catchment) in 2022 that could be implemented during the Plan period.
- 5.8.6 Without an identified deliverable solution, it would not be possible to demonstrate at examination that sites in the Upper Wye Catchment are deliverable. This means that new site allocations for future growth could not be directed to settlements within the affected Wye catchment area, including the primary settlement of Monmouth, until a feasible solution is identified that can be implemented within a timescale that facilitates development within the Plan period. The restrictions on new housing and employment development in this area during the Plan period had obvious implications for the RLDP spatial strategy.
- 5.8.7 Consideration was therefore given to how to progress the RLDP having regard to the above challenges, whilst also ensuring that the RLDP delivers on the Council's objectives and core issues.
- 5.8.8 MCC subsequently developed a spatial option which did not direct growth to settlements within the affected Wye catchment area, including the primary settlement of Monmouth. This option, alongside the spatial strategy consulted on in 2021, were subject to appraisal in the Initial ISA Report 2022. The two options are summarised below:
- **Option 1:** Distribute growth proportionately across the County's most sustainable settlements.
 - **Option 2:** Focus growth in the County's most sustainable settlements of Abergavenny, Chepstow, and Caldicot, including Severnside, supported by lower growth in the most sustainable rural settlements (excluding those settlements in the Upper Wye catchment area).

5.9 Strategic growth areas (2022)

- 5.9.1 In 2020, the Council identified potential strategic growth areas for each of the Primary Settlements and Severnside. To inform these possible strategic growth areas a preliminary high-level assessment of sites submitted during the Initial Call for Candidate Sites was undertaken by the Council to identify those sites which could contribute to delivering the level of growth (housing and jobs) required to deliver the Preferred Strategy. Only strategic sites and

sustainable urban extensions of around 8ha in size and above were considered.

- 5.9.2 The identified strategic growth areas were considered by the Council to have the potential to underpin the Spatial Strategy, by accommodating growth and focusing development within those settlements and areas which are identified as the most sustainable locations.
- 5.9.3 The potential strategic growth options were assessed through the Initial ISA Report 2021 and reproduced in the Initial ISA Report 2022. The strategic growth options were located in Abergavenny and Llanfoist, Chepstow, Monmouth, and Severnside.

5.10 Feedback from consultation and location of growth options in 2024

- 5.10.1 Since 2022, DCWW have identified strategic improvements at the Monmouth Wastewater Treatment Works that can be implemented by 31st March 2025 which has provided WG with sufficient certainty to allow for new growth allocations in the Upper Wye Catchment, including at Monmouth. On this basis, there is no need to continue to assess or develop options that avoid growth in settlements in the Upper Wye Catchment area. The four options developed for ISA in 2021 are therefore considered to be representative of the choices available to the Council at this stage, supported by an assessment of the strategic growth locations which remain the same as reported on in 2021 and 2022.
- 5.10.2 All site options identified through the candidate sites process (by MCC), following the Council's high-level initial sift of sites, have been subject to a GIS analysis. This process has assessed sites against a range of ISA criteria under each of the ISA themes. The method for the assessment and the assessment outcomes are both reported in a separate ISA Technical Annex, and the findings of the assessment, whilst high-level, have informed the assessment of options and allocations in the ISA of the Deposit Plan.

5.11 Summary of options (2024)

- 5.11.1 In summary, the discussion in this chapter has identified no new options for assessment at this stage, and previously assessed options are reproduced as the representative choices for the Council in terms of their preferred approach and reasonable alternatives. The choices that are taken forward for assessment in Chapter 6 are:

Level of growth

- **Option 1:** Existing Preferred Strategy growth level of 7,605 new dwellings over the entire plan period alongside the creation of 7,215 new jobs.
- **Option 2:** Demographic led strategy growth level of 5,400 new dwellings over the entire plan period alongside the creation of 6,240 new jobs.
- **Option 3:** WG prescribed growth level of 4,280 new dwellings over the entire plan period alongside the creation of 4,290 new jobs.

Location of growth

- **Option 1:** Continuation of the existing LDP Strategy – distributing growth around the County with a particular focus on Main Towns, with some development in Severnside and some development in the most sustainable rural areas.
- **Option 2:** Proportionately distributed growth – growth would be distributed across the County’s most sustainable settlements with the level of growth proportionate to that settlement’s size and existing amenities, as well as the identified affordable housing need and capacity for growth.
- **Option 3:** Growth focused on the M4 corridor – focusing growth in the south of the County in the Severnside area close to the M4/ M48, to capitalise on its strategic links to the Cardiff Capital Region and South West England.
- **Option 4:** Growth focused in the north of the County – focusing growth in most sustainable settlements in the north of the County to capitalise on its strategic links to the Heads of the Valleys and wider Cardiff Capital Region via the A465, and towards Herefordshire via the A449 and A40.

Strategic growth locations

- **Abergavenny and Llanfoist:**
 - Option A: Land north of Abergavenny.
 - Option B: Land to the east of the A465; and
 - Option C: Land between the B4246 and Heads of the Valleys Road.
- **Chepstow:**
 - Option D: Land north of the Bayfield Estate.
 - Option E: Land between the Bayfield Estate and A48; and
 - Option F: Land between the A48 and M48.
- **Monmouth:**
 - Option G: Land west of Monmouth.
 - Option H: Land in central Monmouth; and
 - Option I: Land north-east of Monmouth.
- **Severnside:**
 - Option J: Land north-east of Caldicot.
 - Option K: Land north-west of Caldicot.
 - Option L: Land west of Caldicot/ east of Rogiet; and
 - Option M: Land east of Caerwent.

6. Assessing Reasonable Alternatives

6.1 Introduction

6.1.1 This chapter presents the summary findings of the assessment of reasonable alternatives set out in Chapter 5. Sets of options have been considered for the following:

- Level of growth.
- Location of growth; and
- Strategic growth area options.

6.1.2 Detailed assessment findings are provided in the following appendices:

- Appendix B: Level of growth options.
- Appendix C: Location of growth options; and
- Appendix D: Strategic growth area options.

6.2 Methodology

6.2.1 The strategic options identified in Chapter 5 were subject to a comparative appraisal under each ISA theme and the detailed findings are presented in Appendices B - D.

6.2.2 For each of the strategic options, the assessment has examined likely significant effects on the baseline, drawing on the sustainability objectives and themes identified through scoping (see Table 3.1) as a methodological framework.

6.2.3 Every effort is made to predict effects accurately; however, this is inherently challenging given the high-level nature of the options under consideration. The ability to predict effects accurately is also limited by understanding of the baseline (now and in the future under a 'no plan' scenario). Considering this, there is a need to make considerable assumptions regarding how scenarios will be implemented 'on the ground' and what the effect on receptors would be. Where there is a need to rely on assumptions to reach a conclusion on a 'significant effect' this is made explicit in the appraisal text.

6.2.4 It is important to note that effects are predicted considering the criteria presented within Regulations. So, for example, account is taken of the duration, frequency, and reversibility of effects. Cumulative effects are also considered (i.e., where the effects of the plan in combination with the effects of other planned or on-going activity that is outside the control of Monmouthshire County Council).

6.2.5 Based on the evidence available a judgement is made if there is likely to be a significant effect. Where it is not possible to predict likely significant effects based on reasonable assumptions, efforts are made to comment on the relative merits of the alternatives in more general terms and to indicate a rank of preference. The number indicates the rank and does not have any bearing on likely significant effects. This is helpful, as it enables a distinction to be made between the alternatives even where it is not possible to

distinguish between them in terms of 'significant effects'. For example, if an option is ranked as 1 then it is judged to perform better against that ISA theme compared to an option that is ranked 2 or 3 or so on.

6.3 Summary assessment findings for level of growth options

6.3.1 The three options for the level of growth are:

- **Option 1:** Existing Preferred Strategy growth level of 7,605 new dwellings over the entire plan period alongside the creation of 7,215 new jobs.
- **Option 2:** Demographic led strategy growth level of 5,400 new dwellings over the entire plan period alongside the creation of 6,240 new jobs.
- **Option 3:** WG prescribed growth level of 4,280 new dwellings over the entire plan period alongside the creation of 4,290 new jobs.

6.3.2 A summary of the assessment of these options is provided below with the detailed assessment findings presented in Appendix B.

Table 6.1: Summary findings for level of growth options

ISA theme	Rank/ significant effects	Option 1	Option 2	Option 3
Economy and employment	Rank	1	2	3
	Significant effect?	Yes - positive	Yes - positive	No
Population and communities	Rank	1	2	3
	Significant effect?	Yes - positive	Yes - positive	No
Health and wellbeing	Rank	1	2	3
	Significant effect?	Yes - positive	Yes - positive	No
Equalities, diversity, and social inclusion	Rank	1	2	3
	Significant effect?	Yes - positive	Yes - positive	No
Transport and movement	Rank	1	2	3
	Significant effect?	No	No	No
Natural resources (air, land, minerals, and water)	Rank	3	2	1
	Significant effect?	Uncertain	Uncertain	Uncertain
Biodiversity and geodiversity	Rank	3	2	1
	Significant effect?	Uncertain	Uncertain	Uncertain
Historic environment	Rank	3	2	1
	Significant effect?	Uncertain	Uncertain	Uncertain

ISA theme	Rank/ significant effects	Option 1	Option 2	Option 3
Landscape	Rank	3	2	1
	Significant effect?	Uncertain	Uncertain	Uncertain
Climate change (including flood risk)	Rank	1	2	3
	Significant effect?	No	No	No

- 6.3.3 For ISA themes relating to natural resources, biodiversity, the landscape, and historic environment; the nature and significance of effects will be dependent on where growth is located and how development is designed/ implemented. As the level of growth increases so does the likelihood that impacts will occur, and negative effects will arise. Residual effects in this respect are uncertain and will be better informed by consideration of the location of growth, the sensitivity of receptors in these areas, and the potential mitigation measures available. The lowest growth option (Option 3) is ultimately ranked most favourably in respect of the potential environmental impacts, though it is also recognised that higher levels of development proposed through Option 1, followed by Option 2, have further potential to deliver environmental enhancements/ improvements that could lead to positive effects.
- 6.3.4 At this stage there is no evidence to conclude that the higher levels of growth would result in a significant negative effect on biodiversity/ geodiversity, the landscape and historic environment (in the absence of known development locations). However, given the limited brownfield resource in the County, development is likely to be primarily delivered through settlement expansion on greenfield land, with residual negative effects likely. The significance of the effects is likely to increase as the level of growth increases. There is uncertainty in terms of impact on important mineral resources and agricultural land until the location of growth is more defined.
- 6.3.5 Similarly, for the transport ISA theme, Options 1 and 2 proposing a higher level of growth are more likely to result in impacts on the local road network through increased traffic and congestion; however, no evidence suggests impacts are likely to be of significance. Recent increases in homeworking because of the pandemic is considered likely to prevail as a longer-term trend which will continue to support reduced congestion. Further, higher growth presents an increased potential to deliver accessibility and infrastructure improvements and result in more self-contained communities. This could lead to reduced levels of out commuting and modal shift, the importance of which have all been highlighted during the pandemic. As a result, higher growth Option 1, followed by Option 2, are ranked more favourably than Option 3 overall.
- 6.3.6 Option 3 is noted for potential negative effects in relation to the ISA themes of economy and employment, population and communities, health and wellbeing, and equalities, diversity, and social inclusion. However, there is a level of uncertainty, with effects unlikely to be significant in most cases. Particular concern relates predominantly to limited growth restricting opportunities to address a likely resultant demographic imbalance, which in turn would not support sustainable economic growth. Under this option, limited opportunities for the younger population to live and work in the County would negatively impact communities, exacerbating inequality and rural isolation. This is particularly relevant to certain groups with protected characteristics, such as the young, elderly, and disabled, who tend to be disproportionately affected by accessibility issues and the negative effects of transport infrastructure. Further, under Option 3 there would be a limited opportunity to secure additional market or affordable housing, limiting the range and choice of homes (housing mix) which could drive up house prices and exacerbate affordability issues.

6.3.7 High growth Option 1 is identified as best performing against ISA themes relating to the economy and employment, population and communities, health/ wellbeing and equalities as the additional growth provides an opportunity to deliver a greater range of new housing, employment opportunities and community infrastructure to meet the needs of the County. Option 2 performs slightly less positively than Option 1 given the level of growth proposed is less, however similar positive effects are predicted under this Option, providing a more balanced demographic and more sustainable communities than predicted under Option 3.

6.4 Summary assessment findings for location of growth options

6.4.1 The four options for the location of growth are:

- **Option 1:** Continuation of the existing LDP Strategy – distributing growth around the County with a particular focus on Main Towns, with some development in Severnside and some development in the most sustainable rural areas.
- **Option 2:** Proportionately distributed growth – growth would be distributed across the County’s most sustainable settlements with the level of growth proportionate to that settlement’s size and existing amenities, as well as the identified affordable housing need and capacity for growth.
- **Option 3:** Growth focused on the M4 corridor – focusing growth in the south of the County in the Severnside area close to the M4/ M48, to capitalise on its strategic links to the Cardiff Capital Region and South West England.
- **Option 4:** Growth focused in the north of the County – focusing growth in most sustainable settlements in the north of the County to capitalise on its strategic links to the Heads of the Valleys and wider Cardiff Capital Region via the A465, and towards Herefordshire via the A449 and A40.

6.4.2 A summary of the assessment of these options is provided below with the detailed assessment findings presented in Appendix C.

Table 6.2: Summary findings for location of growth options

ISA theme	Rank/ significant effects	Option 1	Option 2	Option 3	Option 4
Economy and employment	Rank	1	1	2	2
	Significant effect?	Yes - Positive	Yes - Positive	Uncertain	Uncertain
Population and communities	Rank	1	1	2	2
	Significant effect?	Yes - Positive	Yes - Positive	Uncertain	Uncertain
Health and wellbeing	Rank	1	1	3	2
	Significant effect?	Yes - Positive	Yes - Positive	Uncertain	Uncertain
Equalities, diversity, and social inclusion	Rank	1	1	2	2
	Significant effect?	Yes - Positive	Yes - Positive	Uncertain	Uncertain
Transport and movement	Rank	1	1	2	3
	Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain
Natural resources (air, land, minerals, and water)	Rank	1	1	3	2

ISA theme	Rank/ significant effects	Option 1	Option 2	Option 3	Option 4
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative	Yes - Negative
Biodiversity and geodiversity	Rank	3	3	1	2
	Significant effect?	Yes – Negative	Yes - Negative	Uncertain	Yes - Negative
Historic environment	Rank	=	=	=	=
	Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain
Landscape	Rank	2	2	1	2
	Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain
Climate change (including flood risk)	Rank	2	2	1	2
	Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain

- 6.4.3 The appraisal found that there is little to differentiate between the options at this stage regarding the historic environment ISA theme. This is given that all options have the potential to result in negative effects by directing development to areas that are sensitive in terms of heritage constraints, albeit in different areas of the County. However, it is recognised that mitigation could be provided, and that development also has the potential to deliver positive effects environmental improvement/ enhancement measures secured at the project scale. The nature and significance of effects will be dependent on the precise scale and location of development.
- 6.4.4 Similar conclusions can also be drawn in relation to biodiversity given the presence of international, national, and local designations throughout the County, though options can be differentiated between in relation to nutrient neutrality implications on the River Wye and River Usk SACs. Whilst solutions are available the options are ranked according to the mitigation requirements. Options 1 and 2, which direct growth to these Primary Settlements (followed by Option 4), therefore are worst performing overall.
- 6.4.5 In terms of the landscape and climate change themes, Option 3 directs development to areas of lower flood risk and that are less sensitive in landscape terms and is therefore considered to perform better compared to the other options. All other options focus development in areas that are of high flood risk (though it is anticipated that high flood risk areas would be avoided in line with national policy and sequential testing) and near landscape designations with a higher likelihood of negative effect arising. Given that the precise location of growth is not known, and further evidence base work is being carried out around landscape sensitivity, all of the options are found to have uncertain effects in relation to the landscape and climate change themes.
- 6.4.6 In terms of natural resources, it is difficult to identify any significant differences between the options in relation to water resources and quality. Options 1, 2 and 4, are best performing in terms of utilising brownfield land and protecting Best and Most Versatile (BMV) agricultural land and ensuring that air quality is not reduced throughout the County. However, it is recognised that there are limited opportunities for the regeneration of brownfield land so ultimately most growth will be on greenfield and potentially agricultural land. Option 3 performs less well given it may also lead to the loss of significant greenfield/ BMV land and has the potential to adversely impact upon the Limestone Mineral Safeguarding Area present to the south of the County. All the Options have the potential for a significant negative effect against the natural resources theme through the potential loss of BMV agricultural land, although it is acknowledged that there is an element of uncertainty at this stage until the precise location of development is known.
- 6.4.7 Options 1 and 2 perform more positively and are found to have the potential for significant long term positive effects against ISA themes relating to population/ communities, health/ wellbeing, economy/ employment, and equalities compared to the other options. They focus growth at the most sustainable Settlements where there is greater need and better access to public transport, existing employment, and facilities/ services. The importance of high levels of local accessibility to open space, services and

facilities have been highlighted through the current pandemic. It should be noted that there are some small differences between Options 1 and 2 in terms of how growth is distributed during the Plan period, but these differences are not significant enough to warrant one option being ranked higher or lower than the other against the ISA themes referred to earlier in this paragraph.

- 6.4.8 Option 3 capitalises upon opportunities associated with the Cardiff Capital Region City Deal, the South East Wales Metro, and the continuing economic growth of the Bristol/ South West region. Whereas Option 4 focuses growth to the most sustainable Settlements to the North of the County capitalising upon opportunities associated with the Cardiff Capital Region City Deal, the A465, and towards Herefordshire via the A449 and A40 along with rail links to Newport, Cardiff and the North via the Welsh Marches line. However, limited growth to the rest of the County under Option 3 and Option 4 would restrict economic growth in the wider County, and would not assist in sustaining Monmouthshire's existing communities, exacerbating existing demographic issues and levels of out-commuting.
- 6.4.9 Consideration is also given throughout the appraisal to Future Wales National Plan 2040 (National Development Framework (NDF) 2021) which indicates a desire to designate a Green Belt "*around Newport and eastern parts of the region*". This is anticipated to include a large part of South Monmouthshire which, although it does not include any of Monmouthshire's main towns, if implemented would significantly constrain future growth in this part of the County. Option 4 would accord with the direction of the Future Wales document, and therefore performs positively in terms of facilitating growth consistent with emerging National policy. PPW notes that longer term needs should be considered when considering the boundaries of a Green Belt. Conversely Option 3 would direct growth to the south where the Green Belt is proposed through the Future Wales document. As all other options seek to disperse growth throughout the County, and a defined location has not yet been established for the Green Belt, it is difficult to make any definitive conclusions on the nature and significance of effects at this stage.

6.5 Summary appraisal findings for strategic growth area options

- 6.5.1 Strategic growth options have been identified across the four settlement areas of Abergavenny and Llanfoist, Chepstow, Monmouth, and Severnside. A summary of the assessment of these options is provided below with the detailed assessment findings presented in Appendix D.

6.5.2 **Abergavenny and Llanfoist:**

- Option A: Land north of Abergavenny.
- Option B: Land to the east of the A465; and
- Option C: Land between the B4246 and Heads of the Valleys Road.

Figure 6-1: Strategic growth options in Abergavenny and Llanfoist

Table 6.3: Summary findings for Abergavenny and Llanfoist strategic growth options

ISA theme	Rank/ Significant effects	Option A	Option B	Option C
Economy and employment	Rank	1	2	3
	Significant effect?	No	No	No
Population and communities	Rank	1	2	3
	Significant effect?	Yes - Positive	Yes - Positive	Yes - Positive
Health and wellbeing	Rank	1	2	2
	Significant effect?	No	No	No
Equalities, diversity, and social inclusion	Rank	2	3	1
	Significant effect?	No	No	No
Transport and movement	Rank	=	=	=
	Significant effect?	No	No	No
Natural resources	Rank	1	2	3
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative
Biodiversity and geodiversity	Rank	1	1	2
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative
Historic environment	Rank	2	1	3
	Significant effect?	Uncertain	Uncertain	Uncertain
Landscape	Rank	3	1	2
	Significant effect?	Yes - Negative	Yes - Negative	Uncertain

ISA theme	Rank/ Significant effects	Option A	Option B	Option C
Climate change (including flood risk)	Rank	2	1	3
	Significant effect?	Uncertain	Uncertain	Uncertain

- 6.5.3 No significant differences have been identified between Options for the Transport and Movement ISA theme.
- 6.5.4 All Options perform positively against the Population and Communities, Health and Wellbeing, Equalities, Diversity and Social Inclusion, and Transport and Movement ISA themes, given Options are connected with reasonable distance to Abergavenny town centre, its services and facilities, and sustainable travel. Option A performs most positively of the Options for the majority of ISA Themes discussed above given this Option is most well located in this respect; with Options B and C dissected from the town centre by the A465. However, Option C performs most positively against the Equalities, diversity, and social inclusion ISA theme as this Option best supports deprived communities to the west of the town.
- 6.5.5 All Options perform negatively against the Natural Resources ISA theme given all Options would result in the loss of greenfield and BMV agricultural land and would not contribute towards promoting the use of brownfield land. However, it is recognised that there are limited opportunities within the County for brownfield development and development on lower grades of agricultural land. Option A is best performing against this ISA theme as it has the greatest access to the town centre.
- 6.5.6 In terms of the Biodiversity ISA theme, Options are constrained in terms of internationally/ nationally/ designated assets/sites, with the potential for significant long term negative effects. Whilst solutions are now available, the mitigation requirements need implementing and the potential for negative effects in their absence are noted at this stage. Supporting policy requirements will reduce the extent of these effects. In terms of ranking the Options, Option C is the worst performing theme as it is within 200m of the River Usk SAC/ SSSI, however given the additional impact pathways identified through the HRA for the SAC (recreation and water quantity, level, and flow), it is considered that Options A and B also have the potential to impact upon this European designated site.
- 6.5.7 Options are also constrained in terms of internationally/ nationally/ designated assets/sites under the Landscape and Historic Environment ISA themes. As with biodiversity, Option C is worst performing against the Historic Environment ISA theme given its proximity to the Blaenavon Industrial WHS and potential to affect internationally and nationally designated heritage landscapes. Option A also has the potential to lead to negative effects in this respect. In terms of Landscape, Option A is worst performing due to the potential impact on the Brecon Beacons National Park, its open character and hillside setting. Option A is also worst performing

given its 'high/medium' sensitivity to residential development, as set out in the Monmouthshire Landscape Sensitivity Update Study (2020). Option B is also identified as having 'high/medium' sensitivity to residential development.

- 6.5.8 The overall significance of effects against the Biodiversity, Landscape and Historic Environment ISA themes is uncertain at this stage and will be dependent on the design/ layout and implementation of specific mitigation measures. Specifically, in relation to the issue of nutrient neutrality in the River Usk SAC, all residential development coming forward in the hydrological catchment of these riverine SACs will have to be phosphorus neutral and supported by nutrient budgets. It is also noted that there is the potential for positive effects to be delivered, i.e., through improved accessibility to, and enhancement of, designated assets.
- 6.5.9 Option C is worst performing of the Options in relation to the Climate Change ISA theme, given that a significant proportion of Option C is located within areas at higher risk of flooding, with the potential for long term negative effects. However as above, for all Options, effects against Climate Change are uncertain at this stage. Uncertainty could be reduced by supporting policy mitigation.

6.5.10 **Chepstow:**

- Option D: Land north of the Bayfield Estate.
- Option E: Land between the Bayfield Estate and A48; and
- Option F: Land between the A48 and M48.

Figure 6-2: Strategic growth options in Chepstow

Table 6.4: Summary findings for Chepstow strategic growth options

ISA theme	Rank/ Significant effects	Option D	Option E	Option F
Economy and employment	Rank	3	2	1
	Significant effect?	No	No	No
Population and communities	Rank	=	=	=
	Significant effect?	Yes - Positive	Yes - Positive	Yes - Positive
Health and wellbeing	Rank	=	=	=
	Significant effect?	No	No	No
Equalities, diversity, and social inclusion	Rank	2	1	3
	Significant effect?	No	No	No
Transport and movement	Rank	=	=	=
	Significant effect?	No	No	No
Natural resources	Rank	=	=	=
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative
Biodiversity and geodiversity	Rank	1	2	3
	Significant effect?	Uncertain	Uncertain	Uncertain
Historic environment	Rank	1	1	2
	Significant effect?	Uncertain	Uncertain	Yes - Negative
Landscape	Rank	2	1	3
	Significant effect?	Uncertain	Yes - Negative	Yes - Negative

ISA theme	Rank/ Significant effects	Option D	Option E	Option F
Climate change (including flood risk)	Rank	=	=	=
	Significant effect?	Uncertain	Uncertain	Uncertain

- 6.5.11 No significant differences have been identified between Options for the Population and Communities, Transport and Movement, Health and Wellbeing, Natural Resources, and Climate Change ISA themes.
- 6.5.12 All Options perform positively against the Economy and Employment ISA theme, Population and Communities, Health and Wellbeing, Equalities, Diversity and Social Inclusion and Transport and Movement ISA theme. In terms of Economy and Employment, Option F performs most positively given it is well connected with the M4 corridor, the Severn Bridge, and employment opportunities to the south of the town. In terms of Equalities, Diversity and Social Inclusion, Option E is best performing as it provides improved access for vulnerable groups to the town centre; supporting improved levels of deprivation.
- 6.5.13 All Options perform negatively against the Natural Resources ISA theme given all Options would result in increased vehicular use within Chepstow AQMA, and the permeant loss of BMV agricultural land /greenfield land. However, it is recognised that there are limited opportunities within the County for brownfield development and development on lower grades of agricultural land.
- 6.5.14 In terms of the Biodiversity, Landscape, and Historic Environment ISA themes; all Options are constrained in terms of internationally/ nationally/ designated assets/ sites, with the potential for significant long term negative effects. In terms of biodiversity, given the impact pathways identified through the HRA (2019), all Options perform equally in terms of impact on the Wye Valley Woodland SAC/ SSSI/ National Nature Reserve and the River Wye SAC/ SSSI. Option F is the worst performing against the Biodiversity ISA theme as there are areas of Ancient Woodland (and other habitats and associated species) present within the Option, impacts upon which have the potential for long term negative effects.
- 6.5.15 Option F is the most sensitive in terms of the historic environment as the growth area falls within a conservation area and contains 16 listed buildings. It is not possible to identify any significant differences between Options D and E at this stage in terms of the Historic Environment ISA theme; however, they are considered to be less likely to result in residual significant effects compared to Option F.
- 6.5.16 All of the options have the potential for a significant negative effect on the Landscape ISA them. Assuming that the same scale/ type of development would be delivered within the strategic growth areas, the differences identified between them at this stage mainly reflect the Landscape Sensitivity

Update Study (2020) and findings. Option F is worst performing, given its 'high' sensitivity to residential development; followed by Option D given it is identified as having medium landscape sensitivity and located adjacent to the AONB.

- 6.5.17 For all Options, effects against Climate Change are uncertain at this stage. Uncertainty could be reduced by supporting policy mitigation.

6.5.18 **Monmouth:**

- Option G: Land west of Monmouth.
- Option H: Land in central Monmouth; and
- Option I: Land north-east of Monmouth.

Figure 6-3: Strategic growth options in Monmouth

Table 6.5: Summary findings for Monmouth strategic growth options

ISA theme	Rank/ Significant effects	Option G	Option H	Option I
Economy and employment	Rank	2	1	3
	Significant effect?	No	No	No
Population and communities	Rank	2	1	1
	Significant effect?	Yes - Positive	Yes - Positive	Yes - Positive
Health and wellbeing	Rank	1	1	1
	Significant effect?	No	No	No

ISA theme	Rank/ Significant effects	Option G	Option H	Option I
Equalities, diversity, and social inclusion	Rank	=	=	=
	Significant effect?	No	No	No
Transport and movement	Rank	=	=	=
	Significant effect?	No	No	No
Natural resources	Rank	1	2	3
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative
Biodiversity and geodiversity	Rank	1	1	2
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative
Historic environment	Rank	1	2	3
	Significant effect?	Uncertain	Uncertain	Uncertain
Landscape	Rank	1	2	2
	Significant effect?	Uncertain	Yes - Negative	Yes - Negative
Climate change (including flood risk)	Rank	=	=	=
	Significant effect?	Uncertain	Uncertain	Uncertain

6.5.19 No significant differences have been identified between Options for the Equalities, Diversity and Social Inclusion, Transport and Movement, and Climate Change ISA themes.

6.5.20 All Options perform positively against the Economy and Employment ISA theme, Population and Communities, Health and Wellbeing, Equalities, Diversity and Social Inclusion, and Transport and Movement ISA themes, given Options are connected with reasonable distance to Monmouth town centre, its services and facilities, and sustainable travel. Option H performs most positively of the Options for Economy and Employment, Population and Communities, and Health and Wellbeing ISA Themes given this Option is

- most well located in this respect. Option G also performs well due to its location adjacent to the Wonastow Estate employment site.
- 6.5.21 All Options perform negatively against the Natural Resources ISA theme given all Options would result in the loss of greenfield and BMV agricultural land and would not contribute towards promoting the use of brownfield land. However, it is recognised that there are limited opportunities within the County for brownfield development and development on lower grades of agricultural land. Option G is best performing in this respect as it is the least constrained Option in terms of BMV agricultural land coverage. Option I is worst performing given it would result in the loss of higher quality agricultural land in comparison with Option H.
- 6.5.22 In terms of the Biodiversity ISA themes; all Options are constrained in terms of internationally/ nationally/ designated assets/ sites, with the potential for significant long term negative effects. Whilst solutions are now available to address nutrient neutrality issues, the mitigation requirements need implementing and the potential for negative effects in their absence are noted at this stage. Supporting policy requirements will reduce the extent of these effects. In terms of ranking the Options, given the proximity of Option I to the River Wye SAC/ SSSI and the Wye Valley Woodland SAC/ SSSI/ National Nature Reserve, and the biodiversity present at the Option itself, Option I is worst performing overall.
- 6.5.23 All Options are also constrained in terms of internationally/ nationally/ designated assets/ sites under the Landscape and Historic Environment ISA themes. As above in relation to biodiversity, Option I is worst performing against the Historic Environment ISA theme as there are numerous heritage assets present in close proximity to the Option (Monmouth (Dixton) Conservation Area to the south east of the Option (which contains two scheduled monuments and five listed buildings), and the listed buildings to the north west of the Option on the other side of the A466).
- 6.5.24 Options I and J perform equally against the Landscape ISA theme given both are identified as having high/medium sensitivity to residential development, and both are constrained by landscape designations (Option I is located adjacent to a Landscape of Outstanding or Special Historic Interest, while Option H is designated in the current adopted LDP as an 'Area of amenity importance').
- 6.5.25 The overall significance of effects against the Biodiversity, Landscape and Historic Environment ISA themes is uncertain at this stage and will be dependent on the design/ layout and implementation of specific mitigation measures. Specifically, in relation to the emerging issue of nutrient neutrality in the River Wye SAC, Natural Resources Wales and Natural England advise that all residential development coming forward in the hydrological catchment of these riverine SACs will have to be phosphorus neutral and supported by nutrient budgets. It is also noted that there is the potential for positive effects to be delivered, i.e., through improved accessibility to, and enhancement of, designated assets.
- 6.5.26 For all Options, effects against Climate Change are uncertain at this stage. Uncertainty could be reduced by supporting policy mitigation.

6.5.27 **Severnside:**

- Option J: Land north-east of Caldicot.
- Option K: Land north-west of Caldicot.
- Option L: Land west of Caldicot/ east of Rogiet; and
- Option M: Land east of Caerwent.

Figure 6-4: Strategic growth options in Severnside

Table 6.6: Summary findings for Severnside strategic growth options

ISA theme	Rank/ Significant effects	Option J	Option K	Option L	Option M
Economy and employment	Rank	2	2	1	3
	Significant effect?	No	No	No	No
Population and communities	Rank	1	2	1	3
	Significant effect?	Yes - Positive	Yes - Positive	Yes - Positive	Yes - Positive
Health and wellbeing	Rank	2	2	1	3

ISA theme	Rank/ Significant effects	Option J	Option K	Option L	Option M
	Significant effect?	No	No	No	No
Equalities, diversity, and social inclusion	Rank	2	3	1	4
	Significant effect?	No	No	No	No
Transport and movement	Rank	2	2	1	3
	Significant effect?	No	No	No	No
Natural resources	Rank	2	2	1	2
	Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative	Yes - Negative
Biodiversity and geodiversity	Rank	3	2	3	1
	Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain
Historic environment	Rank	3	2	1	2
	Significant effect?	Uncertain	Uncertain	No	Uncertain
Landscape	Rank	3	3	2	1
	Significant effect?	Yes - Negative	Yes - Negative	Uncertain	Uncertain
Climate change (including flood risk)	Rank	1	1	3	2
	Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain

6.5.28 All Options perform positively against the Population and Communities, Health and Wellbeing, Equalities, Diversity and Social Inclusion, and Transport and Movement ISA themes, given Options have good to reasonable access to services and facilities throughout the Severnside area (notably Caldicot town centre), and access to the strategic transport network.

Options have the potential to capitalise upon sustainable travel opportunities in the key Severnside settlements (namely Caldicot and the Severn Tunnel Junction rail station in Rogiet), in addition to utilising the M4 corridor. This will provide access to wider employment markets, including opportunities associated with the Cardiff Capital Region City Deal and the South East Wales Metro. While positive effects are anticipated through all Options, Option M performs least well of the Options given its comparatively poor access to Severnside centres, services and facilities, and relatively limited potential to capitalise upon the strategic road network.

- 6.5.29 In terms of differentiating between Options J-L for the above ISA themes, Option L is best performing given its location along the M4 corridor, nestled between Caldicot and Rogiet, and its ability to capitalise upon sustainable transport infrastructure and encourage modal shift. Option J and K perform relatively on a par, given reasonable access to services, facilities, and the strategic road network/ sustainable transport opportunities.
- 6.5.30 All Options perform negatively against the Natural Resources ISA theme given all Options would result in the loss of greenfield and BMV agricultural land and would not contribute towards promoting the use of brownfield land. However, it is recognised that there are limited opportunities within the County for brownfield development and development on lower grades of agricultural land. Option L is best performing against this ISA theme as it is well located in terms of potential to utilise sustainable travel and improve air quality; is the least constrained in terms of Grade 1 agricultural land coverage.
- 6.5.31 In terms of the Biodiversity, Landscape, and Historic Environment ISA themes; Options are constrained in terms of internationally/ nationally/ designated assets/ sites, with the potential for significant long term negative effects. Options J and L are worst performing against the Biodiversity ISA theme given the presence of the Severn Estuary SPA/ SAC/ Ramsar site/ SSSI within 900m and 1.2km of the Options, respectively. Option M is identified as best performing, given it is the least constrained of the Options in terms of potential impact on biodiversity designated sites, and overall biodiversity value.
- 6.5.32 Option J is also worst performing against the Historic Environment ISA theme given it may lead to some development within the Caldicot Conservation Area, which also contains Caldicot Castle Grade I listed building and Scheduled Monument; and would result in the loss of large areas of greenfield/ open space in the setting of the castle which is also a Country Park. Option L is the least sensitive in terms of the historic environment. Options J and K are worst performing in terms of landscape, given both have been identified through the Landscape Sensitivity Update Study (2020) as having 'medium-high sensitivity for housing development. Option K would extend development northwest of the M48 into the open landscape; while Option J would extend the settlement of Caldicot to the northeast, towards the settlement of Crick and extend development north of the Caldicot Castle Country Park (which is also a conservation area). Option L has medium sensitivity to residential development, and may lead to coalescence between Caldicot and Rogiet, resulting in the loss of a multi-functional open space and designated 'Green Wedge'. Option M is best

performing in this respect, although there remains the potential for residual minor negative effects.

- 6.5.33 The potential for Options to lead to significant effects against the Biodiversity, Landscape, and Historic Environment ISA themes is uncertain at this stage and will be dependent on the design/ layout and implementation of specific mitigation measures. It is also noted that there is the potential for positive effects to be delivered, i.e., through biodiversity net-gain, and the enhancement of designated assets.
- 6.5.34 Option L is worst performing of the Options in relation to the Climate Change ISA theme, given that a significant proportion of Option L is located within Flood Zones B/C, with the potential for long term negative effects. However as above, for all Options, effects against Climate Change are uncertain at this stage. Uncertainty could be reduced by supporting policy mitigation.

7. Developing the Preferred Approach

7.1 Preferred growth and spatial option

- 7.1.1 The Council have provided the following response to the alternatives assessment.
- 7.1.2 The options appraisal concluded that Growth Option 2 and Spatial Option 2 combined were the most appropriate options for the 2022 Preferred Strategy and Deposit Plan.
- 7.1.3 While Growth Option 2 reduces the level of growth proposed compared to the 2021 Preferred Strategy it is considered the best option to respond to challenges, namely the Welsh Government objection to the level of growth set out in the 2021 Preferred Strategy, whilst also ensuring that the RLDP delivers on the Council's objectives and addresses the core issues of delivering much needed affordable housing at pace and scale, responding to the climate and nature emergency by delivering zero carbon ready new homes for our communities, and ensuring our communities are socially and economically sustainable. Similarly, Spatial Option 2 would address our locally evidence-based issues and objectives including in relation to the delivery of affordable homes, rebalancing our demography and responding to the climate and nature emergency, and as such is considered the most appropriate spatial strategy option.
- 7.1.4 The Preferred Growth Strategy is based on a demographic-led scenario with added policy assumptions¹³. It provides a level of growth (homes and jobs) that maximises the extent to which we address our local evidence-based issues, including in relation to the delivery of affordable homes, sustainable economic growth, rebalancing our demography by ensuring that young people can choose to live in the County while responding to the climate and nature emergency. The ISA analysis identifies that Growth Option 2 performs slightly less positively than Growth Option 1 given the level of growth proposed is less, however similar positive effects are predicted under this option. This growth option performs well against ISA themes relating to the economy and employment, population and communities, health/wellbeing and equalities as the additional growth provides an opportunity to deliver a range of new housing, employment opportunities and community infrastructure to meet the needs of the County providing a more balanced demographic and sustainable communities. While Growth Option 1 is identified as best performing against ISA themes relating to the economy and employment, population and communities, health/wellbeing and equalities it performs least favourably against ISA themes relating to Natural Resources, Biodiversity and Geodiversity, Historic Environment and Landscape. In addition, Welsh Government raised significant concerns in relation to this Growth Option suggesting the level of growth in Monmouthshire would undermine growth in the national growth area of Cardiff, Newport and the Valleys and as a result would not be in general conformity with policies 1 and 33 of Future Wales: the National Plan 2040.

¹³ Demographic-led option for the LPA area (i.e. excludes the BBNP area within Monmouthshire) using ONS 2020 MYE base and applying assumptions in relation to migration, household membership rates and commuting ratio, as set out in the Housing Background Paper.

Growth Option 1 has therefore been discounted. Further to this, Growth Option 3 performs negatively to RLDP objectives relating to Economic Growth/Employment, Demography, Housing, Place-making, Communities, Rural Communities, Infrastructure and Accessibility. It is also noted for potential negative effects in relation to the ISA themes of economy and employment, population and communities, health and wellbeing, and equalities, diversity, and social inclusion. Option 3 would not deliver on the Council's core objectives of delivery of affordable housing and rebalancing our demography and has subsequently been rejected. For further details on Growth Options 1 and 3 refer to the Growth and Spatial Strategy Options Appraisal as set out in Appendix 1.

7.1.5 Spatial Option 2 and Spatial Option 1 perform positively against ISA themes, in relation to population/ communities, health/ wellbeing, economy/ employment, and equalities. The Preferred Growth and Spatial Option would best achieve sustainable balanced deliverable outcomes by:

- Delivering a level of growth (homes and jobs) that addresses our locally evidence-based issues and objectives, including in relation to the delivery of affordable homes, rebalancing our demography and responding to the climate and nature emergencies, whilst having regard to WG officer concerns regarding alignment with Future Wales: The National Plan 2040.
- Maximising affordable housing delivery on new housing allocations, reflecting the Council's commitment to deliver 50% affordable homes on new housing sites which would help to tackle Monmouthshire's housing need, homelessness, and social inequality. This approach would also enable the Council to consider alternative mechanisms for delivering affordable homes.
- Providing a wider choice of smaller homes to enable younger people to live and work in Monmouthshire which would make our ageing communities more socially and economically sustainable.
- Requiring new homes to be net zero carbon, reflecting our commitment to responding to and tackling climate change.
- Delivering growth in our most sustainable settlements. This would limit the impacts of climate change and ensure good placemaking principles of attractive, accessible places to live and work that have access to sustainable transport links and reduce the need for journeys by the car.
- Promoting sustainable economic growth by providing policy support to enable and facilitate home/remote working, enabling economic growth through supporting the delivery of the priorities and aims identified in the Council's Economy, Employment and Skills Strategy and climate emergency declaration, maximising opportunities from Cardiff Capital Region City Deal, targeting growth in key economic sectors and providing appropriate employment land in the right locations.

7.1.6 Overall, it is considered that the Deposit Plan, based on the above preferred growth and spatial options, strikes a compromise between achieving our local evidence-based objectives that underpinned the Preferred Strategy consulted upon in July 2021 and the Welsh Government's response which objected to the level of growth proposed. In response, the Deposit Plan proposes a lower level of growth that responds to these challenges.

7.2 Preferred strategic sites

- 7.2.1 The Preferred Strategic Site Allocations have been selected from a total of 13 Strategic Growth Options located across Abergavenny, Chepstow, Monmouth and Severnside that were previously consulted on in the 2021 and 2022 Preferred Strategy. Site selection has been informed by the assessment of candidate sites and the consultation responses received.
- 7.2.2 As part of the consultation in July 2021, preferences were cast by members of the public using 'Placecheck'. Although it was made clear at that time that this was not part of the formal consultation, the results provide a helpful indication of public opinion. A total of 3,179 preferences were cast in the process. Table 7.1 below provides further detail. The four Preferred Strategic Site Allocations identified in the Deposit Plan are highlighted.

Table 7.1: Strategic site options

SEA option	Strategic growth area	Up votes	Down votes
Abergavenny A	Land north of Abergavenny	54	184
Abergavenny B	Land to the east of the A465	191	23
Abergavenny C	Land between the B4246	107	47
Chepstow D	Land north of the Bayfield Estate	51	132
Chepstow E	Land between the Bayfield Estate and A48	43	143
Chepstow F*	Land between the A48 and M48	60	143
Monmouth G	Land west of Monmouth	270	175
Monmouth H	Land central Monmouth	255	189
Monmouth I	Land north east Monmouth	318	248
Severnside J	Land north east of Caldicot	74	72
Severnside K	Land north west of Caldicot	48	85
Severnside L	Land west of Caldicot/ east of Rogiet	57	100
Severnside M	Land east of Caerwent	59	51

*Site/ Option F is no longer being put forward for development by the site promoter

- 7.2.3 The reasons for selection of sites are set out below:

Land to the East of Abergavenny (Option B)

- 7.2.4 The preferred strategic site allocation is a sustainably located edge of settlement site. Development here would expand the built-up area of the town beyond the A465 which currently forms a hard development boundary to the town. The site has the potential to form a well-connected urban extension to Abergavenny and provides the opportunity to provide a mixed-use development, containing a mix of residential uses alongside employment/commercial uses, facilities and services.
- 7.2.5 The proximity of the area to Abergavenny Railway Station (currently an approximately 10-minute walk, 0.5 miles) offers significant benefits to maximise opportunities for a modal shift to more sustainable forms of transport and offers an opportunity for transit-oriented development. The site is just an approximate 16-minute walking distance from the town centre

(0.7 miles). Vehicular access would be required from the A465 trunk road. The site has potential to offer park and ride facilities for Abergavenny train station, helping address an existing problem and supporting future modal shift alongside the increased train service frequency proposed as part of the South Wales Metro proposals.

- 7.2.6 The land is categorised as having high/medium landscape sensitivity to residential development in the Landscape Sensitivity Update. The site is mostly located on an area of predictive grade 2/3a BMV agricultural land. However, when considering the search sequence recommended in PPW12 it is noted that most of the land surrounding Abergavenny is either of BMV status or within floodplain. Moreover, the County's primary settlements are surrounded by either BMV land or flood plain meaning an alternative spatial strategy would not avoid allocating BMV land for development. Development will need demonstrate phosphate neutrality or betterment in its design and/or its contribution to the water body of the River Usk SAC catchment area.
- 7.2.7 This allocation could helpfully identify the long-term direction of growth for the town. This longer-term potential is advantageous.

Land at Mounon Road, Chepstow (Option E)

- 7.2.8 The Bayfield Site has not progressed to the Deposit Plan. In October 2023 a report of post consultation Preferred Strategy changes was agreed by Council. This included swapping the strategic site in Chepstow from Bayfield to Land at Mounon Road on the basis that a mixed-use development that includes a care home and proposed hotel had associated job creation and tourism benefits.
- 7.2.9 The preferred strategic site allocation is a sustainably located edge of settlement site. Development here would expand the existing built-up area west of the A466 (St Lawrence Road), north of the A48 and south of Mounon Road. The site is near the Wye Valley National Landscape (AONB) and on the opposite side of the road to the Mathern Conservation Area. PPW gives National Parks and AONBs equal status in terms of landscape and scenic beauty and requires that both be afforded the highest status of protection from inappropriate developments. Development in this location would need to be carefully designed to ensure that any effects on the setting of the National Landscape are acceptable. The land is categorised as being of high/medium landscape sensitivity to residential development.
- 7.2.10 The site is approximately 0.9 miles or an approximate 15-minute walking distance from the town centre and Bulwark neighbourhood centre, 0.9 miles (approximately 17-minute walk) from Chepstow Comprehensive School and Leisure Centre, and 1.1 miles (approximately 9-minute walk) from Chepstow railway station. As outlined above, careful consideration will be required regarding the cumulative impact of development on the A466, A48 and Highbeech roundabout.
- 7.2.11 Circa 72% of the land is predictive grade 2 and 3a BMV agricultural land. However, when considering the search sequence recommended in PPW it is noted that most of the land surrounding Chepstow is either of BMV status or affected by other constraints. Moreover, the County's primary settlements

are surrounded by either BMV land or flood plain meaning an alternative spatial strategy would not avoid allocating BMV land for development. Another consideration will include its location in the limestone minerals safeguarding area.

Leasbrook, Monmouth (Option I)

- 7.2.12 The preferred strategic site allocation in Monmouth relates to a greenfield site to the north-east of Monmouth. The site is a sustainably located edge of settlement site north of Dixton Road. The site is located adjacent to existing development at Dixton Close and Hereford Road, including Haberdashers' Monmouth School's playing pitches to the west, along with agricultural land to the east and north.
- 7.2.13 Monmouth sits within the River Wye Special Area of Conservation (SAC) catchment area. The strategic site will therefore need to demonstrate phosphate neutrality or betterment in its design and/or its contribution to the water body. A strategic solution to phosphates at the Monmouth Wastewater Treatment Works has been identified by Dŵr Cymru Welsh Water which should be implemented by 31st March 2025.
- 7.2.14 The site is near the Dixton Roundabout offering good links to locations further afield when public transport and use of the private car is necessary. There is no rail network to encourage sustainable travel by rail, the need to reduce travel/carbon and support active travel options is of importance.
- 7.2.15 Regarding agricultural land, the site contains a small amount of Grade 2 land with most of the site Grade 3a with Grade 3b. However, when considering the search sequence recommended in PPW it is noted that most of the land surrounding Monmouth is of BMV status. Moreover, the County's primary settlements are surrounded by either BMV land or flood plain meaning an alternative spatial strategy would not avoid allocating BMV land for development.
- 7.2.16 As a small part of the main access point of the site is located in floodplain, an emergency access will be included to ensure an alternative route in any extreme flooding events on Dixton Road. The site is located within proximity to two Special Areas of Conservation and adjoins the Dixton Conservation Area with a very small portion of the site being located in the Lower Wye Valley Landscape of Historic Interest.
- 7.2.17 In terms of distance to Monmouth Town Centre the site is located approximately 0.6 miles/13-minutes from the Town Centre with the whole Town Centre being located within 0.9 miles and an 18-minute walk. The site is in very close proximity to Monmouth Comprehensive School 0.4miles/ 7-minutes and the Leisure Centre 0.6miles/ 12-minutes (using the public entrance/route).

Land to the East of Caldicot (Option J)

- 7.2.18 The preferred strategic site allocation is a sustainably located edge of settlement site. Development here would extend the settlement of Caldicot to the northeast, towards the settlement of Crick and adjacent to the adopted LDP Crick Road, Portskewett site. The site is north of the Caldicot Castle

Country Park, a Conservation Area and an area currently designated as an Area of Amenity Importance under the Adopted LDP.

- 7.2.19 A small part of the candidate site adjacent to the former railway line is in the floodplain: built development would not be permitted within this part of the site. Part of the site includes previously developed land comprising a commercial equestrian centre, with much of the remainder being on Council-owned land. The inclusion of such suitable land is supported by Future Wales Policy 3 which supports public leadership and the use of public land to deliver on ambitious affordable housing targets.
- 7.2.20 In terms of agricultural land, the site contains a small area of grade 1 agricultural land, most of which is within a floodplain so would not be built on. The remaining area is classified predominantly as grade 2 agricultural land. However, when considering the search sequence recommended in PPW it is noted that most of the land surrounding Caldicot is either of BMV status or floodplain. Moreover, the County's primary settlements are surrounded by either BMV land or flood plain meaning an alternative spatial strategy would not avoid allocating BMV land for development.
- 7.2.21 In terms of distance from Caldicot town centre, it is approximately 1.2 miles (from a central point of the growth area) and approximately 22-minutes walking distance. It is approximately a 33-minute walk from Caldicot railway station. The former railway line has recently been purchased by MCC and is being turned into an active travel route, offering a significant benefit in terms of modal shift and leisure provision. Landscape sensitivity to residential development is high/ medium. Part of this site is within the limestone minerals safeguarding area.
- 7.2.22 This allocation could helpfully identify the long-term direction of growth for the town. This longer-term potential is advantageous.

8. ISA Findings of the Deposit Plan at this Stage

8.1 Introduction

8.1.1 The aim of this chapter is to present an appraisal of the RLDP, as currently presented in the Deposit Plan.

8.2 Methodology

8.2.1 The appraisal of the Deposit Plan identifies and evaluates 'likely significant effects' of the plan on the baseline, drawing on the ISA objectives identified through scoping (see Table 3.1) as a methodological framework.

8.2.2 Every effort is made to predict effects accurately; however, this is inherently challenging given the high-level nature of the policies under consideration and understanding of the baseline (now and in the future under a 'no plan' scenario) that is inevitably limited. Given uncertainties there is a need to make assumptions, e.g., in relation to plan implementation and aspects of the baseline that might be impacted. Assumptions are made cautiously and explained within the text (with the aim to strike a balance between comprehensiveness and conciseness/ accessibility). In many instances, given reasonable assumptions, it is not possible to predict 'significant effects', but it is nonetheless possible and helpful to comment on merits (or otherwise) of the Plan in more general terms.

8.2.3 Finally, it is important to note that effects are predicted taking account of the effect characteristics and 'significance criteria' presented within Schedules 1 and 2 of the SEA Regulations.¹⁴ So, for example, account is taken of the probability, duration, frequency and reversibility of effects as far as possible. Cumulative effects are also considered, i.e., the potential for the Plan to impact an aspect of the baseline when implemented alongside other plans, programmes, and projects. Explicit reference is made within the appraisal as appropriate (given the need to balance the desire of systematic appraisal with a desire to ensure conciseness/ accessibility).

8.3 Overview of the Deposit Plan

8.3.1 Strategic Policy S1 (Growth Strategy) and Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy) set the spatial strategy for housing and employment growth in Monmouthshire during the plan period. To implement the RLDP's Strategy, strategic site allocations are identified within Policies HA1 to HA4 for the primary settlements of Abergavenny, Caldicot, Chepstow, and Monmouth. Each of the strategic site allocations has been subject to ISA, as detailed in Chapter 6 and Appendix D, and the findings of this work has informed this appraisal.

8.3.2 Policy S1 states that the RLDP will make provision for 6,210 homes (to meet a housing requirement of 5,400 homes, including a 15% flexibility allowance), and a minimum of 38 hectares of employment land over the plan

¹⁴ Environmental Assessment of Plans and Programmes Regulations 2004

period 2018-2033. As set out in Policy S2, the focus of this development will be to the County's most sustainable settlements of Abergavenny, Caldicot, Chepstow, and Monmouth, including Severnside, as well as some growth in the most sustainable rural settlements to deliver much needed affordable homes, and to address rural inequality and rural isolation in these areas.

- 8.3.3 Policy S2 sets out the indicative proportion of residential growth to be accommodated by each of the settlement tiers. The Settlement Hierarchy reflects the findings of the Sustainable Settlement Appraisal¹⁵, which has grouped settlements into tiers based on their role and function and has informed where development should be spatially located to achieve a sustainable pattern of growth. Table 8.1 out a summary of the overarching indicative spatial distribution of housing provision for the RLDP.

Table 8.1: Summary of indicative spatial distribution of housing provision

Settlement	Completions 2018-2023	Existing Commitments	Total Allowances (Small sites; Windfalls)	LDP Rollover Allocations	RLDP New Housing Allocations (Dwellings)	Total RLDP Housing Provision
Abergavenny (incl. Llanfoist)	537	29	196	0	600	1,362
Chepstow	448	81	154	0	146	829
Monmouth (incl. Wyesham)	286	70	77	160	330	923
Caldicot (incl. Severnside)	663	555	162	0	805	2,190
Secondary Settlements	109	38	67	0	136	350
Rural Settlements	177	25	231	15	113	556
Total	2,220	798	887	175	2,130	6,210

- 8.3.4 Policy S2 also outlines the distribution of employment growth, as shown in Table 8.2.

¹⁵ The Sustainable Settlement Appraisal 2020 can be viewed on the Council's website via the following link: <https://democracy.monmouthshire.gov.uk/documents/s26562/Appendix%201%20Sustainable%20Settlement%20Appraisal%20March%202020.pdf>

Table 8.2: Distribution of employment land

Settlement	% of employment growth distribution	Hectares
Abergavenny (incl. Llanfoist)	3	1.7 (note: The Council will continue to explore opportunities to bring forward vacant premises in Abergavenny for employment use, in conjunction with the CCR / relevant partners)
Chepstow	11	6.4
Monmouth (incl. Wyesham)	10	5.84
Caldicot (incl. Severnside area comprising of: Caerwent, Crick, Magor, Undy, Portskewett, Rogiet and Sudbrook)	65	37.86
Secondary settlements of Penperlleni, Raglan and Usk	10	6.05

8.3.5 The RLDP key diagram is provided in Figure 8.1.

Figure 8.1: RLDP Key Diagram

8.4 Economy and employment

- 8.4.1 Strategic Policy S1 (Growth Strategy) states that the RLDP will make provision for 6,210 homes (to meet a housing requirement of 5,400 homes) and a minimum of 38 hectares of employment land over the Plan period 2018-2033. The proposed distribution of these homes is set out in Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy) and shown in Table 8.1. The proposed distribution of employment land is also set out in Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy) and shown in Table 8.2. New and protected employment areas are also included under Policy EA1 (Employment Allocations) and Policy EA2 (Protected Employment Sites).
- 8.4.2 The spatial strategy performs positively in relation to the ISA objective to maximise the economic contribution of the area to the Cardiff City, Bristol, and wider South West Region, particularly in respect of directing strategic allocations for housing growth to locations from which key regional employment hubs can be accessed. Abergavenny (including Llanfoist) and Chepstow each have existing rail connections to both Newport and Cardiff, with services to Cardiff taking around 40-45 minutes from Abergavenny and around 40 minutes from Chepstow. Within the Severnside area, Caldicot has been classified as a higher tier settlement, with functional transport links to the smaller settlements of Rogiet, Caerwent, Portskewett, Sudbrook and Crick. Caldicot Train Station connects the town to the employment areas of Newport, Cardiff, and Bristol. Whilst Monmouth does not have a train station, it allows for sustainable transport access via bus services to locations like Abergavenny and Hereford and is also adjacent to the A40. This road provides vehicular connections to the wider strategic network – Newport is an approximate 30-minute drive to the south-west.
- 8.4.3 Directing growth to these locations responds positively to the removal of the Severn Bridge Tolls; a multi-modal transport network with services fulfilled by a combination of heavy rail, light rail and bus rapid transit. Higher growth in this part of the County will capitalise upon the continuing economic growth of the Bristol/ South West region and the opportunities for Monmouthshire as a border County located between the ‘Great Western Cities’. Furthermore, directing growth close to the M4/ M48 will provide residents with good access to economic opportunities throughout the region, utilising the infrastructure connections to the South of the County.
- 8.4.4 It is considered likely that sustainable travel upgrades will be seen across the Primary Settlements, including an increase in the capacity of travel modes, increased frequency of services to Newport and Cardiff, and reduced journey times. This will enable workers to access key employment centres and jobs markets more quickly and more frequently, boosting the local and regional economy. Furthermore, Policy H1 (Residential Development in Primary and Secondary Settlements), Policy H2 (Residential Development in Main Rural Settlements) and Policy H3 (Residential Development in Minor Rural Settlements) all work to safeguard existing retail and employment space through new-build residential development and the redevelopment/ conversion of existing structures. Furthermore, Policies RC1 (Central Shopping and Commercial Areas), RC2 (Primary Shopping Frontages), RC3 (Local Centres and Neighbourhood Centres / Shops) and RC4 (New Retail

Proposals Outside of Identified Town and Local Centres) contribute to protecting existing and bringing forward further retail opportunities, thus working towards maintaining and enhancing the local economy.

- 8.4.5 Distributing housing and employment growth between Abergavenny (including Llanfoist), Chepstow, Caldicot (including Severnside) and Monmouth (including Wyesham) will help ensure growth is dispersed across the plan area and not simply concentrated towards the M4 corridor in the south. For example, despite being accessible to Cardiff, Abergavenny is sufficiently far north that it serves as the regional centre for a number of smaller settlements in the north of the plan area. By delivering substantial growth at Abergavenny, including through the strategic site Land to the East of Abergavenny (Policy HA1 – for 500 homes over the plan period) and through Policy HA5 (Land at Penlanlas, Abergavenny – for 100 homes over the plan period), the spatial strategy will help sustain the rural economy of the smaller settlements which Abergavenny supports. It is noted that the strategic allocation under Policy HA1 (Land to the East of Abergavenny) will deliver a residential-led mixed-use development, including a mixed-use hub, and park and ride services. This will contribute to enhancing access to employment opportunities and services that support the local economy by bringing forward new/ additional opportunities within Abergavenny itself and improving connections to the transport network.
- 8.4.6 By also distributing a substantial proportion of growth to the Severnside settlements, the spatial strategy is likely to deliver further positive effects in relation to the economy and employment. The Severnside settlements (Caldicot, Caerwent, Crick, Magor Undy, Portskewett, Rogiet and Sudbrook) are strategically located for access to the M4/ M48 corridors and to rail services between Cardiff and Bristol. The area is already well served by public transport via Caldicot and Severn Tunnel Junction stations and, as with other Tier 1 settlements, public transport connectivity is likely to be enhanced later in the plan period as the rollout of the SE Wales Metro progresses. Given the scale of growth proposed at Caldicot under Policy HA2 (Land to the East of Caldicot – for 770 homes over the plan period), it is considered that improvements to the sustainable/ active travel network would likely be delivered alongside housing and employment. This includes stipulations made under Policy HA2 (Land to the East of Caldicot) for pedestrian and cycle links within and to the new development area, including from Caldicot Town Centre and the former MoD railway, cycle, and walking routes.
- 8.4.7 The strategic site allocation under Policy HA2 (Land to the East of Caldicot) will also deliver residential-led mixed-use development, including a local centre with appropriate community facilities, and employment space. As such, it is considered the strategic site will make a considerable economic contribution to the Cardiff City Region, as locating housing and employment growth in close proximity to regional economic opportunities has the potential to lead to significant long term positive effects. It is also noted that Policy HA9 (Land at Former MOD land, Caerwent, for 40 homes over the plan period) is put forward for a mixed-use residential scheme, including employment land.

- 8.4.8 The Severnside settlement cluster already represents a key employment hub in its own right and delivering housing growth will help ensure the continued vitality of key employment sites such as Castle Gate Business Park at Caldicot and the AB InBev brewery at Magor. However, strategic housing growth at the south of the County is likely to also prove an attractive location for workers who commute to employment hubs outside the Cardiff City Region, particularly those who commute to Bristol which is a short drive or train journey away.
- 8.4.9 The strategic site allocation in Chepstow under Policy HA3 (Land at Mounton Road, Chepstow, for 146 homes over the plan period) is proposed for residential use and commercial uses, for example, hotels or residential care homes. Whilst this is unlikely to encourage a large level of inward investment and support local economic growth directly, delivering growth in this location will increase the local workforce and support tourism. As such, development of the site will contribute towards the local/ wider economy, with potential for long-term positive effects.
- 8.4.10 The Preferred Strategy (December 2022) proposed no new site allocations in the primary settlement of Monmouth, or within the upper River Wye catchment north of Bigsweir Bridge, due to the lack of an identified strategic solution to the treatment of phosphates at the Monmouth Wastewater Treatment Works (WwTW) within the Plan period. However, new site allocations have been considered in Monmouth (including Wyesham) on the basis that sufficient certainty is provided by Dwr Cymru Welsh Water's (DCWW) planned improvements at the Monmouth Wastewater Treatment Works by 31st March 2025. As such, development in the area will help to address concerns in Monmouth over a reduced working age population.
- 8.4.11 One strategic allocation is made within Monmouth under Policy HA4 (Land at Leasbrook, for 270 homes over the plan period), and three further sites are proposed under Policy HA6 (Land at Rockfield for 60 homes over the plan period), Policy HA7 (Land at Drewen Farm for 110 homes over the plan period), and Policy HA8 (Tudor Road, Wyesham for 50 homes over the plan period). Whilst these policies focus only on residential development, they are anticipated to bring forward positive effects in relation to this ISA theme by increasing the working age population in the area and bringing forward additional spending within the local economy.
- 8.4.12 The additional housing development sites under policies HA10 to HA18 also have a residential focus. Whilst these policies do not make provision for employment land, it is considered that they will bring forward positive effects through locating housing in proximity to economic opportunities in the area.
- 8.4.13 Strategic Policy S10 (Employment Sites Provision) sets out the quantum of employment land to be delivered throughout the Plan period, in accordance with the Spatial Strategy and the recommendations of the Employment Land Review (ELR) (2022). This is supported by Policy E1 (Protection of Existing Employment Land) and Policy E2 (Non-Allocated Employment Sites), which seek to maintain and enhance employment levels by safeguarding existing sites and supporting new sites for industrial and business development.
- 8.4.14 In line with Strategic Policy S10, provision will be made for a minimum of 57 hectares of land on a suitable range and choice of sites for industrial and

business development (classes B1, B2 and B8). This minimum requirement reflects a forecast scenario based on past take-up rates and includes a five-year buffer to allow for choice and uncertainty in forecasting. Strategic Policy S10 also seeks to protect existing employment land from conversion to “*alternative forms of development*”. When considering the existing employment land supply, it is recognised that the large existing employment allocation at Quay Point, Magor, accounts for a significant mass of land of the available supply of employment land at one site (13.76ha). The Deposit Plan highlights the need for further supply to meet the shortfall of supply and enable further flexibility in the market in terms of types of land and locations.

- 8.4.15 The other strategic policies likely to have a direct effect in relation to economy and employment are Strategic Policy S11 (Rural Economy) and Strategic Policy S12 (Visitor Economy), given that they seek to support the diversification of the rural economy and support the visitor economy and promote sustainable forms of tourism. This is supported by Policy T1 (New or Extended Tourism Accommodation and Facilities in the Open Countryside), and Policy T2 (Protection of existing tourism facilities). Future Wales (2021) has expressed a commitment to supporting vibrant rural areas and improving the rural economy¹⁶. The National Plan Policy 4 – Supporting Rural Communities, and Policy 5 – Supporting the Rural Economy, establish the national policy approach for LDPs to plan positively to meet the employment needs of rural areas through appropriate and proportionate economic growth. Strategic Policy S11 (Rural Economy) therefore seeks to sustain and enhance the economy of the County’s rural settlements to ensure their continued viability, which is likely to have a long term positive effect on this theme. This is achieved through the supporting policies RE1 (Secondary and Main Rural Settlements Employment Exceptions), RE2 (The Conversion or Rehabilitation of Buildings in the Open Countryside for Employment Use), RE3 (Agricultural Diversification), RE4 (New Agricultural and Forestry Buildings), RE5 (Intensive Livestock/ Free Range Poultry Units), and RE6 (Provision of Recreation and Leisure Facilities in the Open Countryside).
- 8.4.16 The role of the rural economy is considered through Strategic Policy S12, which recognises the significance of tourism to Monmouthshire’s economy, with the supporting text of the policy stating that “*in rural areas tourism related development is an essential element in providing for a healthy diverse local economy*”. By establishing support in principle for development which provides or enhances sustainable tourism Policy S12 will help support and grow the tourism sector which has the additional benefit of distributing employment opportunities throughout small settlements and rural areas of the County. Collectively, this suite of policies is considered to perform positively in relation to the ISA objectives of contributing to the local economy, strengthening, and diversifying the economy, and ensuring a distribution of employment opportunities throughout the plan area.
- 8.4.17 PPW12 equally values the importance of tourism to economic prosperity and job creation and its ability to act as a catalyst for environmental protection, regeneration, and improvement in both urban and rural areas. Strategic Policy S14 (Town, Local and Neighbourhood Centres) establishes a four-tier retail hierarchy, with the broad retail offer of the four ‘County towns’ of

¹⁶ Welsh Government (2020) Future Wales: the national plan 2040 [online] available at: <https://gov.wales/future-wales-national-plan-2040#FutureWales:TheNationalPlan2040>

Abergavenny, Caldicot, Chepstow and Monmouth recognised as being of significance not just to the towns themselves but also their wider rural hinterlands. The ‘Minor County Town Centres’ of Usk and Magor are located on the second tier, and the ‘Local Centres’ of Raglan and Bulwark are in the third tier. These centres are recognised as serving a more local convenience function, whilst the fourth tier applies to neighbourhood centres within larger settlements. Linked to this, Strategic Policy S6 (Infrastructure) seeks to secure improvements in infrastructure, facilities, services and related works across the four-tier retail hierarchy. This includes health infrastructure and facilities, and recreation and leisure facilities which will likely provide local employment opportunities.

- 8.4.18 Welsh Government’s commitment to better places, placemaking, quality outcomes, and good design is evidenced throughout the Building Better Places (2020) Document, which identifies town centres as a policy area that should be the focus of consideration and action, in order to act as a catalyst for a recovery. The RLDP policy intention is therefore to protect town and local centre vitality and sustain the County’s main settlements as “*vibrant and attractive centres*” to ensure that they “*remain attractive places to live and visit*”. This is considered to perform positively in relation to the ISA objective to enhance the viability and vitality of town centres.
- 8.4.19 In terms of supporting the rural economy and tourist economy, Strategic Policy S5 (Green Infrastructure, Landscape and Nature Conservation) could have potential for indirect positive effects by protecting natural and built heritage attractions and thereby encouraging tourism development and tourist spend. For example, Strategic Policy S5 seeks the protection of landscape and townscape character to protect and enhance “*landscape setting and quality of place*”, and also highlights the importance of resilient ecosystems.
- 8.4.20 Whilst highlighted as a key issue for the RLDP, the policies are largely silent on skills and training. Skills and training are important considerations in terms of aligning the RLDP with current and emerging economic opportunities at both a local and regional scale, i.e., the City Deal and the Skills for the Future Project. As discussed above, the RLDP sets out support for inward investment and local employment growth/ opportunities; however, it could be further strengthened by establishing a policy position on delivering high quality skills and training.

Cumulative effects

- 8.4.21 Cumulatively, Monmouthshire’s location within the ten-authority Cardiff City Region gives it a broad regional context, and its location at the eastern edge of the region means it is also within the influence of economic hubs in England, particularly the Bristol City Region and local economic hubs in Gloucestershire and Herefordshire. In this context there are potential cumulative effects on the regional economy from development in the plan area and vice versa.
- 8.4.22 The Cardiff Capital Region City Deal identifies regional economic challenges and opportunities for the ten authorities which comprise the Cardiff Capital Region. Addressing economic challenges and maximising opportunities are right at the heart of the rationale behind the City Deal and there is likely to be

significant potential for positive cumulative effects in relation to economy and employment in this context.

- 8.4.23 Development proposals in Newport are likely to be of particular significance in terms of cumulative effects from growth in Monmouthshire. Identified as a National Growth Area, Newport is a significant employment hub and population centre adjacent to Monmouthshire's southern boundary. The additional employment land and housing delivery in Newport could provide additional regional employment opportunities for workers from Monmouthshire and could potentially further bolster the business case for the eastward expansion of the South East Wales Metro. There could be particular cross boundary significance in relation to housing growth at the Severnside settlements as this could directly support the vitality of employment hubs along the M4 corridor. This will help maximise regional economic opportunities and is considered likely to have significant long term positive effects in relation to Monmouthshire and the Cardiff Capital Region more broadly. The Newport LDP also safeguards land for major road schemes including improvements to the M4 Motorway Junction 28, western extension of the Southern Distributor Road as the Duffryn Link Road between Maesglas and Coedkernew and the North South Link - Llanwern. Proposed development could increase traffic along the M4, A4042 and A449. However, in time the SE Wales Metro will likely to relieve some of this additional traffic burden, particularly in relation to radial commuting between Monmouth/ Abergavenny/ Chepstow and employment hubs at Newport and Cardiff.
- 8.4.24 The visitor economy is significant in Monmouthshire and the Brecon Beacons National Park is a key component of this in terms of visitor accommodation and associated services. The Brecon Beacons National Park Authority is its own LPA and therefore is able to propose development within Monmouthshire but outside the Monmouthshire LDP plan area. Growth in the key settlements of Brecon, Crickhowell, Hay-on-Wye and Talgarth is not likely to result in any significant interactions with development being proposed through the Monmouthshire RLDP. Therefore, no significant effects are anticipated in relation to economy and employment.
- 8.4.25 It is also considered that cumulative positive effects are likely in relation to economy and employment from growth at Abergavenny and growth along the Heads of the Valleys corridor as this will continue to support and grow the regional economy.
- 8.4.26 The two English LPAs of Herefordshire Council and Forest of Dean District Council are adjacent to the plan area's eastern boundary, with much of the boundary of both comprising the Wye Valley Area of Outstanding Natural Beauty (AONB). There are key settlements in both authorities which have strong functional links with Monmouthshire as both Ross-on-Wye in Herefordshire and Coleford in Gloucestershire are located a short distance from Monmouth along the A40 and A4136 respectively. Housing and employment growth could have the potential to increase traffic, especially on key roads into and out of Monmouth in particular, and on the A48 through Chepstow to Tutshill and Sedbury. However, positive effects are considered likely overall by virtue of supporting the wider regional economy.

Summary of likely effects

- 8.4.27 Overall, the employment land protections and provisions, alongside well-connected housing and town / local centre development are considered likely to lead to **significant positive effects** for this ISA theme. Additional provisions that seek to improve the local environment and sustainable and active travel connections will also bolster positive effects and support the rural economy and tourism growth.

8.5 Population and communities

- 8.5.1 A key consideration under the population and communities ISA theme is the provision of the right number of homes in the right places, including delivering a sufficient mix of housing types and tenures to meet different identified needs within the community.
- 8.5.2 In accordance with Strategic Policy S1 (Preferred Growth Strategy) the RLDP will deliver approximately 5,400 – 6,210 homes over the Plan period 2018-2033. The level of housing need is based on a demographic-led scenario with added policy assumptions¹⁷, providing a level of growth (homes and jobs) that maximises the extent to which local evidence-based issues and objectives in the south of the County and River Usk catchment area can be addressed, whilst also having regard to Welsh Government officer concerns regarding alignment with Future Wales: the National Plan 2040.
- 8.5.3 This level of growth is in general conformity with Future Wales' overall strategy. Although Monmouthshire is not within the national growth area identified in Future Wales 2040: the National Plan, supporting evidence shows that the proposed level of growth is essential to deliver the County's local evidence-based issues and objectives and ensure the RLDP is sound. It is supported by Future Wales policies 4, 5 and 7 in particular which support rural communities, the rural economy and the delivery of affordable homes.
- 8.5.4 Strategic Policy S1 (Growth Strategy) identifies a total housing target of 6,210 dwellings over the plan period based on a 15% flexibility allowance. On this basis, Strategic Policy S1 (Growth Strategy) is considered to have a significant long term positive effect as it proposes the delivery of enough new homes to meet identified needs, including affordable housing needs, and includes some flexibility should any sites not come forward.
- 8.5.5 In terms of the location of new housing and employment, Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy) identifies the level of growth to come forward across the different settlement types. It identifies four strategic growth areas in the main towns of Abergavenny (inc. Llanfoist), Caldicot, Chepstow (inc. Severnside), and Monmouth (inc. Wyesham), which have been considered through the ISA process. These sites have provided sufficient evidence of viability and deliverability that will be built on as the plan progresses.

¹⁷ Demographic-led option for the LPA area (i.e. excludes the BBNP area within Monmouthshire) using ONS 2020 MYE base and applying assumptions in relation to migration, household membership rates and commuting ratio, as set out in the Housing Background Paper.

- 8.5.6 Of note is Land to the East of Caldicot (Policy HA2), the largest of the strategic site allocations, which seeks to deliver 770 homes within a relatively deprived part of the community. In line with Strategic Policy S6 (Infrastructure), the strategic site will include a range of supporting infrastructure (education, employment, retail, and leisure) which will likely lead to positive effects in terms of supporting self-sustaining communities. Positive effects in this respect are also anticipated through the delivery of the strategic site Land to the East of Abergavenny (Policy HA1), which is also proposed for mixed use, including community uses.
- 8.5.7 More broadly, it is considered that the Spatial Strategy represents a reasonable approach to the distribution of growth as it will ensure that the delivery of new homes is focussed at the most sustainable locations and where there is greater need, i.e., the larger settlements which offer the broadest range of services, facilities, and transport options. Under Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy), Abergavenny is allocated 22% of growth over the plan period, Chepstow 13%, Monmouth (including Wyesham) 15%, and Caldicot (including the Severnside area) 35%. This translates to around 1,362 dwellings at Abergavenny, 829 at Chepstow, 923 at Monmouth, and 2,190 across the Severnside area. This growth is put forward under policies HA1 (Land to the East of Abergavenny), HA2 (Land to the East of Caldicot), HA3 (Land at Mounton Road, Chepstow), HA4 (Land at Leasbrook, Monmouth), HA5 (Land at Penlanlas Farm, Abergavenny), HA6 (Land at Rockfield Road, Monmouth), HA7 (Land at Drewen Farm, Monmouth), HA8 (Land at Tudor Road, Wyesham, Monmouth), and HA9 (Land at Former MoD, Caerwent). Growth is also put forward through committed sites, windfall sites, and infill opportunities – including those under policies HA10 to HA18.
- 8.5.8 The three secondary settlements of Penperlleni, Raglan and Usk are apportioned 6% (350 dwellings). This growth is included under allocation policies HA10 (South of Monmouth Road, Raglan), HA11 (Land east of Burrium Gate, Usk) and HA12 (Land west of Trem yr Ysgol, Penperlleni). The remaining dwellings would be distributed between the main and minor rural settlements, and through policies HA13-HA18. Growth is also put forward through committed sites, windfall sites, and infill opportunities. The strengths of this approach are that smaller settlements receive some allocated housing growth, helping to meet local housing need where it arises and ensuring the benefits of growth, such as the provision of new community infrastructure, are not simply directed to the highest tier settlements. This will likely ensure the delivery much needed affordable homes in the right places and address rural inequality and rural isolation in the lower tier areas.
- 8.5.9 Affordable housing is one of the key challenges facing the County's communities. The RLDP specifically seeks to address housing affordability, committing to the delivery of 1,595 – 2,000 affordable homes. This includes on the strategic site allocations, which will have on-site provision of affordable homes at 50% (Strategic Policy S7 Affordable Housing). Furthermore, Strategic Policy S7 (Affordable Housing) also outlines affordable housing thresholds for different sized residential development within settlement boundaries. This includes 50% on-site affordable housing on all new site allocations, 50% on-site affordable housing on sites of 20+ homes, and 40% on-site affordable housing on sites of 5-19 homes. For

developments of 1-4 homes, financial contributions towards the provision of affordable housing in the wider Monmouthshire area will be required; the same is required where conversions and subdivisions of houses is proposed. Linked to this, Policy H9 (Affordable Housing Exception Sites) outlines support for additional affordable housing adjoining Tier 1, 2, 3 and 4 settlements on sites that would not otherwise be released for residential development.

- 8.5.10 The commitment to affordable housing will lead to long-term positive effects, helping tackle Monmouthshire's housing need, homelessness, and social inequality. The supporting text of Strategic Policy S7 (Affordable Housing) highlights the significance of affordable housing for the RLDP, forming an integral part of the overarching Strategy. Provision will contribute positively towards addressing issues associated with the County's high house prices (relative to the Welsh average and relative to earnings), such as difficulties attracting and retaining younger age groups and anticipated increased demand for housing in Monmouthshire related to the removal of the Severn Bridge Tolls.
- 8.5.11 On balance it is considered that the Deposit Plan performs broadly positively in relation to the population and communities ISA theme given it will deliver above the level of objectively assessed housing need. In line with the Settlement Hierarchy, growth will be focused to the primary settlements of Abergavenny (including Llanfoist), Caldicot (including Severnside), Chepstow and Monmouth (including Wyesham), together with a sustainable amount of growth to the most sustainable lower tier settlements. The Settlement Hierarchy reflects the findings of the Sustainable Settlement Appraisal, which groups settlements into tiers based on their role and function and has informed where development should be spatially located to achieve a sustainable pattern of growth.
- 8.5.12 Other strategic policies likely to have a direct effect in relation to population and communities are Strategic Policy S3 (Sustainable Placemaking & High Quality Design) and Strategic Policy S6 (Infrastructure). Strategic Policy S3 establishes a range of criteria by which development will be expected to contribute to "*high quality, attractive and sustainable places that support the health and well-being of the community and respond to climate change*". This includes safe and inclusive design, co-locating different land uses to maximise public transport accessibility, incorporating green infrastructure and leveraging the natural, historic, and built character of a site to contribute to quality placemaking. This is reiterated in the supporting Policy PM1 (Creating well-designed places). This also links to Strategic Policy S8 (Site Allocation Placemaking Principles) – which seeks to ensure residential development complies with placemaking principles, including a mix of housing types, tenures and sizes and ensuring a safe and secure environment for all the community.
- 8.5.13 Strategic Policy S6 (Infrastructure) emphasises the importance of infrastructure in ensuring the sustainability of new development. The policy presents a comprehensive approach to seeking suitable new infrastructure through the development process, effectively establishing a hierarchy of mechanisms for infrastructure delivery. It sets an expectation that new or improved infrastructure "*must be provided as part of the proposed*

development". Furthermore, *"where provision on-site is not appropriate, off-site provision, or a financial contribution towards it, will be sought"*. An expansive list of potential planning obligations is also presented which will be sought including infrastructure improvements that are *"necessary to make development acceptable"*. This policy is supported by Policy IN1 (Telecommunication, broadband and other digital infrastructure), which seeks to ensure appropriate infrastructure will come forward to support communities.

- 8.5.14 Strategic Policy S15 (Community and Recreation Facilities and Areas of Amenity Importance) performs positively in terms of planning for sustainable communities, focussing on ensuring provision or enhancement of accessible community and recreation facilities, defined in the supporting text as *"facilities used by the local communities for leisure, social, health, education and cultural purposes"*. It also establishes a presumption against the unjustified loss of such facilities. This is supported by Policy CI1 (Retention of Existing Community Facilities), Policy CI2 (Provision of Formal and Informal Open Space and Allotments / Community Growing Areas), Policy CI3 (Safeguarding Existing Recreational Facilities, Public Open Spaces and Allotments / Community Growing) and Policy CI4 (Areas of Amenity Importance), which all seek to maintain and enhance community infrastructure for the benefit of the populations in Monmouthshire.
- 8.5.15 It is important that the RLDP plans for the needs of the gypsy and travellers as well as the settled community. Strategic Policy S9 (Gypsy and Travellers) seeks to address this through a high-level commitment that *"land will be made available at Bradbury Farm, Crick for 7 pitches to accommodate unmet Gypsy and Traveller accommodation needs"*. This is supported by Policy GT1 (Gypsy, Traveller and Showpeople Sites).
- 8.5.16 The wider policies also work to bring forward benefits for the population and communities ISA theme. Policy GW1 (Green Wedge Designations) seeks to safeguard several key areas of land between settlements. This helps to retain individual settlement and community identities. Furthermore, Strategic Policy S13 (Sustainable Transport) works to support population and communities through maintaining and improving transport networks, allowing for a level of connectivity within and between settlements. Strategic Policy 14 (Town, Local and Neighbourhood Centres) also works to support population and communities through enhanced retail, commercial and social developments; this will help to support communities and reduce their need to travel outside of their settlements to access key services and facilities. This policy is supported by Policy RC1 (Central Shopping and Commercial Areas), Policy RC2 (Primary Shopping Frontages), Policy RC3 (Local Centres and Neighbourhood Centres / shops) and Policy RC4 (New Retail Proposals Outside of Identified Town and Local Centres). The need to protect and enhance retail, commercial and social development is also reflected in policies H1 (Residential Development in Primary and Secondary Settlements), H2 (Residential Development in Main Rural Settlements), and H3 (Residential Development in Minor Rural Settlements), which all seek to ensure development protects existing community uses.

Cumulative effects

- 8.5.17 Development proposed within the Preferred Strategy has the potential for cumulative effects with growth proposed by other authorities within and beyond the Cardiff Capital Region, particularly in relation to the supply of a sufficient quantity of the new homes in sustainable locations.
- 8.5.18 The adopted and emerging development plans of all the surrounding local authorities propose meeting or exceeding their housing need. This means that the Deposit Plan's proposed housing delivery is contributing to a regional position of housing and infrastructure needs being met where it arises, which is a significant positive cumulative effect in relation to the population and communities ISA theme.
- 8.5.19 In this context there are likely to be positive effects in relation to accessibility to services and facilities throughout South Wales from the in-combination effects of proposed enhancements to cross-boundary public transport through the Cardiff City Deal. The County will also benefit in this respect from its links to England; Herefordshire to the north-east, South Gloucestershire and the Forest of Dean District to the east (on the other side of the River Wye), with links to South Gloucestershire via the Severn Bridge. Any cross-boundary sustainable transport improvements will make it easier to access existing services and facilities available at higher tier settlements, including those further afield at Newport, Cardiff, and Bristol, even in locations where the level of growth proposed may not support widespread provision of new local facilities.

Summary of likely effects

- 8.5.20 Considering the above, it is anticipated that implementation of the RLDP will likely lead to **significant positive effects**. This is due to its support of building sustainable and resilient communities across Monmouthshire and tackling the affordable housing challenge. This also reflects the focus of the RLDP on bringing forward different housing development (various types and tenures) in well-connected areas to meet the varying needs of the population.

8.6 Health and wellbeing

- 8.6.1 The Growth Strategy under Strategic Policy S1 (Growth Strategy) and Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy) provides a level of growth (homes and jobs) that maximises the extent to which local evidence-based issues and objectives in the south of the County and River Usk catchment area can be addressed, including in relation to the delivery of affordable homes, sustainable economic growth, rebalancing the demography by ensuring that young people can choose to live in the County and responding to the climate and nature emergency; whilst also having regard to Welsh Government officer concerns regarding alignment with Future Wales: the National Plan 2040, and the phosphate constraints in the Upper River Wye catchment.
- 8.6.2 By virtue of directing the majority of growth to settlements in the two highest tiers of the settlement hierarchy the preferred strategy is likely to focus growth at locations which offer the potential for sustainable access to local

services and facilities. For example, much of the growth directed to Abergavenny under Policy HA1 (Land to the East of Abergavenny) will likely be delivered within around 1.5 miles of the town centre, which is considered to be a reasonable cycling distance to access key facilities and services. Furthermore, the site allocated under Policy HA3 (Land at Mounton Road, Chepstow) is located within the Chepstow settlement boundary to the west – allowing for easy access to services and facilities in the centre along the A48. The same can be said of the site allocated under Policy HA4 (Land at Leasbrook, Monmouth) – which is located within the Monmouth settlement boundary and adjacent to the A466.

- 8.6.3 Correspondingly, by directing a proportionately small amount of growth to Tier 3 and 4 the preferred strategy avoids significant growth at smaller settlements which are likely to have a higher rate of car dependency. This is consistent with the RLDP objective of enabling healthier lifestyles.
- 8.6.4 In relation to the largest of the strategic site allocations, Land to the East of Caldicot (Policy HA2), while the site has good proximity to local services, positive effects will also be delivered through the proposed mixed use local centre and employment space. This reflects the strategic nature of the site (770 homes), and will support sustainable, healthy communities.
- 8.6.5 The Growth Strategy also performs well by directing growth to locations with good potential for accessing services via healthy transport options (under policies HA6-HA18). While the actual degree of walking and cycling connectivity will partly be determined by detailed matters of design and layout, it is considered that in spatial terms, broadly positive effects can be concluded.
- 8.6.6 Consideration is also given under this ISA theme to the impact of the COVID-19 pandemic. Building Better Places Wales acknowledges the behavioural shift of increased cycling and walking activity, and new working from home patterns which have reduced overall need to travel. The RLDP policy framework seeks to maximise opportunities and further secure in the long -term this positive transport modal shift, kick started by the COVID-19 pandemic, from the car to active travel car-free journeys. Strategic Policy 13 (Sustainable Transport) performs particularly positively in this respect. Policy S13 (Sustainable Transport) stands out as being of particular significance in relation to health and wellbeing as it includes an explicit requirement for development proposals to “*reduce the need to travel*” and include “*promoting and prioritising active travel*”. The policy identifies that the existing Active Travel Network in Monmouthshire will need enhancing and expanding to ensure that walking and cycling are effectively promoted, achieved through maintaining and improving the Active Travel Network Maps to maximise engagement. The Active Travel Network is established by the Active Travel (Wales) Act 2013 and requires authorities to seek continuous improvement in cycling and pedestrian infrastructure. This means the policy is underpinned by a strong legislative platform which could act as an effective hook for ensuring developers design-in walking and cycling connectivity to the existing network when delivering new developments.
- 8.6.7 This links to Policy PROW1 (Public Rights of Way), which seeks to protect the existing Public Rights of Way network and add to it where appropriate. Furthermore, the delivery and enhancement of green infrastructure through

- the development process as per Strategic Policy S5 (Green Infrastructure, Landscape and Nature Recovery) is likely to be an important element of boosting walking and cycling.
- 8.6.8 Other strategic policies likely to have a direct effect in relation to health and wellbeing are Strategic Policy S3 (Sustainable Placemaking & High Quality Design), Strategic Policy S5 (Green Infrastructure, Landscape and Nature Recovery), and Strategic Policy S15 (Community and Recreation Facilities, Public Open Spaces and Areas of Amenity Importance). This is through the protection of existing green spaces and infrastructure, and the delivery of new green infrastructure, which will contribute to health and wellbeing by providing safe spaces to engage with physical activity, to the benefit of physical and mental health.
- 8.6.9 Furthermore, Strategic Policy S15 (Community and Recreation Facilities, Public Open Spaces and Areas of Amenity Importance) offers support in principle for development proposals which provide or enhance community facilities, the definition of which includes GP surgeries and health centres. This links to Strategic Policy S6 (Infrastructure), which indicates planning agreements and obligations will need to include the consideration and appropriate provision of a number of key services and facilities, including health infrastructure and facilities. Strategic Policy S15 (Community and Recreation Facilities, Public Open Spaces and Areas of Amenity Importance) also establishes a presumption against the unjustified loss of such facilities. It is considered that the policy is relatively passive, i.e., simply supports such facilities coming forward rather than actively seeks their provision. However, in the context of Monmouthshire, where the need for growth is not acute, this is considered a proportionate approach.
- 8.6.10 Strategic Policy S3 (Sustainable Placemaking & High Quality Design) could help support health and wellbeing by promoting the incorporation of *“an appropriate mix of uses, where applicable, to minimise the need to travel and to maximise opportunities for sustainable travel”*. This is understood to mean delivering a mixed range of services and facilities across the different use classes at the same accessible location so that residents only need to walk or cycle to one place to access retail, employment, leisure and so on. This is supported by Policy PM1 (Creating well-designed places), which indicates all development will need to ensure a safe environment that supports the community and integrates multifunctional green and blue infrastructure and public open space within site boundaries. This will allow for safe engagement with physical activity, including active transportation. Health is further safeguarded through Policy PM2 (Environmental Amenity), which stipulates development proposals will need to ensure it does not cause significant harm to local health – including through air and water pollution. The health of residents is also considered through Policy H7 (Specialist Housing), which seeks to ensure specialist housing development and extensions are located close to key services and infrastructure to allow for safe and convenient access and allow for the provision of support and care. This will allow for older residents to remain in their homes for longer.
- 8.6.11 The importance of sustainable placemaking has been identified in the Building Better Places document. Policy priorities include placing greater emphasis on creating neighbourhoods that enable residents to stay and

move locally to access most services and amenities through revitalised town centres and the provision of locally accessible green spaces. Strategic Policy S3 (Sustainable Placemaking and High Quality Design) is therefore anticipated to lead to positive effects in terms of creating and sustaining high quality, connected communities. Other policies likely to perform positively in this respect include Strategic Policy 5 (Green Infrastructure, Landscape and Nature Recovery), Strategic Policy S14 (Town, Local and Neighbourhood Centres Hierarchy) and Strategic Policy S15 (Community and Recreation Facilities, Public Open Spaces and Areas of Amenity Importance).

- 8.6.12 Strategic Policy S14 (Town, Local and Neighbourhood Centres Hierarchy) focuses on ensuring retail, commercial and social development comes forward at levels appropriate to the settlement size. This will allow for the health and wellbeing of communities to be met within the settlements themselves. This is supported by Policy RC1 (Central Shopping and Commercial Areas), which seeks to safeguard the vitality, attractiveness and viability of central shopping and commercial areas within Abergavenny, Caldicot, Chepstow, Monmouth, Magor and Usk. This provides a further health and wellbeing benefit by protecting services and retail opportunities in these areas. The same can be said of Policy RC2 (Primary Shopping Frontages), which seeks to safeguard primary shopping frontages in Abergavenny, Caldicot, Chepstow and Monmouth, and Policy RC3 (Local Centres and Neighbourhood Centres / Shops).
- 8.6.13 Strategic Policy S15 (Community and Recreation Facilities, Public Open Spaces and Areas of Amenity Importance) is further supported by Policy C11 (Retention of Existing Community Facilities) and Policy C13 (Safeguarding Existing Recreational Facilities, Public Open Spaces and Allotments / Community Growing), which safeguards existing neighbourhood and community facilities from redevelopment.
- 8.6.14 It is also recognised that Monmouthshire is a largely rural plan area and in practice there will likely continue to be a degree of car dependency for many residents to reach some higher tier services and employment where these are not available locally. However conversely, the RLDP acknowledges the behavioural shift of increased working from home patterns, which has been brought about by the unprecedented impact of the COVID-19 pandemic.

Cumulative effects

- 8.6.15 The rural nature and substantial size of Monmouthshire contribute to its key settlements having a high degree of self-containment in terms of walking and cycling infrastructure, though some indirect inter-settlement connectivity exists through long distance rights of way and bridleways which crisscross the County. In this context there are limited strategic opportunities to seek cross boundary Active Travel Network infrastructure or to leverage the networks of other authorities in the region to build a coherent consolidated network. However, in the context of the Welsh Government's support for active travel and modal shift it is evident that individual authorities are increasingly seeking to incentivise walking and cycling. These efforts will likely contribute to a positive cumulative effect on the overall health outcomes of residents in the Cardiff Capital Region.

- 8.6.16 It is recognised that the role of the National Park as a sought-after destination for accessing the natural environment and growth within the Monmouthshire plan area will enable a greater number of people to access the Park for recreation and leisure with associated health and wellbeing benefits. For example, the Monmouthshire RLDP will deliver a substantial proportion of new residential development at Abergavenny from which access to the popular walking trails of Sugarloaf Mountain is easily achievable.

Summary of likely effects

- 8.6.17 Overall, it is considered that the RLDP will have **significant positive effects** on the health and wellbeing of Monmouthshire's population. This is through supporting development within proximity to key services and facilities in the higher tier settlements of Monmouth, Abergavenny, Chepstow and Caldicot. It also reflects the focus of the wider policies on bringing forward new infrastructure to support physical and mental health, for example green and blue infrastructure. This will ensure a continued high-quality service of resources in Monmouthshire.

8.7 Equalities, diversity, and social inclusion

- 8.7.1 The focus of the equalities, diversity, and social inclusion ISA theme is reducing poverty and inequality, tackling social exclusion, and promoting community cohesion. Many aspects of equalities, diversity and social inclusion do not have a spatial dimension and are unlikely to be directly affected by the spatial distribution of growth through the Preferred Strategy. For example, promoting community cohesion is likely to be most directly influenced through detailed policies which have the granularity to deliver focused responses at specific locations.
- 8.7.2 However, it is considered that focusing new development through Strategic Policy S1 (Growth Strategy) and Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy) on the primary settlements of Abergavenny (including Llanfoist), Chepstow, Caldicot (including the Severnside area), and Monmouth (including Wyesham), together with a sustainable amount of growth to the most sustainable lower tier settlements, will help to support and sustain a hierarchy of vibrant centres across the County. The delivery of strategic site allocations through Policy HA1 (Land to the East of Abergavenny), Policy HA2 (Land to the East of Caldicot), Policy HA3 (Land at Mounton Road, Chepstow) and Policy HA4 (Land at Leasbrook, Monmouth) will support the growth of and regeneration of existing communities, and improving access to housing, jobs, and services. This is especially true of Policy HA2 (Land to the East of Caldicot), which is allocated for mixed-use development – non-residential development under this policy (for example, the primary school and local centre) will contribute to the provision of Caldicot and its support of the settlement population.
- 8.7.3 Channelling an appropriate level of growth to the County's most sustainable locations, including rural settlements, is also considered to lead to positive effects, enabling local people to remain in their communities rather than have to seek opportunities for housing and employment elsewhere. This will be achieved through the delivery of housing through Policies HA5 to HA18.

- 8.7.4 However, it is difficult to conclude that growth in rural settlements and rural areas will address existing deprivation in terms of access to jobs, healthcare and opportunities as the distribution set out in Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy) (9% across Tiers 3 and 4) means growth will be unlikely of a scale which unlocks significant investment or enhancement in these areas. On balance, it is considered that the scale and distribution of growth is likely to have a minor positive effect in relation to equalities, diversity, and social inclusion.
- 8.7.5 Affordable housing provision is a key issue for the County and forms an integral part of the overarching strategy with 50% provision being sought on all new site allocations (Strategic Policy S7 Affordable Housing). This provision will assist in attracting and retaining a younger, economically active population and balancing the ageing population.
- 8.7.6 The provision of land for Gypsy and Travellers will also contribute to addressing equalities, diversity, and social inclusion. By designating land through Strategic Policy S9 (Gypsy and Travellers) and through the supporting Policy GT1 (Gypsy, Traveller, and Showpeople Sites), the RLDP is ensuring it provides for all communities within Monmouthshire. It also allows for enhanced levels of inclusion through ensuring sites are adjacent to settlement boundaries.
- 8.7.7 Other strategic policies most likely to have indirect effects on equalities, diversity and social inclusion are Strategic Policy S3 (Sustainable Placemaking and High Quality Design) and Strategic Policy S6 (Infrastructure).
- 8.7.8 There is clearly an economic and educational dimension to tackling poverty and exclusion as it is critical that people are given the opportunity to acquire skills and education which empowers them to enter the workplace and find stable, high-quality employment. In this sense Strategic Policy S6 (Infrastructure) could potentially play a role through the requirement to provide “*new or improved infrastructure and facilities to remedy deficiencies*” given that this includes education facilities. However, where deficiencies in provision currently exist it is not clear whether the policy would be effective in addressing the existing shortfall as well as providing additional capacity for new development, or whether this simply means existing provision would be deficient once additional growth is added. Effects are uncertain in this respect.
- 8.7.9 Placemaking can play a role in tackling social exclusion through well designed, barrier-free environments which can be entered and used safely and with dignity by all members of the community. Strategic Policy S3 (Sustainable Placemaking and High Quality Design) seeks sustainable places which support community wellbeing, including through the implementation of “*safe and inclusive design that offers ease of access for all*” and could have potential for minor positive effects. Related to this, Strategic Policy S5 (Green Infrastructure, Landscape and Nature Recovery) seeks to maintain, protect, and enhance the green infrastructure network in Monmouthshire – including accessible multifunctional interconnected spaces and routes.

8.7.10 Access to a range of types and tenures of genuinely affordable housing is an important element of tackling poverty and social exclusion – as demonstrated through Policy H8 (Housing Mix). Strategic Policy S7 (Affordable Housing) will therefore be a key lever by which affordable housing is delivered in Monmouthshire. The supporting text of the policy recognises that certain groups within the community are often particularly in need of affordable housing, such as elderly people and younger age groups who may otherwise not be able to afford to continue living locally. This links to Policy H7 (Specialist Housing), which seeks to permit specialist housing to provide for levels of support and care – allowing for older residents to remain in their homes for longer. In the context of Monmouthshire where average house prices are significantly above the average for Wales it will be of great importance that a sufficient range and choice of affordable housing is delivered which enables people to remain living in their community if they wish to do so.

Cumulative effects

- 8.7.11 Addressing the equalities, diversity and social inclusion objectives is not considered to be a primarily spatial matter. In this sense there are unlikely to be significant cumulative effects from development proposed in the Deposit Plan and development in surrounding authorities.
- 8.7.12 However, there is a degree of cross-cutting between the equalities theme and other ISA themes, particularly in relation to the role of affordable housing and educational opportunities in tackling entrenched poverty and deprivation. In this sense the fact that Monmouthshire and its regional partners are all proposing meeting or exceeding their housing need could be perceived as a positive, as it could offer opportunities to meet complex housing needs within particularly deprived communities, particularly in post-industrial settlements which have struggled over time to develop their economic vitality.
- 8.7.13 Additionally, it is recognised that the proposed enhancements to regional public transport through the Cardiff Capital Region City Deal and SE Wales Metro rollout will have potential to ease access to employment and training opportunities as well as services more broadly. Increased accessibility could have potential to reduce social exclusion and reduce some dimensions of deprivation.
- 8.7.14 It is considered that cumulative effects in relation to equalities, diversity and social exclusion are likely to be a minor positive effect overall. Although elements of tackling entrenched deprivation and inequality are likely to be influenced by targeted action addressing specific needs at a local level, the collective action of authorities at a regional scale is likely to deliver similar benefit, or potentially even greater benefit, from all the investment being stimulated through the Cardiff City Deal and other LDPs in the region.

Summary of likely effects

- 8.7.15 Considering the above, it is anticipated that **significant positive effects** will come forward as a result of the RLDP for this ISA theme. This is due to the focus on protecting existing and supporting new infrastructure in the neighbourhood area, thereby safeguarding, and improving access to important services and facilities. It also reflects policy requirements for

development that promotes accessible and inclusive places. The strategic allocations for housing development also contribute to equalities, diversity, and social inclusion – linked to their ability to provide a significant number of affordable houses that are supported by existing infrastructure within the primary settlements.

8.8 Transport and movement

- 8.8.1 The transport and movement ISA objectives include improving access to jobs and services, reducing private vehicle use through promoting active travel and encouraging modal shifts, and improving access to high-speed digital infrastructure. The Spatial Strategy seeks to maximise the opportunities presented by the COVID-19 pandemic, and subsequent behavioural shift seen in people's commuting patterns, such as increased working from home.
- 8.8.2 The distribution of growth proposed by the RLDP growth strategy performs reasonably positively in relation to the first of these objectives as it capitalises on existing transport links at the higher tier settlements to direct growth to locations served by transport hubs. By focusing new development on the primary settlements of Abergavenny (including Llanfoist), Chepstow, Caldicot (including the Severnside area) and Monmouth (including Wyesham), the strategy ensures that new residential development will be at locations with the strongest public transport links to other regional employment hubs, particularly Cardiff, Bristol, and Newport. Similarly, new employment growth in Abergavenny, Chepstow and Caldicot will be accessible by train.
- 8.8.3 Underpinning the spatial strategy are four strategic site allocations, proposed through Policy HA1 (Land to the East of Abergavenny), Policy HA2 (Land to the East of Caldicot), Policy HA3 (Land at Mouton Road, Chepstow) and Policy HA4 (Land at Leasbrook, Monmouth). All sites perform well in terms of improving access to jobs and services, including sustainable transport. For example, strategic sites at Abergavenny and Chepstow benefit from train stations served by frequent services, and the strategic sites at Caldicot and Monmouth are located adjacent to strategic roads (B2425 in Caldicot, and A466 at Monmouth).
- 8.8.4 Strategic growth focussed under Policy HA2 (Land to the East of Caldicot) is also positive in transport terms given that the area is served by two train stations. Both stations are within close proximity of each other at Rogiet and Caldicot, and it is also considered that given the level of growth proposed (770 homes in the plan period and further development beyond), supporting infrastructure for the site would be extensive.
- 8.8.5 Any infrastructure delivery would also support the far west of the Severnside area (including Magor) which is currently limited in terms of practical walking or cycling options for accessing either train station. It is further noted that the new South Wales Metro plan designates Magor as a location for a rail station (Magor Walkway Station). It is considered that directing growth to the strategic site under Policy HA2 (Land to the East of Caldicot) is a clear positive, as it reduces growth in other locations with very limited public transport.

- 8.8.6 Furthermore, the strategic site allocation policies do make provisions for transportation and movement. All four policies seek to provide on and off-site highways infrastructure improvements – which will help ensure the existing transportation network is able to continue to support local journeys by new and existing residents. Policy HA1 (Land to the East of Abergavenny) indicates development will have a park and ride facility linking to the train station, and active travel networks to the train station and the settlement centre. It also indicates there will be good quality, safe and accessible pedestrian and cycle linkages to key access points (including key services and transport infrastructure), as well as greater connectivity with the existing public rights of way network. This will help to encourage a greater engagement with active and public transportation opportunities. Providing key connections to the town centre and walking and cycling routes is a focus of Policy HA2 (Land to the East of Caldicot).
- 8.8.7 The Active Travel (Wales) Act (2013) requires all local authorities in Wales to deliver improvements to their network of active travel routes and facilities. Monmouthshire’s Active Travel Network includes walking and cycling paths within each of the principal settlements though inter-settlement connectivity is limited outside of the Severnside settlements (which are close enough for active travel to be a viable option, though this may be partly on-road). In this context new development through the RLDP performs well at a localised scale, offering good potential for new development to link with and enhance the existing network within settlements. However, the rural nature of the County and the distances between most of the higher tier settlements mean that the development is unlikely to have a positive effect in relation to the majority of inter-settlement travel.
- 8.8.8 The priority for the ‘reduction in the need to travel’ and a shift away from the private car for travel is reflected in the Welsh Government’s Future Wales: The National Plan 2040 and ‘Llwybr Newydd – The Wales Transport Strategy 2021’. The RLDP seeks to establish the foundations to encourage longer term changes to the historic high level of car usage in Monmouthshire. The spatial strategy therefore focuses development in the County’s most sustainable settlements of Abergavenny (including Llanfoist), Chepstow Caldicot (including Severnside), and Monmouth (including Wyesham), that provide opportunities for a reduction in travel and provide opportunities for sustainable transport (see Sustainable Settlement Appraisal 2021).
- 8.8.9 However, Monmouthshire is predominantly a rural County and as set out in Future Wales Policy 5, there are clearly significant disparities between urban areas with regard to the feasibility of delivering effective public transport systems and active travel routes. To address this, Llwybr Newydd: the Wales Transport Strategy has committed to a ‘Rural Pathway’ which sets out how regional Corporate Joint Committees (CJCs) and Welsh Government policy makers will work together on strategies to tailor solutions to extend the geographical reach of public transport links into rural areas. This is reflected through Strategic Policy S13 (Sustainable Transport), which supports development in rural areas where it “*enables solutions to rural transport problems*”.
- 8.8.10 The behavioural shift in people’s commuting patterns since the COVID-19 pandemic is also acknowledged in the RLDP. It aims to build on the

increased cycling and walking activity and working from home patterns, as highlighted through the Welsh Government's Building Better Places document. The RLDP seeks to maximise opportunities and further secure this positive transport modal shift, kickstarted by the COVID-19 pandemic, from the car to active travel car-free journeys. Distributing growth based on the settlement hierarchy outlined in Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy) is anticipated to lead to long term positive effects in this respect, enabling the delivery of sustainable and resilient communities.

- 8.8.11 Strategic Policy S13 (Sustainable Transport) is likely to have the most direct positive effects in relation to transport and movement. The policy establishes a presumption in favour of development which accords with PPW12's Sustainable Transport Hierarchy. Where sites are available to support this approach, this will help embed sustainability and accessibility into new development by integrating walking and cycling and public transport access into the location, design, and layout of new schemes. This principle is supported by other strands of the policy, which seeks to maintain and improve the existing Active Travel Network and promote and prioritise active travel uptake. This links to Policy PROW1 (Public Rights of Way), which seeks to protect the public rights of way network through retaining or relocating contributing routeways and providing new ones where appropriate. It also links to Policy ST5 (Transport Schemes), which seeks to protect active travel schemes in key settlements in Monmouthshire, as well as public transport improvement schemes and road schemes.
- 8.8.12 Strategic Policy S13 (Sustainable Transport) is underpinned by a number of additional policies. Policy ST1 (Sustainable Transport Proposals) includes the need for development to be accompanied by a Transport Assessment where they are likely to significantly impact upon trip generation and travel demand. This will help to develop a strategy to reduce the need to travel, as well as facilitate, promote, and prioritise active and public transport. This will help reduce the number of vehicles on the highway network and could contribute to reducing occurrences of traffic related issues, such as congestion. The policy also indicates that financial contributions should be made for safety and/ or congestion mitigation measures, or for highway improvements, where appropriate. This will likely include the routes identified in Policy ST2 (Highway Hierarchy). Policy ST3 (Freight) works to reduce the impact of freight on the road network through supporting transfer points between road/ rail/ last mile sustainable transport – which will likely contribute to reducing traffic on the network and reducing congestion at key points. Finally, Policy ST6 (Protection of Redundant Routes) seeks to safeguard former routes (for example, canal and rail routes) that could contribute to future sustainable transport use.
- 8.8.13 Another strategic policy that is likely to have an effect in relation to the transport and movement ISA theme is Strategic Policy S3 (Sustainable Placemaking and High Quality Design), which indicates that development must minimise the need to travel and maximise opportunities for sustainable transportation. This will help contribute to reducing the number of vehicles on the road. Strategic Policy S4 (Climate Change) includes the need for development to provide ultra-low emission vehicle charging infrastructure where appropriate, which will likely contribute to the transport and movement

ISA theme by helping to reduce combustion engine vehicles on the local road network. This is reiterated in Policy NZ1 (Monmouthshire Net Zero Carbon Homes), and Strategic Policy S8 (Site Allocation Placemaking Principles).

- 8.8.14 Strategic Policy S8 (Site Allocation Placemaking Principles) also includes stipulations for transport and movement through residential development. This includes prioritising active travel to and from the site, bringing forward improvements to the active and public transportation networks, and maintaining highway safety, capacity, and operation. These stipulations are likely to positively contribute to the transport and movement ISA theme through encouraging uptakes in active and public transportation options and maintaining and enhancing network safety for all users.
- 8.8.15 Strategic Policy S6 (Infrastructure) also makes provision for transport and movement by ensuring planning agreements and obligations consider the appropriate provision of sustainable transport measures and transport infrastructure. By ensuring development fully considers this, the RLDP is helping to reduce negative impacts on the transport network in Monmouthshire – for example, making sure there is a sufficient level of public transport that is easily accessible will likely contribute to reducing traffic and congestion on the local road network linked to additional cars.
- 8.8.16 The wider plan policies also have a transport and movement focus. This includes Policy LC4 (Wye Valley National Landscape (AONB)), which indicates development within the designated area will need to consider how it will generate additional traffic and improvements for existing roads and lanes. Furthermore, Policy GT1 (Gypsy, Traveller and Travelling Showpeople) indicates sites will need to have safe and convenient access to the highway network and not cause traffic congestion. Traffic congestion is also a focal point of Policy RE5 (Intensive Livestock / Free Range Poultry Units), which indicates this type of development will be permitted where there are no serious implications on the surrounding highway network. These policies will help to ensure the existing transportation network is not compromised by development contributing additional traffic. Furthermore, Policy T1 (New or Extended Tourism Accommodation and Facilities in the Open Countryside) includes the need for sustainable tourism proposals in the open countryside to prioritise, promote and facilitate sustainable travel opportunities, and include safe and efficient highway design. Again, this contributes to encouraging active and sustainable transportation opportunities over increasing private vehicle usage, which is likely to bring forward positive effects for the transport and movement ISA theme through reduced impacts to the highway network.

Cumulative effects

- 8.8.17 There is potential for both negative and positive cumulative effects in relation to transport and movement, particularly in relation to cross boundary roads and railways which stand to be impacted by development both within Monmouthshire and regionally.
- 8.8.18 Existing travel patterns in Monmouthshire reflect its rurality, particularly a trend for relatively long travel to work distances, high levels of car ownership and reliance on the private car. The primary points of road congestion in the

region are on the M4, with the recent South East Wales Transport Commission Final Recommendations Plan (2020) highlighting that *“there is an acute congestion problem on the M4 in South East Wales, particularly on the approach to the Brynglas tunnels. The single biggest cause – by some margin – is the sheer traffic volume at peak times, especially associated with commuting”*.¹⁸ The 2019 decision not to progress an M4 relief road¹⁹ circumventing the Newport tunnel bottleneck could have effects in combination with growth at Monmouthshire, Newport and in the West of England resulting in additional congestion over time. This in turn could increase the duration of car and HGV journeys between south Monmouthshire, Newport, and Cardiff. It is however recognised that the Final Recommendation Plan (2020) sets out a number of recommendations to address the M4 congestion, which may reduce adverse effects in the long term.²⁰

- 8.8.19 There could also be potential for increased traffic along the M4, A4042 and A449 as a result of growth within Newport. Additionally, growth in the Heads of the Valleys, while likely to boost the regional economy, could lead to increased pressure on the road network, particularly the A465. However, it is noted that the A465 has recently undergone significant enhancement, including dualling of the carriageway in places, and capacity has therefore been boosted.
- 8.8.20 Links to Herefordshire Council and Forest of Dean District Council could also lead to increased congestion in Monmouthshire’s key settlements in the south/ east. Notably there is an existing commuter flow of residents from the south of the Forest of Dean along the A48, through Chepstow, and on to the M48 as they seek access to Bristol or Newport and Cardiff. This traffic flow adds to congestion on the A48 and the A466 as it approaches the M48, both of which are trunk roads for these relevant stretches through Monmouthshire. Additional development between Lydney and Chepstow could exacerbate existing traffic issues in Chepstow. It is however recognised that the Forest of Dean Local Plan will likely offer measures which will mitigate the increase in congestion around Chepstow.
- 8.8.21 Cumulative effects in relation to public transport are projected to be largely positive, as future growth of the Cardiff City Region is underpinning the business case for the SE Metro rollout. This includes enhanced heavy rail connectivity between Cardiff and Abergavenny and Chepstow. In the context of early uncertainties around the extent of the SE Wales Metro rollout, growth proposed in the neighbouring authorities within the Cardiff City Region contribute to this positive cumulative effect through the introduction of additional users of the network to create a robust business case for expansion.

Summary of likely effects

¹⁸ South East Wales Transport Commission (2020) Final recommendations [online] available at:

<https://gov.wales/sites/default/files/publications/2020-11/south-east-wales-transport-commission-final-recommendations.pdf>

¹⁹ Welsh Government (2019) ‘M4 corridor around Newport: decision letter’ [online], available at: <https://gov.wales/m4-corridor-around-newport-decision-letter>

²⁰ South East Wales Transport Commission (2020) Final recommendations [online] available at:

<https://gov.wales/sites/default/files/publications/2020-11/south-east-wales-transport-commission-final-recommendations.pdf>

8.8.22 Considering the above, **significant positive effects** are concluded likely for the transportation and movement ISA theme under the RLDP. This reflects the focus on bringing forward strategic allocations in settlements with a good distribution of services and facilities and transportation infrastructure. Furthermore, there is a focus on prioritising existing public rights of way and active transportation infrastructure and enhancing the network where appropriate. This will likely contribute to reducing the reliance on private vehicles to move around the area and will help support the transportation network in Monmouthshire.

8.9 Natural resources (air, land, minerals, and water)

- 8.9.1 Whilst air quality is not a significant issue for the County, it is recognised that air pollution is a major cause of death and disease globally²¹. The greatest problems associated with air quality in the County are caused by vehicle emissions; evidenced by the two Air Quality Management Areas (AQMAs) declared at Chepstow and Usk for nitrogen dioxide (NO₂)²². Strategic Policy S1 (Growth Strategy) sets out the approach to focus new development on the primary settlements of Abergavenny (including Llanfoist), Chepstow Caldicot (including the Severnside area), and Monmouth (including Wyesham), together with a sustainable amount of growth to the most sustainable lower tier settlements. This is in combination with the outcome of the Sustainable Settlement Appraisal (2021). The Appraisal established a sustainable settlement hierarchy that reflects those communities best placed to accommodate sustainable growth based on accessibility to sustainable transport, the availability of local services and the level of employment opportunities.
- 8.9.2 Focusing growth towards the most sustainable communities is likely to lead to positive effects in terms of supporting levels of self-containment in the higher tier settlements, reducing the need to travel where possible, and subsequently reducing levels of NO₂. However, as a Tier 1 settlement, Strategic Policy S2 (Spatial Distribution of Development - Settlement Hierarchy) states that around 829 dwellings will be directed to Chepstow during the plan period, which has the potential to exacerbate NO₂ levels within the AQMA through increased road users and subsequent increased levels of congestion. Notably, Chepstow AQMA includes the A48, between the roundabout with the A466, which would likely be utilised by commuters. This includes strategic site allocation Land at Mounon Road, Chepstow (Policy HA3), which is located in the northwest of Chepstow close to the A466.
- 8.9.3 Conversely, it is noted that Strategic Policy S2 (Spatial Distribution of Development - Settlement Hierarchy) identifies Usk as a secondary settlement (along with Raglan and Penperlleni), with only 350 dwellings distributed between these settlements. The Air Quality Action Plans for both areas contain many transport-related measures, and these have been taken account through the development of the LTP (2016), and subsequently

²¹ World Health Organisation (2019) Ambient air pollution: Health impacts <https://www.who.int/airpollution/ambient/health-impacts/en/>

²² Air Quality in Wales (2019) Air Quality Management Areas <https://airquality.gov.wales/laqm/air-quality-management-areas>

through the South East Wales Transport Commission Final Recommendations Plan: November 2020. This will inform the RLDP^{23, 24}.

- 8.9.4 It is noted that through Strategic Policy S2 (Spatial Distribution of Development - Settlement Hierarchy), approximately 2,190 homes are to be delivered in the Severnside area. This includes 770 homes at the Land to the East of Caldicot site allocation under Policy HA2. Delivering strategic growth to the South of the County has the potential to lead to positive effects through capitalising upon the strategic links to the Great Western Cities, Cardiff Capital Region, and SW / Bristol region. The Capital Region is committed to a low carbon future, delivering healthier and sustainable travel options, which may provide opportunity for building more sustainable communities and improved air quality in the South of the County. Furthermore, it is recognised that the strategic site allocation will deliver supporting infrastructure alongside housing, which is likely to include active and sustainable travel improvements, supporting self-containment and reduced reliance on the private vehicle.
- 8.9.5 More broadly, it is considered that the programme outlined in the LTP (2016) will support sustainable communities across the County, including through the delivery of walking and cycling infrastructure, bus network improvements, station and highways improvements, Cardiff Capital Region Metro schemes, 20mph limits and road safety schemes. This coincides with higher level policy frameworks, and in accordance with Welsh Government guidance it does not contain specific rail service and trunk road proposals. It is noted that in 2023 Monmouthshire County Council launched a public consultation on the next draft Local Transport Plan; this closed on the 5th January 2024.
- 8.9.6 The uptake of sustainable transportation is likely to contribute to reducing air pollution through ensuring active and public transportation opportunities are viable options. This is reiterated through Strategic Policy S13 (Sustainable Transport), which includes the need for “*ensuring development enables transition to Ultra Low Emission Vehicles (ULEVs) by providing necessary underlying infrastructure*”. This will contribute positively towards reducing atmospheric levels of NO₂ and improving air quality within Monmouthshire.
- 8.9.7 The uptake of sustainable travel to improve air quality is further supported through Strategic Policy S2 (Sustainable Placemaking and High Quality Design) and Strategic Policy S6 (Infrastructure); which requires development proposals to “*incorporate an appropriate mix of uses to minimise the need to travel and to maximise opportunities for sustainable transport use*”.
- 8.9.8 Monmouthshire is predominantly rural, and it is therefore acknowledged that the brownfield land resource is particularly limited. In line with Policy S2 (Spatial Distribution of Development - Settlement Hierarchy), the majority of growth is being directed to the Tier 1 Settlements, with the intention of utilising brownfield land where possible. This will contribute positively towards meeting the ISA objective to “*...maximise opportunities for development on previously developed land*”.

²³ Monmouthshire County Council (2015) Monmouthshire Local Transport Plan [online] available at: <https://www.monmouthshire.gov.uk/local-transport-plan/>

²⁴ South East Wales Transport Commission (2020) South East Wales Transport Commission: Final Recommendations Plan [online] available at: <https://gov.wales/south-east-wales-transport-commission-final-recommendations>

- 8.9.9 In terms of specific loss of greenfield land, the spatial strategy performs negatively as a result of strategic site allocations at Abergavenny, Chepstow, Caldicot and Monmouth. Further greenfield loss is expected through allocations under Policies HA5-HA18 – though these areas are likely to be small, cumulatively the greenfield loss is expected to be more significant.
- 8.9.10 In terms of agricultural land quality throughout Monmouthshire, it is recognised that there is a high percentage of best and most versatile agricultural land (i.e., Grade 1, 2 or 3a). While there is a need to conserve these resources, there are limited opportunities within the County for development on lower grades of agricultural land (i.e., Grade 3b, 4 and 5). The Predictive ALC model for Wales (2017) is based on the principles of the Agricultural Land Classification System of England & Wales, the Revised Guidelines & Criteria for Grading the Quality of Agricultural Land (MAFF 1988). This data model allows you to predict the distribution of BMV land throughout the County, and in relation to key areas as set out in the settlement hierarchy:
- Primary Settlements: these are predominately urban centres, with areas of Grade 3a land located to the east of Abergavenny and integrated between the main urban area throughout Monmouth. Interspersed areas of high-quality Grade 2 land and non-agricultural land are present around Chepstow and Monmouth, as well as Grade 3a land. Severnside is particularly constrained by Grade 2 and Grade 1 land, surrounding the M4. Significantly constrained areas include the entirety of Crick, and large areas within Caerwent, between Rogiet and Magor / Undy, and north of Sudbrook.
 - Secondary Settlements: these areas include significant areas of BMV land; areas of Grade 3a land surround Usk (notably to the south). North east / and north west of Penperlleni and north/ north east of Raglan are areas of Grade 3a land. Grade 2 and 3b land is dispersed outside of Raglan’s urban area.
 - Main and Minor Rural Settlements: these areas are particularly constrained, being located outside of the main settlements where there is a significant amount of BMV agricultural land. This reflects the rural nature of the County. It is noted that the Preferred Strategy does not yet establish where growth may be located in the County’s rural areas.
- 8.9.11 It is considered that directing a significant proportion of growth to the Tier 1 settlements (Strategic Policy S2: Spatial Distribution of Development – Settlement Hierarchy) will protect best and most versatile agricultural land where possible. This is in accordance with PPW12, which states that *“agricultural land of grades 1, 2 and 3a is the best and most versatile and should be conserved as a finite resource for the future”*. However, as set out in the RLDP, the widespread distribution of BMV agricultural land (surrounding all settlements to some extent) means that development anywhere in the County will likely lead to residual adverse effects.
- 8.9.12 The delivery of strategic sites within Abergavenny, Chepstow, Caldicot and Monmouth will likely result in the loss of BMV agricultural land. Based on the Predictive ALC model for Wales (2017), the four strategic site allocations are located on high quality agricultural land, with the site under Policy HA1 (Land

to the East of Abergavenny) located on an area grade 2 / 3a agricultural land, the site under Policy HA2 (Land to the East of Caldicot) being on an area of grade 1 (which is mostly floodplain and would not be developed) surrounded by grade 2. The site under Policy HA3 (Land at Mouton Road, Chepstow) is underlain with grade 3a, and the site under Policy HA4 (Land at Leasbrook, Monmouth) is a mix of grade 2, 3a and 3b. It is noted that every effort will be made to, where possible, protect the higher grades of BMV land; and to avoid / or minimise the loss of BMV land. This will contribute positively towards meeting the ISA objective to promote the efficient use of land.

- 8.9.13 In terms of the County's mineral resource, the latest South Wales Regional Aggregates Working Party (SWRAWP) Annual Report (2021) establishes that at the end of 2018 Monmouthshire had a greater than 50 year's supply of crushed rock reserves²⁵. In view of the surplus of existing permitted crushed rock reserves, no further allocations for crushed rock are required to be identified within the RLDP. A revised Regional Technical Statement (RTS) - 2nd Review was published in 2020. The 2nd Review (RTS2) makes recommendations for the apportionments necessary to ensure an adequate supply of crushed rock, including the nationally recommended minimum provision of 7 and 10 years, are available for the entire duration of the RLDP. The total apportionments required for Monmouthshire are zero for land-won sand & gravel and 5.866 million tonnes for crushed rock. These compare with existing landbanks (excluding dormant sites) of zero for sand & gravel and 11.25 million tonnes for crushed rock (as of 31st December 2016). When compared against the apportioned requirement as set out in the RTS2, Monmouthshire has a surplus of provision and therefore no further allocations for future working are specifically required to be identified within the RLDP when determined on a Local Planning Authority basis.
- 8.9.14 Whilst it is considered that there would be no negative impact on Monmouthshire's mineral resource through the Preferred Strategy as mineral landbank obligations can be met, the RLDP does have the potential to impact upon the Limestone Mineral Safeguarding Area (MSA) present in parts of the south of the County²⁶. Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy) directs around 2,190 dwellings towards the Severnside area in the south of the County, including through the delivery of strategic site allocation under Policy HA2 (Land to the East of Caldicot). As such, development could have an impact on the MSA.
- 8.9.15 It is considered that in accordance with national and regional policy requirements, a sustainable approach to minerals planning will be adopted. This is evidenced through Strategic Policy S16 (Sustainable Minerals Management) and supporting Policy M1 (Local Building and Walling Stone), Policy M2 (Minerals Safeguarding Areas) and Policy M3 (Mineral Site Buffer Zone), which work to safeguard sensitive mineral deposits by preventing development occurring in certain areas and allowing for the reopening of small-scale quarries for building and walling stone (where appropriate).

²⁶ North Wales and South Wales Regional Aggregates Working Parties (2014) Regional Technical Statement - 1st Review <https://www.merthyr.gov.uk/media/4451/sd44-south-wales-regional-aggregates-working-party-regional-technical-statement-1st-review-august-2014.pdf>

- 8.9.16 Water is supplied to Monmouthshire by Dwr Cymru/ Welsh Water (DCWW). They supply water via a large scale, multi-source, integrated network that is typical of many other water company areas. Monmouthshire falls within two Water Resource Zones (WRZs); Monmouth and the South East Wales Conjunctive Use System (SEWCUS). The Monmouth WRZ supplies the market town of Monmouth and the surrounding villages. The WRZ is heavily dependent on the Mayhill abstraction from the River Wye at Monmouth. There is also a spring abstraction at Ffynnon Gaer which supplies a small localised area south of Monmouth. The total demand for water for this WRZ is forecast to remain relatively stable until 2030, with a decline in demand anticipated over the 2030-2050 planning period, and then to just 10% of current demands by 2050. The SEWCUS supplies the majority of the County, and a significant proportion of the South East Wales Region. In total, there are over 40 resources that are used to supply the SEWCUS WRZ, which include a mixture of river abstractions from the larger rivers in the east of the WRZ and relatively small upland reservoir sources with small catchment areas. For both WRZs the total demand for water is forecast to remain relatively stable until 2030, with a decline in demand anticipated over the 2030-2050 planning period, and then to just 10% of current demands by 2050.
- 8.9.17 Water companies are legally required to supply water to private consumers and businesses within their area. As set out in the Water Industry Act 1991, they must prepare and maintain a Water Resources Management Plan (WRMP) that sets out how the company intends to maintain the balance between water supply and demand. Water companies update their WRMPs every five years to take account of predicted growth and ensure that there are schemes in place to meet future demands.
- 8.9.18 In terms of water quality, following new evidence about the environmental impacts of phosphates in watercourses, Natural Resources Wales (NRW) has adopted tighter targets for river water quality and has assessed the nine riverine Special Areas of Conservation (SAC) in Wales. Within Monmouthshire, it was identified that 88% of the River Usk's water bodies failed to meet the required target and within the River Wye 67% failed to meet the required target. As a result of this failure NRW has issued detailed planning guidance to ensure that the environmental capacity of the rivers does not deteriorate any further. The spatial strategy has regard to this latest position on the phosphates water quality issue and associated requirements to demonstrate neutrality or betterment when proposing development. The strategy has been developed following ongoing discussions with NRW and Dŵr Cymru Welsh Water on future strategic solutions for phosphate mitigation within the river catchment areas.
- 8.9.19 In accordance with PPW (2024) development coming forward through the RLDP will be encouraged to be water efficient and may deliver mitigation (for example rain water harvesting measures) to support reduced water use per person per day. PPW (2024) states that "*New development should be located and implemented with sustainable provision of water services in mind, using design approaches and techniques which improve water efficiency and minimise adverse impacts on water resources, including the ecology of rivers, wetlands and groundwater and thereby contributing towards ecological resilience*". This is reinforced through Strategic Policy S4

(Climate Change) which requires all development proposals to incorporate water efficiency measures and minimise adverse impacts on water resources and quality. This will contribute positively towards meeting the ISA objective to promote the efficient use of natural resources including providing increased opportunities for water efficiency. The RLDP makes further provisions for water quality through Policy PM2 (Environmental Amenity), which seeks to protect water quality by not allowing development to come forward where there would be a significant risk of / harm to water resources.

Cumulative effects

- 8.9.20 There is the potential for a cumulative loss of greenfield land and BMV agricultural land as a result of the distribution of housing to meet the need of the wider South Wales region, and neighbouring English authorities. Development proposed through the RLDP has the potential to interact with development proposed through neighbouring authority plans to result in cumulative significant loss of greenfield land and BMV agricultural land.
- 8.9.21 The County has regional obligations to be met in terms of Minerals planning, forming part of the former Gwent sub-region along with Torfaen, Newport, and Blaenau Gwent. However, when compared against the apportioned requirement as set out in the RTS2, (2020), Monmouthshire has a surplus of provision and therefore no further allocations for future working are specifically required to be identified within the RLDP.
- 8.9.22 There is the potential for development proposed through the Deposit Plan to interact with development proposed in other plans and programmes to have both a negative and positive cumulative effect on the water environment. More broadly, it is considered that water resources and wastewater treatment capacity are generally managed at a catchment level and there is close working between Natural Resources Wales, Welsh Water, and wastewater service providers to monitor the situation and plan ahead for new infrastructure to meet predicted demands. Given the total demand for water in the County is forecast to remain relatively stable until 2030, with a decline in demand anticipated over the 2030-2050 planning period, and then to just 10% of current demands by 2050, it is considered that the RLDP will not have a significant negative cumulative effect on this ISA theme.

Summary of likely effects

- 8.9.23 In summary, the plan includes a good level of provision for mineral safeguarding and water quality and works well to reduce impacts on air quality. However, it is noted there is a need to conserve greenfield sites. It is recognised there are limited brownfield opportunities within Monmouthshire, and the plan works well to allocate strategic sites within settlement boundaries and adjacent to built up areas. However, at this time, **significant negative effects** are concluded likely for the impact on natural resources, due to the substantial (and unavoidable) loss of greenfield and agricultural land.

8.10 Biodiversity and geodiversity

- 8.10.1 In terms of internationally designated sites, it is recognised that the plan area is particularly constrained. HRA screening (November 2022) found that the

following European sites within 15km of Monmouthshire and impact pathways need to be considered in more detail through the Appropriate Assessment (AA) stage:

- Usk Bat Sites SAC (atmospheric pollution, recreation and loss of functionally linked land).
- Cwm Clydach Woodlands SAC (atmospheric pollution).
- Wye Valley Woodlands SAC (atmospheric pollution, recreation).
- Severn Estuary SAC (atmospheric pollution, recreation, water quality and water quantity, level and flow).
- Severn Estuary SPA / Ramsar (atmospheric pollution, recreation, loss of functionally linked land, water quality and water quantity, level and flow).
- River Wye SAC (atmospheric pollution, recreation, water quality and water quantity, level and flow).
- River Usk SAC (recreation, water quality and water quantity, level and flow).
- Wye Valley and Forest of Dean bat Sites SAC (loss of functionally linked land); and
- Sugar Loaf Woodlands SAC (recreation).

8.10.2 The HRA also explored potential impact pathways in relation to the four Preferred Strategic Site Allocations proposed in the RLDP. The HRA found that for all four strategic site allocations, LSEs cannot be excluded, and they were subsequently screened in for AA.

8.10.3 With nutrient neutrality solutions now in place, the HRA AA has subsequently concluded that the RLDP contains a sufficient policy framework, and that no adverse effects would arise on habitat sites alone or in combination with other plans or projects coming forward in Monmouthshire.

8.10.4 The level of development proposed and directed to these areas under Strategic Policies S1 (Growth Strategy) and S2 (Spatial Distribution of Development – Settlement Hierarchy) has the potential to result in impacts on the designated sites and wider biodiversity. Of note, Land to the East of Abergavenny (Policy HA1) has the potential to lead to habitat loss and recreational disturbance of the nearby ancient woodland and habitats present within / surrounding the site. There is also the potential for negative effects through the delivery of Land to the East of Caldicot (Policy HA2), given the presence of the Severn Estuary SPA / SAC / Ramsar site / SSSI within 1.2km of the site, as well as the adjacent ancient woodland at Farthing Hill. It is also recognised that all four strategic sites are greenfield and therefore have the potential to hold biodiversity value. Notably, there are sparse mature trees present throughout Land to the East of Caldicot (Policy HA2) which could be lost or damaged.

8.10.5 It is however considered that development proposals should seek to retain and enhance features where possible, ensuring no net loss, and deliver biodiversity net gain in accordance with national policy. Furthermore, the strategic nature of the sites present an opportunity to exceed the mandatory requirement of 10% net-gain, with the potential for significant long-term

- positive effects. This can be achieved through measures outlined in Strategic Policy S8 (Site Allocation Placemaking Principles), including the incorporation of multifunctional streetscapes, retention of green features including trees, and enhancing semi-natural habitats and the ecological connectivity between them.
- 8.10.6 There are a number of other policies that support or permit a type of development that could have impacts on designated or wider biodiversity interests. This includes Policy CC2 (Renewable Energy Allocation) and Policy CC3 (Renewable Energy Generation), Policy IN1 (Telecommunication, broadband and other digital infrastructure) which supports infrastructure development. This also includes the housing policies H1 to H8, Strategic Policy S9 (Gypsy and Travellers) and Policy GT1 (Gypsy, Traveller and Showpeople Sites), which seek to support housing development. All of these policies have the potential to impact upon biodiversity through potential changes to or losses of habitats, as well as changes to the biodiversity network and associated connectivity.
- 8.10.7 However, it is recognised that some of the policies that support or permit development have specific biodiversity stipulations. Policy CC3 (Renewable Energy Generation) indicates proposals must not bring forward unacceptable adverse impacts to biodiversity, and environmental benefits directly related to development will need to outweigh any potential negative impacts. Whilst Policy IN1 (Telecommunication, broadband and other digital infrastructure) does not make specific stipulations for biodiversity, the overarching Strategic Policy S6 (Infrastructure) indicates improvements to infrastructure, facilities, services and related works will need to include consideration and appropriate provision of green and blue infrastructure and ecological mitigation and enhancement. This will bring forward benefits for biodiversity by improving connectivity between habitats and designated sites through increased green and blue infrastructure.
- 8.10.8 Benefits for biodiversity are also anticipated to come forward through Strategic Policy S10 (Employment Site Provision) and Strategic Policy S11 (Rural Economy), which indicate all proposals relating to employment will need to protect the natural environment and ensure no unacceptable harm comes to surrounding biodiversity value. This includes through Policy E2 (Non-Allocated Employment Sites), Policy RE1 (Secondary and Main Rural Settlements Employment Exceptions) and Policy RE6 (Provision of Recreation and Leisure Facilities in the Open Countryside), which allow for employment and recreational development to come forward where no unacceptable harm occurs to the natural environment – which will likely extend to include biodiversity quality and connectivity. Similarly, Policy T1 (New or Extended Tourism Accommodation and Facilities in the Open Countryside) seeks to protect biodiversity through development by ensuring proposals will not cause harm to quality or connectivity, but rather enhance biodiversity and the resilience of ecosystems.
- 8.10.9 Strategic Policy S5 (Green Infrastructure, Landscape and Nature Recovery) requires development to, “*Maintain, protect and enhance the integrity and connectivity of Monmouthshire’s green infrastructure, landscapes, biodiversity, public rights of ways and heritage assets*”, through six key functions. This includes “*by protecting, assessing, positively managing and*

enhancing biodiversity and geological interests, including designated and non-designated sites, protected and priority species and their habitats, and the ecological connectivity between them". There is also a key function relating to greenspace provision that states that green infrastructure assets and opportunities are designed to deliver a multifunctional resource. This links to Policy GI1 (Green Infrastructure), which seeks to ensure development proposals maintain, protect and enhance the integrity and diversity of the green infrastructure network across Monmouthshire. It also links to Policy GI2 (Trees, Woodland and Hedgerows), which works to protect these features through development, or replace them where removal or damage is necessary. These policies contribute to biodiversity by protecting networks and features, which helps to strengthen the network.

- 8.10.10 Furthermore, some of the wider RLDP policies also include a biodiversity focus. Policy OC1 (New built development in the Open Countryside) puts forward a presumption against new built development in the undeveloped countryside of Monmouthshire, and where proposals are put forward, they will only be permitted where they will have no unacceptable adverse impact on biodiversity. This links to Policy GW1 (Green Wedge Designations), which seeks to protect certain green gaps between settlements. These policies work to protect biodiversity by maintaining the existing network in the open countryside, and reducing the potential for negative impacts to occur where development is permitted. Strategic Policy S3 (Sustainable Placemaking and High Quality Design) puts forward the need for development to incorporate a green infrastructure approach – reiterated through supporting Policy PM1 (Creating well-designed places), which encourages the integration of multifunctional green and blue infrastructure with development. These policies will contribute to maintaining and enhancing biodiversity connectivity through protecting existing features that contribute to the network and adding new features to it. Adverse impacts on biodiversity connectivity are resisted through Policy LC5 (Dark Skies and Lighting).
- 8.10.11 Additionally, Policy NR1 (Nature Recovery and Geodiversity), Policy NR2 (Severn Estuary Recreational Pressure), and Policy NR3 (Protection of Water Sources and the Water Environment) all contribute to maintaining and enhancing biodiversity. This is achieved through protecting designated sites for biodiversity and / or geology and reducing the risk of harm, incorporating mitigation measures where harm cannot be avoided, and delivering benefits for biodiversity and ecosystem resilience.

Cumulative effects

- 8.10.12 Development proposed through the Deposit Plan has the potential to interact with and have cumulative effects on biodiversity with growth proposed in other areas outside the County. This includes development plans in surrounding authorities, such as Torfaen, Newport, Brecon Beacons National Park, and Herefordshire, and development plans in wider South East Wales and South West England. All of the Local Development Plans include policies which seek to protect and enhance biodiversity.
- 8.10.13 HRA work has been carried out to address the likelihood for adverse effects on the integrity of any European designated sites as a result of development

proposed through the RLDP acting in-combination with other plans and projects. The candidate site assessment process has also considered the impacts of development at specific sites on biodiversity to inform RLDP policies.

- 8.10.14 It will be important for Local Planning Authorities and stakeholders, such as NRW and Natural England, to work closely to identify potential cross-boundary issues and seek to protect and enhance ecological corridors that cross authority boundaries where possible. Where possible, any strategic opportunities to deliver biodiversity net gain should be explored.

Summary of likely effects

- 8.10.15 Considering the above and with nutrient neutrality solutions now in place, **minor positive effects** are considered most likely for the biodiversity and geodiversity ISA theme under the RLDP. This is due to the policy framework avoiding adverse impacts on important sites for biodiversity, and the focus of the plan on bringing forward net gains and improving ecological connectivity.

8.11 Historic environment

- 8.11.1 Through Strategic Policy S1 (Growth Strategy) and Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy), the majority of growth during the plan period is being directed towards the primary settlements of Abergavenny (including Llanfoist), Caldicot (including the Severnside area), Chepstow, and Monmouth (including Wyesham). There is a range of nationally designated heritage assets located within and around these settlements. Furthermore, the Blaenavon Industrial Landscape World Heritage Site is located to the south west of Abergavenny. The level of development proposed and directed to these settlements under Strategic Policy S1 (Growth Strategy) and Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy) has the potential to result in impacts on the designated heritage assets and wider historic environment within and surrounding these settlements. Given the lack of brownfield sites it is likely that growth will broadly be delivered on greenfield sites.
- 8.11.2 The RLDP identifies four large scale sites for development at Abergavenny (including Llanfoist), Chepstow, Caldicot (including Severnside area), and Monmouth (including Wyesham). All four strategic sites have been considered through the ISA process. Of particular note in relation to the historic environment is strategic growth proposed under Policy HA2 (Land to the East of Caldicot). Part of the site is located within the Caldicot Conservation Area, containing Caldicot Castle Grade I listed building and Scheduled Monument covering the unoccupied parts. However, it is noted Policy HA2 makes a stipulation for the historic environment – indicating development should consider and respond positively to the setting of the heritage assets and views to the nearby scheduled monument, and that no built development will occur within these sensitive areas. Additionally, the site allocated under Policy HA4 (Land at Leasbrook, Monmouth) is within close proximity to the Dixton Conservation Area – located to the east. Furthermore, the site under Policy HA3 (Land at Mounon Road, Chepstow) is also adjacent to a conservation area – Mathern Conservation Area,

located to the south. In this respect, development is likely to impact the intrinsic qualities, and setting of these heritage assets.

- 8.11.3 There are a number of other policies that support or permit a type of development that could have impacts on the historic environment. This includes Policy CC2 (Renewable Energy Allocation), which supports the construction of ground mounted solar development at a site within Raglan Enterprise Park, and Strategic Policy S6 (Infrastructure), which details the different requirements that will need to come forward to make development acceptable. Furthermore, Strategic Policy S9 (Gypsy and Travellers) and Policy GT1 (Gypsy, Traveller and Showpeople Sites) allocates a site at Bradbury Farm, Crick for seven pitches to meet Gypsy and Traveller accommodation needs and supports proposals for further sites subject to meeting outlined criteria. Furthermore, Strategic Policy S10 (Employment Site Provision) seeks to allocate 57 hectares of employment land to meet a minimum requirement of 38 hectares, at new sites put forward through Policy EA1 (Employment Allocations) and non-allocated sites under Policy E2 (Non-Allocated Employment Sites). This links to Strategic Policy S11 (Rural Economy), which enables rural enterprise uses outside settlement boundaries, and Strategic Policy S12 (Visitor Economy) – which supports development proposals that contribute to the visitor economy and sustainable tourism. Finally, Strategic Policy S15 (Community and Recreation Facilities, Public Open Spaces and Areas of Amenity Importance) seeks to bring forward enhanced community and recreation facilities within or adjoining settlement boundaries – supported by Policy CI2 (Provision of Outdoor Recreation Facilities, Open Space and Allotments / Community Growing Areas). All of these policies could impact upon the historic environment through changes to the setting of heritage features, or changes to views to/ from heritage structures, thus changing how they are interpreted.
- 8.11.4 However, Policy OC1 (New built development in the Open Countryside) contributes to reducing the potential for negative impacts on the historic environment and heritage assets in Monmouthshire by bringing forward a presumption against new built development in the open countryside. This will help to limit development coming forward outside of settlement boundaries, thus helping to protect the integrity of the wider historic landscape. Furthermore, Policy OC1 (New built development in the Open Countryside) indicates proposals for new development in the open countryside will only be permitted where it will have no unacceptable adverse impact on historic, cultural, or geographical heritage. Again, this policy works to protect the historic environment of Monmouthshire by ensuring features and qualities are maintained and protected.
- 8.11.5 The RLDP includes policies that will help to reduce the impact of proposed development on the historic environment. This includes Strategic Policy S3 (Sustainable Placemaking & High Quality Design) which requires development to “*contribute to creating high quality, attractive and sustainable places that support the health and well-being of the community*”. To achieve this development should, “*protect and enhance the natural, historic and built environments and show an understanding of how these function together to contribute towards the quality of places*”.

- 8.11.6 This is supported by Policy PM1 (Creating well-designed places), which indicates development proposals will need to meet a number of criteria. This includes respecting the existing development design (including form, materials, and layout), contributing to a sense of place, and respecting and enhancing local distinctiveness – particularly where historical features are present. This will help ensure new development is reflective of and positively contributes towards the existing built environment. It is also supported by Policy PM2 (Environmental Amenity), which indicates development that would cause significant harm to built heritage through increased pollution (for example, air and light) will not be permitted unless measures are incorporated to overcome potential risks. Furthermore, Strategic Policy S3 is supported by Policy HE1 (Conservation Areas) and Policy HE2 (Design of Shop Fronts in Conservation Areas) which seeks to preserve and enhance the character and appearance of Conservation Areas and their settings through new development. This links to Policy PM3 (Advertisements), which stipulates advertisements in Conservation Areas will be permitted where they would not detract from the character or appearance of the area. It is also supported by Policy HE3 (Roman Town of Caerwent), which ensures development protects the integrity of archaeological remains and the character of the associated Conservation Area. As such, these policies positively contribute to the protection of heritage features and the wider historic environment through seeking reflective and considerate development.
- 8.11.7 Furthermore, Strategic Policy S5 (Green Infrastructure, Landscape and Nature Recovery) states that development proposals must, *“Maintain, protect and enhance the integrity and connectivity of Monmouthshire’s green infrastructure, landscape, biodiversity, public rights of ways and heritage assets”* through *“Landscape Setting and Quality of Place, by identifying, protecting and, where appropriate, enhancing the distinctive landscape and historical, cultural, ecological and geological heritage, including natural and man-made elements associated with existing landscape character”*. This will contribute to a maintained wider historic landscape. This policy is supported by Policy GI1 (Green Infrastructure) and Policy GI2 (Trees, Woodland and Hedgerows), which seek to maintain and enhance green features (including those that are of cultural heritage), which will safeguard and contribute additional features that influence the setting of historic features. As such, the green infrastructure policies work well to maintain heritage features and enhance the historic environment in Monmouthshire.
- 8.11.8 Policy LC1 (Landscape Character) also supports Strategic Policy S5 through ensuring development does not have an unacceptable adverse effect on the historic character or quality of Monmouthshire’s landscape – including changes to the character of the built landscape. The heritage importance of Blaenavon Industrial Landscape World Heritage Site is protected through Policy LC2 (Blaenavon Industrial Landscape World Heritage Site), which works to protect the setting and character of the designation, as well as significant views into and out of the area. Heritage considerations are also included in Policy LC3 (Bannau Brycheiniog National Park), which protects the setting of the designation and significant views and Policy LC4 (Wye Valley National Landscape (AONB)), which stipulates development will need to be in harmony with the built heritage of the designated area. These work to maintain the character of the historic environment in Monmouthshire.

- 8.11.9 It is recognised that some of the policies that support or permit development have specific heritage stipulations. This includes Policy IN1 (Telecommunication, broadband and other digital infrastructure), which indicates these types of development proposals will be considered and permitted where they would not bring forward significant adverse impacts to the historic environment or built heritage. Strategic Policy S10 (Employment Site Provision), which requires all proposals to be subjected to detailed planning considerations – including the protection of the built environment. This will likely extend to the historic environment as demonstrated by supporting Policy E2 (Non-Allocated Employment Sites), which indicates proposals for industrial and business development will be supported where proposals would not cause harm to historical or cultural heritage. Similarly, Strategic Policy S11 (Rural Economy) indicates development to enable rural enterprise will need to not cause unacceptable harm to surrounding historic and cultural heritage. This is reflected in supporting Policy RE1 (Secondary and Main Rural Settlements Employment Exceptions), which indicates small-scale industrial and business development will be supported where it would not cause unacceptable harm to the built environment – which will likely extend to include heritage features. Furthermore, under Policy T1 (New or Extended Tourism Accommodation and Facilities in the Open Countryside), any sustainable tourism proposals in the open countryside will need to protect, maintain, and enhance the historic environment. Additionally, Policy CC3 (Renewable Energy Generation) indicates renewable and low carbon development proposals will be permitted where there is no unacceptable impact upon historic features. These policies work to support the historic environment by ensuring heritage assets and their settings are not harmed through development.
- 8.11.10 The future well-being of the Welsh language the RLDP is dependent on a range of factors beyond the planning system, particularly education, demographic change, community activities, and a sound economic base to maintain thriving sustainable communities. The RLDP will deliver new homes and employment opportunities as well as associated infrastructure improvements. As most growth is directed to the principal settlement areas, effectively integrated new housing and employment development can support cultural vitality and inclusive communities. This is likely to have a long term indirect positive effect on the future of the Welsh language; however, this is unlikely to be significant.

Cumulative effects

- 8.11.11 Development proposed through the Deposit Plan has the potential to interact with development proposed through other plans to have a cumulative effect on the historic environment. Interactions of greatest significance are likely to be those plans, programmes and projects that impact upon the Blaenavon Industrial Landscape World Heritage Site (WHS), as well as historic town centres.
- 8.11.12 The WHS lies across the County Boundary and also forms part of the County Borough of Torfaen. The south-western boundary of the WHS runs parallel with the boundary of Torfaen/ Blaenau Gwent County Borough's also. Growth proposed through the RLDP alongside growth proposed through the emerging spatial strategies for the Torfaen and Blaenau Gwent

LDPs has the potential to cumulatively affect the sensitive historic site and its setting. It is recognised however, that all of the Local Development Plans will include policies which seek to protect and enhance the historic environment.

- 8.11.13 The WHS Management Plan seeks to “*deliver well-being benefits through heritage management and heritage-led regeneration*”. The document identifies that Blaenavon has enjoyed successful heritage-led urban and environmental regeneration which has benefitted the historic landscape delivering substantial improvements and promoting continued inward investment. In this respect, growth around the WHS has the potential to support regeneration and townscape improvements that continue to protect and enhance the designated area and the wider setting.
- 8.11.14 It will be important for Local Planning Authorities and stakeholders, such as Cadw, to work closely to identify potential cross-boundary issues and seek to protect and enhance heritage settings that cross authority boundaries where possible. Where possible, any strategic opportunities to deliver heritage-led regeneration, in line with the WHS Management Plan, should be explored.

Summary of likely effects

- 8.11.15 At this time, **minor negative effects** are concluded most likely under the RLDP for this ISA theme. This reflects the proximity of site allocations to heritage features, and their potential to impact upon the historic environment where the design and layout of development will be crucial to minimise negative effects, as guided by the Deposit Plan policies. There are also notable policy provisions included under the RLDP, which will directly and indirectly benefit the historic environment by protecting specific features and enhancing the wider setting they are located within.

8.12 Landscape

- 8.12.1 Monmouthshire has a rich and diverse landscape stretching from the coastline of the Gwent Levels in the south of the County, to the uplands of the Brecon Beacons in the north, and the river corridor of the Wye Valley in the east. In terms of nationally designated landscapes, the County includes:
- Wye Valley National Landscape (previously Area of Outstanding Natural Beauty, or AONB) located to the east of Monmouthshire. The part of the Wye Valley National landscape located within Monmouthshire covers approximately 16% of the Monmouthshire LDP area.
 - Brecon Beacons National Park located to the north west of Monmouthshire. The portion of the Brecon Beacons National Park (BBNP) located in Monmouthshire covers approximately 17% of the County.
- 8.12.2 In line with Planning Policy Wales (2024) it is recognised that the Wye Valley National Landscape and Brecon Beacons National Park are “*valued for their intrinsic contribution to a sense of place, and that their special characteristics should be protected and enhanced*”. In addition to national policy requirements, protection is also provided to the Wye Valley through the Wye Valley AONB Management Plan (2021), which sets out five Development Strategic Objectives, underpinning the aim to “*Ensure all development within*

*the AONB and its setting conserves and enhances the AONB*²⁷. Notably, Objective WV-D2 seeks to “*encourage and support high standards of design, materials, energy efficiency, drainage, landscaping, and Green Infrastructure in all developments*”.

- 8.12.3 In terms of the Brecon Beacons National Park, there is an established Local Development Plan (LDP) in place and development control functions in the correlating part of the County. The LDP “*represents and defines the National Park Authority’s approach for ensuring sustainable development is carried out in the National Park*”. Additionally, ‘Y Bannau The Future’ The Management Plan for the Brecon Beacons 2023 – 2028 sets out under even cross-cutting themes, policies, and priorities for managing change in the National Park. Notably, ‘Place Planning’ helps to deliver high quality integrated sustainable development within the National Park.
- 8.12.4 While protection is provided at the higher level, it is nonetheless considered that development proposed through the RLDP has the potential to adversely impact upon special landscape features, character, and setting.
- 8.12.5 Strategic Policy S1 (Growth Strategy) states that the LDP will make provision for up to 6,210 homes over the plan period. However, the residual housing requirement during the plan period is less than this once existing commitments have been taking into account.
- 8.12.6 The growth strategy seeks to distribute growth across the County in a manner that reflects the findings of the Sustainable Settlement Appraisal. This is demonstrated through Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy). It will focus growth to the primary settlements of Abergavenny (including Llanfoist), Chepstow and Caldicot (including the Severnside area), and Monmouth (including Wyesham), together with a sustainable amount of growth to the most sustainable lower tier settlements, including, a small amount of development in the most sustainable Rural Settlements to bring forward affordable housing. It is noted that the RLDP has a presumption against new built development in the open countryside unless justified under national planning policy (Policy OC1 New Built Development in the Open Countryside). This will likely include the avoidance of new development within designated green wedges that contribute to keeping settlements separate (Policy GW1 Green Wedge Designations), thus contributing to the protection of undeveloped landscapes in Monmouthshire.
- 8.12.7 It is noted that the conversion / rehabilitation of buildings within the open countryside is supported under Policy H4 (Conversion / Rehabilitation of Buildings in the Open Countryside for Residential Use) where development is respectful of the landscape. This includes how the structure is designed (for example, the form and materials used), and how it is accessed – especially if located within the Wye Valley National Landscape. Linked to this, the replacement of existing dwellings in the countryside will be permitted as per Policy H5 (Replacement Dwellings in the Open Countryside), so long as the original structure is not important to the visual and intrinsic character of the landscape, and the replacement is designed to be considerate of the setting. Similarly, the extension of rural dwellings in

²⁷ Note the Management Plan has not been updated to reflect the change to National Landscape from AONB.

the open countryside should be modest and should respect and enhance the existing structure (Policy H6 Extension of Rural Dwellings). This will help ensure development contributes to the landscape character and quality.

- 8.12.8 Looking specifically at the strategic policies, in accordance with Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy) around 1,362 homes, including strategic site allocation Land to the East of Abergavenny (Policy HA1 - which will deliver 500 homes within the plan period), will be directed to Abergavenny. Whilst the settlement is adjacent to the National Park, the strategic site is a distance from the designation – located within the settlement boundary to the east. 829 homes, including the strategic site allocation Policy HA3 (Land at Mounton Road, Chepstow – which will deliver 146 homes) are directed to Chepstow, which is located adjacent to the Wye Valley National Landscape. The site allocation is within proximity to the designated area and as such development could impact upon the setting of the landscape. The same can be said of the strategic site allocation under Policy HA4 (Land at Leasbrook, Monmouth) which seeks to bring forward development within close proximity to the Wye Valley National Landscape.
- 8.12.9 As a result, focussing a significant proportion of development in the Primary Settlements has the potential to increase pressure on landscape character, setting, and the intrinsic qualities of the Wye Valley National Landscape and Brecon Beacons National Park. All strategic site allocations are expected to demonstrate how the proposal has been informed by surrounding landscape character, qualities, and sensitivities, under Strategic Policy S8 (Site Allocation Placemaking Principles).
- 8.12.10 Consideration is also given to the impact of the RLDP on the wider valued landscape; recognising that Cadw, Natural Resources Wales and the International Council on Monuments and Sites (ICOMOS UK) has compiled a non-statutory Register of 58 landscapes of outstanding or special historic interest in Wales. Notably there are four located within Monmouthshire. These mainly relate to the National Landscape along the east of the County, along the Severn Estuary to the south, and to the west coinciding with the Brecon Beacons National Park.
- 8.12.11 It is considered that directing a significant proportion of growth towards important designated landscapes will ultimately change the landscape setting of these assets to some degree, with both positive and negative effects anticipated. Negative effects are ultimately anticipated due to a loss of greenfield and agricultural land through strategic development sites at Abergavenny and Chepstow. The delivery of these sites is likely to affect local landscape character, with development at Chepstow also considered likely to affect views from the National Landscape given the rural nature and topography of the County. More broadly, effects are likely to be more significant in relation to Land to the East of Abergavenny (Policy HA1), given the scale of growth proposed and the categorisation of the site as being of ‘a high to medium landscape sensitivity’ in relation to residential development²⁸. The same can be said of the site under Policy HA4 (Land at Leasbrook, Monmouth). Land at Mounton Road, Chepstow (Policy HA3) is categorised as being of ‘medium landscape sensitivity’. The site allocated under Policy

²⁸ Monmouthshire Landscape Capacity Update 2020

HA2 (Land to the East of Caldicot) is a mix of both 'high to medium landscape sensitivity' and 'medium landscape sensitivity' in relation to residential development.

- 8.12.12 It is considered that potential negative effects and potential positive effects are dependent upon the delivery of high-quality design and efficient layout.
- 8.12.13 To this effect, Strategic Policy S3 (Sustainable Placemaking and High Quality Design) requires that "*development will contribute to creating high quality, attractive and sustainable places that support the well-being of the community*". In particular, this policy is supported by Policy PM1 (Creating well-designed places), which seeks to ensure high-quality sustainable design respects the character and distinctiveness of the built, historic and natural environment of Monmouthshire. This is also supported by Policy PM2 (Environmental Amenity), which indicates development proposals that would cause a significant risk or harm to local character and quality of the countryside and landscape through pollution (for example, noise and light pollution) will not be permitted unless the risk can be overcome through design measures.
- 8.12.14 PPW places the delivery of sustainable places which are attractive, sociable, accessible, active, secure, welcoming, healthy, and friendly at the heart of the Plan and notes it as the optimal outcome of development plans. Notably, PPW12 defines Green Infrastructure as "*the network of natural and semi-natural features, green spaces, rivers and lakes that intersperse and connect places*". The importance of protecting and enhancing Green Infrastructure is a key policy theme within PPW, recognising the multi-functional role it has in delivering the goals and objectives of the Future Generations and Wellbeing Act.
- 8.12.15 The RLDP supports a green infrastructure led approach to the design of new development that will enhance the character and identity of Monmouthshire's settlements and countryside, encourage sustainable lifestyles and create attractive, safe and accessible places. It is however recognised that the achievement of this will depend largely upon identifying and understanding the local characteristics which are distinctive to an area. To ensure this is delivered, Strategic Policy S5 (Green Infrastructure, Landscape and Nature Conservation) requires that development proposals maintain, protect, and enhance the integrity and connectivity of Monmouthshire's green infrastructure, landscapes, biodiversity, public rights of ways and assets through a number of key functions, including greenspace provision and connectivity, sustainable energy use, and landscape setting and quality of place. This policy is supported by several policies concerned with maintaining, protecting and enhancing the green infrastructure network (Policy GI1 Green Infrastructure) and specific green features (Policy GI2 Trees, Woodland and Hedgerows) and the character contribution of dark skies (Policy LC5 Dark Skies and Lighting).
- 8.12.16 Policy LC1 (Landscape Character) is concerned with protecting the landscape character of Monmouthshire and requires landscape assessments to be undertaken for development proposals that would impact upon landscape character. This contributes to ensuring landscape character and quality is maintained. There are several supporting policies that seek to protect important landscape areas, such as the Blaenavon Industrial

Landscape World Heritage Site (Policy LC2), the Bannau Brycheiniog National Park (Policy LC3), and the Wye Valley National Landscape (Policy LC4). These will all contribute positively towards meeting the RLDP objective to “*protect, enhance and manage Monmouthshire’s natural environment. This includes, the Wye Valley National Landscape (AONB), the County’s other high quality and distinctive landscapes, protected sites, protected species and other biodiversity interests*”. In this context, in accordance with Strategic Policy S6 (Infrastructure) development may be required to include “*Recreation and Leisure Facilities including formal and informal open space*”, and / or “*Green Infrastructure*” alongside development, to make development acceptable.

- 8.12.17 The wider RLDP policies make provisions for landscape. Strategic Policy S11 (Rural Economy) allows for diversification of the rural economy outside of defined settlement boundaries where it is of a style and type compatible with the surrounding area and will not bring forward unacceptable harm to the landscape. This is supported by Policy RE1 (Secondary and Main Rural Settlements Employment Exceptions) Policy RE2 (The Conversion or Rehabilitation of Buildings in the Open Countryside for Employment Use), and Policy RE6 (Provision of Recreation and Leisure Facilities in the Open Countryside). The same can be said of Strategic Policy S12 (Visitor Economy), which indicates development proposals will be supported where they would not have an adverse impact on the landscape character of key features and areas of tourism interest. This works to protect the landscape by ensuring development integrates well with its surroundings. This policy is supported by Policy T1 (New or Extended Tourism Accommodation and Facilities in the Open Countryside)
- 8.12.18 Policy CC3 (Renewable Energy Generation) also makes provisions for landscape – indicating that renewable and low carbon development will be permitted where there are no unacceptable adverse impacts upon the landscape or its character. This would likely include visual impacts to important views, which is also a key consideration for Policy IN1 (Telecommunication, broadband and other digital infrastructure), which indicates infrastructure will need to minimise impact on the visual amenity and should pay particular care to the National Landscape and National Park designations.
- 8.12.19 Furthermore, sites for Gypsy, Traveller and Travelling Showpeople communities will be permitted where the land does not occupy a prominent location and is in line with RLDP policies for protecting and enhancing the character of the landscape. Under Policy GT1 (Gypsy, Traveller and Showpeople Sites), where sites have the potential to bring forward negative impacts to the landscape, mitigating measures will need to be incorporated to reduce the impacts. This will help to protect the landscape character and important views.
- 8.12.20 In terms of employment sites, Policy E2 (Non-Allocated Employment Sites) indicates proposals for industrial and business development will be supported where the proposed site is within or adjacent to settlement boundaries or existing and proposed employment sites. This will help to reduce potential landscape issues by bringing forward growth in areas that already experience a level of development, which will contribute to reducing

visual impacts. Further to this, Policy E2 also indicates proposals would need to cause no harm to surrounding landscape value – further protecting landscape character and quality.

Cumulative effects

- 8.12.21 Development proposed through the Deposit Plan has the potential to interact with and have cumulative effects on landscape with growth proposed in other areas outside the County. This includes development plans in surrounding authorities, such as Torfaen, Newport, Brecon Beacons National Park, Forest of Dean and Herefordshire, and development plans in wider South East Wales and South West England. All of the Local Development Plans include policies which seek to protect and enhance the landscape.
- 8.12.22 Development proposed through the RLDP has the potential to interact with development proposed through these other plans to have a cumulative effect on the landscape. Interactions of greatest significance are likely to be those plans, programmes and projects that impact upon the Wye Valley National Landscape (AONB) and Brecon Beacons National Park, given their importance nationally.
- 8.12.23 When considering cumulative effects of development on the National Landscape, consideration should be given to the protections provided by the adopted Wye Valley AONB Management Plan (2021). In addition to national policy requirements, the AONB Management Plan sets out Strategic Development Objectives, which aim to *“Ensure all development within the AONB and its setting conserves and enhances the AONB”*.
- 8.12.24 In terms of the National Park, consideration should be given to the protections provided by the BBNP Management Plan (2021). In addition to national policy requirements, the Management Plan sets out under numerous themes, policies, and priorities for managing change in the National Park. Notably, ‘Place Planning’, helps to deliver high quality integrated sustainable development within the National Park.
- 8.12.25 Ultimately the nature and significance of effects will be dependent on the design / layout of development and the implementation of mitigation measures. It will be important for Local Planning Authorities to work closely with each other as well as Natural Resources Wales / Natural England and the Wye Valley AONB Partnership, to try and plan at a landscape scale, minimise potential impacts as well as identify opportunities to deliver improvements where possible, including the delivery of new valued landscapes.

Summary of likely effects

- 8.12.26 At this time, **minor negative effects** are considered most likely in relation to the landscape ISA theme. Whilst development will impact upon landscape character and quality in Monmouthshire, the RLDP works well to reduce this impact by allocating sites within settlement boundaries and outside of landscape designations. Furthermore, the development policies and wider policy provisions under the RLDP work to maintain and enhance landscape character and quality – for example, through green infrastructure provision

and resisting development in the open countryside. Despite this, considerable greenfield loss will impact the landscape cumulatively.

8.13 Climate change (including flood risk)

- 8.13.1 The Climate Change ISA objectives are to both mitigate and adapt to the effects of climate change through increasing energy efficiency and using low carbon and renewable energy sources where possible. Adapting to the effects of climate change includes the need to adapt to increased flood risk, whilst a key focus of mitigating climate change is the need to reduce CO₂ emissions from the built environment.
- 8.13.2 The distribution of growth proposed under Strategic Policy S1 (Growth Strategy) and Strategic Policy S2 (Spatial Distribution of Development – Settlement Hierarchy) has potential to perform either positively or negatively in relation to climate change adaptation as the strategy is not supported by a bottom-up understanding of specific sites. However, there is a broad understanding of the direction of growth, including four strategic sites directed to the main settlements of Abergavenny (including Llanfoist), Chepstow, Caldicot (including Severnside), and Monmouth (including Wyesham). Nonetheless, this means that detailed conclusions are challenging as flood risk varies within settlements. For example, the growth directs a significant proportion of growth to Abergavenny – and the settlement has substantial areas of Flood Zone C2, i.e., the area at greatest risk of fluvial flooding. However, it is recognised that the strategic site allocation under Policy HA1 (Land to the East of Abergavenny) is outside of the areas of C2 fluvial flood risk. Furthermore, higher tier policy is likely to ensure that areas of high flood risk are avoided through the development process. This is reiterated by MCC.
- 8.13.3 In terms of the other strategic site allocations, the site under Policy HA3 (Land at Mounton Road, Chepstow) is not constrained by flood risk. There is however an isolated area in the north half of the site at high risk of flooding from surface water. It is recognised that the site has potential to support adaptation to the potential effects of climate change by utilising sustainable drainage systems (SuDS) and providing improvements to the local green infrastructure network. Development is also likely to be directed away from these areas of high flood risk in line with higher tier planning policy and guidance via the PPW and Technical Advice Note 15.
- 8.13.4 The Land to the East of Caldicot (Policy HA2) is constrained by fluvial flood risk along its western boundary. As above, it is considered that the design and layout of development alongside the use of suitable mitigation methods will minimise the potential residual effects, in line with higher level planning policy – especially given the policy indicates no built development will be permitted within the part of the site that is within the floodplain.
- 8.13.5 Much of Monmouth is also at risk of flooding, linked to the River Wye and River Monnow flowing through the settlement. Whilst areas of the settlement are within areas of C1 and C2 flood risk, the strategic site under Policy HA4 (Land at Leasbrook, Monmouth) is largely removed from this higher risk. There is a small area of the site in the southern extent that is within zone C2 – though it is anticipated this risk could be avoided or mitigated through development by focusing growth elsewhere in the site or incorporating flood

management techniques (like SuDS). Furthermore, the policy also includes the requirement for emergency vehicular access to be provided to connect the site to the A466 to allow for greater access in the case of an extreme flooding event. This contributes well to mitigating the flood risk on the site.

- 8.13.6 In terms of climate change mitigation, the growth strategy has a mixed performance. Notably, there is the potential to reduce greenhouse gas emissions by focusing growth at the higher tier settlements with existing transport links. By directing of the majority of growth to Tier 1 settlements, including through the allocation of strategic sites, the strategy ensures that new development will be at locations with the strongest public transport links to other regional employment hubs, particularly Cardiff, Newport, Bristol and the Wider SW Region. Similarly, new employment growth in the Tier 1 settlements will be accessible by train.
- 8.13.7 In terms of the strategic site allocations, it is considered that larger sites will be supported by a level of transport infrastructure / active travel improvements. This is likely to support self-containment, reducing the need to travel and in turn contributing positively towards climate change mitigation objectives. While there is uncertainty at this stage in terms of the specific infrastructure to be provided, positive effects of greatest significance are considered in relation to Policy HA2 (Land to the East of Caldicot), given the level of growth proposed, followed by Policy HA1 (Land to the East of Abergavenny).
- 8.13.8 The Active Travel (Wales) Act (2013) requires all local authorities in Wales to deliver improvements to their network of active travel routes and facilities. Monmouthshire's Active Travel Network includes walking and cycling paths within each of the principal settlements though inter-settlement connectivity is limited outside of the Severnside settlements (which are close enough for active travel to be a viable option, though this may be partly on-road). In this context new development through the growth strategy performs well at a localised scale, offering good potential for new development to link with and enhance the existing network within settlements. However, the rural nature of the County and the distances between most of the higher tier settlements mean that growth is unlikely to have a positive effect in terms of climate change mitigation in relation to the majority of inter-settlement travel.
- 8.13.9 The trend of increased home and remote working in light of the COVID-19 pandemic is anticipated to continue over the longer term. In accordance with Welsh Government's ambition of 30% of people working from or near home, the RLDP supports new development where it meets infrastructure requirements, including broadband provision. This, amongst other requirements, will contribute positively towards reducing out-commuting and supporting the Council's climate change objectives by reducing the overall need to travel.
- 8.13.10 In 2018 the proportion of CO₂ emissions in Monmouthshire from the built environment, i.e., from both domestic and industrial / commercial sources, was 50% which is notably low in relation to the Wales average of 74%. However, this is likely to simply reflect that the County has a higher-than-average proportion of emissions from transport sources, rather than reflecting low built environment emissions per se. While it is considered that the growth strategy is delivering relatively low growth in absolute terms,

strategic growth proposed at strategic site allocation under Policy HA2 (Land to the East of Caldicot) is considered of scale to facilitate opportunities for delivering decentralised heat / power generation from renewable or low carbon sources.

- 8.13.11 More broadly it is considered unlikely that the distribution of growth will appreciably reduce emissions from the built environment.
- 8.13.12 Strategic Policy S4 (Climate Change) could lead to positive effects in relation to climate change adaptation and climate change mitigation. The policy has a strong emphasis on the need to embed low carbon concepts into development, saying that all development proposals will be required to incorporate *“low / zero carbon energy requirements by reducing energy demand and promoting energy efficiency”*, utilise *“sustainable construction techniques and local supplies through the adoption of circular economy techniques”* and provide *“ultra-low emission vehicle charging infrastructure to reduce emissions”*. The policy also requires all development to avoid *“areas at risk of flooding”* and to incorporate *“measures such as Sustainable Urban Drainage Systems and flood resilient design”*.
- 8.13.13 Strategic Policy S4 is supplemented by four additional policies related to the Climate Change theme. These policies set out standards for all new build residential development to follow to ensure houses are built to the highest energy efficiency standards (Policy NZ1 Monmouthshire Zero Carbon Homes), and incorporate sustainable urban drainage systems where appropriate (Policy CC1 Sustainable Drainage Systems). The policies also identify a renewable energy opportunity at Raglan Enterprise Park for ground mounted solar development (Policy CC2 Renewable Energy Allocation), and further renewable and low carbon development which contribute to national and local targets are supported through Policy CC3 Renewable Energy Generation. As such, they perform positively, compliment Strategic Policy S4 (Climate Change), and contribute well to climate change mitigation and adaptation.
- 8.13.14 It is considered that wider policies will also contribute to climate change adaptation and mitigation effects. For example, Strategic Policy S5 (Green Infrastructure, Landscape and Nature Recovery) and its supporting policies G11 (Green Infrastructure) and G12 (Trees, Woodland and Hedgerows) work to maintain, protect and enhance green infrastructure in Monmouthshire. Protecting green features will maintain contributions to carbon capture and storage, and maintain natural flood risk contributions (linked to water interception). Furthermore, Strategic Policy S13 (Sustainable Transport) and its supporting policies (in particular Policy ST1 Sustainable Transport Proposals, as well as Policy PROW1 Public Rights of Way) will help contribute to climate change mitigation through reducing emissions linked to transportation. This will be achieved through promoting and prioritising active travel and public transport over private vehicular transport, thus reducing the number of vehicles on the road.
- 8.13.15 Additionally, Strategic Policy S3 (Sustainable Placemaking and High Quality Design) will contribute to climate change adaptation and mitigation. This is due to its focus on incorporating a green infrastructure-led approach and minimising the need to travel, and promoting sustainable transportation. This will reduce the number of vehicles on the road, and increase carbon

capture and storage levels. Policy GT1 (Gypsy, Traveller and Showpeople Sites) outlines the need for accommodation sites to be removed from areas at high risk of flooding – thus reducing the potential for flood impacts on structures. Finally, the identification of new employment sites under Policy EA1 (Employment Allocations), and the protection of existing sites under Policy EA2 (Protected Employment Sites) will likely reduce the need to travel out of settlements to access work opportunities, which will contribute to reducing emissions linked to transportation.

Cumulative effects

- 8.13.16 In terms of climate change adaptation there does not appear to be notable potential for negative cumulative effects from development in Monmouthshire in combination with development in neighbouring plan areas. Although significant areas of fluvial flood risk permeate the County, in alignment with the major watercourses which flow to the Severn estuary to the south, there is a presumption in PPW against development in Flood Zone C2, the highest risk zone. This is augmented by the revised draft Technical Advice Note 15 (TAN15) which emphasises that *“In Zone 3 (Rivers and Sea), allocations for residential and other highly vulnerable development must not be made as the risks and consequences of flooding are not considered acceptable for these types of development.”* This will help ensure that development in Monmouthshire will be part of a regional and national picture of development which is directed away from areas at high risk. In this sense effects from the Deposit Plan in combination with surrounding authorities are likely to be neutral.
- 8.13.17 Additionally, the PPW presumption against such development is likely to ensure that development upstream from Monmouthshire in neighbouring authorities will be directed away from high-risk areas, thereby minimising interference in the natural flow of watercourses through the County. The Deposit Plan does not direct development to locations which could have impacts further downstream in neighbouring plan areas. For example, in the context of PPW and TAN15 development at Usk will be unlikely to be of a scale or at sites which could impact the River Usk downstream as it flows through Newport.
- 8.13.18 In terms of climate change mitigation there is greater potential for cumulative effects. As noted in the discussions of air quality and of transport, positive effects are anticipated from proposed expansion of the SE Metro throughout the Cardiff Capital Region, including in Monmouthshire. This includes enhanced rail connectivity between Cardiff and Abergavenny and Chepstow, and bus rapid transit between Cardiff and Monmouth. This will likely contribute to a modal shift away from high emitting transport modes towards sustainable travel. However, regional growth along major road arteries, such as growth in Newport along the M4 corridor and growth in Blaenau Gwent along the A465 corridor, could introduce additional road users as well.
- 8.13.19 The Cardiff Capital Region City Deal states an ambition for the ten authorities in the Cardiff Capital Region to come together to deliver strategic solutions for the region, including in relation to renewable energy. The City Deal identifies that regional development will present opportunities to deliver *“renewable energy-led regeneration and housing programmes”*. In this

context there is theoretical potential for positive in-combination effects, particularly as larger-scale development can give rise to opportunities to minimise per capita emissions from the built environment over-and-above a strategy involving dispersal of housing growth across smaller sites. It is recognised that development proposed through the adopted plans of the Brecon Beacons National Park, Forest of Dean, and Herefordshire could demonstrate particular locational/ site specific opportunities in respect of minimising per capita built environment and transport emissions.

8.13.20 There could also be potential to explore strategic low-carbon opportunities from development in the south of Monmouthshire in combination with the strategic Eastern Expansion Area in Newport.

Summary of likely effects

8.13.21 At this time, **neutral effects** are considered most likely in relation to climate change adaptation. This reflects the allocation of strategic sites at little to no risk of flooding. This conclusion is also based on the policy provisions of the RLDP, including those under Strategic Policy S4 (Climate Change), which seek to reduce flood risk across Monmouthshire.

8.13.22 In terms of climate change mitigation, **minor negative effects** are concluded most likely at this time. Though the RLDP includes policy stipulations to help reduce emissions (including active and public transportation, green infrastructure provision, and encouraging containment within settlements), the level of growth proposed through the housing policies is significant and will increase emissions across Monmouthshire.

9. Conclusions and Recommendations

- 9.1.1 The overall conclusions for each ISA theme are presented in this Chapter. At this later stage of plan-making no recommendations are identified, recognising that earlier iterations of the ISA have informed plan development.

ISA theme	Conclusion
Economy and employment	Overall, the employment land protections and provisions, alongside well-connected housing and town / local centre development are considered likely to lead to significant positive effects for this ISA theme. Additional provisions that seek to improve the local environment and sustainable and active travel connections will also bolster positive effects and support the rural economy and tourism growth.
Population and communities	Considering the above, it is anticipated that implementation of the RLDP will likely lead to significant positive effects . This is due to its support of building sustainable and resilient communities across Monmouthshire and tackling the affordable housing challenge. This also reflects the focus of the RLDP on bringing forward different housing development (various types and tenures) in well-connected areas to meet the varying needs of the population.
Health and wellbeing	Overall, it is considered that the RLDP will have significant positive effects on the health and wellbeing of Monmouthshire's population. This is through supporting development within proximity to key services and facilities in the higher tier settlements of Monmouth, Abergavenny, Chepstow and Caldicot. It also reflects the focus of the wider policies on bringing forward new infrastructure to support physical and mental health, for example green and blue infrastructure. This will ensure a continued high-quality service of resources in Monmouthshire.
Equalities, diversity, and social inclusion	Considering the above, it is anticipated that significant positive effects will come forward as a result of the RLDP for this ISA theme. This is due to the focus on protecting existing and supporting new infrastructure in the neighbourhood area, thereby safeguarding, and improving access to important services and facilities. It also reflects policy requirements for development that promotes accessible and inclusive places. The strategic allocations for housing development also contribute to equalities, diversity, and social inclusion – linked to their ability to provide a significant number of affordable houses that are supported by existing infrastructure within the primary settlements.

ISA theme	Conclusion
Transport and movement	<p>Considering the above, significant positive effects are concluded likely for the transportation and movement ISA theme under the RLDP. This reflects the focus on bringing forward strategic allocations in settlements with a good distribution of services and facilities and transportation infrastructure.</p> <p>Furthermore, there is a focus on prioritising existing public rights of way and active transportation infrastructure and enhancing the network where appropriate. This will likely contribute to reducing the reliance on private vehicles to move around the area and will help support the transportation network in Monmouthshire.</p>
Natural resources (air, land, minerals and water)	<p>In summary, the plan includes a good level of provision for mineral safeguarding and water quality and works well to reduce impacts on air quality. However, it is noted there is a need to conserve greenfield sites. It is recognised there are limited brownfield opportunities within Monmouthshire, and the plan works well to allocate strategic sites within settlement boundaries and adjacent to built up areas. However, at this time, significant negative effects are concluded likely for the impact on natural resources, due to the substantial (and unavoidable) loss of greenfield and agricultural land.</p>
Biodiversity and geodiversity	<p>Considering the above and with nutrient neutrality solutions now in place, minor positive effects are considered most likely for the biodiversity and geodiversity ISA theme under the RLDP. This is due to the policy framework avoiding adverse impacts on important sites for biodiversity, and the focus of the plan on bringing forward net gains and improving ecological connectivity.</p>
Historic environment	<p>At this time, minor negative effects are concluded most likely under the RLDP for this ISA theme. This reflects the proximity of site allocations to heritage features, and their potential to impact upon the historic environment where the design and layout of development will be crucial to minimise negative effects, as guided by the Deposit Plan policies. There are also notable policy provisions included under the RLDP, which will directly and indirectly benefit the historic environment by protecting specific features and enhancing the wider setting they are located within.</p>

ISA theme	Conclusion
Landscape	<p>At this time, minor negative effects are considered most likely in relation to the landscape ISA theme. Whilst development will impact upon landscape character and quality in Monmouthshire, the RLDP works well to reduce this impact by allocating sites within settlement boundaries and outside of landscape designations. Furthermore, the development policies and wider policy provisions under the RLDP work to maintain and enhance landscape character and quality – for example, through green infrastructure provision and resisting development in the open countryside. Despite this, considerable greenfield loss will impact the landscape cumulatively.</p>
Climate change (including flood risk)	<p>At this time, neutral effects are considered most likely in relation to climate change adaptation. This reflects the allocation of strategic sites at little to no risk of flooding. This conclusion is also based on the policy provisions of the RLDP, including those under Strategic Policy S4 (Climate Change), which seek to reduce flood risk across Monmouthshire.</p> <p>In terms of climate change mitigation, minor negative effects are concluded most likely at this time. Though the RLDP includes policy stipulations to help reduce emissions (including active and public transportation, green infrastructure provision, and encouraging containment within settlements), the level of growth proposed through the housing policies is significant and will increase emissions across Monmouthshire.</p>

10. Next Steps and Monitoring

10.1 Next steps

10.1.1 This ISA Report will accompany the Deposit Plan for public consultation. Any comments received will be reviewed and considered as part of the iterative plan-making and ISA process and inform the submission RLDP.

10.2 Monitoring

10.2.1 Table 10.1 table below outlines the proposed monitoring for the RLDP. This will be refined in the ISA Adoption Statement.

Table 10.1: Proposed ISA monitoring programme for the RLDP

ISA theme	Proposed monitoring measure
Economy and employment	<ul style="list-style-type: none"> • Overall employment and unemployment rate. • Net additional employment floorspace. • Net additional floorspace of commercial development by location. • Net improved quality employment floorspace. • Annual tourism income. • Net additional tourism development by location and type.
Population and communities	<ul style="list-style-type: none"> • Five-year housing land supply. • Number of pitches for travellers and travelling showpeople provided. • Regular updates to the Gypsy, Traveller and Travelling Showpeople Accommodation Assessment. • Number of affordable homes completed in the reporting year. • Number of homes completed by type and bedroom size in the reporting year. • Number of homes completed providing specialist accommodation in the reporting year. • Number of self-build/ custom build homes completed in the reporting year.
Health and wellbeing	<ul style="list-style-type: none"> • Area of new accessible natural spaces provided through development proposals. • Areas of improved access to natural green spaces provided through development proposals. • New active travel connections by location. • Loss/ gain of public open space by type. For example, park, children's playground, allotments.
Equalities, diversity, and social inclusion	<ul style="list-style-type: none"> • Indices of multiple deprivation scorings.

ISA theme	Proposed monitoring measure
Transport and movement	<ul style="list-style-type: none"> • Road junction improvements. • Improvements in accessibility scoring by location for walking and cycling. • Improvement in public transport networks. • Transport Plans agreed by location and land use type. • Additional kilometres of Public Rights of Way.
Natural resources (air, land, minerals, and water)	<ul style="list-style-type: none"> • Continued air quality monitoring data at air quality monitoring locations. • AQMA revocations. • Area of contaminated land remediated in reporting year. • Number and location of schemes implemented with sustainable drainage serving existing as well as new development. • Number and location of development including watercourse re-naturalisation or flood storage areas. • Number and location of development schemes affecting mineral safeguarding areas. • Area and location of brownfield redevelopment in the reporting year. • Loss of agricultural land by grade. • Area of greenfield development in the reporting year. • Number and location of developments contributing to maintenance of water infrastructure. • Number and location of non-domestic schemes achieving a reduction in water usage over the baseline.
Biodiversity and geodiversity	<ul style="list-style-type: none"> • Action Plan targets that monitor and manage the impacts of growth on internationally designated sites (SACs/ SPAs/ Ramsar) • Net gains/ losses of buffer land and alternative green space by function that reduce pressures of growth designated sites. • Net gain/ loss of habitat arising from development proposals. • New linkages between habitats by location.
Historic environment	<ul style="list-style-type: none"> • Number, type, and location of approved development impacting on a heritage asset. • Number of heritage assets improved and raised out of the 'at risk' category.
Landscape	<ul style="list-style-type: none"> • Positive landscape impact assessments on proposals approved.

ISA theme	Proposed monitoring measure
Climate change (including flood risk)	<ul style="list-style-type: none"><li data-bbox="592 232 1378 309">• Negative landscape impact assessments on proposals refused.<li data-bbox="592 322 1378 398">• New developments containing electric vehicle charging points by land use type.<li data-bbox="592 412 1378 488">• Number, location, and type of proposals achieving low carbon design.<li data-bbox="592 501 1378 577">• Number of decentralised low carbon and renewable energy schemes approved in development.<li data-bbox="592 591 1378 667">• Approvals of development in Flood Risk Zones 2, 3a, and 3b by use class and flood risk compatibility.<li data-bbox="592 680 1378 725">• Refusals of development in Flood Risk Zones 2, 3a, and 3b.

Appendix A – Regulatory requirements

As discussed in Chapter 1 of the main report, Schedule 2 of the Environmental Assessment of Plans Regulations 2004 explains the information that must be contained in the ISA Report; however, interpretation of Schedule 2 is not straightforward. **Table A** links the structure of this report to an interpretation of Schedule 2 requirements, whilst **Table B** explains this interpretation. **Table C** provides a checklist of where and how the requirements have been met in this report.

Table A: Questions answered by the ISA Report, in accordance with an interpretation of regulatory requirements

Report section	Questions answered	Regulatory requirement met
Introduction	What is the plan seeking to achieve?	<ul style="list-style-type: none"> An outline of the contents, main objectives of the plan, and relationship with other relevant plans and programmes.
	What is the scope of the ISA?	<ul style="list-style-type: none"> Relevant environmental protection objectives, established at international or national level. Any existing environmental problems which are relevant to the plan including those relating to any areas of a particular environmental importance. Relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan. The environmental characteristics of areas likely to be significantly affected. Key environmental problems/ issues and objectives that should be a focus of (i.e., provide a 'framework' for) assessment.
Part 1	What has plan-making/ ISA involved up to this point?	<ul style="list-style-type: none"> Outline reasons for selecting the alternatives dealt with (and thus an explanation of the 'reasonableness' of the approach). The likely significant effects associated with alternatives. Outline reasons for selecting the preferred approach in light of the alternatives assessment/ a description of how environmental objectives and considerations are reflected in the Plan.
Part 2	What are the ISA findings at this current stage?	<ul style="list-style-type: none"> The likely significant effects associated with the Plan. The measures envisaged to prevent, reduce, and offset any significant adverse effects of implementing the Plan.
Part 3	What happens next?	<ul style="list-style-type: none"> A description of the monitoring measures envisaged.

Table B: Questions answered by the SA Report, in accordance with regulatory requirements

<u>Schedule 2</u>	<u>Interpretation of Schedule 2</u>	
<i>The report must include...</i>	<i>The report must include...</i>	
1. an outline of the contents, main objectives of the plan and relationship with other relevant plans and programmes;	An outline of the contents, main objectives of the plan and relationship with other relevant plans and programmes	i.e. answer - <i>What's the plan seeking to achieve?</i>
2. the relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan	Any existing environmental problems which are relevant to the plan including, in particular, those relating to any areas of a particular environmental importance	i.e. answer - <i>What's the 'context'?</i>
3. the environmental characteristics of areas likely to be significantly affected;		
4. any existing environmental problems which are relevant to the plan or programme including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to Directives 79/409/EEC and 92/43/EEC;	The relevant environmental protection objectives, established at international or national level	i.e. answer - <i>What's the 'baseline'?</i>
5. the environmental protection objectives, established at international, Community or Member State level, which are relevant to the plan and the way those objectives and any environmental considerations have been taken into account during its preparation;	The relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan'	
6. the likely significant effects on the environment including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors;	The environmental characteristics of areas likely to be significantly affected	i.e. answer - <i>What are the key issues & objectives?</i>
	Any existing environmental problems which are relevant to the plan including, in particular, those relating to any areas of a particular environmental importance	
7. the measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan;	Key environmental problems / issues and objectives that should be a focus of appraisal	i.e. answer - <i>What has Plan-making / SA involved up to this point?</i> [Part 1 of the Report]
8. an outline of the reasons for selecting the alternatives dealt with and a description of how the assessment was undertaken including any difficulties (such as technical deficiencies or lack of know-how) encountered in compiling the required information	An outline of the reasons for selecting the alternatives dealt with (i.e. an explanation of the 'reasonableness of the approach')	
9. a description of the measures envisaged concerning monitoring.	The likely significant effects associated with alternatives, including on issues such as... ... and an outline of the reasons for selecting the preferred approach in light of the alternatives considered / a description of how environmental objectives and considerations are reflected in the draft plan.	i.e. answer - <i>What are the assessment findings at this current stage?</i> [Part 2 of the Report]
	The likely significant effects associated with the draft plan	
	The measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects of implementing the draft plan	i.e. answer - <i>What happens next?</i> [Part 3 of the Report]
	A description of the measures envisaged concerning monitoring	

i.e. answer - What's the scope of the SA?

Table C: ‘Checklist’ of how (throughout the SA process) and where regulatory requirements are or will be met.

Regulatory requirement	Discussion of how the requirement is met
Schedule 2 requirements:	
1. An outline of the contents, main objectives of the plan or programme, and relationship with other relevant plans and programmes.	Chapter 2 (‘What’s the plan seeking to achieve’) presents this information. The relationship with other plans and programmes is also set out in scoping information (available separately).
2. The relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan or programme.	These matters were considered in detail at the scoping stage, which included consultation on a Scoping Report published in 2018. The outcome of scoping was an ‘ISA Framework’, and this is presented within Chapter 3 (‘What’s the scope of the ISA’). More detailed messages are reported in the Scoping Report
3. The environmental characteristics of areas likely to be significantly affected.	
4. Any existing environmental problems which are relevant to the plan or programme including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to Directives 79/409/EEC and 92/43/EEC.	
5. The environmental protection objectives established at international, national, or community level, which are relevant to the plan or programme and the way those objectives and any environmental considerations have been taken into account during its preparation.	The Scoping Report (2018) presents a detailed context review and explains how key messages from the context review (and baseline review) were then refined to establish an ‘ISA framework’. The scoping information is presented in the Scoping Report. The context review informed the development of the ISA framework and topics, presented in Chapter 3, which provide a methodological ‘framework’ for appraisal. With regards to explaining “how... considerations have been taken into account” - <ul style="list-style-type: none"> • Chapter 5 explains how reasonable alternatives were established in-light of available evidence. • Chapter 6 sets out the detailed appraisal of alternative options. • Chapter 7 explains the Council’s ‘reasons for supporting the preferred approach’, i.e., explains how/ why the preferred approach is justified in-light of alternatives appraisal (and other factors). • Chapter 8 sets out the findings of the appraisal of the draft plan and Chapter 9 provides a summary of the findings and any recommendations.
6. The likely significant effects on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape, and the interrelationship between the above factors. (Footnote:	<ul style="list-style-type: none"> • Chapter 5 explains how reasonable alternatives were established in-light of available evidence. • Chapter 6 sets out the detailed appraisal of reasonable alternatives. • Chapter 8 sets out the findings of the appraisal of the draft plan and Chapter 9 provides a summary of the findings and any recommendations.

Regulatory requirement**Discussion of how the requirement is met**

these effects should include secondary, cumulative, synergistic, short-, medium-, and long-term, permanent and temporary, positive and negative effects).

As explained within the various methodology sections, as part of appraisal work, consideration has been given to the ISA scope, and the need to consider the potential for various effect characteristics/ dimensions.

7. The measures envisaged to prevent, reduce, and as fully as possible offset any significant adverse effects on the environment of implementing the plan or programme.

Where necessary, mitigation measures are identified within the alternatives appraisal (in Chapter 6 and Appendices B - D) and appraisal of the Plan (Chapters 8 and 9).

8. An outline of the reasons for selecting the alternatives dealt with, and a description of how the assessment was undertaken including any difficulties (such as technical deficiencies or lack of know-how) encountered in compiling the required information.

Chapter 5 deals with 'Reasons for selecting the alternatives dealt with', in that there is an explanation of the reasons for focusing on particular issues/ options.

Also, Chapter 7 explains the Council's 'reasons for selecting the preferred option' (in light of alternatives appraisal). Methodology is discussed at various places, ahead of presenting appraisal findings, and limitations/ assumptions are also discussed as part of appraisal narratives.

9. A description of the measures envisaged concerning monitoring in accordance with Article 10.

Monitoring measures are set out in Chapter 10.

10. A Non-Technical Summary of the information provided under the above headings.

A Non-Technical Summary (NTS) is provided separately.

The ISA Report must be published alongside the Draft Plan, in accordance with the following regulations: Authorities with environmental responsibility and the public, shall be given an early and effective opportunity within appropriate time frames to express their opinion on the Draft Plan or programme and the accompanying SA Report before the adoption of the plan or programme (Art. 6.1 and 6.2).

At the current time, this ISA Report is being published alongside the Deposit Plan for public consultation.

The ISA Report must be taken into account, alongside consultation responses, when finalising the Plan. The SA Report prepared pursuant to Article 5, the opinions expressed pursuant to Article 6, and the results of any transboundary consultations entered into pursuant to Article 7, shall be taken into account during the preparation of the plan or programme and before its adoption or submission to the legislative procedure.

The Council will take into account this Interim SA Report when preparing the submission version of the Local Plan for examination.

Appendix B – ISA of level of growth options

Linked to Chapters 5 and 6, this appendix provides the detailed assessment of the level of growth options. The level of growth options are detailed in Table AB.1.

Methodology

For each of the strategic options, the assessment examines likely significant effects on the baseline, drawing on the sustainability objectives and topics identified through scoping (see Table 3.1 in the main report) as a methodological framework.

Every effort is made to predict effects accurately; however, this is inherently challenging given the high-level nature of the options under consideration. The ability to predict effects accurately is also limited by understanding of the baseline (now and in the future under a 'no plan' scenario). In light of this, there is a need to make considerable assumptions regarding how scenarios will be implemented 'on the ground' and what the effect on particular receptors would be. Where there is a need to rely on assumptions in order to reach a conclusion on a 'significant effect' this is made explicit in the appraisal text.

It is important to note that effects are predicted considering the criteria presented within Regulations. So, for example, account is taken of the duration, frequency, and reversibility of effects. Cumulative effects are also considered (effects of the plan in combination with the effects of other planned or on-going activity that are outside the control of Monmouthshire County Council).

Based on the evidence available a judgement is made if there is likely to be a significant effect. Where it is not possible to predict likely significant effects on the basis of reasonable assumptions, efforts are made to comment on the relative merits of the alternatives in more general terms and to indicate a rank of preference. The number indicates the rank and does not have any bearing on likely significant effects. This is helpful, as it enables a distinction to be made between the alternatives even where it is not possible to distinguish between them in terms of 'significant effects'. For example, if an option is ranked as 1 then it is judged to perform better against that ISA topic compared to an option that is ranked 2 or 3 and so on.

Table AB.1: Level of growth options

Growth option	Type of scenario	Population change 2018-2033	Population change %	Average net migration per annum	Household change 2018-2033	Household change %	Dwellings per annum	Dwellings 2018-2033	Jobs per annum	Jobs 2018-2033
Existing Preferred Strategy growth Population-led (with added policy assumptions) (PG Long Term (adjusted) (5yr) (MR, CR_R), CH)	Demographic	12,443	13.2%	1,216	7,255	18.1%	507	7,605	481	7,215
Demographic led strategy for the LPA area Population-led (with added policy assumptions) (PG Long Term (adjusted) (5yr) (MR, CR_R)	Demographic	9,480	+10.9%	930	5,160	+14%	360	5,400	416	6,240

WG										
prescribed										
growth										
<i>Dwelling-led</i>										
<i>(WG prescribed</i>	Dwelling	8,050	+9.3%	830	3,900	+10.6%	285	4,280	286	4,290
<i>285 dpa)</i>										

Economy and employment

Options	Option 1 – Existing preferred strategy	Option 2 – Demographic-led strategy	Option 3 – WG prescribed growth
Rank	1	2	3
Significant effect?	Yes - positive	Yes - positive	No

Option 1 seeks to deliver a higher economic growth level than Options 2 and 3 and as a result, is expected to be best performing in relation to this ISA theme. The housing growth proposed alongside economic development also seeks to address potential demographic imbalances with growth in key working age groups. Option 1 is likely to support the retention of younger age groups and reduce out-commuting through growth with high levels of sustainable local access. Option 1 is also predicted to provide opportunities to encourage a more diverse and vibrant economy; notably providing opportunities associated with the Cardiff Capital Region City Deal, the SE Wales Metro, and the removal of the Severn Bridge toll. Considering these benefits to local economy and employment, significant long-term positive effects are anticipated under Option 1.

Option 2 would result in a growth in jobs of 416 pa, which would encourage greater indigenous business growth and encourage inward investment. This would contribute positively towards creating a thriving, well-connected, diverse economy and would assist in building sustainable and resilient communities.

Option 3 represents jobs growth at a lower rate than past delivery rates, and the demographic projections indicate a declining workforce (although there is some growth in the 30-44 age groups), as well as a declining customer base, under this option. The employment growth proposed eventually brings job levels in the County broadly in line with the average job level seen over the last 15 years, but not until the end of the Plan period. As a result, negative effects are considered likely, with Option 3 therefore worst performing in this respect.

To summarise, there is an assumption that the higher the level of economic and housing growth, the greater the potential significance of positive effects. Option 1 therefore is considered likely to lead to positive effects of greatest significance, supporting a well-connected diverse economy, and is ranked highest. Significant positive effects are also predicted in relation to growth Option 2 as while the level of economic and housing growth is lower than Option 1, there remains net positive job creation and dwellings per annum. However, effects are likely to be negative under Option 3 given the overall decline in working age population in the county, and the option is ranked least favourably.

Population and communities

Options	Option 1 – Existing preferred strategy	Option 2 – Demographic-led strategy	Option 3 – WG prescribed growth
Rank	1	2	3
Significant effect?	Yes - positive	Yes - positive	No

The latest Monmouthshire Annual Monitoring Report of the Adopted LDP (2022-2023) shows that the annual level of housing completions monitored against the Average Annual Requirement (AAR) is no longer recorded, given the 10 year housing requirement of 4,500 units was reached in March 2021. However, it does show that the total cumulative completions monitored against the cumulative requirement (Cumulative AAR) is underdelivering. As such, it is considered that options 1 and 2 would perform positively in terms of contributing towards meeting and sustaining sufficient land supply for the forthcoming Plan period, supporting the future vitality of communities. Option 3 however would deliver limited residential allocations, performing least positively in this respect.

Options 1 to 3 deliver gradually decreasing levels of growth, and it is assumed that as the level of growth increases, so does the ability to address historic under-delivery, and deliver a greater range/ mix of new homes to help meet the needs of all residents in the County, including affordable housing. Higher levels of growth also increase the potential for accessibility improvements and other community benefits associated with development, including new and improved service and facility provision, extended green infrastructure, transport and infrastructure upgrades, new open spaces, and an improved public realm. Option 1 therefore performs most positively in this respect, followed by Option 2.

The delivery of community benefits will be particularly important in addressing potential future demographic imbalances, and modelling suggests that natural balances are more likely to be achieved with the growth levels proposed under Option 1. Under this higher growth option, growth in younger age brackets, particularly those of working age, balance out the effects of an ageing population, and new development provides the opportunity to address the changing needs of residents in this respect.

While high growth proposed through Option 1 presents the potential to deliver a greater level of infrastructure improvements, the option, given the scale of growth in the context of the County, may also place increased demands on existing infrastructure. Notably, in terms of education, Option 1 would likely result in a significant growth in the number of school aged children, placing more pressure on the capacity of existing schools. However, the level of housing delivery would provide a substantial opportunity to secure additional provision through planning gain to fund extensions and/ or new schools. Conversely, lower growth proposed through Option 3 would likely lead to an unbalanced demographic, and likely see falling school numbers which could in turn result in the closure of schools. Finally, in terms of

Option 2, it is recognised that while the level of growth from younger age groups is at a low level, a more balanced demography has the potential to secure a level of new infrastructure and support balanced communities.

Taking the above into account it is considered that as the level of growth increases so does the likelihood for positive effects of significance. Option 1 would provide a greater range of new homes to meet the predicted increased population and affordable housing needs and is therefore more likely to have a residual significant effect when considered against Options 2 and 3. Option 1 is ranked most favourably accordingly, however, it is noted with Option 1 that there is a need to manage the impacts of growth on local infrastructure capacity so that it does not place unnecessary burdens on existing infrastructure. Option 2 also has the potential to reduce burdens in this respect, but notably will deliver less growth than Option 1 leading to positive effects of less significance. Option 3 is the worst performing as would lead to an unbalanced demographic with limited opportunities to build sustainable communities and support the County’s younger population. Any effects are therefore likely to be minor in nature.

Health and wellbeing

Options	Option 1 – Existing preferred strategy	Option 2 – Demographic-led strategy	Option 3 – WG prescribed growth
Rank	1	2	3
Significant effect?	Yes - positive	Yes - positive	No

At the time of the 2021 Census, 46.4% of Monmouthshire residents felt that they were in ‘very good health’ (Wales 46.2%), whilst 4.4% felt that they were in ‘bad health’ (Wales 5.3%). This reflects the 2021/2022 data on lifestyle and behavioural choices for adults in Wales, which shows that Monmouthshire has a lower proportion of smokers, e-cigarette users, and those who are overweight and/ or obese.²⁹ However, Monmouthshire has a higher percentage (23%) of those who consume more than 14 units of alcohol on a weekly basis, which was higher by 7% than in the Aneurin Bevan Health Board area and Wales.³⁰ The 2019 WIMD health domain further highlights deprivation relating to the lack of good health. In Monmouthshire, there are 20 LSOAs in the 50% most deprived, 5 LSOAs in the 30% most deprived, and 2 LSOAs in the 20% most deprived.

In terms of access to the countryside, green/ open spaces, it could be suggested that as the level of growth increases so does the potential for accessibility to be reduced in this respect; for example where countryside is lost at settlement edges. However, this is dependent on the

²⁹ StatsWales (2022) Adult lifestyles by local authority and health board [online] available at: <https://statswales.gov.wales/Catalogue/National-Survey-for-Wales/Population-Health/Adult-Lifestyles/adultlifestyles-by-healthboard-from-202021>

³⁰ Ibid

exact location of development and therefore effects are uncertain under all options at this stage. Furthermore, the higher level of growth under Option 1 could increase pressure on existing health services; and it is recognised that Monmouthshire has one main hospital, Nevill Hall Hospital in Abergavenny. Despite this, there are certain health benefits associated with growth and development. This includes the potential for new or improved community services and facilities supporting growth in the County, including healthcare, public spaces, green infrastructure and retail and leisure. Further, development which delivers transport and infrastructure upgrades, including active travel upgrades, can improve accessibility and safety for residents. The importance of improved connectivity and accessibility to local facilities and open space, in light of the recent pandemic, highlights the potential for higher growth under Option 1, and to a lesser extent Option 2, to support more positive health outcomes than Option 3. However, there is also a need to manage the impacts of growth on local infrastructure capacity to ensure that no unnecessary burdens are placed on existing infrastructure. Option 1 followed by Option 2 will likely ensure communities are balanced, healthy, and socially sustainable, with the potential for significant long term positive effects.

Lower growth proposed through Option 3 could negatively impact on communities and exacerbate negative health implications by providing limited opportunities for job creation or improvements to existing services and facilities. The unbalanced demographic and low level of dwelling and job creation provides little opportunity to support social sustainability and balanced communities. While negative effects are unlikely to be significant under Option 3, Option 3 nonetheless performs least favourably of all options.

Equalities, diversity, and social inclusion

Options	Option 1 – Existing preferred strategy	Option 2 – Demographic-led strategy	Option 3 – WG prescribed growth
Rank	1	2	3
Significant effect?	Yes - positive	Yes - positive	No

At this stage the location of growth is not known, as a result it is difficult to determine how specific communities and protected characteristics are likely to be affected by the Options. As indicated through the appraisal under other themes, increased levels of growth provide an opportunity to deliver a greater mix of housing and employment to meet the needs of all members of the community. There is also the potential to deliver greater improvements to community infrastructure and the public realm, but this is uncertain at this stage. In this context, a higher level of growth could help to address areas of deprivation depending on where it is located. Furthermore, a higher level of growth could also be more likely to meet the needs of people across a wider area of the County; however, again this would be dependent on the preferred spatial strategy.

Whilst lower growth could be argued to help protect the identity of existing communities, Option 3 has the potential to impact negatively on the age profile of the County leading to an unbalanced demographic, with the continuation of an ageing population over the Plan period. Under Option 3 there will be limited opportunities for the younger population to live and work in the County, through providing limited opportunities for job creation or improvements to existing services and facilities. This is likely to exacerbate inequality, in particular, the effects of rural isolation which will negatively impact groups with protected characteristics, such as the young, elderly and disabled, who tend to be disproportionately affected by accessibility issues. Difficulties in sustaining services/facilities across the County as well as limited opportunities to improve a range of infrastructure, including active travel and digital infrastructure would further increase deprivation issues, the significance of which has been particularly highlighted through the recent pandemic. As a result, Option 3 is predicted to lead to negative effects, though these effects are unlikely to be significant, the option is judged to perform least favourably of all options.

Higher growth under Option 1 would likely result in a more balanced demographic with an increase in the number of older and elderly people living in the County balanced against an increase in the younger age groups. Option 2 would also provide a more balanced demographic however it should be recognised there is some decline in the 20-29 age group. New development through Option 2 could provide opportunities to support the rural economy and address rural isolation and social inequality, but positive effects are likely to be greater in this respect through Option 1. Both Options 1 and 2 present opportunities to improve accessibility and reduce inequalities through an appropriate spatial strategy, delivering sustainable local communities.

Taking the above into account, both Options 1 and 2 have the potential to lead to significant positive effects through the delivery of new homes, jobs and community infrastructure that strategically improves accessibility and connectivity within the County. It is however recognised that Option 1 could enhance the significance of these effects through planning for more homes, and therefore Option 1 ranks highest overall.

Transport and movement

Options	Option 1 – Existing preferred strategy	Option 2 – Demographic-led strategy	Option 3 – WG prescribed growth
Rank	1	2	3
Significant effect?	No	No	No

At this stage, there is no evidence to suggest that the levels of growth proposed under any of the options would have a significant negative effect on the highway network. Whilst all options propose a level of growth that could lead to negative effects in terms of congestion, negative effects are not considered likely to be significant. Further, in light of the recent pandemic, it is likely that higher levels of homeworking will also prevail as a longer-term trend. Higher growth Option 1, followed by Option 2, further provide greater critical mass to enable more significant infrastructure improvements. This is particularly important given the wider ambitions to transition to a lower-emission infrastructure network, where development will be a key delivery vehicle for the technological and infrastructure advances which underpin the transition, such as expansion of the EV network, smart technologies, last mile deliveries and active travel networks including cycle route connectivity. Conversely, lack of employment opportunities and low housing growth levels under Option 3 would likely result in limited opportunities to enhance transport infrastructure, accessibility, active travel, and the use of sustainable transport options.

The nature and significance of the effects will ultimately be dependent on where the development is located as well as the infrastructure improvements that could be provided. If the additional residential development is located close to the main settlements, taking advantage of the services/ facilities and employment opportunities on offer, and main bus routes, then there is the potential to reduce levels of out-commuting, encourage the use of sustainable transport and therefore encourage a modal shift. Similarly, if growth were to be focussed to the south of the County/ Severnside along the M4 corridor, this would utilise good links to the M4 and other sustainable travel links including rail at Caldicot and Severn Tunnel Junction Train Stations. Growth to the south would also capitalise upon transport improvements such as the removal of the Severn Bridge toll and the ambitions and opportunities associated with the Cardiff Capital Region City Deal and the SE Wales Metro. If additional growth is located away from the main settlements and Severnside, in the rural areas, then this is likely to exacerbate the current trend of private vehicle use and increase traffic on the road network in the absence of significant interventions; given sustainable transport infrastructure is limited in these locations.

Considering the above, whilst no significant effects are predicted, much uncertainty remains about the overall performance of the options in relation to this ISA theme until the spatial strategy is more clearly defined. However, it is duly recognised that Options 1 and 2 have greater

potential for positive transport outcomes than the limited opportunities provided through Option 3, and the ranking of Options reflects this assumption.

Natural resources (air, land, minerals, and water)

Options	Option 1 – Existing preferred strategy	Option 2 – Demographic-led strategy	Option 3 – WG prescribed growth
Rank	3	2	1
Significant effect?	Uncertain	Uncertain	Uncertain

As the level of growth increases so does the likelihood for negative impacts on natural resources through the potential loss of greenfield/ agricultural land and mineral resources; reduced air quality as a result of increased traffic; and increased demand for water resources.

Most of the County's main settlements are surrounded by BMV (Grade 3a and above). Alongside soil resources, South Wales is well-endowed with aggregate resources and it has inherited over time a substantial volume of permitted reserves, although the reserves are often variable in terms of quality and location. There is one limestone quarry within Monmouthshire, the Ifton Quarry which whilst not currently worked could be worked in the future. Additional limestone resources exist in the southern part of the County, but in general, the area is sensitive in terms of environmental capacity. Furthermore, some parts of the limestone resource lie within the Wye Valley National Landscape (previously Area of Outstanding Natural Beauty, or AONB); MTAN1 (paragraph 49) indicates that no allocations should be made in respect of such areas. There are no significant sources of secondary aggregates in the area. Under the adopted Monmouthshire Local Development Plan Policy M2 (Minerals Safeguarding Areas), safeguarding zones are identified for sand and gravel and limestone resources within the County. A substantial part of the south of the County is affected by the limestone safeguarding area. The sand and gravel deposits are predominantly located in the Usk Valley.

It is considered that mineral landbank obligations could be met under all Options, though it is recognised that increasing levels of growth will put increasing pressure on safeguarded areas, particularly those that encroach upon settlements. The overall loss of agricultural land and mineral resources is uncertain at this stage as it will be dependent on the precise location of development and if the land is greenfield or brownfield. The quality of agricultural land will also play a role in determining the potential significance of effects.

While it is recognised that the provision of housing alongside employment could promote efficient use of land and use of brownfield sites, it is also recognised that brownfield land is sparse throughout the County, and most development is anticipated to take place on greenfield

land. In this respect, Option 3, that proposes a low level of growth, is considered to perform better against this theme as will require less land take. This is reflected in the ranking of Options, with Option 1 performing least positively given it proposes the highest level of growth.

Whilst air pollution is not a significant problem in Monmouthshire, air quality across the County varies with two Air Quality Management Areas (AQMAs) declared in Usk and Chepstow. It is therefore considered that the significance of effects in this respect will be dependent on the location of growth, and the implementation of appropriate mitigation measures. As discussed under the transportation ISA theme, with an increase in population it is considered that higher growth Options 1 and 2 have greater potential for negative effects than Option 3 in relation to congestion on the existing road network. However, no evidence suggests this will lead to effects of significance. Ultimately the spatial strategy should seek to reduce congestion pressures at AQMAs, and new development provides opportunities to address infrastructure upgrade requirements that support more efficient movement in the highways network and active travel. New development also provides opportunities to increase local accessibility, particularly access to employment opportunities, which can in turn support reduced levels of out-commuting and congestion and support a modal shift. A higher level of homeworking brought on by the recent pandemic is also considered likely to continue to some degree as a longer-term trend supporting reduced congestion and improved air quality. Considering this, whilst no significant effects are considered likely at this stage, the overall nature and significance of the effects in relation to air quality under all options remains uncertain until the precise location of development is known.

Water is supplied to Monmouthshire by Dwr Cymru/ Welsh Water (DCWW). They supply water via a large scale, multi-source, integrated network that is typical of many other water company areas. Monmouthshire falls within two Water Resource Zones (WRZs); Monmouth WRZ and the South East Wales Conjunctive Use System (SEWCUS) WRZ. The Monmouth WRZ supplies the market town of Monmouth and the surrounding villages. This WRZ is heavily dependent on the Mayhill abstraction from the River Wye at Monmouth. There is also a spring abstraction at Ffynnon Gaer which supplies a small localised area south of Monmouth. The SEWCUS supplies the majority of the County, and a significant proportion of the South East Wales Region. In total, there are over 40 resources that are used to supply the SEWCUS WRZ, which include a mixture of river abstractions from the larger rivers in the east of the WRZ and relatively small upland reservoir sources with small catchment areas. For both WRZs the total demand for water is forecast to remain relatively stable until 2030, with a decline in demand anticipated over the 2030-2050 planning period, and then to just 10% of current demands by 2050.³¹

Water companies are legally required to supply water to private consumers and businesses within their area. As set out in the Water Industry Act 1991, they must prepare and maintain a Water Resources Management Plan (WRMP) that sets out how the company intends to maintain the balance between water supply and demand. Water companies update their WRMPs every 5 years to take account of predicted growth and ensure that there are schemes in place to meet future demands. As the scale of growth proposed under the options increases so does the pressure on water resources. However, given the legal requirements in place for WRMPs, it is considered that there

³¹ Welsh Water (2019) Final Water Resources Management Plan 2019 <https://www.dwrcymru.com/en/My-Water/Water-Resources/Final-Water-Resources-Management-Plan-2019.aspx>

are no significant differences between the options in terms of effects on water resources. It is expected that development coming forward under any of the options can deliver water efficiency measures to support reduced water use per person per day.

There are 45 water bodies within Monmouthshire, 38 surface waters, such as rivers, lakes, canals and greens, and 7 groundwater bodies. 37 of these water bodies have been designated as protected areas, these are areas requiring special protection under other EC directives and waters used for the abstraction of drinking water. Not all water bodies are required to be assessed for chemical status, of the 15 in Monmouthshire which are required to be assessed 2 are failing to achieve good status, one groundwater and one river. The river that is failing is the section of the River Usk between the confluence with the River Gavenny and the confluence with the Olway Brook. The main reasons for the failures identified by these assessments have been identified as diffuse pollution from agriculture, low flows/ abstraction and physical modifications to watercourses, predominantly barriers to fish migration. In addition, there are some known urban diffuse sources from combined sewer overflows/ misconnections, affecting the Nedern Brook and the Gavenny River.

Option 1 proposes a high level of growth, and therefore could place increased pressure on sewerage infrastructure; with the potential for long term negative effects. The increased growth could have impacts on water quality through increased impermeable surfaces and transfer of pollutants, but it is considered that there is suitable mitigation available at a development management level to ensure that residual effects are not significant. Taking the above into account, it is considered that there are no significant differences between the options at this stage in terms of the water environment.

Biodiversity and geodiversity

Options

Option 1 – Existing preferred strategy

Option 2 – Demographic-led strategy

Option 3 – WG prescribed growth

Rank

3

2

1

Significant effect?

Uncertain

Uncertain

Uncertain

In terms of biodiversity and geodiversity the impacts will ultimately be dependent on the precise location of development. There are five European sites (Special Areas of Conservation (SAC), Special Protections Areas (SPA) or Ramsar sites) within the County; Severn Estuary SAC/ SPA/ Ramsar Site, River Wye SAC, River Usk SAC, Wye Valley Woodlands SAC, and the Wye Valley and Forest of Dean Bat sites SAC. Additionally, there are a further four European Sites within the Brecon Beacon National Park which must also be considered. These are Coed y Cerrig SAC, Cwm Clydach Woodlands SAC, Sugar Loaf Woodlands SAC, and Usk Bat Sites SAC. Further to this, Llangorse Lake/ Llyn Syfaddan SAC, in Powys, Avon Gorge Woodlands SAC and Aberbargoed Grassland SAC Caerphilly fall within 15km of Monmouthshire and could possibly be affected by growth proposed through the RLDP.

In terms of nationally designated sites, there are 50 SSSIs that fall wholly within the County. Most are woodland or grassland sites, with others designated for their wetland or geological interest, and a few designated for bat interest. It is noted that of these, 16 fall within the SACs listed above. Spatially, a significant proportion of the SSSIs are located to the north west of the County, within the Brecon Beacons National Park and surrounding Abergavenny. Fiddler's Elbow SSSI and Lady Park Wood SSSI are also the County's two National Nature Reserves (NNRs), located within the County, east of Monmouth. In terms of locally important biodiversity, there is one Local Nature Reserve (LNR) designated within the County; Cleddon Bog. There are also approximately 650 Sites of Importance for Nature Conservation (SINCs) (also known as Local Wildlife Sites (LWSs) designated within the County.

It is assumed that none of the Options would result in the loss of any international, national, or locally designated sites or lead to negative effects of significance in this respect. However, the decreasing level of growth under Options 1 to 3 is likely to require decreasingly less land take. As land take increases, there is likely to be wider habitat loss and fragmentation as well as increased pressure; notably disturbance (through recreation, noise, and light pollution), atmospheric pollution, and through impacts on water quality and resources. It is recognised that a HRA is currently being revised for the RLDP, which will determine the impact on the designated sites and their features. For the purposes of ranking the options, it is considered at this stage that Option 1, by proposing the highest level of growth has the greater potential for negative effects of significance in relation to designated sites. This is followed by Option 2, with the lowest growth Option 3 performing most positively in this respect. The ranking of Options reflects this assumption.

Despite this, it is recognised that higher levels of growth could also offer greater opportunities for delivering biodiversity net gain, creating new linkages through improvements to green infrastructure, securing and/ or enhancing ecological connectivity, public open space, and recreation provision through planning gain. However, this is uncertain at this stage as the location of development is not known. The nature and significance of residual effects will therefore ultimately be dependent on the exact location, design/ layout of development, the implementation of mitigation measures, and the sensitivity of receptors.

Overall, it is considered that effects are uncertain for all options, in the absence of known development locations. In terms of ranking the options, there is an assumption that as the level of growth increases through Options 2 and 1, so too does the potential significance of negative effects. Option 3 (lowest growth) is therefore ranked as the best performing option, and Option 1 (highest growth) worst; although it is recognised that an appropriate spatial strategy under any option could avoid significant negative effects arising.

Historic environment

Options	Option 1 – Existing preferred strategy	Option 2 – Demographic-led strategy	Option 3 – WG prescribed growth
Rank	3	2	1
Significant effect?	Uncertain	Uncertain	Uncertain

In terms of the historic environment the impacts will ultimately be dependent on the precise location and design of development. Monmouthshire has 31 Conservation Areas that are dispersed throughout the County. There are also 45 Historic Parks and Gardens varying considerably in size and character, three Landscapes of Outstanding Historic Interest, including Blaenavon Industrial World Heritage Site, and 164 Scheduled Monuments within Monmouthshire. There are also 2,149 listed buildings spread across the County.

While it is assumed that none of the Options would result in the loss of any designated heritage assets, all options have the potential to lead to significant negative effects, dependant entirely on the location of growth. In terms of ranking the options there is an assumption that the highest level of growth (Option 1) has the potential to result in greater levels of settlement expansion, loss of countryside at the settlement edge, affect views into and from settlements, which is particularly important for areas with designated conservation areas. Conversely effects in this respect could be lesser under low growth (Option 3). This is uncertain at this stage as the location of development is not known, but the ranking of options reflects these assumptions.

It is also highlighted that options delivering the highest levels of growth could also offer more opportunities to improve access to designated heritage assets or help to redevelop brownfield areas that are currently detracting from the historic environment. However, again this is uncertain at this stage. The nature and significance of residual effects will therefore ultimately be dependent on the exact location, design/ layout of development and the implementation of mitigation measures.

At this stage it is not possible to confirm any significant differences between the Options or conclude that they are likely to have significant effects on the historic environment. None of the Options are likely to have a significant effect on the Welsh language.

Landscape

Options	Option 1 – Existing preferred strategy	Option 2 – Demographic-led strategy	Option 3 – WG prescribed growth
Rank	3	2	1
Significant effect?	Uncertain	Uncertain	Uncertain

As for a number of other ISA themes, the nature and significance of effects on landscape/ townscape impacts will ultimately be dependent on the precise location and design of development. Monmouthshire has a rich and diverse landscape, incorporating part of the Wye Valley National Landscape to the east of Monmouthshire and part of the Brecon Beacons National Park to the north west. The portion of the Brecon Beacons National Park (BBNP) located in Monmouthshire covers some 14,880 hectares, which accounts for approximately 17% of the County. The part of the Wye Valley National Landscape located within Monmouthshire covers approximately 11,710 hectares and accounts for approximately 16% of Monmouthshire. There are also three landscapes of outstanding historic interest within Monmouthshire; including the Blaenavon Industrial World Heritage Site, the Gwent Levels and the Lower Wye Valley. A small portion of the Blaenavon World Heritage Site (approximately 20 hectares) lies within the Monmouthshire local planning area.

The decreasing levels of additional growth proposed under Options 1 to 3 are likely to require decreasing levels of land take. As such, highest land take under Option 1 is likely to place the greatest pressure on greenfield land resources, resulting in wider impacts on the landscape across the County. Given the limited brownfield land available in the County, it is considered that most additional growth will be delivered on greenfield land on the edge of existing settlements, placing increased pressure on the County’s landscape interests and rural character with the potential for long term negative effects. While effects are broadly uncertain at this stage as the location of development is not known, the ranking of options reflects these assumptions.

It is noted that the delivery of any additional growth in the more rural areas is also more likely to result in a residual negative effect of greater significance, but again, this is dependent on the sensitivity of the landscape and scale and design/ layout of development.

Alongside the potential for negative effects, it is recognised that there is also the opportunity for growth to deliver landscape enhancements; maximising opportunities to create new linkages through improvements to green infrastructure and ecological connectivity, and to secure and/or improve public open space and recreation provision through planning gain. Opportunities to deliver positive effects in this respect are considered to increase as the level of growth increases, but likely to be minor overall when considered in the context of greenfield development. As above, the nature and significance of effects will ultimately be dependent on the exact location, design/ layout of development, and the implementation of mitigation measures.

Considering the above, the overall effects remain uncertain for most Options. Despite this, the increased pressures on greenfield land and rural landscapes under higher growth Options 1 and 2 are reflected in the ranking of the Options.

Climate change (including flood risk)

Options	Option 1 – Existing preferred strategy	Option 2 – Demographic-led strategy	Option 3 – WG prescribed growth
Rank	1	2	3
Significant effect?	Uncertain	Uncertain	Uncertain

In terms of climate change mitigation, a higher level of growth will ultimately lead to increased levels of greenhouse gas (GHG) emissions. At this stage, no specific opportunities, that would help to significantly reduce per capita GHG emissions or deliver new low carbon or renewable energy infrastructure, are known. It is also assumed that development proposed under any of the options has the potential to incorporate renewable or low carbon energy.

However, higher growth options are noted for their greater potential to support infrastructure upgrades that reduce congestion and improve accessibility (particularly in terms of sustainable transport and active travel), and support a transition to lower-emission, and carbon neutral economies and networks. Further, the higher growth options are also considered for their greater potential to contribute to improved ecological connectivity, green infrastructure networks, open spaces, and urban greening measures which support improved climate resilience. As a result, higher growth options are considered for greater potential positive outcomes, and this is reflected in the ranking of options, with Option 1 performing most favourably overall.

In terms of climate change adaptation, it is assumed that susceptible development proposed under all options would be directed to areas of lower flood risk as per the requirements of sequential testing. It is also assumed that there is suitable mitigation available to ensure that the additional development does not increase flood risk, for example through the delivery of sustainable drainage systems in accordance with National Planning Policy and Sustainable Drainage (SUDs) legislation. Alongside the potential for negative effects, it is recognised that there is also the opportunity for growth to deliver landscape enhancements; maximising opportunities to create new linkages through improvements to green infrastructure and ecological connectivity, and to secure and/or improve public open space and recreation provision through planning gain. Opportunities to deliver positive effects in this respect are considered to increase as the level of growth increases, but likely to be minor overall when considered in the context of greenfield development. As above, the nature and significance of effects will ultimately be dependent on the exact location, design/ layout of development, and the implementation of mitigation measures.

Considering the above, the overall effects remain uncertain for all Options. Despite this, the increased pressures on greenfield land and rural landscapes under higher growth Options 1 and 2 are reflected in the ranking of the Options.

Appendix C – ISA of location of growth options

Linked to Chapters 5 and 6, this appendix provides the detailed assessment of the location of growth options. The location of growth options are detailed in Table AC.1. A comparative appraisal of the options has been carried out under each ISA Theme. The appraisal assumes that each option will deliver the same quantum of growth.

Methodology

For each of the strategic options, the assessment examines likely significant effects on the baseline, drawing on the sustainability objectives and topics identified through scoping (see Table 3.1 in the main report) as a methodological framework.

Every effort is made to predict effects accurately; however, this is inherently challenging given the high-level nature of the options under consideration. The ability to predict effects accurately is also limited by understanding of the baseline (now and in the future under a 'no plan' scenario). In light of this, there is a need to make considerable assumptions regarding how scenarios will be implemented 'on the ground' and what the effect on particular receptors would be. Where there is a need to rely on assumptions in order to reach a conclusion on a 'significant effect' this is made explicit in the appraisal text.

It is important to note that effects are predicted considering the criteria presented within Regulations. So, for example, account is taken of the duration, frequency, and reversibility of effects. Cumulative effects are also considered (effects of the plan in combination with the effects of other planned or on-going activity that are outside the control of Monmouthshire County Council).

Based on the evidence available a judgement is made if there is likely to be a significant effect. Where it is not possible to predict likely significant effects on the basis of reasonable assumptions, efforts are made to comment on the relative merits of the alternatives in more general terms and to indicate a rank of preference. The number indicates the rank and does not have any bearing on likely significant effects. This is helpful, as it enables a distinction to be made between the alternatives even where it is not possible to distinguish between them in terms of 'significant effects'. For example, if an option is ranked as 1 then it is judged to perform better against that ISA topic compared to an option that is ranked 2 or 3 and so on.

Table AC.1: Location of growth options

Option	Description
Option 1 – Continuation of the existing LDP Strategy	Growth would be distributed development around the County with a particular focus on Main Towns, with some development in Severnside and some development in the most sustainable rural areas to enable provision of affordable housing throughout the County. New residential development would be accompanied by new employment opportunities, where possible.
Option 2 – Distribute growth proportionately across the County's most sustainable settlements	Growth, including jobs and affordable housing, would be distributed across the County's most sustainable settlements, with the level of growth proportionate to that settlement's size and amenities, affordable housing need as identified in the LHMA, the capacity for growth and/or the need for development to sustain the community.
Option 3 – Focus growth on the M4 corridor	Growth would be predominately located in the South of the County in the Severnside area close to the M4/M48, to capitalise on its strategic links to the Cardiff Capital Region and South West England, existing economic opportunities and regional infrastructure connections, including via the South Wales Main rail line at Severn Tunnel Junction. Affordable Housing would be directed to those sustainable areas in the south of the County identified in the LHMA as having the greatest housing.
Option 4 – Focus growth in the north of the County	Growth would be predominantly located in the most sustainable Settlements within the North of the County to capitalise on its strategic links to the Heads of the Valleys and wider Cardiff Capital Region via the A465, and towards Herefordshire via the A449 and A40, along with rail links to Newport, Cardiff and the North via the Welsh Marches line. Affordable Housing would be directed to those sustainable areas in the north of the County identified in the LHMA as having the greatest housing.

Economy and employment

Options	Option 1 – Existing LDP Strategy	Option 2 – Proportionate growth	Option 3 – Focus on M4 corridor	Option 4 – Focus in north of County
Rank	1	1	2	2
Significant effect?	Yes - Positive	Yes - Positive	Uncertain	Uncertain

Monmouthshire's increasing ageing population and shrinking working age population is currently limiting employment growth throughout the County. This is exacerbated by limited job opportunities and limited public transport, particularly in rural areas, making it harder to access jobs, services and facilities.

Abergavenny, Caldicot, Chepstow, Magor Undy, Monmouth, Raglan and Usk, all provide a range of employment opportunities, which is evidenced by their higher levels of self-containment.³² The level of self-containment is a useful indicator of the number of people who live and work within the same settlement; providing significant potential for sustainable travel. Opportunities to maximise the self-containment of these settlements are more likely to be taken through Options 1 and 2 by focussing housing and employment growth towards these settlements. This will strengthen the local economy, ensuring an appropriate economic base to enable younger people to live and work locally within the County. It is considered that positive effects in this respect are also anticipated through all other Options; however, lower growth at these settlements may reduce positive effects in terms of promoting economic growth in the County's key centres.

Option 3 will lead to positive effects through responding to the recent removal of the Severn Bridge Tolls and the ambitions and opportunities associated with the Cardiff Capital Region City Deal and the South East Wales Metro. It seeks to capitalise upon the continuing economic growth of the Bristol/ South West region and the opportunities for Monmouthshire as a border County and its location between the 'Great Western Cities'. Directing growth close to the M4/ M48 will therefore provide residents with good access to economic opportunities throughout the region, utilising the infrastructure connections to the South of the County. In this context, it is recognised that the main concentrations of employment outside of the Primary Settlements are in the Severnside area, with the Primary Settlements and Severnside accounting between them for nearly 72% of all employment.³³ Directing growth to the South of the County therefore has the potential to deliver long term positive effects against this ISA theme.

³² Monmouthshire County Council (2019) Sustainable Settlement Appraisal (Draft) Update reference

³³ Business Register and Employment Survey 2017

Option 4 will, conversely, lead to positive effects through focussing growth in the most sustainable Settlements in the North of the County, capitalising upon its strategic links to the Heads of the Valleys. Like Option 3, Option 4 also seeks to take advantage of the wider Cardiff Capital Region via the A465, and towards Herefordshire via the A449 and A40, along with rail links to Newport, Cardiff and the North via the Welsh Marches line. Targeted growth in the North of the County therefore has the potential to lead to increased levels of self-containment, supporting sustainable communities at the most sustainable Settlements of North Monmouthshire. However, it is recognised that within Options 3 and 4, concentrating growth in either the South or North of the County would result in limited employment opportunities outside these areas, which would exacerbate existing high levels of out-commuting in other settlements (i.e. Abergavenny/ Llanfoist, Chepstow and Monmouth under Option 3, and Chepstow, Usk and Severnside under Option 4). Additionally, this may limit economic growth in the wider County and exacerbate existing demographic issues.

Another key issue for the County is the changing role of high streets. Changing shopping habits, the use of out of town retail centres and increased levels of internet shopping has resulted in increased vacancy rates in some of the County's main retail centres such as Abergavenny; impacting on local economic growth. The ongoing pandemic has also highlighted the importance of high streets and the need to protect the role and function of the high street in the local community. Technical Advice Note 4 (TAN 4) reiterates the important role that retail and commercial centres play in creating sustainable locations, seeking to ensure they have a positive future. It states that *...good access to and within, retail and commercial centres is key, both to the vibrancy of those places and to ensure that everyone in society has access to the wide variety of goods and services.* Options 1 and 2 will lead to positive effects in this respect, through supporting the existing centres; protecting their vitality and viability through increasing footfall, and supporting existing/ attracting additional facilities, in the main county towns. Conversely, Options 3 and 4 which direct growth towards certain centres and not others may further the trend of increasing vacancy rates on those centres where growth is not focussed, leading to negative effects against this ISA theme. Specifically, long term positive effects are anticipated where options support the regeneration of the County's main centres. Investing in existing centres through Options 1 and 2 will likely retain retail expenditure and attract inward investment, adapting positively to the changing role of the high streets throughout the County.³⁴

Tourism plays a significant role in the Monmouthshire economy, particularly in assisting in rural diversification. The County's historic town centres also attract tourists. All of the options could have a positive effect on tourism with Options 1 and 2 performing more strongly as growth is also directed to rural areas across the County.

Overall, Options 1, and 2 are likely to lead to positive effects of greatest significance; facilitating sustainable growth in accordance with the settlement hierarchy, addressing localised economic issues and supporting a well-connected diverse economy. There are some small differences between Options 1 and 2 in terms of how growth is distributed during the Plan period, but these differences are not significant

³⁴ Monmouthshire Retail Background Paper, 2018

enough to warrant one option being ranked higher or lower than the other. Comparatively Options 3 and 4 perform less well given they focus growth in one area of the County to the potential detriment of the other.

Population and communities

Options	Option 1 – Existing LDP Strategy	Option 2 – Proportionate growth	Option 3 – Focus on M4 corridor	Option 4 – Focus in north of County
Rank	1	1	3	2
Significant effect?	Yes - Positive	Yes - Positive	Uncertain	Uncertain

As a result of in-migration the population of Monmouthshire has shown a steady increase over a ten year period to 2011; the County has a negative natural change. All Options perform positively in terms of providing housing to meet the identified needs of the County, with Options 1 and 2 best performing in this respect. Options 1 and 2 would provide affordable housing throughout the settlement hierarchy, ensuring a range and choice of homes are delivered, particularly where there is a need for affordable housing, to assist in regaining a balanced population. In terms of Options 3 and 4, housing will be delivered to either the South of the County (Option 3) or the North of the County (Option 4) only, resulting in needs not being met across all housing market areas. Additionally, there is a need to consider the potential impact on house prices arising in this context, given the delivery of affordable homes will be focussed in either the South or the North, and not meet needs more widely.

In terms of addressing the wider needs of communities, Options 1 and 2 will deliver long term positive effects through focussing the majority of growth at the Primary Settlements and Severnside. It is considered that facilitating the provision of increased accessible services in these urban areas, supported by connective infrastructure, will meet local needs, recognising the role of these settlements as service hubs for their rural hinterlands. This will contribute positively towards encouraging younger people to reside in the County, and addressing issues surrounding accessibility for elderly residents. A level of housing will also be provided under Options 1 and 2 in Secondary Settlements, the Severnside area and some of the Rural Settlements. The Secondary Settlements offer services of a more local nature aimed at meeting the daily needs of their inhabitants and those living in the surrounding areas, while outside of these settlements are a large number of smaller settlements with a limited offer in terms of services and facilities. It is therefore recognised that delivering higher growth to these smaller rural settlements through Options 1 and 2 may place additional pressure on existing social infrastructure at these locations; notably health care facilities unless supported by new or enhanced infrastructure capacity.

Option 3 will lead to positive effects through capitalising upon the recent removal of the Severn Bridge Tolls and the ambitions and opportunities associated with the Cardiff Capital Region City Deal and the South East Wales Metro. Utilising these strategic economic links

will contribute positively towards delivering sustainable communities, achieving infrastructure improvements/ provision in the South of the County. Similarly, Option 4 will lead to positive effects through capitalising upon its strategic links to the Heads of the Valleys and wider Cardiff Capital Region via the A465, and towards Herefordshire via the A449 and A40, along with rail links to Newport, Cardiff and the North via the Welsh Marches line. Utilising these strategic economic links will contribute positively towards delivering sustainable communities, achieving infrastructure improvements/ provision in the North of the County.

However, concentrating growth in the South (Option 3) or the North (Option 4) would also result in limited investment in infrastructure/ facilities outside the targeted locations, which would exacerbate existing reliance on the car and high levels of out-commuting in other areas (i.e. Abergavenny/ Llanfoist, Chepstow and Monmouth under Option 3 and Chepstow, Caldicot, Usk and Magor under Option 4). Additionally, through Options 3 and 4, existing centres outside of the key development areas (namely the Severnside area (Option 3) and the most sustainable Settlements to the North (Option 4)) would not be supported, resulting in limited growth at these settlements. Rural areas in particular will be disadvantaged as they would not benefit from additional housing to help support existing facilities or attract additional facilities.

Page 72
 Consideration must also be given to the recent publication of the Future Wales The National Plan 2040 (Working Draft National Development Framework (NDF)) which indicates a desire to designate a Green Belt “around Newport and eastern parts of the region”. This is anticipated to include a large part of South Monmouthshire which may constrain future growth to some extent in this part of the County, although it is recognised that no main towns are considered to be within the Green Belt. Option 4 would accord with the direction of the Future Wales document, and therefore performs positively in terms of facilitating growth consistent with emerging National policy. Conversely the delivery of Option 3 would lead to negative effects; conflicting substantially with the Future Wales document through directing growth to the south where the Green Belt has been proposed. As all other Options seek to disperse growth throughout the County, and a defined location has not yet been established for the Green Belt, it is difficult to make any definitive conclusions on the nature and significance of effects at this stage.

Overall, Options 1 and 2 are considered to perform best as they provide sufficient housing and employment opportunities to meet identified housing and economic growth needs throughout the County. Further the options distribute housing in line with the settlement hierarchy, helping to meet the needs of all communities. There are some small differences between Options 1 and 2 in terms of how growth is distributed during the Plan period, but these differences are not significant enough to warrant one option being ranked higher or lower than the other. Comparatively Option 4 and in particular 3 perform less well due to the focus of growth in either the North or South of the County.

Health and wellbeing

Options	Option 1 – Existing LDP Strategy	Option 2 – Proportionate growth	Option 3 – Focus on M4 corridor	Option 4 – Focus in north of County
Rank	1	1	4	3
Significant effect?	Yes - Positive	Yes - Positive	Uncertain	Uncertain

In terms of improving the health and wellbeing of residents, Option 1 and 2 are anticipated to lead to long term positive effects through supporting and sustaining a hierarchy of vibrant town and village centres across the County. It is considered that the focus of growth in the Primary Settlements of Abergavenny, Chepstow and Monmouth, and Severnside settlements, would ensure sustainable access to a range of community services and facilities, including health, leisure and recreation; notably three of the four leisure centres in Monmouthshire are located in these Primary Settlements. Positive effects are therefore anticipated in terms of improving physical and mental health and wellbeing by encouraging healthier lifestyles, quality living environments and community cohesion. Positive effects in this respect are also anticipated through Option 4; however, the level of growth directed towards these settlements is likely to be less.

Whilst growth may place additional pressures on healthcare facilities, it is recognised that recent healthcare developments, such as the new critical care hospital in Cwmbran provides opportunities to support growth with enhanced sustainable healthcare care access in and around this location. Such opportunities are more likely to be capitalised upon under Options 1 and 2.

The delivery of Option 3 and Option 4 present the opportunity to capitalise upon regional infrastructure connections, and are considered to be well located in terms of access to health services. In this context, under Option 3 residents would be a reasonable distance from the Royal Gwent Hospital in Newport and the new critical care hospital in Cwmbran. Chepstow Community Hospital is also accessible, located to the east of the M4 corridor/ Severnside. Under Option 4, residents would also have good access to Nevill Hall Hospital. Through capitalising upon the strategic links to the Cardiff Capital Region and the provisions of the Capital Region Deal, Option 3 and Option 4 may also provide opportunity for achieving infrastructure improvements/ provision in the South of the County through Option 3, and the North of the County through Option 4, building more sustainable communities. However, under both Options, infrastructure provision would be limited in the rest of the County, which may exacerbate the existing deficiencies seen in many locations in relation to community and recreational facilities. This may contribute to rural isolation in certain areas; notably within smaller rural settlements outside of North Monmouthshire under Option 4.

All options have the potential to increase opportunities for healthy living by protecting and enhancing provision of multi-functional Green Infrastructure, public open space and recreation. The value and importance of having access to locally accessible open/ green spaces to

assist in recreation and health and wellbeing has been heightened during the current pandemic and should be reflected in growth strategies. Options 1 and 2 perform most positively in this respect as growth (and therefore green infrastructure provision) is delivered throughout Monmouthshire, aiding ecological connectivity throughout the County. This is compared to Options 3 and 4 which focus development to the South and North of the County respectively.

Given the rural nature of the County, it is considered that all options will lead to positive effects in terms of providing residents with access to the countryside; although the quality of this access may differ. Options 1 and 2 perform most positively in this respect as they direct a significant level of growth to Abergavenny which is located in close proximity to the Brecon Beacons National Park, and Monmouth and Chepstow which are located in close proximity to the Wye Valley National Landscape. Significant growth at these locations will provide access to these valued natural spaces, supporting the mental and physical health and wellbeing of residents.

Overall, it is considered that all Options provide a significant opportunity to deliver improvements to social/ community infrastructure. The level of infrastructure delivery is expected to be similar under all options; however, Options 3 and 4 perform less positively compared to Options 1 and 2 given the focus of growth to only the South or North of the County. All Options also provide an opportunity to deliver new and improved areas of multi-functional Green Infrastructure alongside development, and promote access to the countryside, which has become increasingly important in light of the current pandemic. Options 1 and 2 are best performing in this respect given the direction of growth towards more areas of higher accessibility, and more dispersed growth with new provisions benefitting more areas.

Equalities, diversity, and social inclusion

Options	Option 1 – Existing LDP Strategy	Option 2 – Proportionate growth	Option 3 – Focus on M4 corridor	Option 4 – Focus in north of County
Rank	1	1	2	2
Significant effect?	Yes - Positive	Yes - Positive	Uncertain	Uncertain

At the time of the 2014 Welsh Index of Multiple Deprivation (WIMD) none of the 56 lower super output areas (LSOAs) in Monmouthshire were in the most deprived 10% (Ranks 1-191) in Wales or the most deprived 20% (Ranks 1-382) in Wales. However, the 2019 WIMD now shows that alongside 20 LSOAs in the 50% most deprived (doubled since 2014), 5 LSOAs were in the 30% most deprived, and 2 LSOAs were in the 20% most deprived. Almost half (47%) of the total population live in wards defined as being in rural areas (i.e. with a population of less than 10,000). Population densities are, as would be expected, highest in the towns, with the majority of rural wards having low population densities when compared to national averages. Therefore Option 1 and 2 which seek to focus growth towards Primary Settlements are anticipated to lead to long term positive effects in terms of providing increased opportunities through employment and

Page 67/21

housing provision for the younger population to live and work in Monmouthshire; enhancing the service roles of these settlements. The current pandemic has demonstrated the importance of ensuring communities are balanced and socially sustainable, particularly in terms of demography. Option 1 and 2 will also lead to positive effects through reducing inequalities between rural and urban areas; supporting and sustaining a hierarchy of vibrant centres across the County.

Option 3, through capitalising upon the strategic links to the Cardiff Capital Region (CCR) and the provisions of the CCR City Deal, would likely provide opportunity for building more sustainable communities and achieving infrastructure improvements/ provision in the South of the County. However, this limits opportunities for sustainable development in the Primary, Secondary and rural settlements in the rest of the County, which may lead to increased levels of inequality throughout Monmouthshire. Additionally, it is considered that if mixed-development is not prioritised and successfully utilised through Option 3, there will be a risk of exacerbating existing problems of lack of social and community facilities in rural locations, and high levels of out-commuting in Severnside. This option could lead to rural isolation. Similar effects are anticipated through the delivery of Option 4, given development would be located at the most sustainable Settlements within the North of the County to capitalise on its strategic links to the Heads of the Valleys and wider Cardiff Capital Region via the A465, and towards Herefordshire via the A449 and A40, along with rail links to Newport, Cardiff and the North via the Welsh Marches line. Growth in the North of the County would provide access to employment, retail, community facilities and social infrastructure, building sustainable communities through the provision of homes and jobs and improved levels of self-containment. However, through Option 4 housing would only be directed to the North of the County and would not address need in other areas across the County; likely impacting upon Monmouthshire's demography, leading to inequality across the County. This would likely impact on the sustainability of existing rural areas as no additional growth would be provided to help maintain/ support rural facilities, or attract additional rural employment opportunities. This option could also lead to rural isolation.

Monmouthshire's population profile in terms of ethnic groups is different to both the Wales average and that of the South East Wales region as a whole. At the time of the 2021 census, 96.9% of Monmouthshire's population classified themselves as white, compared to 93.8% in Wales.³⁵ The South East Wales figures are particularly influenced by the population profile of Cardiff which accounts for over 25% of the population of the region, and as would be expected the population profile is much more diverse in the city. Directing growth to the South of the County through Option 3 may contribute positively towards increasing the ethnic diversity within the County. In this context, utilising strategic links to the Cardiff Capital Region and South West England will likely support cross-boundary community cohesion, and capitalise upon regional social infrastructure connections. Positive effects are also identified in this respect in relation to Option 4, given there is the potential to develop links from Abergavenny to the wider Cardiff Capital Region.

Overall, Options 1 and 2 are preferred as they seek to support and sustain a hierarchy of vibrant centres across the County, directing the majority of the growth to the most sustainable settlements while also still delivering growth in the secondary settlements and rural areas.

³⁵ ONS Census 2021 'Build a custom area profile' can be accessed via <https://www.ons.gov.uk/visualisations/customprofiles/build/>

This will likely positively address existing demographic issues, encouraging younger people to reside and work in the County. They are also anticipated to lead to positive effects in this respect, delivering affordable housing in both urban and rural areas and where there is greatest need. There are some small differences between Options 1 and 2 in terms of how growth is distributed during the Plan period, but these differences are not significant enough to warrant one option being ranked higher or lower than the other. While Option 3 and Option 4 may support more sustainable communities and achieve social infrastructure improvements/ provision in the South and North of the County respectively, these options perform least well due to the likely isolation of communities and continuation of imbalanced demographic profile across Monmouthshire.

Transport and movement

Options	Option 1 – Existing LDP Strategy	Option 2 – Proportionate growth	Option 3 – Focus on M4 corridor	Option 4 – Focus in north of County
Rank	1	1	2	3
Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain

Existing travel patterns in Monmouthshire reflect its rural nature; with a trend of relatively long travel to work distances, high levels of car ownership and reliance on the private car. Specifically, in 2021 52.4% of the resident population of Monmouthshire were travelling to work by car or van, compared to 56.5% in Wales.³⁶ The primary points of road congestion in the region are on the M4, with regular issues of congestion near Newport reflecting the high commuter levels; affecting connectivity between Monmouthshire and Cardiff.³⁷ However, it is recognised that the recent increase in home-working as a result of the current pandemic is likely to continue over the longer term which will likely support reduced commuting levels and congestion in the future.

While focusing growth along the M4 corridor through Option 3 may intensify traffic levels, it also has the potential to link housing and employment growth, utilising links to the M4 corridor and the removal of the Severn Bridge Tolls. This would reduce the need to travel by car, capitalising upon existing sustainable transport links such as rail at Caldicot and Severn Tunnel Junction Train Stations; and forthcoming improvements such as the ambitions and opportunities associated with the Cardiff Capital Region City Deal and the South East Wales Metro. The Metro will provide an opportunity for alternative sustainable travel; providing faster, more frequent and joined-up services using trains, buses and light rail.³⁸ Notably, the Regional Bus Rapid Transit will provide a west-east connection that will complement north-

³⁷ Monmouthshire County Council (2015) Monmouthshire Local Transport Plan [online] available at: <https://www.monmouthshire.gov.uk/local-transport-plan/>

³⁸ Welsh Government (2018) Rolling out our Metro <https://gov.wales/sites/default/files/publications/2018-06/south-wales-metro-brochure.pdf>

south travel connectivity provided by the railway lines, and provide residents with direct access to economic opportunities located in the Heads of the Valleys corridor.

Positive effects are also anticipated in this respect but to a lesser extent through Option 4, which seeks to predominantly locate growth in most sustainable Settlements within the North of the County. This is with the ambition to capitalise on strategic links to the Heads of the Valleys and wider Cardiff Capital Region via the A465, and towards Herefordshire via the A449 and A40 along with rail links to Newport, Cardiff and the North via the Welsh Marches line. However, lack of development outside of the Severnside area through Option 3, and outside of the most sustainable Settlements in the North through Option 4, would not generate sufficient infrastructure improvements and gains in other areas across Monmouthshire. This would likely exacerbate out-commuting in other areas and would not assist in improving self-containment of the main County towns outside the targeted growth areas (i.e. Abergavenny, Chepstow and Monmouth under Option 3, and Chepstow, and Severnside under Option 4).

In terms of sustainable transport options available throughout the County, buses are most predominant, with the County being served by both local and national routes. The Primary Settlements of Abergavenny, Chepstow and Monmouth all have bus stations with hourly (or more frequent) services extending to the surrounding towns and villages and to the sub-region, including Bristol, Gloucester, Hereford, Newport and Cardiff. In terms of rail provision, Monmouthshire has four railway stations, Caldicot, Chepstow and Severn Tunnel Junction in the South of the County and Abergavenny in the North. The centre and north east of the County are poorly served for rail travel. Options 1 and 2 will therefore lead to long-term positive effects through directing growth to these Primary Settlements, capitalising upon the sustainable transport offer and supporting lower levels of car use.³⁹

The Public Rights of Way (PRoW) network is generally good throughout Monmouthshire; with some localised fragmentation, notably in the rural areas. There are also two national cycle routes within the County, both of these run from Chepstow; number 4 - The Celtic Trail (Severn Bridge to Pembrokeshire) and number 42 (Chepstow to Glasbury, Powys).

The Active Travel (Wales) Act (2013) requires local authorities in Wales to deliver year on year improvements in active travel routes and facilities. As such, Monmouthshire has prepared a series of Integrated Network Maps (INMs) which set out the Council's plans for improving active travel routes in and around certain settlements over the next 15 years. At the time of preparation, the guidance stated that the settlements should have had a population of at least 2,000 at the time of the 2001 Census. For Monmouthshire this included the settlements of Abergavenny, Caldicot, Chepstow, Magor Undy, Monmouth and Usk. However, there are existing active travel routes in smaller settlements. The maps produced show proposed future networks of key walking and cycling routes, and include schemes for

³⁹ Welsh Government (2018) Rolling out our Metro <https://gov.wales/sites/default/files/publications/2018-06/south-wales-metro-brochure.pdf>

delivery in the next couple of years, schemes for delivery in the medium term (5-10 years), and longer-term (10-15 years) proposals of a more aspirational nature. The INMs were submitted to Welsh Government on 27 February 2018 and these have now been approved.⁴⁰

Options 1 and 2 focus development at settlements that provide the best current and future opportunities for achieving sustainable development; which offer a choice of transport modes and contribute towards the development of a sustainable transport network. New development will likely capitalise upon existing transport infrastructure at these locations, further promoting active travel and integrated sustainable transport opportunities. Additionally, it is considered that delivering jobs and homes in these locations will likely support levels of self-containment, reducing the reliance on the car for employment.

Despite the likelihood that higher levels of homeworking will prevail following the current pandemic, there is no guarantee that all residents will live and work in the same area, and a proportion are likely to continue the trend of out-commuting by car for journeys (recognising that currently only 1.2% of Monmouthshire resident working population travel to their place of work using public transport).⁴¹ Congestion is notably an issue of concern in Chepstow (given the Air Quality Management Area [AQMA] present) where a large proportion of growth through Option 1 and 2 is targeted. This presents a challenge for development, as there is significant risk that this trend would be intensified.

An appropriate amount of development is also allocated through Options 1 and 2 to Severnside; with a lower level of growth to the County's secondary settlements and rural areas, recognising that in many rural areas there is often no accessible sustainable transport offer.

Infrastructure provision is notably lacking in rural areas in the North of the County, and it is recognised that a Welsh Government (and subsequent Local Transport Plan (2015)) priority is to *“maximise the contribution that effective and affordable transport services can make to tackling poverty and target investment to support improvements in accessibility for the most disadvantaged communities”*. It is noted that this has been partly addressed by the introduction of a 'grass routes' bus service⁴², which might be utilised through Option 2 supporting the growth of rural communities. However, further improvements to accessibility in these settlements are unlikely to be achieved as growth would not be of a critical mass to support significant infrastructure delivery. Directing growth to the rural settlements will therefore likely promote unsustainable travel patterns, with (despite a likely higher level of homeworking) a proportion of residents continuing to travel by car to existing centres to access services and employment.

It is recognised that all Options have the potential to contribute positively towards the Welsh Government's commitment to reducing reliance on the private car and supporting the transport hierarchy and a modal shift to walking, cycling and public transport (Planning Policy Wales, Edition 10). However, Options 1 and 2 are identified as best performing through directing growth to the Primary Settlements, which are all

⁴⁰ Monmouthshire County Council (2020): Sustainable Settlement Appraisal can be accessed via

<https://democracy.monmouthshire.gov.uk/documents/s26562/Appendix%201%20Sustainable%20Settlement%20Appraisal%20March%202020.pdf>

⁴¹ ONS Census 2021 'Build a custom area profile' can be accessed via <https://www.ons.gov.uk/visualisations/customprofiles/build/>

⁴² A demand responsive bus service available during the week for all residents of Monmouthshire and accommodation providers who are members of the scheme

multi-modal transport hubs that benefit from active travel routes, existing railway stations (at Abergavenny and Chepstow only) and frequent bus services. The Primary Settlements are also well placed geographically to take advantage of the strategic road network in the County. These options are therefore most likely to promote a safe, efficient, accessible and sustainable transport system that supports self-containment at the Primary Settlements; providing opportunities for walking and cycling and encouraging active travel. There are some small differences between Options 1 and 2 in terms of how growth is distributed during the Plan period, but these differences are not significant enough to warrant one option being ranked higher or lower than the other.

Option 3 will lead to long term positive effects through building more sustainable communities and achieving transport improvements/ provision in the South of the County, while Option 4 will lead to long term positive effects through building more sustainable communities and achieving transport improvements/ provision in the North of the County. However, this would be at the expense of the remainder of the County, exacerbating out-commuting and private vehicle use in other areas. At this stage the potential effects are considered to be uncertain until further evidence base work is carried out relating to the impacts of growth on the highway network.

Natural resources (air, land, minerals, and water)

Options	Option 1 – Existing LDP Strategy	Option 2 – Proportionate growth	Option 3 – Focus on M4 corridor	Option 4 – Focus in north of County
Rank	1	1	3	2
Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative	Yes - Negative

In terms of air quality, while this is not a significant issue for the County, it is nonetheless recognised that air pollution is a major cause of death and disease globally.⁴³ The greatest problems associated with air quality in the County are caused by vehicle emissions; evidenced by the two Air Quality Management Areas (AQMAs) declared at Primary Settlement Chepstow and Secondary Settlement Usk for NO₂.⁴⁴ Directing growth to these locations through Options 1 and 2 (and to a lesser extent Option 3) has the potential to exacerbate existing air quality issues through increased road users and subsequent increased levels of congestion. Notably, Chepstow AQMA includes the A48, between the roundabout with the A466, which would likely be utilised by commuters. The Air Quality Action Plans for both areas contain many transport-related measures, and these have been taken account through the development of the LTP (2015).⁴⁵ In accordance with the LTP and higher level policy frameworks, Options are anticipated to deliver mitigation where possible; ensuring the location of new

⁴³ World Health Organisation (2022) Ambient (outdoor) air pollution [https://www.who.int/news-room/fact-sheets/detail/ambient-\(outdoor\)-air-quality-and-health](https://www.who.int/news-room/fact-sheets/detail/ambient-(outdoor)-air-quality-and-health)

⁴⁴ Air Quality in Wales (no date) Air Quality Management Areas <https://airquality.gov.wales/laqm/air-quality-management-areas>

⁴⁵ Monmouthshire County Council (2015) Monmouthshire Local Transport Plan [online] available at: <https://www.monmouthshire.gov.uk/local-transport-plan/>

development does not worsen conditions in the AQMAs, or result in the declaration of new ones. Further, the pandemic has resulted in higher levels of homeworking which are likely to prevail in the longer-term, reducing congestion pressures on air quality. In this context, Options 1 and 2 will likely further support the increased use of sustainable transport and reduced reliance on the private vehicle through delivering homes that are well located to services, facilities and employment in existing centres.

Delivering under all Options has the potential to lead to positive effects through capitalising upon the strategic links to the Cardiff Capital Region and the provisions of the CCR City Deal. The Capital Region is committed to a low carbon future, delivering healthier and sustainable travel options, which would likely provide opportunity for building more sustainable communities and improved air quality.

There is a limited supply of brownfield land in the County, with the average percentage of housing completions on brownfield land over years totalling approximately 48.4%.⁴⁶ The lack of brownfield land in the urban areas is a concern for the RLDP, with limited opportunities existing in the Primary Settlements only. Options 1 and 2 are therefore best performing in this respect, as while growth is likely to be predominately greenfield development, brownfield land within the Primary Settlements will be utilised where possible. Option 4 seeks to deliver growth to the most sustainable Settlements in the North, which includes Monmouth and Abergavenny, in addition to Raglan; a secondary Settlement. A significant proportion of development under Option 4 is therefore likely to be on greenfield land. Option 3 is also considered to lead to long term significant effects as there are limited opportunities for brownfield development in the Severnside area, with development likely to be predominately on greenfield land.

Monmouthshire has a significantly high percentage of best and most versatile agricultural land (i.e. Grade 1, 2 or 3a). While there is a need to conserve these resources, there are limited opportunities within the County for development on lower grades of agricultural land (i.e. Grade 3b, 4 and 5). All options are therefore likely to result in the loss of some areas of BMV agricultural land, leading to significant long term negative effects against this ISA theme. The Predictive ALC model for Wales (2017) is based on the principles of the Agricultural Land Classification System of England & Wales, the Revised Guidelines & Criteria for Grading the Quality of Agricultural Land (MAFF 1988).⁴⁷ This data model allows you to predict the distribution of BMV land throughout the County, and in relation to key areas as set out in the settlement hierarchy:

- **Primary Settlements** are predominately urban centres, with areas of Grade 3a land located to the east of Abergavenny and integrated between the main urban area throughout Monmouth. Interspersed areas of high quality Grade 2 land and non-agricultural land are present around Chepstow.

⁴⁶ Monmouthshire Housing Land Availability Surveys 2008-2018

⁴⁷ <http://lle.gov.wales/map/alc#m=-2.7235,51.59785,14&b=europa&l=908h;893h;1326,0,37;>

- **Secondary Settlements** include significant areas of BMV land; areas of Grade 3a land surround Usk (notably to the south). North east/ and north west of Penperlleni and north/ north east of Raglan are areas of Grade 3a land. Grade 2 and 3b land is dispersed outside of Raglan's urban area.
- **Severnside** is particularly constrained by Grade 2 and Grade 1 land, surrounding the M4. Significantly constrained areas include the entirety of Crick, and large areas within Caerwent, between Rogiet and Magor/ Undy, and north of Sudbrook.
- **Rural settlements** have not yet been defined⁴⁸; however, it is recognised that outside of the main settlements there is a significant amount of BMV agricultural land, reflecting the rural nature of the County.

In terms of the Options, it is therefore considered that directing growth to the existing main settlements through Options 1 and 2 will help to protect best and most versatile agricultural land in the rural areas. Option 4 is also anticipated to perform well in this respect, given growth is directed to the primary settlements of Abergavenny and Monmouth, and the secondary settlement of Raglan. However, it is recognised that there are limited opportunities for brownfield development within the County's existing urban areas, and that the delivery of all Options would inevitably lead to loss of greenfield land, as discussed above. Nonetheless it is considered that residual loss may be less significant under Option 4 as the settlements in the North are not identified as being significantly constrained in terms of BMV land. Given the extent of BMV land surrounding Severnside and the M4 corridor, it is considered that Option 3 will lead to significant long term negative effects through inevitable permanent loss of BMV land.

While mineral extraction plays a limited role in Monmouthshire's economy, there remains a need to safeguard the County's mineral resources in order to make an appropriate contribution to the sustainable supply of aggregates to the wider South Wales economy. Development would be located away from safeguarded areas under Options 1, 2 and 4. Due to the focus of development in the South of the County through Option 3, this Option has the potential to adversely impact upon the Limestone Mineral Safeguarding Area present. Option 3 is therefore worst performing in this respect. The Options are considered to lead to neutral effects in terms of waste, as it is considered that all of them are capable of being served by appropriate waste infrastructure.

Water is supplied to Monmouthshire by the Dwr Cymru/Welsh Water (DCWW). They supply water via a large scale, multi-source, integrated network that is typical of many other water company areas. Monmouthshire falls within two Water Resource Zones (WRZs); Monmouth and the South East Wales Conjunctive Use System (SEWCUS). The Monmouth WRZ supplies the market town of Monmouth and the surrounding villages. The WRZ is heavily dependent on the Mayhill abstraction from the River Wye at Monmouth. There is also a spring abstraction at Ffynnon Gaer which supplies a small localised area south of Monmouth. The SEWCUS supplies the majority of the County, and a significant proportion of the South East Wales Region. In total, there are over 40 resources that are used to supply the SEWCUS WRZ, which include a mixture of river abstractions from the larger rivers in the east of the WRZ and relatively small upland reservoir

⁴⁸ Monmouthshire County Council (2022) Growth and Spatial Options Paper can be accessed via <https://www.monmouthshire.gov.uk/app/uploads/2022/12/Growth-and-Spatial-Options-Paper-Sept-2022-1.pdf>

sources with small catchment areas. For both WRZs the total demand for water is forecast to remain relatively stable until 2030, with a decline in demand anticipated over the 2030-2050 planning period, and then to just 10% of current demands by 2050. Water companies are legally required to supply water to private consumers and businesses within their area. As set out in the Water Industry Act 1991, they must prepare and maintain a Water Resources Management Plan (WRMP) that sets out how the company intends to maintain the balance between water supply and demand. Water companies update their WRMPs every 5 years to take account of predicted growth and ensure that there are schemes in place to meet future demands.

All Options are anticipated to deliver neutral effects in terms of impact on water resources, with no best performing Option identified. This is given the legal requirements in place for WRMPs, and that all Options are assumed to deliver the same level of growth throughout the Plan period. It is expected that development coming forward under any of the Options will be encouraged to be water efficient and may deliver mitigation (for example rain water harvesting measures) to support reduced water use per person per day. This is in accordance with PPW12 (2024) which outlines the contributions planning can make, including “ensuring resilient local choices for infrastructure and built development, taking into account water supplies, water quality and reducing, wherever possible, air and noise pollution and environmental risks, such as those posed by flood risk, coastal change, land contamination and instability.”

Overall, while it is difficult to identify any significant differences between the options in terms of water resources and quality, Options 1 and 2 followed by Option 4, are best performing in terms of utilising brownfield land and protecting BMV agricultural land, and ensuring that air quality is not reduced throughout the County. However, it is recognised that there are limited opportunities for the regeneration of brownfield land and so ultimately the majority of growth will be on greenfield and potentially agricultural land. Option 3 performs least well given it may also lead to the loss of significant greenfield/BMV land and has the potential to adversely impact upon the Limestone Mineral Safeguarding Area present to the south of the County. All the Options have the potential for a significant negative effect against the natural resources theme through the potential loss of BMV agricultural land, although it is acknowledged that there is an element of uncertainty at this stage until the precise location of development is known.

Biodiversity and geodiversity

Options	Option 1 – Existing LDP Strategy	Option 2 – Proportionate growth	Option 3 – Focus on M4 corridor	Option 4 – Focus in north of County
Rank	2	2	1	3
Significant effect?	Yes – Negative	Yes - Negative	Uncertain	Yes - Negative

It is assumed that development proposed under any of the Options would not result in the loss of any international, national or locally designated sites for biodiversity. In terms of internationally designated biodiversity sites, the following are located within the County:

- Severn Estuary** Special Protection Area (SPA), Special Area for Conservation (SAC), Ramsar Site, and Site of Special Scientific Interest (SSSI) is the largest coastal plain estuary in the UK with the second highest tidal range in the world. The site covers the southern extent of the County, and contains habitats listed under Annex I of the Habitats Directive. These include estuaries, mudflats and sandflats. In addition to Annex I habitats present, primary reasons for designation are species listed under Annex II of the Habitats Directive including Sea lamprey, River lamprey and Twaite shad.
 - Primary reasons for the SPA designation is that the site qualifies as an area of Internationally Important Assemblage of Birds, under Article 4.2, where over the winter the area regularly supports 84,317 waterfowl.
 - Primary reasons for Ramsar designation is that there are eight criterions that are within the Ramsar designation. This includes the immense tidal range creating diversity of the physical environment and biological communities, and due to unusual estuarine communities, reduced diversity and high productivity.
 - This site is also designated due to the importance for the run of migratory fish between sea and river via the estuary. It is also of particular importance for migratory birds during spring and autumn.
- River Wye SAC** covers the length of the River Wye, to the north east of the County, notably extending through Monmouth. The SAC contains habitats listed under Annex I of the Habitats Directive and a variety of species listed under Annex II of the Habitats Directive which are also the primary reasons for designation. The River Wye is important for its population of Atlantic salmon, and whilst stocks have declined the salmon population is still of considerable importance in UK terms. The Wye also holds the densest and most well established otter population in Wales. The site is considered one of the best in the UK for white-clawed crayfish. Other important species supported by the River Wye are twaite shad, bullhead and river, sea and brook lamprey.
- River Usk SAC** covers the length of the River Usk, to the west of the County, running through Abergavenny and Usk. The SAC contains habitats listed under Annex I of the Habitats Directive and a variety of species listed under Annex II of the Habitats Directive; that are

primary reason for designation. The River Usk SAC is part within the Brecon Beacons National Park Planning Area. **Wye Valley Woodlands SAC** is a large woodland SAC that straddles the Wales-England border, extending along the east of the County. The site is underpinned by nine SSSIs in Wales and seven in England. The Wye Valley contains abundant and near continuous semi-natural woodland along the gorge. The variety of woodland types found are rare within the UK.

- **Wye Valley and Forest of Dean Bat sites SAC** straddles the Wales-England border, extending along the east of the County. It is underpinned by four SSSIs in Wales and nine in England, all of which lie entirely within the SAC. This composite of sites contains the greatest concentration of lesser horseshoe bat in the UK, totalling about 26% of the national population.
- There are an additional four European Sites within the Brecon Beacon National Park which must also be considered. These are Coed y Cerrig SAC, Cwm Clydach Woodlands SAC, Sugar Loaf Woodlands SAC, and Usk Bat Sites SAC. Further to this, Llangorse Lake/ Llyn Syfaddan SAC, in Powys, and Aberbargoed Grassland SAC Caerphilly fall within 15km of Monmouthshire and therefore could possibly be affected by growth proposed through the RLDP. A full HRA is currently being undertaken in respect of the replacement Monmouthshire LDP.

Additional development proposed through the RLDP is most likely to have impacts on the European sites discussed above through the loss and fragmentation of linear foraging habitats for bat species, atmospheric pollution, increased disturbance (recreation, noise and light), and through impact on water quality and resources. Both the River Wye SAC and the River Usk SAC are notably sensitive to increased nutrient loading, predominantly phosphates contributed from treated sewage effluent. Due to the increasing phosphate concentrations in both riverine systems, both Natural Resources Wales and Natural England have recently advised that development plans should not result in a net increase of phosphorus concentrations in both SACs, a concept known as nutrient neutrality. The HRA (2021) carried out for the RDLP concludes that potential residential or employment sites in Abergavenny and Monmouth are likely to have nutrient neutrality implications, because they are served by WWTWs discharging into the upper reaches of both SACs. The Chepstow and Severnside SGAs are served by Nash WwTW in Newport, which discharges into the Severn Estuary and therefore will not contribute phosphorus the River Wye and River Usk. More recent evidence shows there are solutions available at the WWTW's now, which will help to ensure no significant effects arise in relation to nutrient neutrality. It is recognised that the applicable options will require mitigation supported by RLDP policy provisions.

In terms of ranking the Options, it is considered that all Options are constrained to some extent by internationally designated sites. In this context, Option 3 has the potential to lead to negative effects on the Severn Estuary SAC given settlements such as Sudbrook within this Option are adjacent to the internationally designated site. Options 1, 2 and 4 have the potential to lead to negative effects on numerous internationally designated sites which extent throughout the Primary and Secondary Settlements. Notably the River Usk SAC passes through Abergavenny and Usk, the River Wye SAC passes through Chepstow and Monmouth, and Chepstow and Monmouth are also in close proximity of the Wye Valley Woodlands. As set out in the HRA (2021) development in Abergavenny and Monmouth is most likely to lead to nutrient neutrality implications with the potential for significant adverse effects on the SACs. Option 4 directs the highest level of

growth to these settlements, followed by Options 1 and 2, and therefore is worst performing in this respect overall. In terms of nationally designated sites, there are 50 SSSIs that fall wholly within the County. Most are woodland or grassland sites, with others designated for their wetland or geological interest, and a few designated for bat interest. It is noted that of these, 16 fall within the SACs listed above. Spatially, a significant proportion of the SSSIs are located to the north west of the County, within the Brecon Beacons National Park and surrounding Abergavenny. Growth directed to Abergavenny through Options 1, 2 and 4 therefore have the potential to adversely impact upon SSSIs; including Sugar Loaf Woodlands SSSI and Coed-Y-Person SSSI. Impacts are most likely to arise as a result of increased recreational disturbance. There is also a cluster of SSSIs to the east of the County around Monmouth, and dispersed in the rural landscape between Monmouth and Chepstow in the south, which may also be impacted by Options 1, 2 and 4 given growth is directed to these locations. Notably Fiddler's Elbow SSSI and Lady Park Wood SSSI are also the County's two National Nature Reserves (NNRs) and may be impacted by high growth at Monmouth.

There are also several SSSIs along the M4 corridor and to the southern extent of the County, including the Gwent Levels SSSI and component SSSIs under the Severn Estuary SAC as discussed above. Option 3 has the greatest likelihood for impacts on these SSSIs given the focus of development to the South of the County. Impacts are most likely to arise as a result of increased recreational disturbance, water pollution, and air pollution.⁴⁹

All of the Options have the potential to impact nationally designated sites, the nature and significance of effects will ultimately depend on the precise location of development and the implementation of mitigation measures.

In terms of locally important biodiversity, there is just one Local Nature Reserve (LNR) designated within the County; Cleddon Bog. Cleddon Bog LNR is located within the Wye Valley National Landscape in the rural landscape, and is not likely to be affected by any of the Options. Monmouthshire also includes approximately 650 Sites of Importance for Nature Conservation (SINCs) (also known as Local Wildlife Sites (LWSs)). These predominantly relate to grassland and ancient and semi-natural woodland areas. SINCs are dispersed throughout the County, and it is considered that development coming forward under any of the Options could have localised impacts on these designed sites.

In addition to designated sites, all Options have the potential to result in adverse effects on biodiversity through loss of greenfield land and priority habitats. Habitat fragmentation is a key issue for the County; for example, fragmentation of hedgerows caused by development and canalised streams and rivers. Options 1 and 2 are likely to result in habitat loss and fragmentation across a wider area of the County whereas Options 3 and 4 are likely to have an effect of greater significance on a more localised area.

⁴⁹ Natural England (2015) Site Improvement Plan: Severn Estuary Mor Harfen <http://publications.naturalengland.org.uk/publication/4590676519944192>

Overall, it is considered that all Options have the potential to adversely impact upon the County’s biodiversity resource, with the potential for significant residual negative effects. The focus of development in the Primary Settlements through Options 1, 2 and 4 will likely result in increased pressure on the environment, due to concentrating growth in locations around the existing main settlements in the North where a number of internationally/ nationally designated biodiversity sites are located. Notably, focussing growth at the Primary Settlements of Abergavenny and Monmouth through Option4 (and a lesser extent Options 1 and 2) have the potential to lead to nutrient neutrality implications within the River Wye and River Usk SACs. Option 4 and then Options 1 and 2 are therefore identified as worst performing overall. In terms of Option 3, a number of the smaller rural settlements and Severnside are also constrained at an international/ national level, and therefore the potential for adverse effects cannot be ruled out at this stage.

It is also recognised that all Options have the potential to deliver positive effects on biodiversity through enhancement measures. This is currently uncertain, and therefore at the County scale it is difficult to differentiate between the Options. Ultimately the nature and significance of effects will ultimately be dependent on the design/ layout of development as well as the implementation of mitigation measures.

Historic environment

Options	Option 1 – Existing LDP Strategy	Option 2 – Proportionate growth	Option 3 – Focus on M4 corridor	Option 4 – Focus in north of County
Rank	=	=	=	=
Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain

There is one internationally designated site falling partially within the County; Blaenavon Industrial World Heritage Site (WHS), located to the west of Abergavenny. The WHS was inscribed by UNESCO in 2000 on account of its industrial landscape having Outstanding Universal Value (OUV). A Management Plan has been prepared for the period 2018-2023 a suite of policies for the continued effective protection, conservation, presentation and transmission of the Site’s OUV.⁵⁰

There are also a range of designated heritage assets and archaeological areas within the County:

- **31 Conservation Areas** including a range of areas from market towns, rural villages and medieval castles. The largest three Conservation Areas are Mathern (231.6ha), Llanarth (203.1ha) and Abergavenny (152.8ha). In addition to these three, there are

⁵⁰ Chris Blandford Associates (2018) Blaenavon Industrial Landscape World Heritage Site Management Plan 2018-2023 <http://moderngov.torfaen.gov.uk/documents/s35685/Blaenavon%20WHS%20Management%20Plan%20FINAL%20SEPTEMBER%202018.pdf>

Conservation Areas located in the remaining Primary and Secondary Settlements. There is a collection of Conservation Areas to the south of the County, including within numerous settlements along the M4 corridor, and within rural settlements along the eastern border of the County.

- **45 Historic Parks and Gardens** varying considerably in size and character, the largest of which are Chepstow Park and Piercefield Park, both located in Chepstow. Many Historic Parks and Gardens are located in Chepstow and the wider south east of the County, with others distributed throughout the settlement hierarchy and in the more rural settlements, notably south of Abergavenny and north west of Monmouth.
- **3 Landscapes of Outstanding Historic Interest** have been identified by CADW within the County – Blaenavon, the Gwent Levels and the Lower Wye Valley.
- **164 Scheduled Monuments** are widely dispersed across the County.
- **> 2,206 Listed Buildings** of which 2% are Grade I, 10% are Grade II * and 88% are Grade II. There are multiple Grade I listed buildings located within the Primary Settlements (notably five in Chepstow, four in Monmouth and two in Abergavenny - including the Abergavenny Castle Ruins within the town centre). Usk also has four Grade I listed buildings, including Usk Castle and its precincts. Of the Listed Buildings, 166 (7.5% of the stock) are identified as being 'at risk'. The four communities with the highest percentage of listed buildings at risk based on the number of buildings are:
 - St Arvans - 12 buildings
 - Tintern - 9 buildings
 - Rogiet - 4 buildings
 - Llanbadoc - 4 buildings
- **10 Archaeologically Sensitive Areas (ASAs)** of which the largest extends across the south of the County, covering Caldicot, Rogiet, Magor Undy, and the Gwent Levels. There are also ASAs present at each of the Primary Settlements, Usk and Raglan, and rural locations outside of the main settlements.

Given the volume of heritage assets located throughout the County, it is considered that all of the Options are likely have an impact on the historic environment. It is considered that growth focussed at the Primary Settlements in the North through Options 1, 2 and 4 will result in increased pressure on the rich historic environment present at these locations; including notably the WHS and its setting, extensive Conservation Areas (all of which contain numerous Listed Buildings), Registered Parks & Gardens, and Grade 1 Listed Buildings, at Abergavenny, Chepstow and Monmouth. Together with their settings, these heritage assets require protection and enhancement, in accordance with the WHS Management Plan (2018), Conservation Area Appraisals and requirements of Planning Policy Wales (2018). It is therefore considered that directing significant growth to these locations has the potential for negative effects of greater significance, and reflects a likely greater need for suitable mitigation in development strategies.

It is noted that the redevelopment of brownfield sites in the Primary Settlements, i.e. through Options 1 and 2, and to a lesser extent Option 4, has good potential for positive townscape improvements. In this context, where proposals seek to deliver good, high quality design and appropriate layout, this may lead to landscape/ townscape improvements and positive effects such as increased awareness and access. This however is uncertain at this stage, and it is recognised that the County has a limited offer of brownfield land.

In terms of Option 3 it is considered that the South of the County is also sensitive in terms of the historic environment. Notably constraints include the ASA which extends across the M4 corridor; Portskewett, Caldicot and Major/ Undy contain Grade I Listed Buildings; Rogiet contains four listed buildings at risk; the Gwent Levels Registered Landscape of Outstanding and of Special Interest covers areas of Caldicot, Undy and Magor; and there are numerous Conservation Areas present. Focussing growth to the South therefore has the potential to adversely impact upon archaeological and/ or historic assets, their settings and intrinsic qualities. As discussed for other Options, development also has the potential to deliver neutral/ positive effects through having a positive contribution to an area's character or appearance. It is also noted that directing growth to the South of the County will preserve the historic environment in the remainder of the County, maintaining the historic landscape and setting of towns and villages, and protecting settlement identity.

Page 136
It is recognised that Monmouthshire's cultural assets also include the use of the Welsh language. None of the Options are considered likely to have a significant effect on the Welsh language, and it is therefore not possible to distinguish between the Options in this respect.

Overall, it is difficult to rank the Options in terms of preference against this ISA Objective as they are all predicted to have a residual significant effect as they direct development to areas that are sensitive in terms of the historic environment; albeit in different areas of the County. It is considered that the significance of effects will ultimately be dependent on the design/ layout of development as well as the implementation of mitigation measures.

Landscape

Options	Option 1 – Existing LDP Strategy	Option 2 – Proportionate growth	Option 3 – Focus on M4 corridor	Option 4 – Focus in north of County
Rank	2	2	1	2
Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain

Monmouthshire has a rich and diverse landscape stretching from the coastline of the Gwent Levels in the south of the County, to the uplands of the Brecon Beacons in the north, and the river corridor of the Wye Valley in the east. In terms of nationally designated landscapes, the County incorporates:

- **Wye Valley National Landscape** located to the east of Monmouthshire. The part of the Wye Valley National Landscape located within Monmouthshire covers approximately 16% of the Monmouthshire LDP area.
- **Brecon Beacons National Park** located to the north west of Monmouthshire. The portion of the Brecon Beacons National Park (BBNP) located in Monmouthshire covers approximately 17% of the County.

In line with Planning Policy Wales (2024) it is recognised that the Wye Valley National Landscape and Brecon Beacons National Park are *valued for their intrinsic contribution to a sense of place, and that their special characteristics should be protected and enhanced.* In addition to national policy requirements, protection is also provided to the Wye Valley through the Wye Valley AONB Management Plan (2021), which sets out five Development Strategic Objectives, underpinning the aim to *“Ensure all development within the AONB and its setting is compatible with the aims of AONB designation”*. Notably, Objective WV-D2 seeks to *“encourage and support high standards of design, materials, energy efficiency, drainage and landscaping in all developments”*.⁵¹ In terms of the Brecon Beacons National Park, there is an established Local Development Plan (LDP) in place and development management functions in the correlating part of the County. The LDP *“represents and defines the National Park Authority’s approach for ensuring sustainable development is carried out in the National Park.”*⁵² While protection is provided at the higher level, it is nonetheless considered, given the level of growth proposed through all Options, that development has the potential to adversely impact upon special landscape features, character, and setting.

⁵¹ Wye Valley AONB Joint Advisory Committee (2021) Wye Valley Area of Outstanding Natural Beauty (AONB) Management Plan 2021 - 2026 <https://www.wyevalley-nl.org.uk/wp-content/uploads/Wye-Valley-AONB-Management-Plan-2021-26-finalised.pdf>

⁵² Brecon Beacons National Park Authority (2019) Brecon Beacons National Park Local Development Plan (2018 – 2033) Preferred Strategy Consultation Document <https://www.beacons-npa.gov.uk/planning/draft-strategy-and-policy/local-development-plan-review/preferred-strategy/>

The focus of development in the Primary Settlements in the North through Options 1, 2 and 4 is anticipated to result in increased pressure on landscape character, setting, and the intrinsic qualities of the National Landscape and National Park. This is given Options 1, 2 and 4 direct a significant level of growth to Abergavenny which is located in close proximity to the National Park and Monmouth and Chepstow which are located in close proximity to the Wye Valley National Landscape.

Option 3 directs growth away from Monmouthshire’s nationally designated landscapes, to the South of the County. This will likely reduce the potential for residual adverse effects through protecting these high quality landscapes, and directing growth to areas anticipated to be of higher capacity to accommodate new development, given the urban environment surrounding the M4 corridor. Additionally, directing growth along the M4 corridor will contribute positively towards the preservation of local landscapes throughout the remainder of the County and the rural areas, avoiding development in the open countryside and supporting sustainable patterns of development.

Overall, given Monmouthshire’s rural nature and the landscape assets present, it is considered that Options 1, 2 and 4 are more likely to have a negative effect as a result of development in the North. In terms of ranking the Options, Options 1, 2 and 4 are considered worst performing given these Options direct the highest level of growth in close proximity to the National Landscape and National Park. Option 3 is best performing and unlikely to give rise to significant effects given it concentrates growth along the M4 corridor which is an urban area distant from the nationally designated landscapes located to the east and north west of the County. Given that the precise location of growth is not known and further evidence base work is being carried out around landscape sensitivity, all of the options are found to have an uncertain effect at this stage.

Climate change (including flood risk)

Options	Option 1 – Existing LDP Strategy	Option 2 – Proportionate growth	Option 3 – Focus on M4 corridor	Option 4 – Focus in north of County
Rank	2	2	1	2
Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain

Development proposed under any of the Options has the potential to incorporate renewable or low carbon energy, EV charging and smart infrastructure which can support more resilient community infrastructure. There are three substantial main rivers that pass through Monmouthshire, the Rivers Wye, Usk and Monnow and a number of smaller but significant ones are the River Trothy, Olway and Neddern. Monmouthshire is at risk from all types of flooding: surface water, ordinary watercourses, groundwater, rivers and the sea. Both the towns and rural areas are at risk from surface water flooding to various extents during heavy rainfalls. The terrain of the County with its hills,

valleys and plains is also at risk of flooding from watercourses. It is considered that the River Wye has the potential to affect more properties than the others.⁵³

In line with the Flood Risk Regulations (2009), the Preliminary Flood Risk Assessment (PRFA) process has been carried out in order to establish the level of flood risk within the area. Subsequent to this, a Flood Risk Management Plan (FRMP) has been produced (2016) which sets out the findings of the PRFA.⁵⁴ The FRMP highlights that in terms of fluvial flood risk, communities at most risk from a 1 in 1000 year flood (Flood Zone 2) are Monmouth, Abergavenny and Usk. Communities most at risk of 1 in 1000 year surface flooding (Flood Zone 2) were Caldicot, Abergavenny, and Chepstow. Monmouth, Magor/Undy, Llanfoist Fawr, Usk, and Portskewett all feature as part of the top ten communities at risk from surface water flooding.⁵⁵ As such, directing growth to the most sustainable Settlements through Options 1, 2 and 4 have the potential to lead to long term negative effects, given these settlements have been identified as high flood risk areas. It is considered that all new development will accord with Technical Advice Note 15: Development and Flood risk (2004), which sets out a precautionary framework to direct new development away from those areas which are at high risk of flooding.⁵⁶ To this effect, in accordance with national policy, information will need to be provided to demonstrate that any development proposal satisfies the tests contained in the TAN.

Option 3 delivers growth to the South of the County, which is not identified through the FRMP as being significantly constrained in terms of fluvial flood risk, with only Magor/ Undy and Portskewett identified as at medium risk of surface water flooding. This Option is therefore likely to perform more positively than other Options, through delivering growth outside of areas at highest risk of flooding.

Overall, it is considered that Options 1, 2 and 4 perform less positively compared to Option 3 given they direct growth to locations vulnerable to flooding. It is however recognised that there is a level of uncertainty for all Options at this stage, and therefore the nature and significance of effects will be dependent on the precise location of growth and mitigation delivered at the project level.

Appendix D – ISA of strategic growth area options

Linked to Chapters 5 and 6, this appendix provides the detailed assessment of the strategic growth area options. Strategic growth areas have been identified in Abergavenny and Llanfoist, Chepstow, Monmouth, and Severnside.

Methodology

For each of the strategic options, the assessment examines likely significant effects on the baseline, drawing on the sustainability objectives and topics identified through scoping (see Table 3.1 in the main report) as a methodological framework.

Every effort is made to predict effects accurately; however, this is inherently challenging given the high-level nature of the options under consideration. The ability to predict effects accurately is also limited by understanding of the baseline (now and in the future under a 'no plan' scenario). In light of this, there is a need to make considerable assumptions regarding how scenarios will be implemented 'on the ground' and what the effect on particular receptors would be. Where there is a need to rely on assumptions in order to reach a conclusion on a 'significant effect' this is made explicit in the appraisal text.

It is important to note that effects are predicted considering the criteria presented within Regulations. So, for example, account is taken of the duration, frequency, and reversibility of effects. Cumulative effects are also considered (effects of the plan in combination with the effects of other planned or on-going activity that are outside the control of Monmouthshire County Council).

Based on the evidence available a judgement is made if there is likely to be a significant effect. Where it is not possible to predict likely significant effects on the basis of reasonable assumptions, efforts are made to comment on the relative merits of the alternatives in more general terms and to indicate a rank of preference. The number indicates the rank and does not have any bearing on likely significant effects. This is helpful, as it enables a distinction to be made between the alternatives even where it is not possible to distinguish between them in terms of 'significant effects'. For example, if an option is ranked as 1 then it is judged to perform better against that ISA topic compared to an option that is ranked 2 or 3 and so on.

Abergavenny and Llanfoist options

- Option A: Land north of Abergavenny.
- Option B: Land to the east of the A465; and
- Option C: Land between the B4246 and Heads of the Valleys Road.

Economy and employment

Options	Option A – Land north of Abergavenny	Option B – Land east of the A465	Option C – Land between B4246 and Heads of the Valleys
Rank	1	2	3
Significant effect?	No	No	No

Abergavenny plays a significant economic role in the County, being identified as a Primary Settlement in the RLDP settlement hierarchy. Its location on the Heads of the Valleys road provides strategic links through its links to Brecon, Mid Wales and the wider Cardiff Capital Region; and the A465 separates the town from Llanfoist to the south. Options B and C to the east and west of the A456, respectively, are therefore considered to be less well connected to the town centre.

Abergavenny is one of the most self-sufficient settlements in terms of employment with a variety of employment sites within the town; a number of which are protected employment sites. The largest protected employment sites at Union Street, Hatherleigh Place and Mill Street are located to the south west of the main settlement. These employment sites are reasonably accessible from all growth Options, with all Options required to cross the A40 or A465 for access, and would therefore likely be reliant on the car. However, it is noted that this part of the A40 is more residential with some pedestrian crossings already in place. Overall, all Options perform positively in terms of providing good access to local employment sites, supporting levels of self-containment in Abergavenny.

Option B performs most positively in terms of providing access to Abergavenny railway station which is located adjacent to the Option, to the west. Abergavenny railway station connects residents with employment hubs opportunities of the County including Newport, Cardiff, and the Midlands. Options A and C are both located 1.6 miles, or a 34 minute walk from the station. However, it is noted that Option B is separated from the town and the railway station by the A465 so development would need to provide suitable pedestrian links.

All Options have the potential to include employment land and infrastructure delivery to support the town, encouraging inward investment and supporting local economic growth. It is considered that all Options would be able to deliver a similar level of infrastructure, and therefore Options cannot be differentiated between in this respect. Nonetheless, it is considered that the delivery of infrastructure alongside development has the potential to lead to positive effects against this ISA theme, although this is uncertain at this stage.

Overall, all Options are anticipated to lead to long-term positive effects against this ISA theme. Option A is considered best performing given it is reasonably well connected with the town centre and employment opportunities; and is not detached by the A465; as is the case for Options B and C. Option B performs more positively than Option C given it's distance to Abergavenny railway station, and would support the

uptake of sustainable travel to access employment opportunities outside of the County as long as suitable links to the railway station are delivered.

Population and communities

Options	Option A – Land north of Abergavenny	Option B – Land east of the A465	Option C – Land between B4246 and Heads of the Valleys
Rank	1	2	3
Significant effect?	Yes - Positive	Yes - Positive	Yes - Positive

All Options perform equally in terms of providing sufficient housing to meet the identified housing needs of the community, as it is assumed that all Options could deliver the same quantum of growth. Long term positive effects are predicted in this respect.

There are however significant differences between areas of Abergavenny town, as reflected by the range in the average house prices. While some housing is amongst the most expensive in the County, Lansdown and Priory wards, which include the central area of the town northeast of the main shopping area, are much less desirable locations to live.⁵⁷ It is therefore considered that further growth to the north through Option A may lead to positive effects in terms of promoting regeneration in the north of the town, supporting the growth of existing communities and reinforcing Abergavenny's position in the settlement hierarchy as a Tier 1 Primary Settlement. It is however noted that Option A is approximately a mile or a 20-minute walking distance from the town centre where shopping and employment opportunities are focussed. While this is well connected comparatively with other Options it is noted that some residents (notably elderly and those with young children) may rely on the car for access.

Options B and C are further detached from the town centre by the A465 to the east and west of the town, respectively. Option C is the furthest of the options from the town centre, approximately a 2.4 mile or a 57-minute walking distance. Option B is a similar walking distance to Option A however would involve crossing the A465. Options B and C would therefore be more heavily reliant on the car to access the town centre than Option A, performing less positively in terms of potential to support sustainable communities.

While disconnected from the town centre, Option C nonetheless would be an extension of Llanfoist to the west of the town. As such it is considered that development at this location would lead to positive effects through integration with the existing sub-urban community,

⁵⁷ Monmouthshire County Council (2018) Final Local Housing Market Assessment <https://www.monmouthshire.gov.uk/app/uploads/2019/05/Final-Local-Housing-Market-Assessment-September-2018.pdf>

providing a level of infrastructure to support the smaller settlement. Benefits in this respect may include improved access to facilities, services, and potential improvements to highways/ public transport infrastructure.

Overall, Option A, followed by Option B perform most positively against this ISA theme as they are the most well connected with the town centre, its services and facilities, and sustainable travel. Option A is most likely to support the growth/ regeneration of Abergavenny as an attractive Tier 1 settlement, supporting vibrant communities both within the town and the wider hinterlands.

Health and wellbeing

Options	Option A – Land north of Abergavenny	Option B – Land east of the A465	Option C – Land between B4246 and Heads of the Valleys
Rank	1	2	2
Significant effect?	No	No	No

Monmouthshire has one main hospital, Nevill Hall Hospital in Abergavenny, which has a minor injury unit. Option A is 900m/ a 17-minute walk from the hospital. Option C is 1.2km from the hospital by car, however walking distance is 2.8 miles/ 58 minutes. Option B is the least well located, being over 3km from the hospital. In terms of GP surgeries, there are three located within Abergavenny, close to the town centre. Options A and B are within 1km / 18-minute walking distance of a GP surgery. Option C is considerably further from health facilities in the town centre, approximately 2.4km from Old Station Surgery. However, if travelling by car, Option C is also within 1km.

Access to sustainable transport throughout Abergavenny is good. Notably there are public transport links by rail and bus to Cwmbran, Newport, Cardiff and the Midlands, and good road links to Cwmbran, Newport, Monmouth and the motorway system. Option B is best performing in terms of access to the railway station, which is located adjacent to the site to the west. Options A and B are both located 1.6 miles, or a 34-minute walk from the station. However, it is noted that Option B is separated from the town and the railway station by the A465 so development would need to provide suitable pedestrian links.

All Options have relatively limited access to bus services given the edge of settlement locations. While Option A is located within 400m of a bus stop on Underhill Crescent, this is considerably distant from the northern extent of the site. Option B would require crossing the A465 to access a bus stop unless new bus stops are provided, and Option C has access to a bus stop on the B424; however, this is also distant from the north east of the site which extends into the open rural landscape. It is however recognised that there is a regular bus service from the outskirts of the settlement to the town centre; notably at Underhill Crescent which is accessible from Option A, improving access from the site to the railway station and town centre.

The town’s proximity to the Brecon Beacons National Park makes walking, cycling and many other outdoor activities readily accessible, supporting active travel. Option B is best performing in this respect given its proximity to the National Park, and the Brecons Way bridle way located to the north of the growth area. It is also noted that positive effects are also anticipated through Option C, given its location adjacent to the Usk Valley Walk which extends along the Monmouthshire & Brecon Canal.

Overall, Options B and C perform on a par in relation to the Health and wellbeing ISA theme. Option A is best performing in terms of proximity to health services. Option A performs similarly to other options in terms of supporting healthy forms of transport to reach health (and wider) services/ facilities. Option A is less well located in terms of access to the train station; however, it is recognised that the Abergavenny circular bus service provides improved access to some extent.

Equalities, diversity, and social inclusion

Options	Option A – Land north of Abergavenny	Option B – Land east of the A465	Option C – Land between B4246 and Heads of the Valleys
Rank	2	3	1
Significant effect?	No	No	No

Abergavenny is defined as a Tier 1 settlement, and as such, expanding upon built form through all Options will lead to positive effects in terms of supporting and sustaining a hierarchy of vibrant centres across the County, focussing development in accordance with recent population growth data. This will likely positively address existing demographic issues, encouraging younger people to reside and work in the County. It is predicted that growth around Abergavenny will lead to positive effects on new and existing residents’ quality of life, supporting regeneration and creating more positively integrated communities. It is however noted that Option B is detached from residential development by the A465, which may reduce potential for positive integration with existing communities.

It is noted that Abergavenny experiences high deprivation in areas. As highlighted above, development at all Options will support equal communities with improved accessibility to services, employment, and affordable housing. However, it is considered that by targeting some of the most deprived communities through Options B and C, positive effects are likely to be enhanced to some degree. Option C seeks to positively expand upon Llanfoist village to the west of Abergavenny. While less deprived itself, Option A performs positively through reducing inequalities between sub-urban and urban areas.

Option A also performs most positively of the Options in terms of ensuring access to services for more vulnerable or immobile groups in the community, particularly elderly residents and young families, especially those without access to private vehicles. Option C is least well

performing in this respect as is the furthest of the options from the town centre (2.4km). Option B is a similar walking distance to Option A; approximately a mile or a 20-minute walking distance.

Overall, it is considered that all Options perform positively against this ISA theme through supporting the growth of and regeneration of existing communities, improving access to housing, jobs and services. However, Option C is predicted to lead to positive effects of greater significance through targeting deprived areas; promoting equality and social inclusion through developing more inclusive communities. Option B performs least well of the Options given it is severed from the settlement by the A465, which may reduce potential for positive integration with existing communities.

Transport and movement

Options	Option A – Land north of Abergavenny	Option B – Land east of the A465	Option C – Land between B4246 and Heads of the Valleys
Rank	=	=	=
Significant effect?	No	No	No

In terms of the strategic transport network, Abergavenny is closely linked to the A465, and plays an important role on the Heads of the Valleys road through its links to Brecon, Mid Wales and the wider Cardiff Capital Region. While levels of self-containment are high in Abergavenny, there remains a reliance on the car as the primary mode of transport, and therefore traffic throughout the town is a significant issue. In addition to high levels of through traffic currently experienced, it is noted that a high percentage of the overall travel to work flows for the County would be to Abergavenny. All Options are well located in terms of access to the strategic transport network (the A465 extends east and west of the main settlement), and it is considered that development under all Options is likely to result in increased vehicular use in the town with the potential for long term adverse effects.

Access to sustainable transport throughout Abergavenny is good. Notably there are public transport links by rail and bus to Cwmbran, Newport, Cardiff and the Midlands. However, of the Options, only Option B is well located in terms of access to the railway station, being located adjacent to the site to the west. Options A and C are both located 1.6 miles, or a 34-minute walk from the station. However, it is noted that Option B is separated from the town and the railway station by the A465 so development would need to provide suitable pedestrian links. All Options have relatively limited access to bus services given the edge of settlement locations. While Option A is located within 400m of a bus stop on Underhill Crescent, this is considerably distant from the northern extent of the site. Option B would require crossing the A465 to access a bus stop, and Option C has access to a bus stop on the B424, however this is also distant from the north east of the site which extends into the open rural landscape. It is however recognised that there is a regular bus service from the outskirts of

the settlement to the town centre; notably at Underhill Crescent which is accessible from Option A, improving access from the site to the railway station and town centre. Option B performs most positively overall given its location in close proximity to the railway station, and subsequently the increased opportunity to encourage modal shift for shorter journeys both within the town, and for wider commuter journeys.

The town’s proximity to the Brecon Beacons National Park makes walking, cycling and many other outdoor activities readily accessible, supporting active travel. Option B is best performing in this respect given its proximity to the National Park, and the Brecons Way bridle way located to the north of the growth area. It is also noted that positive effects are also anticipated through Option C, given its location adjacent to the Usk Valley Walk which extends along the Monmouthshire & Brecon Canal.

All Options are assumed to have the potential to include enhancements/ improvements to services/ facilities and public transport. As set out above, the level of infrastructure delivery is expected to be equal under all Options, and therefore none of the Options are better performing in this respect.

Overall, all Options perform similarly against this ISA theme, directing growth towards a Tier 1 settlement, with good access to the strategic transport network. While all Options may increase traffic through the town, it is recognised that Options perform positively in terms of promoting the uptake of sustainable travel. While Option B would arguably provide the greatest opportunity for residents to capitalise upon a range of sustainable transport options; located adjacent to the railway station, and with access to the Brecons Way bridle, it is considered that the separation of the option from the main settlement by the A465 may reduce its potential to encourage a modal shift. Options A and C are better located to the settlement and bus services, but less well located in terms of the railway station. It is therefore concluded that Options cannot be differentiated between at this stage.

Natural resources (air, land, minerals, and water)

Options	Option A – Land north of Abergavenny	Option B – Land east of the A465	Option C – Land between B4246 and Heads of the Valleys
Rank	1	2	3
Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative

While air pollution is not a major problem in Monmouthshire it can cause significant problems for people’s health. The greatest problems associated with air quality in the County are caused by vehicle emissions, and therefore Options perform positively where they seek to utilise sustainable transport opportunities; such as active travel networks, improved public transport and electric charging point

infrastructure. This will help to reduce the impact of transport-based emissions and improvements in air quality. Option A is best performing in this respect, being a mile or a 20-minute walking distance from the town centre where shopping and employment opportunities are focussed. However, this is arguably not an achievable walking distance for all residents (notably the elderly and families with young children), with many people still likely to rely on the car for access. Options B and C are further detached from the town centre by the A465 to the east and west of the town, respectively. Option C is the furthest of the Options from the town centre, 2.4 miles away. Option B is a similar walking distance to Option A. Options B and C would therefore be more heavily reliant on the car to access the town centre than Option A, performing less positively in terms of potential to promote sustainable travel. Option B has the potential to encourage modal shift given it is located adjacent to the railway station; however, suitable pedestrian links would need to be delivered for crossing the A465. Options A and C are both located 1.6 miles, or a 34-minute walk from the station. Options B and A are therefore best performing in terms of potential to improve air quality in the town.

The Agricultural Land Classification (ALC) classifies land into six grades (plus 'non-agricultural' and 'urban'), where Grades 1 to 3a are recognised as being the 'best and most versatile' land (BMV) and Grades 3b to 5 are of poorer quality. Detailed agricultural land quality surveys will be undertaken by site promoters as part of the candidate site process, and therefore at this stage ALC at each of the Options has been based on the Predictive ALC model for Wales (2019).⁵⁸ The area containing Option C was found to be entirely Grade 2, while the area containing Option B was found to be partially Grade 2 and partially Grade 3a. Option A was the only Option found to include an area of land that is not BMV, containing Grade 2 and 3b. Option A is therefore best performing in this respect, as it would necessitate the least amount of loss of BMV land. All Options comprise entirely greenfield sites and consequently it is not possible to differentiate between them in terms of promoting the use of previously developed land.

None of the Options fall within, or within close proximity to a mineral safeguarding area, and therefore all perform equally in terms of impact on the County's mineral resource. All Options are also considered to perform equally in terms of demand for water, and impact on water quality.

Overall, all Options perform negatively against this ISA theme given all Options would result in the loss of greenfield and BMV agricultural land and would not contribute towards promoting the use of brownfield land. However, it is recognised that there are limited opportunities within the County for brownfield development and development on lower grades of agricultural land. Option A is best performing of the Options as it may encourage active travel to some extent, given its location 1 mile from the town centre; and is the least constrained Option in terms of BMV agricultural land. Option B performs more positively than Option C as it is located adjacent to the railway station, which may encourage modal shift.

⁵⁸ The Predictive ALC model for Wales (2019) is based on the principles of the Agricultural Land Classification System of England & Wales, the Revised Guidelines & Criteria for Grading the Quality of Agricultural Land (MAFF 1988).

Biodiversity and geodiversity

Options	Option A – Land north of Abergavenny	Option B – Land east of the A465	Option C – Land between B4246 and Heads of the Valleys
Rank	1	1	2
Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative

In terms of European sites, it is recognised that the HRA (2021) screening of the Preferred Strategy policies found that potential residential or employment sites in Abergavenny are likely to have nutrient neutrality implications for the River Usk SAC, because it is served by WwTWs discharging into the upper reaches of the SAC. Whilst solutions have now been identified (2024) mitigation will be required supported by RLDP policy provisions. All options therefore have the potential to lead to long term significant negative effects in this respect, and options cannot be differentiated given the level of development is considered equal across all options.

In terms of differentiating between the Options, Option A is located 1km south of the Sugar Loaf Woodlands Special Area of Conservation (SAC), and Option C is located approximately 200m south of the River Usk SAC. Taking each European site in turn:

The Sugar Loaf Woodlands SAC comprises 173.1ha of broad-leaved deciduous woodland (76.7%), and heath and scrub (23.3%). The site has been designated for its area of old sessile oak woods near the south-eastern fringe of the habitat’s range. This is the largest in the UK and Europe.

- **The River Usk SAC** covers the length of the River Usk, to the west of the County, running through Abergavenny and Usk. The SAC contains habitats listed under Annex I of the Habitats Directive and a variety of species listed under Annex II of the Habitats Directive; that are primary reason for designation. The River Usk SAC is part within the Brecon Beacons National Park Planning Area.

In addition to the water quality issue set out above, the HRA screening (2021) found that there is the potential for development to significantly affect the River Usk through recreation, and water quantity, level and flow. As such, this site and potential impact pathways will be considered in more detail through the Appropriate Assessment stage.

In terms of the Sugar Loaf Woodlands SAC, given the distance (more than 200m) from the nearest major road, adverse impacts are not anticipated on the site through atmospheric pollution. The SAC lies approximately 1km from the Strategic Growth Area of Abergavenny, indicating that it is likely to be within walking distance for new local residents. However, Natural Resources Wales’ Core Management Plan

does not refer to recreational pressure as a potential management requirement for the site.⁵⁹ It is therefore concluded that there will be no likely significant effects of the Monmouthshire RLDP on the Sugar Loaf Woodlands SAC and the site can be screened out from Appropriate Assessment.

It is therefore considered that Option C performs most negatively in terms of potential impact on the River Usk SAC, given its close proximity. However, given the impact pathways identified, all Options have the potential to lead to adverse effects on the European site. It is however noted that effects may be less significant under Options A and B. Potential strategic growth areas have been identified as needing to be screened in for further detailed consideration through the HRA process.

There is a range of nationally and locally designated biodiversity located around Abergavenny. Some of these designations fall within or have the same boundaries as the European sites considered through the HRA and outline above, although they may have different designated features and sensitivities in some cases. Despite this, the impact pathways identified for European sites are also applicable/relevant to nationally and locally designated sites and wider biodiversity interests. Notably, as discussed above, Options have the potential to impact on the River Usk SSSI through recreation, water quality and water quantity, level and flow. Option C performs most negatively in this respect given the proximity of the Option to the European designated site.

The Options are also constrained by Ancient Woodland, with a linear area located to the south/ east of Option A, and a significant area coinciding with Ysgyrd Fach hill to the east of Option B. It is considered that Options have the potential to adversely impact on these nationally important habitats (and associated species) through increased disturbance, noise, light and air pollution. This should be considered alongside the potential to possibly enhance these habitats and deliver significant positive effects. For example, development proposals could include the delivery of biodiversity net gain, creating ecological corridors between the woodland habitats and the Options.

The Options are not constrained by locally designated sites; however, it is recognised that all sites are greenfield, and may have the potential to hold biodiversity value. Notably, there are patches of hedges/mature trees extending through Options A and C, and along the field boundaries and along the A465 surrounding /within Option B. There is therefore potential for development across all Options to lead to negative effects on biodiversity through direct loss of these habitats and any associated species. Development should seek to retain and enhance these habitats where possible, ensuring no net loss, and seek to deliver significant positive effects through biodiversity net gain.

Overall, all options have the potential to lead to long term significant negative effects as a result of nutrient neutrality implications for the River Usk SAC and the subsequent mitigation requirements. In terms of ranking the Options, given the presence of the River Usk SAC/ SSSI, Option C is worst performing of the Options, with the greatest potential for negative effects on biodiversity. However, given the impact pathways identified through the HRA for the SAC, it is considered that Options A and B also have the potential to impact upon the European

⁵⁹ Countryside Council for Wales (2008) Core Management Plan for Sugar Loaf Woodlands SAC/SSSI
https://naturalresources.wales/media/674063/Sugar_Loaf_Woodlands_core_management_plan_Mar_2008%20A_.pdf

designated site; however, effects are likely to be less significant. Options A and B are also constrained in terms of potential indirect effect on Ancient Woodland; while all Options are constrained in terms of potential adverse effects on habitats present within/ surrounding the Options (i.e., through habitat loss and recreational disturbance). It is however also noted that there is the potential for Options to deliver positive effects through biodiversity enhancement/ net gain.

Historic environment

Options	Option A – Land north of Abergavenny	Option B – Land east of the A465	Option C – Land between B4246 and Heads of the Valleys
Rank	2	1	3
Significant effect?	Uncertain	Uncertain	Uncertain

Option A is located to the north of Abergavenny and would extend the existing built-up area toward the boundary with the Brecon Beacons National Park. Development would be in close proximity to the northern boundary of the Abergavenny Conservation Area and a number of listed buildings. It is assumed development would not extend beyond Pentre Lane or Deri Road into the National Park. It's possible that the site could accommodate development without any significant residual negative effects on the historic environment as long it is sensitively designed, and the layout takes account of any important views into and from the National Park and the Conservation Area. However, this is uncertain at this stage.

Option B is located to the east of the A465 and apart from some listed buildings near the train station, it's not in close proximity to any designated heritage assets. However, as you move further away from the town and the A465 the elevation increases, and development is likely to be become more visible from the settlement and the World Heritage Site (WHS) and National Park across the town. Furthermore, in terms of the wider historic environment this option would extend the built area beyond the A465, a natural barrier to the town for many years, into the countryside. It's possible that the site could accommodate development without any significant residual negative effects on the historic environment as long as it is sensitively designed, and the layout takes account of any important views into and from heritage assets within and beyond the settlement. However, this is uncertain at this stage.

Option C is located to the north west of Llanfoist, between the B4246 and the Heads of the Valleys Road. It would extend the built-up area to the boundary with the Brecon Beacons National Park as well as the Blaenavon Industrial Landscape WHS. Additionally, there are two listed buildings in close proximity to the growth area. It appears that the majority of the growth area sits at a lower elevation than the WHS, National Park and the Heads of the Valley Road. As a result, development is unlikely to significantly affect any views in or out from the WHS or the National Park. Development could affect the setting of a Grade II listed building (Glan nant-y-Ilan) on Church Lane but it's

possible that development could avoid the area in the south east adjacent Church Road, which is slightly more elevated and therefore more visible in terms of the WHS and National Park. It’s possible that the site could accommodate development without any significant residual negative effects on the historic environment as long as it is sensitively designed and the layout takes account of any important views into and from the National Park, WHS and the listed building off Church Lane. However, this is uncertain at this stage.

It is recognised that Monmouthshire’s cultural assets also include the use of the Welsh language. The RLDP is not considered likely to have a significant effect on the Welsh language, and therefore no significant differences have been identified between the Options in this respect.

Given uncertainties no significant differences between the options in terms of the nature and significance of effects could be identified at this stage. They could all potentially affect the setting of designated heritage assets depending on the design and layout of development. Despite this, it is possible to rank them; assuming that the same scale/ type of development would be delivered within the strategic growth areas, the differences identified between them at this stage mainly reflect proximity to designated heritage assets. While there are a significant number of uncertainties at this stage, Option B is considered to be less sensitive in terms of the historic environment compared to the other options. Development at Option A and particular Option C are more likely to affect internationally and nationally designated heritage landscapes and natural landscapes that have shaped development over time and contribute to the character of the area and settlement identities. By its proximity to the WHS as a significant heritage asset, development under Option C is least preferred.

Landscape

Options	Option A – Land north of Abergavenny	Option B – Land east of the A465	Option C – Land between B4246 and Heads of the Valleys
Rank	3	1	2
Significant effect?	Yes - Negative	Yes - Negative	Uncertain

As a largely rural County, Monmouthshire has major landscape resources and is home to internationally and nationally designated landscapes. Looking specifically at Abergavenny, the built-up area to the north and west extends close to the Brecon Beacons National Park (BBNP) boundary and Llanfoist adjoins the Blaenavon World Heritage Site (WHS). In line with Planning Policy Wales (2018) it is recognised that these designated assets are “valued for their intrinsic contribution to a sense of place, and that their special characteristics should be protected and enhanced.”⁶⁰ In addition to national policy requirements, protection is also provided to the Brecon Beacons

⁶⁰ Welsh Government (2018) Planning Policy Wales

National Park through the established Local Development Plan in place and development control functions in the correlating part of the County. In terms of the WHS, the Blaenavon WHS Management Plan (2018) identifies an overall vision and key principles for the management of the WHS.⁶¹

While protection is provided at the higher level, it is nonetheless considered that Options A and C have the potential to adversely impact upon special landscape features, character and setting of the BBNP and WHS. Development to the north through Option A and to the north west of Llanfoist through Option C, would expand the existing built up area toward the boundary with the BBNP; and Option C also has the potential to adversely impact upon the setting of the WHS. It is however possible that Options could accommodate development without any significant residual negative effects on the landscape as long it is sensitively designed, and the layout takes account of any important views into and from the BBNP and WHS. However, this is uncertain at this stage.

It is also noted that Cadw, Natural Resources Wales and the International Council on Monuments and Sites (ICOMOS UK) has compiled a non-statutory Register of 58 Landscapes of Outstanding or Special Historic Interest in Wales. None of the options fall within, or adjacent to these Landscapes of Outstanding or Special Historic Interest.

A Landscape Capacity Update study has been carried out for the County (2020), which identifies Local landscape Character Areas (LLCAs) and provides an overall analysis of each LLCA's sensitivity to residential development.⁶² Overall, the study has found that there is capacity for housing in Monmouthshire focussing on the larger settlements; which includes Abergavenny. However, looking specifically at the Options turn:

Option A is categorised as being of high/medium landscape sensitivity to residential development.

- **Option B** is categorised as having high/medium landscape sensitivity to residential development.
- **Option C** is categorised as having medium landscape sensitivity to residential development.

Given uncertainties no significant differences between the Options in terms of the nature and significance of effects could be identified at this stage. They could all potentially affect the intrinsic qualities, character and setting of designated landscapes/ assets depending on the design and layout of development. Despite this, it is possible to rank them; assuming that the same scale/ type of development would be delivered within the strategic growth areas, the differences identified between them at this stage mainly reflect the Landscape Sensitivity Update Study (2020) findings. Option C is therefore identified as best performing given it is the only Option with 'medium' sensitivity to residential development; however, this Option still has the potential to result in significant negative effects. Option A is worst performing given the potential impact on the BBNP; its open character and hillside setting. It is however noted that for all Options, mitigation (which

⁶¹ Chris Blandford Associates (2018) Blaenavon Industrial Landscape World Heritage Site Management Plan 2018 - 2023

⁶² White Consultants (2009) Monmouthshire Landscape Sensitivity and Capacity Study

reduces the extent of development to avoid the most sensitive areas) is considered likely to reduce the significance of the potential negative effects. However, this is uncertain at this stage and will be dependent on the design/ layout and implementation of specific mitigation measures.

Climate change (including flood risk)

Options	Option A – Land north of Abergavenny	Option B – Land east of the A465	Option C – Land between B4246 and Heads of the Valleys
Rank	2	1	3
Significant effect?	Uncertain	Uncertain	Uncertain

Monmouthshire's rurality, limited public transport, high levels of car ownership and the subsequent reliance on the private car, combined with high energy consumption can all contribute to carbon emissions. Monmouthshire County Council declared a climate emergency in May 2019, and as such growth Options will be required to contribute positively towards meeting the Council's aim of reducing its net carbon emissions to zero by 2030.

In relation to climate change adaptation, key issues include the need to capitalise upon opportunities to design-in low carbon infrastructure to development from the outset, and therefore minimise additional CO₂ emissions associated with development. There are no significant differences between the Options in terms of opportunities to design-in low carbon infrastructure, i.e., given there is no difference in quantum of housing growth between options.

All Options also present an opportunity to support adaptation to the potential effects of climate change through providing improvements to the local green infrastructure network. As above, it is considered that all options are able to deliver a similar level of infrastructure, and as such all options perform equally in this respect.

It is considered that there is the potential to reduce greenhouse gas emissions by reducing the need to travel and encouraging the use of sustainable transport modes. Notably, the Active Travel (Wales) Act (2013) requires all local authorities in Wales to deliver improvements to their network of active travel routes and facilities. All Options perform well in this respect, directing growth towards a Tier 1 settlement, with good public transport links connecting residents with employment and services within and outside the County; notably Cwmbran, Newport, Cardiff and the Midlands. Option B arguably provides the greatest opportunity for residents to capitalise upon a range of sustainable transport options given its location adjacent to Abergavenny railway station. However, it is considered that the separation of the Option from the town centre by the A465 may result in heavy reliance on the car for primary mode of travel. Options A and C are better located to the

settlement and bus services, but less well located in terms of the railway station. It is therefore concluded that Options cannot be differentiated between at this stage.

In terms of managing flood risk to address climate change, it is recognised that the floodplain of the River Usk is a constraint to the south of the town and in parts of Llanfoist. Looking specifically at the Options, Option B is located within Flood Zone A, and is not at risk of flooding. However, Option C is at high risk of flooding, with a proportion of the Option located within Flood Zones B/ C. Option A includes a very small area within Flood Zones B/ C; extending north to south in the centre of the Option. It is however noted that development under Options B and C could avoid the highest flood risk areas and deliver suitable mitigation (including sustainable drainage systems) to ensure that development does not increase flood risk elsewhere.

Overall, development proposed at the individual Option scale is not likely to have a significant positive or negative effect on climate change when considered in isolation. It is anticipated that this will be addressed through the RLDP policy framework. All Options seek to support the uptake of sustainable travel where possible, however given the presence of the A465 may result in increased reliance on the car for primary mode of travel. As such, effects on climate change in this respect are uncertain. Option C is worst performing of the Options, given that a significant proportion of Option C is located within Flood Zones B/C, with the potential for long term negative effects. However, it is considered that areas at high risk of flooding would be avoided where possible in line with higher tier planning policy and guidance via the PPW and Technical Advice Note 15.

Chepstow options

- Option D: Land north of the Bayfield Estate.
- Option E: Land between the Bayfield Estate and A48; and
- Option F: Land between the A48 and M48.

Economy and employment

Options	Option D – Land north of Bayfield Estate	Option E – Land between Bayfield Estate and A48	Option F – Land between A48 and M48
Rank	3	2	1
Significant effect?	No	No	No

Chepstow plays a significant economic role in the County, being identified as a Primary Settlement in the RLDP settlement hierarchy. Of all of the settlements appraised in the Sustainable Settlement Appraisal (December 2022) it achieved the second highest weighted score, not far behind Abergavenny. Chepstow is well placed on the M4 corridor at the entrance to Wales to capitalise on its strategic road and rail links to the Cardiff Capital Region and South West England and associated economic opportunities. These opportunities have been enhanced given the recent removal of the Severn Bridge Tolls. Option F is arguably best located in this respect, given its location adjacent to the M48, connecting with the M4 and Newport/ Cardiff to the south west.

In terms of facilities and services present, the town centre has a relatively large number and good range of shops and restaurants and is a vibrant focus for the surrounding area. Option E is best performing in terms of access to the town centre, being less than a mile or a 15-minute walking distance. Option D is approximately 1.3km or a 15-minute walk from the town centre, while Option F is furthest away from the town centre at approximately 1.4 miles or a 29-minute walk.

Chepstow is also one of the main focuses of employment within the County. Chepstow has a good range of employment sites within the town, with the largest being the Newhouse Farm Industrial Estate located to the south of the town on the motorway junction with the M48. In terms of access to this employment site, Option F is best performing, being located to the southwest of the settlement, with Option D worst performing being located furthest north. Nonetheless, all Options perform positively in terms of providing good access to local employment sites, supporting levels of self-containment in Chepstow.

It is also noted that a high percentage of residents cross the River Severn daily to work in Bristol. Option F is therefore best performing in terms of access to the Severn Bridge and M48, supporting access to wider employment opportunities outside of the County.

All Options have the potential to include employment land and infrastructure delivery to support the town, encouraging inward investment and supporting local economic growth. It is considered that all options would be able to deliver a similar level of infrastructure, and therefore options cannot be differentiated between in this respect. Nonetheless, it is considered that the delivery of infrastructure alongside development has the potential to lead to positive effects against this ISA theme, although this is uncertain at this stage.

Overall, all options are anticipated to lead to long-term positive effects against this ISA theme. Although least well connected with the town centre, Option F is considered best performing given it is well connected with the M4 corridor, the Severn Bridge, and employment opportunities to the south of the town.

Population and communities

Options	Option D – Land north of Bayfield Estate	Option E – Land between Bayfield Estate and A48	Option F – Land between A48 and M48
Rank	=	=	=
Significant effect?	Yes - Positive	Yes - Positive	Yes - Positive

All options perform equally in terms of providing sufficient housing to meet the identified housing needs of the community, as it is assumed that all options could deliver the same quantum of growth. Long term significant positive effects are predicted in this respect.

There are significant differences between areas of Chepstow as reflected by the range in the average house prices; St Kingsmark ward has the highest prices and St Christopher ward the lowest.⁶³ It is therefore considered that further growth to the south of Chepstow through Option F may lead to positive effects in terms of promoting regeneration in the south of the town, expanding upon the existing town centre/ retail uses and increasing the potential customer base. This would likely lead to further positive effects in terms of promoting the growth/ regeneration of existing communities and reinforcing Chepstow's position in the settlement hierarchy. However, it is noted that Option F is detached to some extent from the main built up area by the A466, and may not integrate well with the existing community. Option F may also negatively impact upon the identity of smaller, distinct communities in the open countryside to the west of the main settlement, notably between Chepstow and Pwllmeyric and Mathern. Option E may also perform negatively in this respect, between Chepstow and Pwllmeyric. Conversely, however, directing growth to smaller, suburban settlements would likely promote sustainable communities; improving access to the motorway and railway station for employment, wider services and facilities. Options D and E would extend the built up area of Bayfield to the north and south, respectively. Development at this location would likely more positively integrate with the existing community, providing a level of infrastructure to support the settlement and improve connections with the main town centre to the east.

⁶³ Monmouthshire County Council (2018) Final Local Housing Market Assessment <https://www.monmouthshire.gov.uk/app/uploads/2019/05/Final-Local-Housing-Market-Assessment-September-2018.pdf>

Overall, it is not considered possible to differentiate between the options at this stage. All options perform positively in terms of supporting the growth/ regeneration of Chepstow as an attractive Tier 1 settlement, supporting vibrant communities both within the town and the wider hinterlands.

Health and wellbeing

Options	Option D – Land north of Bayfield Estate	Option E – Land between Bayfield Estate and A48	Option F – Land between A48 and M48
Rank	=	=	=
Significant effect?	No	No	No

Chepstow does not include a hospital; however it is supported by Chepstow Community Hospital which includes two GP practices; Mount Pleasant and Town Gate surgeries. Chepstow Community Hospital is located to the west of the settlement, adjacent to the A466. In terms of access to the Community Hospital and associated GP surgeries, Option E is best performing, followed closely by Option D, with Option F least well performing. However, all Options are within 1 mile of the Community Hospital and therefore considered to have good access to health services. For wider hospital services (i.e. A&E and Minor Injuries Unit), The Grange University Hospital in Cwmbran, which is the main hospital in the area, is approximately 34.4km from Chepstow, and there is also the Royal Gwent Hospital located in Newport; 18 miles from Chepstow, respectively. Option F is best located in terms of access to wider hospital services to the east and west, given the close proximity to the M48, to the south of the Chepstow.

Being located close to the M48, Option F also has the potential to perform negatively against this ISA theme as a result of potential impacts on residents’ health (i.e. through atmospheric and noise pollution). The Department of Transport’s Transport Analysis Guidance outlines that, within 200m, the contribution of vehicle emissions from the roadside to local pollution levels is significant. However, it is noted that the nature and significance of effects are uncertain and dependent on the precise scale, layout and design of growth.

While it is recognised that the car is the primary mode of travel throughout Chepstow (utilising the M4 corridor as set out above), Chepstow benefits from active travel routes, an existing railway station and frequent bus services. Notably there are public transport links by bus to Cwmbran, Chepstow circular, Pontypool and Monmouth. All Options have access to a bus stop on the A466, however this is distant from the western extent of all Options, which are relatively distant from the settlement in the open rural landscape. All Options are also a similar distance from Chepstow railway station (1 mile/ 18-minute walk), located on the other side of the settlement, to the east. Chepstow railway station connects residents with the wider south west Wales region and the midlands; including Newport, Cardiff, Birmingham, and Nottingham.

Overall, all Options perform positively in relation to the health and wellbeing ISA theme. It is difficult to distinguish between the Options at this stage, with all options providing residents with good access to health services and supporting active travel.

Equalities, diversity, and social inclusion

Options	Option D – Land north of Bayfield Estate	Option E – Land between Bayfield Estate and A48	Option F – Land between A48 and M48
Rank	2	1	3
Significant effect?	No	No	No

Chepstow is defined as a Tier 1 settlement, and as such, expanding upon built form through all Options will lead to positive effects in terms of supporting and sustaining a hierarchy of vibrant centres across the County, focussing development in accordance with recent population growth data. This will likely positively address existing demographic issues, encouraging younger people to reside and work in the County. Chepstow experiences slightly higher levels of deprivation, as highlighted above, development at all Options will support equal, sustainable communities, notably with improved accessibility to services to address deprivation; but also through access to employment and affordable housing.

In addition to addressing higher levels of deprivation, directing growth around Chepstow will lead to positive effects in terms of improving access to services for vulnerable or immobile groups in the community (particularly elderly residents and young families). Option E is likely to deliver positive effects of greatest significance in this respect given Option E is most well connected with Chepstow town centre. This is followed by Option D, and subsequently Option F, which is approximately 1.4 miles or a 29 minute walk from the town centre. All Options also perform well through reducing inequalities between sub-urban and urban areas, expanding upon Bayfield, Pwllmeyric, Mounton and Newton Green to the west of Chepstow.

Overall, it is considered that all Options perform positively against this ISA theme. Options will support the growth of and regeneration of existing communities, improving access to housing, jobs and services. All Options will also support integration between urban and sub-urban communities, reducing inequality. In terms of ranking the Options, Option E performs most positively given it is most well connected to the town centre, providing access for vulnerable groups and supporting improved levels of deprivation. Option F performs least positively overall given its distance from services in the town centre, which may exacerbate deprivation levels in this respect.

Transport and movement

Options	Option D – Land north of Bayfield Estate	Option E – Land between Bayfield Estate and A48	Option F – Land between A48 and M48
Rank	=	=	=
Significant effect?	No	No	No

In terms of the strategic transport network, Chepstow is well placed on the M4 corridor at the entrance to Wales to capitalise on its strategic road and rail links to the Cardiff Capital Region and South West England. It is also recognised that the recent removal of the Severn Bridge Tolls has enhanced accessibility in this respect. Given its location adjacent to the M48, Option F is arguably the most well located of the Options, connecting with the M4 and Newport/ Cardiff to the south west.

While levels of self-containment are high in Chepstow, there are consequently substantial daily flows of commuters to and from the town, with levels of car reliance high. The A48, which provides the main link between the southern part of the Forest of Dean and the motorway network, passes through the town and creates congestion problems; with part of the route also designated as an Air Quality Management Area (AQMA). All Options are well located in terms of access to the strategic road network, with Option F notably located adjacent to the M48, connecting with the M4 and Newport/ Cardiff to the south west. As such, it is considered that development under all options is likely to result in increased vehicular use in the town with the potential for long term adverse effects.

While it is recognised that the car is the primary mode of travel throughout Chepstow (utilising the M4 corridor as set out above), Chepstow benefits from active travel routes, an existing railway station and frequent bus services. Notably there are public transport links by bus to Cwmbran, Chepstow circular, Pontypool and Monmouth. All Options have access to a bus stop on the A466; however, this is distant from the western extent of all Options, which are relatively distant from the settlement in the open rural landscape. All Options are also a similar distance from Chepstow railway station (1 mile/ 18-minute walk), located on the other side of the settlement, to the east. Chepstow railway station connects residents with the wider south west Wales region and the midlands; including Newport, Cardiff, Birmingham, and Nottingham.

All Options are assumed to have the potential to include enhancements/ improvements to services/ facilities and public transport. As set out above, the level of infrastructure delivery is expected to be equal under all Options, and therefore none of the options are better performing in this respect.

Overall, all Options perform similarly against this ISA theme, directing growth towards a Tier 1 settlement, with good access to the strategic transport network. While all options may increase traffic through the town, leading to adverse effects on air quality and the Chepstow AQMA, it is recognised that Options perform positively in terms of promoting the uptake of sustainable travel.

Natural resources (air, land, minerals, and water)

Options	Option D – Land north of Bayfield Estate	Option E – Land between Bayfield Estate and A48	Option F – Land between A48 and M48
Rank	=	=	=
Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative

While air pollution is not a major problem in Monmouthshire it can cause significant problems for people’s health. The greatest problems associated with air quality in the County are caused by vehicle emissions, this is particularly apparent through the Air Quality Management Area (AQMA) present at Chepstow (and another at Usk). Chepstow AQMA is located in the centre of the town, encompassing properties either side of the A48, between the roundabout with the A466 to the west and extending east just beyond the junction with the B4293 at Hardwick Terrace. Chepstow AQMA was designated in 2007 for levels of NO₂; predominately caused by vehicle emissions from through traffic in the town centre. Options E and F are located adjacent to the AQMA, to the west of the A48 and the A48/ A458 roundabout. It is therefore considered that new development at these Options would lead to increased vehicular use within the AQMA, resulting in heightened levels of NO₂, and an overall adverse effect on air quality. While Option D is located further from the AQMA, to the north west of the town, residents will have to travel in to the AQMA to access services and facilities within Chepstow town centre, contributing to air quality issues. Negative effects are therefore predicted for all Options.

The Agricultural Land Classification (ALC) classifies land into six grades (plus ‘non-agricultural’ and ‘urban’), where Grades 1 to 3a are recognised as being the ‘best and most versatile’ land (BMV) and Grades 3b to 5 are of poorer quality. Detailed agricultural land quality surveys will be undertaken by site promoters as part of the candidate site process, and therefore at this stage ALC grades at each of the Options has been based on predictive mapping. The area containing Options D and E were found to be entirely Grade 2, while the area containing Option F was found to be predominately Grade 1 with smaller areas of Grade 2 and Grade 3a. All Options therefore perform equally, given all are wholly located within BMV agricultural land, leading to the permanent loss of this resource. All Options also comprise entirely greenfield sites and consequently it is not possible to differentiate between them in terms of promoting the use of previously developed land.

All Options are considered to perform equally in terms of demand for water, and impact on water quality. All of the Options fall within the limestone minerals safeguarding area, and therefore also perform equally in terms of impact on the County’s mineral resource.

Overall, all Options are considered to perform equally against this ISA theme. Options are anticipated to have long term negative effects through increased vehicular use within Chepstow AQMA, and the permeant loss of BMV agricultural land /greenfield land. However, it is recognised that there are limited opportunities within the County for brownfield development and development on lower grades of agricultural land.

Biodiversity and geodiversity

Options	Option D – Land north of Bayfield Estate	Option E – Land between Bayfield Estate and A48	Option F – Land between A48 and M48
Rank	1	2	3
Significant effect?	Uncertain	Uncertain	Uncertain

In terms of European sites, the Wye Valley Woodland SAC is located 600m east of Option D, 900m east of Option E, and 1.2km north east of Option F. The River Wye SAC is located 800m east of Option D, 1km east of Option F, and 1.5km east of Option E. Taking each SAC in turn:

- **The Wye Valley Woodland SAC** is a large woodland SAC that straddles the Wales-England border, extending along the east of the County. The site is underpinned by nine SSSIs in Wales and seven in England. The Wye Valley contains abundant and near continuous semi-natural woodland along the gorge. The variety of woodland types found are rare within the UK.
- **The River Wye SAC** covers the length of the River Wye, to the north east of the County, notably extending through Monmouth. The SAC contains habitats listed under Annex I of the Habitats Directive and a variety of species listed under Annex II of the Habitats Directive which are also the primary reasons for designation. The River Wye is important for its population of Atlantic salmon, and whilst stocks have declined the salmon population is still of considerable importance in UK terms. The Wye also holds the densest and most well established otter population in Wales. The site is considered one of the best in the UK for white-clawed crayfish. Other important species supported by the River Wye are twaite shad, bullhead and river, sea and brook lamprey.

HRA Screening (2019) of the Preferred Strategy policies found that there is the potential for development to significantly affect the Wye Valley Woodland SAC through atmospheric pollution; and for development to affect the River Wye SAC through atmospheric pollution, recreation, water quality and water quantity, level and flow. As such, the European sites, and their potential impact pathways, will be

considered in more detail through the Appropriate Assessment stage. It is therefore considered that all Options have the potential to indirectly impact upon the SACs. Potential strategic growth areas have been identified as needing to be screened in for further detailed consideration through the HRA process.

There is a range of nationally and locally designated biodiversity located around Chepstow. Some of these designations fall within or have the same boundaries as the European sites considered through the HRA and outlined above, although they may have different designated features and sensitivities in some cases. Despite this, the impact pathways identified for European sites are also applicable/ relevant to nationally and locally designated sites and wider biodiversity interests. Notably, as discussed above, Options have the potential to impact on the River Wye SSSI through atmospheric pollution, recreation, water quality and water quantity, level and flow; and to impact on the Wye Valley Woodlands SSSI/ National Nature Reserve through atmospheric pollution.

All Options are also constrained by Ancient Woodland:

- Bishops Barnet Wood and Great Barnet Wood is 100m northeast of Option D;

A small area of Ancient Woodland is located north of Option E, south of Mounton Road; and

There are two distinct areas of Ancient Woodland located within Option F, including East Wood.

There is the potential for development at Option F to have a significant negative effect on biodiversity through direct loss of this important habitat and associated species, in addition to potential for indirect negative effects as a result of increased disturbance, noise, light and air pollution. Effects are likely to be indirect through Options D and E given the proximity to the habitats. Consideration should be given under all Options for the potential to deliver positive effects through retaining and enhancing habitats where possible; delivering biodiversity net-gain. This may include creating ecological corridors and connecting biodiversity sites, notably through Option F.

Options are not constrained by locally designated sites; however, it is recognised that all sites are greenfield, and may have the potential to hold biodiversity value. Notably, there are patches of hedges/ mature trees to the north and south west of Option E, and there are sparse hedges and areas of dense vegetation dispersed through Option F; in addition to the Ancient Woodland discussed above. There is the potential for development across Option F, and to a lesser extent Option E, to lead to negative effects on biodiversity through direct loss of these habitats and any associated species. Development should seek to retain and enhance these habitats where possible, ensuring no net loss, and seek to deliver significant positive effects through biodiversity net gain.

Overall, all Options have the potential to lead to adverse effects on biodiversity, given the presence of the Wye Valley Woodland SAC/ SSSI/ National Nature Reserve and River Wye SAC/ SSSI to the east of the settlement. It is difficult to differentiate the Options in terms of impacts on the European designated sites given the impact pathways identified; although it is noted that Option D is considerably closer to the Wye

Valley Woodlands than Option F and is considerably closer to the River Wye than Option E; with the potential for increased significance of effects. In terms of wider biodiversity effects, it is considered that Option F is worst performing given the areas of Ancient Woodland (and other habitats and associated species) present within the Option. Options D and E are less constrained in terms of habitats present at the Options, however, are located in close proximity to Ancient Woodland, with the potential for residual indirect negative effects. It is however also noted that there is the potential for Options to deliver positive effects through biodiversity enhancement/ net gain.

Historic environment

Options	Option D – Land north of Bayfield Estate	Option E – Land between Bayfield Estate and A48	Option F – Land between A48 and M48
Rank	1	1	2
Significant effect?	Uncertain	Uncertain	Yes - Negative

Option D does not contain any designated heritage assets within the growth area. Bishop Barnet's Wood Camp Scheduled Monument is situated approximately 300m to the west from the edge of the growth area. There is also a Grade II listed building (Lion Gates and attached lodges at Chepstow Racecourse) situated to the north east across the A466. Key considerations in terms of the historic environment for growth in this area will be impacts on the scheduled monument, which comprises the remains of an earthwork enclosure and it forms an important element within the wider later prehistoric context and within the surrounding landscape. It's possible that the site could accommodate development without any significant residual negative effects on the scheduled monument and wider historic environment as long it is sensitively designed; however, this is uncertain at this stage.

Option E does not contain any designated heritage assets but there are three listed buildings in close proximity, one to the north close to Mounton Road and two to the south on the other side of the A48. The growth area is adjacent to the Mathern Conservation Area and is approximately 600m from the Mounton Conservation Area and a cluster of listed buildings that lie within it to the west. It's possible that the site could accommodate development without any significant residual negative effects on the Conservation Areas if development does not extend beyond St Lawrence Lane and it is sensitively designed with appropriate screening, and the layout takes account of views into and from the conservation areas. Another consideration in terms of the historic environment for growth in this area will be impacts on the St Lawrence House Grade II Listed Building in the north and it is likely that its setting would be affected by development in this area.

Option F contains 16 listed buildings and is located entirely within the Mathern Conservation Area. Development within this growth area would result in the loss of large areas of greenfield/ open space within the Mathern Conservation Area and around the listed buildings

present. There is the potential for a permanent significant negative effect on the historic environment as a result of strategic development in this area; however, there is some uncertainty at this stage.

Cadw, Natural Resources Wales and the International Council on Monuments and Sites (ICOMOS UK) has compiled a non-statutory Register of 58 Landscapes of Outstanding or Special Historic Interest in Wales. None of the Options fall within, or adjacent to these Landscapes of Outstanding or Special Historic Interest.

It is recognised that Monmouthshire’s cultural assets also include the use of the Welsh language. The RLDP is not considered likely to have a significant effect on the Welsh language, and therefore no significant differences have been identified between the Options in this respect.

Overall, Option F is the most sensitive in terms of the historic environment as the growth area falls within a conservation area and contains 16 listed buildings. It is not possible to identify any significant differences between Options D and E at this stage; however, they are considered to be less likely to result in residual significant effects compared to Option F.

Landscape

Options	Option D – Land north of Bayfield Estate	Option E – Land between Bayfield Estate and A48	Option F – Land between A48 and M48
Rank	2	1	3
Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative

As a largely rural County Monmouthshire has major landscape resources and is home to internationally and nationally designated landscapes. Looking specifically at Chepstow, the area immediately north of the town lies within the Wye Valley National Landscape (formerly Area of Outstanding National Beauty (AONB)). Planning Policy Wales (2018) gives National Parks and AONBs equal status in terms of landscape and scenic beauty, recognising that these designated assets should be “valued for their intrinsic contribution to a sense of place, and that their special characteristics should be protected and enhanced.”⁶⁴ In addition to national policy requirements, protection is also provided to the Wye Valley through the Wye Valley AONB Management Plan (2021). While protection is provided at the higher level, it is nonetheless considered that Options D and E have the potential to adversely impact upon the National Landscape (AONB), its special landscape features, character and setting.

⁶⁴ Welsh Government (2018) Planning Policy Wales

Cadw, Natural Resources Wales and the International Council on Monuments and Sites (ICOMOS UK) has compiled a non-statutory Register of 58 Landscapes of Outstanding or Special Historic Interest in Wales. None of the Options fall within, or adjacent to these Landscapes of Outstanding or Special Historic Interest.

It is also noted that land to the west of the A466 is currently protected by a 'Green Wedge' policy to ensure the town's physical separation from Pwllmeyric and Mathern. Part of Option E (the area between Mounton Road and the A48) and part of Option F (the area between the A48 and the M48) falls within the Green Wedge. It is considered that development at this location could lead to coalescence between Chepstow and Pwllmeyric (under Option E) and Chepstow and Pwllmeyric and Mathern (under Option F).

A Landscape Capacity Update study has been carried out for the County (2020), which identifies Local landscape Character Areas (LLCAs) and provides an overall analysis of each LLCA's sensitivity to residential development.⁶⁵ Overall, the study has found that there is capacity for housing in Monmouthshire focussing on the larger settlements; which includes Chepstow. However, looking specifically at the Options in turn:

Option D is categorised as being of medium landscape sensitivity to residential development.

Option E is a mixture of medium and high/medium landscape sensitivity to residential development.

Option F is categorised as high landscape sensitivity to residential development

Overall, all Options are particularly sensitive in terms of the landscape, with the potential for significant long term negative effects. Depending on the design and layout of development, Options D and E could potentially affect the intrinsic qualities, character and setting of the National Landscape (AONB), while Option F could impact upon the sensitivity of the settlement itself; being located on sloping parkland/ and partial designation as a 'Green Wedge'. In terms of ranking the Options, assuming that the same scale/ type of development would be delivered within the strategic growth areas, the differences identified between them at this stage mainly reflect the Landscape Sensitivity Update Study (2020) and findings. Option F is worst performing, given its 'high' sensitivity to residential development; followed by Option D given it is identified as having medium landscape sensitivity and located adjacent to the National Landscape (AONB). For all Options, mitigation (which reduces the extent of development to avoid the most sensitive areas) is considered likely to reduce the significance of the potential negative effects. However, this is uncertain at this stage and will be dependent on the design/ layout and implementation of specific mitigation measures.

⁶⁵ White Consultants (2009) Monmouthshire Landscape Sensitivity and Capacity Study

Climate change (including flood risk)

Options	Option D – Land north of Bayfield Estate	Option E – Land between Bayfield Estate and A48	Option F – Land between A48 and M48
Rank	=	=	=
Significant effect?	No	No	No

Monmouthshire's rurality, limited public transport, high levels of car ownership and the subsequent reliance on the private car, combined with high energy consumption can all contribute to carbon emissions. Monmouthshire County Council declared a climate emergency in May 2019, and as such growth Options will be required to contribute positively towards meeting the Council's aim of reducing its net carbon emissions to zero by 2030.

In relation to climate change adaptation, key issues include the need to capitalise upon opportunities to design-in low carbon infrastructure development from the outset, and therefore minimise additional CO₂ emissions associated with development. There are no significant differences between the Options in terms of opportunities to design-in low carbon infrastructure, i.e. given there is no difference in quantum of housing growth between Options.

All Options also present an opportunity to support adaptation to the potential effects of climate change through providing improvements to the local green infrastructure network. As above, it is considered that all options are able to deliver a similar level of infrastructure, and as such all Options perform equally in this respect.

It is considered that there is the potential to reduce greenhouse gas emissions by reducing the need to travel, and encouraging the use of sustainable transport modes. Notably, the Active Travel (Wales) Act (2013) requires all local authorities in Wales to deliver improvements to their network of active travel routes and facilities. All Options perform well in this respect, directing growth towards a Tier 1 settlement with good public transport links connecting residents with employment and services within and outside the County; notably bus services run to Cwmbran, Chepstow circular, Pontypool and Monmouth. All Options have access to a bus stop on the A466; however, this is distant from the western extent of all options, which are relatively distant from the settlement in the open rural landscape. All Options are also a similar distance from Chepstow railway station (1 mile/ 18 minute walk), located on the other side of the settlement, to the east. Chepstow railway station connects residents with the wider south west Wales region and the midlands; including Newport, Cardiff, Birmingham, and Nottingham. However, the A48, which provides the main link between the southern part of the Forest of Dean and the motorway network, passes through the town and creates congestion problems; with part of the route also designated as an Air Quality Management Area (AQMA). All Options are well located in terms of access to the strategic road network, with Option F notably located adjacent to the M48,

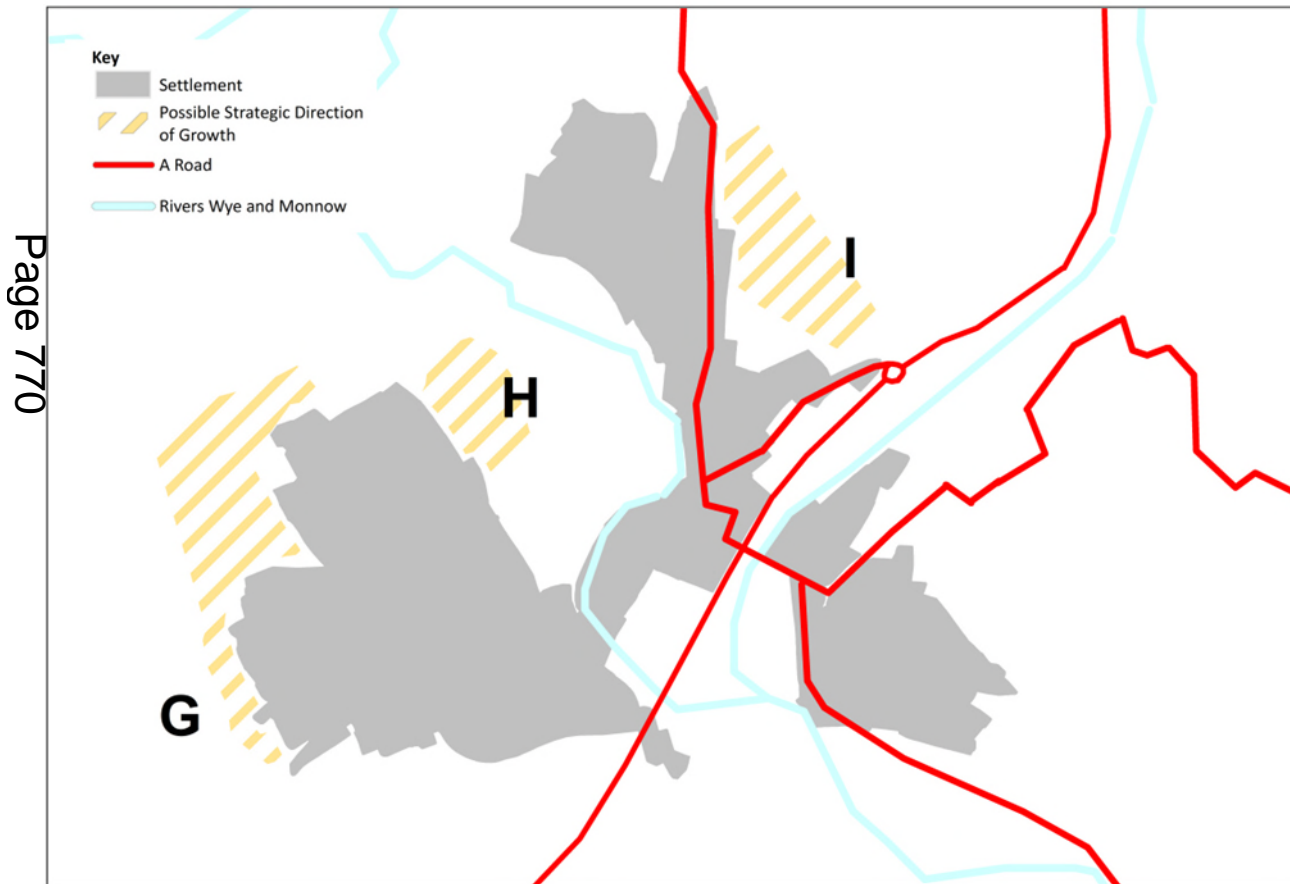

connecting with the M4 and Newport/ Cardiff to the south west. As such, it is considered that development under all Options has the potential to result in increased vehicular use in and around Chepstow.

In terms of managing flood risk to address climate change, while it is recognised that the east of the town is constrained by the River Wye, all Options are located to the west of the Chepstow and therefore are at low risk of flooding.

Overall, development proposed at the individual Option scale is not likely to have a significant positive or negative effect on climate change when considered in isolation. It is anticipated that this will be addressed through the RLDP policy framework. All Options perform on a par in terms of potential flood risk, and seek to support the uptake of sustainable travel where possible. However, the presence of the A48 (and connectivity with the M48 and M4 corridor), may result in increased reliance on the car for primary mode of travel, exacerbating air quality issues in the centre of the town and within Chepstow AQMA. As such, residual effects on climate change are uncertain.

Monmouth options

- Option G: Land west of Monmouth.
- Option H: Land in central Monmouth; and
- Option I: Land north-east of Monmouth.

Economy and employment

Options	Option G – Land west of Monmouth	Option H – Land in central Monmouth	Option I – Land north east of Monmouth
Rank	2	1	3
Significant effect?	No	No	No

Monmouth plays a significant economic role in the County, being identified as a Primary Settlement in the RLDP settlement hierarchy. It has excellent road links occupying a key strategic location on the road network between Newport (A449), Abergavenny (A40) and the Midlands (A466) and has a range of bus services to the South Wales cities and to Gloucestershire and Herefordshire. Option I notably has good access to the A40 and A466.

In terms of facilities and services present, Monmouth scores well within the settlement appraisal, given its relatively large number and good range of shops and restaurants, and is a vibrant focus for the surrounding area. Option H performs most positively in this respect, being centrally located and approximately 0.5 miles / 11-minute walk from town centre. Option I is also considered to have good access to the town centre, its amenities and facilities, being approximately 0.7 miles or a 13-minute walking distance. Option G is furthest from the town centre and therefore worst performing of the Options, at approximately 1.4 miles and a 28-minute walk. Option G would likely rely on the car for day-to-day access to services and facilities in the centre, via the A40/ A466.

Monmouth is one of the most self-sufficient settlements in terms of employment with a variety of employment sites within the town. Monmouth's largest employment area is an Industrial Estate to the South West of the settlement. There has also been recent strategic growth to the south west of the town with a mixed-use development to the west of the Wonastow Estate allocated under the current LDP, which is near completion. In terms of access to employment to the southwest of the town, Option G is best performing, being located adjacent to employment focussed along Wonastow Road. There is also opportunity for Option G to extend upon the existing Wonastow industrial estate. Option H is located 1.1 mile/ 23-minute walk from Wonastow Road, while Option I is least well performing of the Options in this respect, being located 1.8 miles/ 36-minute walk from employment opportunities to the south of the town. Residents at Option I would therefore likely be reliant on the car for access. Nonetheless, all Options perform positively in terms of providing access to local employment sites, supporting levels of self-containment in Monmouth.

All Options have the potential to include employment land and infrastructure delivery to support the town, encouraging inward investment and supporting local economic growth. It is considered that all options would be able to deliver a similar level of infrastructure, and therefore

options cannot be differentiated between in this respect. Nonetheless, it is considered that the delivery of infrastructure alongside development has the potential to lead to positive effects against this ISA theme, although this is uncertain at this stage.

Overall, all options are anticipated to lead to long-term positive effects against this ISA theme. Option H is best performing as it is most centrally located in terms of access to the town centre, its services and facilities, and is within reasonable distance of employment opportunities to the south of the town. Option G also performs well given its location adjacent to the Wonastow Estate employment site; however, it is most distant from the town centre. Option I is reasonably well located in terms of the town centre but performs poorly in terms of access to Wonastow Estate.

Population and communities

Options	Option G – Land west of Monmouth	Option H – Land in central Monmouth	Option I – Land north east of Monmouth
Rank	2	1	1
Significant effect?	Yes - Positive	Yes - Positive	Yes - Positive

All options perform equally in terms of providing sufficient housing to meet the identified housing needs of the community, as it is assumed that all Options could deliver the same quantum of growth. Long term significant positive effects are predicted in this respect.

There are significant differences between areas of Monmouth as reflected by the range in the average house prices; Dixton with Osbaston ward has the highest house prices and Wyesham ward the lowest.⁶⁶ All Options direct growth to the north of the A40, away from Wyesham which is located to the south of the town. Option I is located in close proximity to Dixton, to the north east of the Option.

All Options have the potential to support the growth of existing communities; however, this is likely to be more achievable through Options H and I, given their location in terms of access to the town centre (0.5 miles/ 11-minute walk from Option H, and 0.7 miles/ 13 minute walk from Option I). Notably Option H would extend existing built form at Over Monnow, while Option I would extend the suburb of Obaston to the north east of Monmouth, supporting regeneration at these locations. Option G is arguably more isolated in this respect, being less well connected to the town centre (1.4 miles and a 28-minute walk). Nonetheless, all Options would likely integrate positively with existing communities present, providing a level of infrastructure to support the sub-areas and improve connections with Monmouth town centre.

⁶⁶ Monmouthshire County Council (2018) Final Local Housing Market Assessment <https://www.monmouthshire.gov.uk/app/uploads/2019/05/Final-Local-Housing-Market-Assessment-September-2018.pdf>

Benefits in this respect may include improved access to facilities, services, and potential improvements to highways/ public transport infrastructure.

Overall, it is considered that all Options perform positively in terms of supporting the growth/ regeneration of Monmouth as an attractive Tier 1 settlement, supporting vibrant communities both within the town and the wider hinterlands. In terms of ranking Option G performs least well given its distance from the town centre, services and facilities. It is not possible to differentiate between Options H and I at this stage, as both connect well with the town centre and existing communities on the outskirts of the settlement.

Health and wellbeing

Options	Option G – Land west of Monmouth	Option H – Land in central Monmouth	Option I – Land north east of Monmouth
Rank	1	1	1
Significant effect?	No	No	No

Monmouth does not include a hospital, however it is supported by Monnow Vale Community Hospital (Monnow Vale Integrated Health and Social Care Facility). This specialist hospital provides a range of Health & Social Care needs to people over the age of 65, and also includes access to many specialist Clinics. Option H is best located in terms of access to the Community Hospital, followed by Option G, with Option I least well performing, located 1.3 miles/ 28-minute walking distance away. All Options therefore have good access to the Community Hospital. In terms of GP surgeries, there are two located within Monmouth; Dixton Surgery and Castle Gate Medical Centre. Option I is 800m/ 18-minute walk from Dixton Surgery, while Options G and H are a 900m/ 18 minute walk, and a 0.7 mile/ 14 minute walk from Castle Gate Medical Practice, respectively. All Options therefore perform positively in terms of access to local health facilities. Given the specialist nature of Monnow Vale Community Hospital, it is considered that residents would travel to Nevill Hall Hospital in Abergavenny for wider hospital services. All Options are approximately 18 miles from Nevill Hall Hospital.

Access to sustainable transport throughout Monmouth is reasonable; Monmouth has excellent road links occupying a key strategic location on the road network between Newport (A449), Abergavenny (A40) and the Midlands (A466), which is likely to be utilised by residents. Option I notably has good access to the A40 and A466. There is no railway station located within Monmouth; the nearest being Abergavenny railway station, approximately 16 miles west of all Options. Monmouth does however have a range of bus services which connect residents with the South Wales cities and to Gloucestershire and Herefordshire. All Options are within 400m of a bus stop; in terms of Option G, the nearest bus stop is along Wonastow Road, 400m from the northern extent of the site. In terms of Option H, there is a bus stop adjacent to the site along Rockfield Road, and similarly for Option I, there is a bus stop adjacent to the site along Dixton Road.

The town is in close proximity to Kings Wood to the west, and it is noted that Option G is adjacent to the Offa’s Dyke Path along Watery Lane, which connects the Option to the Wood. Option G therefore performs positively in terms of access to walking and cycling, in addition to recreational activities at Kings Wood.

Overall, all Options perform positively in relation to the health and wellbeing ISA theme. It is difficult to differentiate between the Options at this stage, with all options providing residents with good access to health services and supporting accessibility by healthy forms of transport.

Equalities, diversity, and social inclusion

Options	Option G – Land west of Monmouth	Option H – Land in central Monmouth	Option I – Land north east of Monmouth
Rank	=	=	=
Significant effect?	No	No	No

Monmouth is defined as a Tier 1 settlement, and as such, expanding upon built form through all Options will lead to positive effects in terms of supporting and sustaining a hierarchy of vibrant centres across the County, focussing development in accordance with recent population growth data. This will likely positively address existing demographic issues, encouraging younger people to reside and work in the County. It is predicted that growth around Monmouth will lead to positive effects on new and existing residents’ quality of life, creating more positively integrated communities.

None of the options fall within areas of significantly high deprivation. As highlighted above, development at all Options will support equal communities with improved accessibility to services, employment, and affordable housing. However, it is considered that by targeting more deprived communities through Options G and H (albeit not significantly more deprived), positive effects are likely to be enhanced to some degree. It is recognised that Option G also has the potential to deliver positive effects through reducing inequalities between sub-urban and urban areas, expanding upon Over Monnow, the sub-urban part of Monmouth. Over Monnow is located to the west of the River Monnow and the Monnow Bridge and identified as the third most deprived LSOAs in Monmouthshire (Overmonnow 2, ranked 520). Option I is also likely to lead to positive effects in this respect, directing growth towards rural Dixton village, located 1 mile north east of Monmouth.

In terms of ensuring access to services for more vulnerable or immobile groups in the community, such as elderly residents and young families, Option H performs most positively. This is given its central location adjacent to the town centre (approximately 0.5 miles /11-minute walk away). Option I is also considered to have good access to the town centre, its amenities and facilities, being approximately 0.7 miles or

a 13-minute walking distance. Option G is furthest from the town centre and therefore worst performing of the Options, at approximately 1.4 miles and a 28-minute walk.

Overall, it is considered that all Options perform positively against this ISA theme. Options will support the growth of and regeneration of existing communities, improving access to housing, jobs and services. In terms of ranking the Options, Option G and H are likely to deliver positive effects of greater significance than Option I as growth is targeted towards more deprived areas. Option H however is best located in terms of supporting vulnerable groups with access to services in the town centre, and Options G and I perform well through reducing inequalities between sub-urban and urban areas to the north and southeast of the town. It is therefore not considered possible to differentiate between the Options at this stage.

Transport and movement

Options	Option G – Land west of Monmouth	Option H – Land in central Monmouth	Option I – Land north east of Monmouth
Rank	=	=	=
Significant effect?	No	No	No

In terms of the strategic transport network, Monmouth occupies a key location on the road network, with strategic links between Newport (A449), Abergavenny (A40) and the Midlands (A466). While levels of self-containment are high in Monmouth, there remains a reliance on the car as the primary mode of transport, with high levels of through traffic highlighted as a significant issue for the town. Option I is best located in terms of access to the strategic road network; notably being nestled between the A40 and A466. Options G and H have good access to the A40, to the east. It is considered that development under all options is likely to result in increased vehicular use in the town with the potential for long term adverse effects.

Access to sustainable transport throughout Monmouth is reasonable. Although the town is not connected to the rail network (the nearest being Abergavenny railway station, approximately 16 miles west of all Options), it has good bus services to the South Wales cities and into Gloucestershire and Herefordshire. All Options are within 400m of a bus stop; in terms of Option G, the nearest bus stop is along Wonastow Road, 400m from the northern extent of the site. In terms of Option H, there is a bus stop adjacent to the site along Rockfield Road, and similarly for Option I, there is a bus stop adjacent to the site along Dixon Road.

All Options are assumed to have the potential to include enhancements/ improvements to services/ facilities and public transport. As set out above, the level of infrastructure delivery is expected to be equal under all Options, and therefore none of the options are better performing in this respect.

Overall, all Options perform similarly against this ISA theme, directing growth towards a Tier 1 settlement, with good access to the strategic transport network. While all Options may increase traffic through the town, it is recognised that Options are well located in terms of the bus network which is well connected with wider service centres. Option I is worst performing of the Options given its location between two A-roads which currently experience high levels of traffic and congestion at peak times. However, it is considered that all Options would utilise the strategic road network to some extent, particularly given the absence of a railway station. It is therefore considered that Options cannot be differentiated between at this stage.

Natural resources (air, land, minerals, and water)

Options	Option G – Land west of Monmouth	Option H – Land in central Monmouth	Option I – Land north east of Monmouth
Rank	1	2	3
Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative

While air pollution is not a major problem in Monmouthshire it can cause significant problems for people’s health. The greatest problems associated with air quality in the County are caused by vehicle emissions, and therefore Options perform positively where they seek to utilise sustainable transport opportunities; such as active travel networks, improved public transport and electric charging point infrastructure. This will help to reduce the impact of transport-based emissions and improvements in air quality. All Options are considered to perform equally in this respect, given all Options direct growth towards a Tier 1 settlement, with good access to the strategic transport network and town centre; supporting modal shift to reduce reliance on the car and subsequently reduce NO₂ emissions. However, given the absence of a railway station and the strategic road links to Newport (A449), Abergavenny (A40) and the Midlands (A466), there is likely to be a continued reliance on the private vehicle for travel.

The Agricultural Land Classification (ALC) classifies land into six grades (plus ‘non-agricultural’ and ‘urban’), where Grades 1 to 3a are recognised as being the ‘best and most versatile’ land (BMV) and Grades 3b to 5 are of poorer quality. Detailed agricultural land quality surveys will be undertaken by site promoters as part of the candidate site process, and therefore at this stage ALC at each of the Options

has been based on the Predictive ALC model for Wales (2017).⁶⁷ The area containing Option I was found to be entirely Grade 2, and the area containing Option H was found to be entirely Grade 3a. The area containing Option G however was found to be partially Grade 3a and partially Grade 3b. Option G is therefore best performing of the Options, given it includes a reduced amount of BMV agricultural land.

All Options comprise entirely greenfield sites and consequently it is not possible to differentiate between them in terms of promoting the use of previously developed land. In this context it is possible to say that Option G is best performing in relation to protecting the County’s soil/land resource.

None of the Options fall within, or within close proximity to a mineral safeguarding area, and therefore all perform equally in terms of impact on the County’s mineral resource. All Options are also considered to perform equally in terms of demand for water, and impact on water quality.

Overall, all Options are considered to perform equally in terms of impact on air quality, and the County’s mineral and water resource. However, all Options perform negatively against this ISA theme overall with the potential for significant effects, as all Options would result in the loss of BMV agricultural land, and would not contribute towards promoting the use of brownfield land. However, it is recognised that there are limited opportunities within the County for brownfield development and development on lower grades of agricultural land. In terms of ranking the Options, Option G is best performing given it is the least constrained Option in terms of BMV agricultural land coverage. Option I is worst performing given it would result in the loss of higher quality agricultural land in comparison with Option H.

Biodiversity and geodiversity

Options	Option G – Land west of Monmouth	Option H – Land in central Monmouth	Option I – Land north east of Monmouth
Rank	1	1	2
Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative

In terms of European sites, it is recognised that the HRA screening (2021) of the Preferred Strategy policies found that potential residential or employment sites in Monmouth, are likely to have nutrient neutrality implications for the River Wye SAC, because they are served by WwTWs discharging into the upper reaches of the SAC. Whilst a solution has now been identified (2024), mitigation will be required

⁶⁷ The Predictive ALC model for Wales (2017) is based on the principles of the Agricultural Land Classification System of England & Wales, the Revised Guidelines & Criteria for Grading the Quality of Agricultural Land (MAFF 1988).

(supported by RLDP policy provisions). All options therefore have the potential to lead to long term significant negative effects in this respect, and options cannot be differentiated between given the level of development is considered equal across all options.

In terms of differentiating between the options, the River Wye SAC is located approximately 600m east of Option I, approximately 1.2km east of Option H, and 1.4km east of Option G. Option I is also within 800m of the Wye Valley Woodland SAC. Taking each SAC in turn:

- **The River Wye SAC** covers the length of the River Wye, to the north east of the County, notably extending through Monmouth. The SAC contains habitats listed under Annex I of the Habitats Directive and a variety of species listed under Annex II of the Habitats Directive which are also the primary reasons for designation. The River Wye is important for its population of Atlantic salmon, and whilst stocks have declined the salmon population is still of considerable importance in UK terms. The Wye also holds the densest and most well established otter population in Wales. The site is considered one of the best in the UK for white-clawed crayfish. Other important species supported by the River Wye are twaite shad, bullhead and river, sea and brook lamprey.
- **The Wye Valley Woodland SAC** is a large woodland SAC that straddles the Wales-England border, extending along the east of the County. The site is underpinned by nine SSSIs in Wales and seven in England. The Wye Valley contains abundant and near continuous semi-natural woodland along the gorge. The variety of woodland types found are rare within the UK.

In addition to the blanket water quality issue highlighted above for all options, the HRA Screening (2021) found that there is the potential for development to significantly affect the River Wye SAC through atmospheric pollution, recreation, and water quantity, level and flow, and for development to affect the Wye Valley Woodland SAC through atmospheric pollution. As such, these sites and their potential impact pathways, will be considered in more detail through the Appropriate Assessment stage. It is therefore considered that all Options have the potential to indirectly impact upon the SACs. Potential strategic growth areas have been identified as needing to be screened in for further detailed consideration through the HRA process. Given the proximity of Option I to both SACs, it is considered that this Option has the potential to lead to negative effects of greatest significance.

There is a range of nationally and locally designated biodiversity located around Monmouth. Some of these designations fall within or have the same boundaries as the European sites considered through the HRA and outlined above, although they may have different designated features and sensitivities in some cases. Despite this, the impact pathways identified earlier for European sites are also applicable/ relevant to nationally and locally designated sites and wider biodiversity interests. Notably, as discussed above, Options have the potential to impact on the River Wye SSSI through atmospheric pollution, recreation, water quality and water quantity, level and flow. Option I has the potential to impact on the Wye Valley Woodlands SSSI/ National Nature Reserve through atmospheric pollution.

Options are not constrained by locally designated sites; however, it is recognised that all sites are greenfield, and may have the potential to hold biodiversity value. Notably, there are hedgerows/trees/ dense scrub extending along the field boundaries of Option G, and there is a corridor of mature trees running along the boundary of Option I. Therefore, development at Option I, and to a lesser extent Option G, has

the potential to lead to negative effects on biodiversity through direct loss of habitats and associated species present, in addition to potential for indirect negative effects as a result of increased disturbance, noise, light and air pollution. Consideration should be given under all Options for the potential to deliver positive effects through retaining and enhancing biodiversity where possible; delivering net-gain. This may include creating/ expanding upon ecological corridors and enabling habitat connectivity; notably through Option I.

Overall, all Options have the potential to lead to long term significant negative effects on biodiversity as a result of nutrient neutrality implications for the River Wye SAC. Additionally, all Options have the potential to adversely impact upon the River Wye SAC/ SSSI and the Wye Valley Woodland SAC/ SSSI/ National Nature Reserve to the east of the settlement. In terms of ranking the options, given the proximity of Option I to both SACs, and the biodiversity present at the Option itself, it is considered that this Option has the potential to lead to negative effects of greatest significance. It is considered that Options G and H perform similarly in relation to the biodiversity ISA theme. All Options have the potential to deliver positive effects through biodiversity enhancement/ net gain.

Historic environment

Options	Option G – Land west of Monmouth	Option H – Land in central Monmouth	Option I – Land north east of Monmouth
Rank	1	2	3
Significant effect?	Uncertain	Uncertain	Uncertain

There are no designated heritage assets within or in close proximity to Option G. This growth area is approximately 500m from the significant number of heritage assets present within the settlement and separated by the existing built up area. It's possible that the site could accommodate development without any significant residual negative effects on the historic environment as long it is sensitively designed.

There are no designated heritage assets within or adjacent to Option H. There are a number of listed buildings to the north east and east in close proximity to the River Monnow. To the south east of the growth area lies the Monmouth (Central) Conservation Area which includes a significant number of listed buildings. There are also a number of scheduled monuments, including Monmouth Castle. It's possible that the site could accommodate development without any significant residual negative effects on the historic environment as long it is sensitively designed, and the layout takes account of any important views into and from the designated heritage assets in the wider area, including the Monmouth (Central) Conservation Area. However, this is uncertain at this stage.

There are no designated heritage assets within Option I; however, there is the Monmouth (Dixon) Conservation Area to the south east which contains two scheduled monuments and five listed buildings. There are also three listed buildings to the north west on the other side of the A466. The boundary of the Monmouth (Central) Conservation Area extends up the A466 near the south of the growth area. It's possible that the site could accommodate development without any significant residual negative effects on the historic environment as long as it is sensitively designed, and the layout takes account of any important views into and from the designated heritage assets in the wider area, including the Monmouth Central and Dixon Conservation Areas, listed buildings and scheduled monuments. However, this is uncertain at this stage.

Cadw, Natural Resources Wales and the International Council on Monuments and Sites (ICOMOS UK) has compiled a non-statutory Register of 58 Landscapes of Outstanding or Special Historic Interest in Wales. Option I is adjacent to a Landscapes of Outstanding or Special Historic Interest, to the south west of the Option.

It is recognised that Monmouthshire's cultural assets also include the use of the Welsh language. The RLDP is not considered likely to have a significant effect on the Welsh language, and therefore no significant differences have been identified between the Options in this respect.

Overall, Option G is less sensitive in terms of the historic environment and development in this area is therefore less likely to result in a residual negative effect compared to the other options. It is not possible to identify any significant differences between Options H and I at this stage and the nature and significance of effects are uncertain and dependent on the precise scale, layout and design of growth.

Landscape

Options	Option G – Land west of Monmouth	Option H – Land in central Monmouth	Option I – Land north east of Monmouth
Rank	1	2	2
Significant effect?	Uncertain	Yes - Negative	Yes - Negative

As a largely rural county Monmouthshire has major landscape resources and is home to internationally and nationally designated landscapes. Looking specifically at Monmouth, the area immediately south east of the settlement is the Wye Valley National Landscape (formerly Area of Outstanding Natural Beauty (AONB)). Planning Policy Wales (2018) gives National Parks and National Landscapes (AONBs) equal status in terms of landscape and scenic beauty, recognising that these designated assets should be “*valued for their*

*intrinsic contribution to a sense of place, and that their special characteristics should be protected and enhanced.*⁶⁸ In addition to national policy requirements, protection is also provided to the Wye Valley through the Wye Valley AONB Management Plan (2021), which sets out themes and aims for the AONB (now National Landscape). Given the location of the Options to the west and north of Monmouth, it is not considered that any of the Options will impact on the National Landscape (AONB) or its setting.

Cadw, Natural Resources Wales and the International Council on Monuments and Sites (ICOMOS UK) has compiled a non-statutory Register of 58 Landscapes of Outstanding or Special Historic Interest in Wales. Option I is adjacent to a Landscapes of Outstanding or Special Historic Interest, to the south west of the Option.

It is also noted that Option H is considered to have a high amenity value and is designated in the current adopted LDP as an 'Area of amenity importance' under Policy DES2 (Areas of Amenity Importance). In accordance with Policy DES2 *"development proposals on areas of amenity importance will only be permitted if there is no unacceptable adverse effect on the visual and environmental amenity of the area, including important strategic gaps, vistas, frontages and open spaces [...or...] linked areas of green infrastructure in terms of its contribution to the character of the locality"*. The delivery of Option H therefore has the potential to impact upon the important qualities of this area, with the potential for long term negative effects.

Landscape Capacity Update study has been carried out for the County (2020), which identifies Local landscape Character Areas (LLCAs) and provides an overall analysis of each LLCA's sensitivity to residential development.⁶⁹ Overall, the study has found that there is capacity for housing in Monmouthshire focussing on the larger settlements; which includes Monmouth. However, looking specifically at the Options in

- **Option G** is categorised as high to medium landscape sensitivity to residential development.
- **Option H** is categorised as high/medium sensitivity to residential development.
- **Option I** is categorised as having a high/medium sensitivity to residential development.

Overall, Option G is less sensitive in terms of the landscape, and development in this area is therefore less likely to result in a residual negative effect compared to the other Options. Given uncertainties no significant differences between Options H and I in terms of the nature and significance of effects could be identified at this stage, and will likely be dependent on the precise scale, layout and design of growth. Furthermore, both options are identified as having high/medium sensitivity to development through the Landscape Sensitivity Update Study (2020), and are both constrained by landscape designations (Option I is located adjacent to a Landscape of Outstanding or Special Historic Interest, while Option H is designated in the current adopted LDP as an 'Area of amenity importance'). Options H and I are therefore ranked

⁶⁸ Welsh Government (2018) Planning Policy Wales

⁶⁹ White Consultants (2009) Monmouthshire Landscape Sensitivity and Capacity Study

equally, with the potential for negative effects. For all Options, mitigation (which reduces the extent of development to avoid the most sensitive areas) is considered likely to reduce the significance of the potential negative effects. However, this is uncertain at this stage and will be dependent on the design/ layout and implementation of specific mitigation measures.

Climate change (including flood risk)

Options	Option G – Land west of Monmouth	Option H – Land in central Monmouth	Option I – Land north east of Monmouth
Rank	=	=	=
Significant effect?	Uncertain	Uncertain	Uncertain

Monmouthshire's rurality, limited public transport, high levels of car ownership and the subsequent reliance on the private car, combined with high energy consumption can all contribute to carbon emissions. Monmouthshire County Council declared a climate emergency in May 2019, and as such growth Options will be required to contribute positively towards meeting the Council's aim of reducing its net carbon emissions to zero by 2030.

In relation to climate change adaptation, key issues include the need to capitalise upon opportunities to design-in low carbon infrastructure to development from the outset, and therefore minimise additional CO₂ emissions associated with development. There are no significant differences between the Options in terms of opportunities to design-in low carbon infrastructure, i.e., given there is no difference in quantum of housing growth between Options.

All Options also present an opportunity to support adaptation to the potential effects of climate change through providing improvements to the local green infrastructure network. As above, it is considered that all options are able to deliver a similar level of infrastructure, and as such all Options perform equally in this respect.

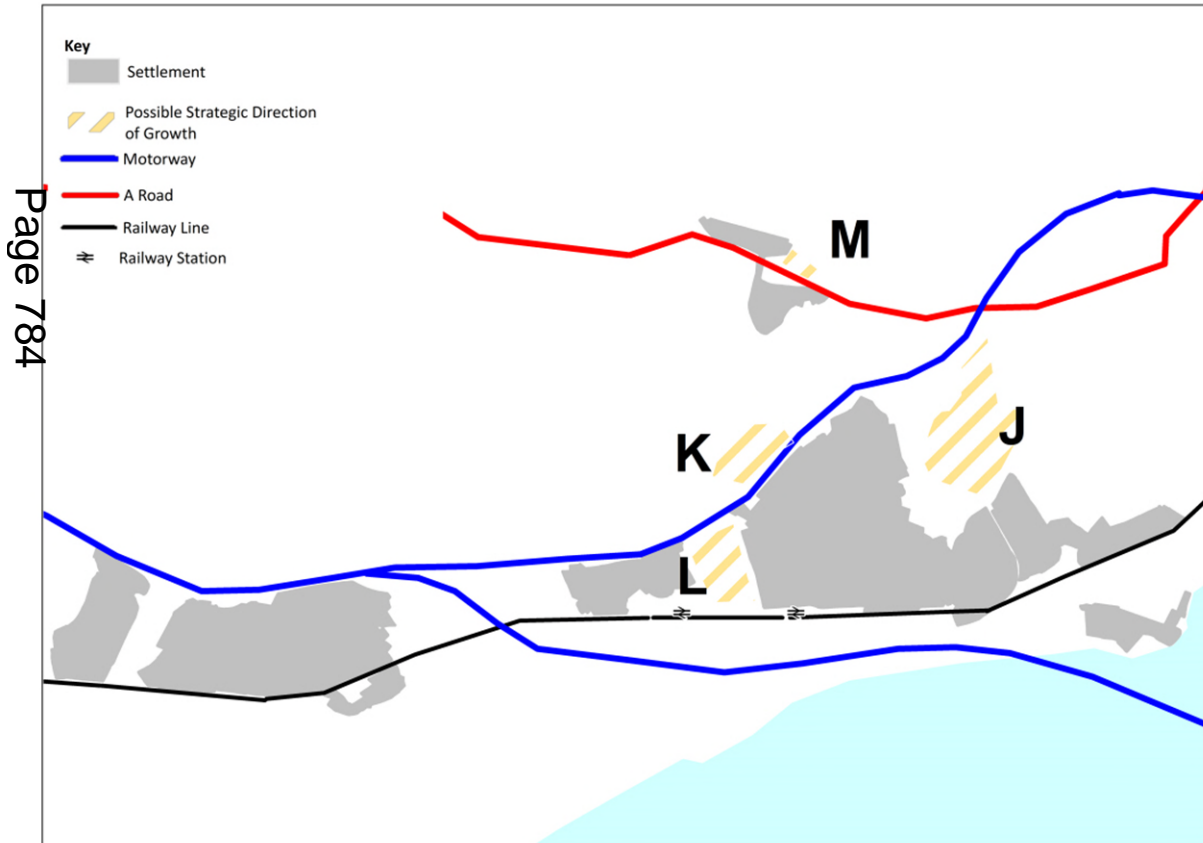

It is considered that there is the potential to reduce greenhouse gas emissions by reducing the need to travel and encouraging the use of sustainable transport modes. Notably, the Active Travel (Wales) Act (2013) requires all local authorities in Wales to deliver improvements to their network of active travel routes and facilities. All Options perform reasonably well in this respect through directing growth towards a Tier 1 settlement; however, given the absence of a railway station, the existing high levels of congestion in the town and the presence of the often congested A40 and A466, there may be a continued reliance on the private vehicle for travel.

In terms of managing flood risk to address climate change, it is recognised that the floodplain of the River Wye is a constraint throughout the centre of the town and in parts of Over Monnow. However, all Options are located away from areas at high risk of flooding, within Flood Zone A.

Overall, development proposed at the individual Option scale is not likely to have a significant positive or negative effect on climate change when considered in isolation. It is anticipated that this will be addressed through the RLDP policy framework. All Options perform on a par in terms of potential flood risk and seek to support the uptake of sustainable travel where possible. However, given the presence of the A40, A466, and absence of a railway station, there is likely to be a continued reliance on the car as the primary mode of travel. Effects on climate change are therefore uncertain.

Severnside options

- Option J: Land north-east of Caldicot.
- Option K: Land north-west of Caldicot.
- Option L: Land west of Caldicot/ east of Rogiet; and
- Option M: Land east of Caerwent.

Economy and employment

Options	Option J – Land north east of Caldicot	Option K – Land north west of Caldicot	Option L – Land west of Caldicot	Option M – Land east of Caerwent
Rank	2	2	1	3
Significant effect?	No	No	No	No

Caldicot is classified as a Primary Settlement within the RLDP settlement hierarchy and has functional transport links with the smaller settlements of Rogiet, Caerwent, Portskewett, Sudbrook and Crick, which together are considered to share characteristics to make up the identifiable group of Severnside. The Severnside area has an important role as the 'Gateway to Wales', with the area immediately adjacent to the Second Severn Bridge (Prince of Wales Bridge) crossing, and as a whole is well located for the nearby employment markets of Newport, Cardiff and Bristol. There are key rail links to these employment markets with stations at Rogiet and Caldicot connecting with the key settlements of Cardiff in the West and Bristol /Cheltenham/Midlands in the east. There are also good road links to the M4 and M48 Motorways, with the M4 Junction at Magor and Undy. The A48 also runs across the north of the Severnside region connecting settlements along the A48 with settlements in Newport to the west, and Chepstow to the east. It is considered that Option L is the most well connected in this respect, with access to the M48 immediately to the north, and M4 and railway stations immediately to the south. Option M is the least well connected given its location along an A-road, furthest away from the M4 corridor and rail line.

In terms of facilities and services present, Caldicot and Magor and Undy are identified as higher tier settlements and therefore provide the greatest range of services and facilities of all the Severnside settlements. Option L therefore performs most positively of the options, given it is 1 mile/ 19-minute walking distance from Caldicot town centre. Following this, Option K is approximately 1.4 miles, a walking distance of 26 minutes; and Option J is approximately 1.9km and approximately 22-minutes walking distance. Option M is 2.1 miles from Caldicot town centre, although it is appreciated there are some limited facilities, such as a Post Office, in the nearest settlement of Caerwent.

Employment sites are present throughout the Severnside area. Notably, Severnside Industrial Estate is located to the south east of Caldicot, which is a significant employment base and separates Caldicot from neighbouring Portskewett. Options J and L are best performing in terms of access to this employment site, given these Options would extend the built settlement of Caldicot, south of the M48. Option K followed by Option M is less well located in this respect; however, they are still considered to be able to access the site. There is also land allocated for employment to the North West of Magor/ Undy with the established Magor Brewery site and Wales One Business Park. These sites are relatively distant from all Options; however, they still have the potential to be capitalised upon via the M48/M4 corridor.

All Options have the potential to include employment land and infrastructure delivery to support the town, encouraging inward investment and supporting local economic growth. It is considered that all Options would be able to deliver a similar level of infrastructure, and therefore Options cannot be differentiated between in this respect. Nonetheless, it is considered that the delivery of infrastructure alongside development has the potential to lead to positive effects against this ISA theme, although this is uncertain at this stage.

Overall, all Options are anticipated to lead to long-term positive effects against this ISA theme. Option L is best performing as it is most centrally located in terms of access to services and facilities in Caldicot town centre, has good access to road links to the M4 and M48 motorways to access outside employment markets, and is within reasonable distance of employment opportunities to the south of the town. Option M performs least well of the Options given its poor access to Severnside centres, poor access to employment sites within Severnside, and limited potential to capitalise upon the strategic road network.

Population and communities

Options	Option J – Land north east of Caldicot	Option K – Land north west of Caldicot	Option L – Land west of Caldicot	Option M – Land east of Caerwent
Rank	1	2	1	3
Significant effect?	Yes - Positive	Yes - Positive	Yes - Positive	Yes - Positive

All Options perform equally in terms of providing sufficient housing to meet the identified housing needs of the community, as it is assumed that all Options could deliver the same quantum of growth. Long term significant positive effects are predicted in this respect.

All Options will lead to positive effects through capitalising upon the recent removal of the Severn Bridge Tolls and the ambitions and opportunities associated with the Cardiff Capital Region City Deal and the South East Wales Metro. Utilising these strategic economic links will contribute positively towards delivering sustainable communities, achieving infrastructure improvements/ provision in the south of the County. It is considered that Option L is the most well connected in this respect, with access to the M48 immediately to the north, and M4 and railway station immediately to the south. Option M is the least well connected given its location along an A-road, furthest away from the M4 corridor and rail line.

In terms of integrating with existing communities/ settlements, Option L performs most positively as it would infill between Rogiet to the west and Caldicot to the east. Option J would also perform positively in this respect through extending Caldicot to the north east. However, while Options J and L have the potential to deliver positive effects in terms of promoting the growth of existing communities; Option L may also lead to the coalescence of Rogiet and Caldicot, with the potential for negative effects in terms of settlement/ community identity.

Option K performs less well given the Option is detached from Caldicot by the M48, and therefore would likely be isolated to some extent from the existing settlement to the south. Residents would likely be reliant on the car to access services and facilities in Caldicot and would perform less positively than Options J and L in terms of supporting sustainable communities. This is also likely to be the case through growth at Option M, however, this option is arguably least well performing as it is in a less sustainable location, north of the M4 corridor. Option M would however likely positively integrate with Caerwent; delivering positive effects to this settlement through infrastructure delivery and subsequent improved accessibility.

Overall, it is therefore considered that Option L, followed by Option J perform most positively in terms of enhancing the Severnside area, integrating with key settlements, and the opportunity to utilise opportunities associated with the Cardiff Capital Region City Deal and the South East Wales Metro. Option K, while adjacent to the M48/ M4 strategic transport network and in close proximity to Caldicot, performs less well as it is severed from the community by the motorway. Option M performs least well given its relative detachment from the M4 corridor and the main town of Caldicot; and subsequent reduced potential to deliver sustainable communities.

Health and wellbeing

Options	Option J – Land north east of Caldicot	Option K – Land north west of Caldicot	Option L – Land west of Caldicot	Option M – Land east of Caerwent
Rank	2	2	1	3
Significant effect?	No	No	No	No

There are two GP surgeries located within the Severnside area within close proximity to the Options; Gray Hill Surgery and Portskewett Surgery. Options J, K and L are all within 1km / 20-minute walk of a GP practice, while Option M is 2.4 miles (drive) from Portskewett Surgery.

In terms of wider health facilities, the Grange University Hospital, is located in Cwmbran, is approximately 24.7km from Options K and L, 24km from Option M, and 26.4km from Option J. Option M is worst performing in terms of access to a GP, while all Options perform on a par in terms of access to a hospital and wider health services.

Within the Severnside area, Caldicot and Magor and Undy have been classified as higher tier settlements which have functional transport links. The Severnside area, has an important role as the ‘Gateway to Wales’, with the area immediately adjacent to the Second Severn Bridge (Prince of Wales Bridge) crossing, providing access to Newport, Cardiff and Bristol. Railway stations at Rogiet and Caldicot connect with the key settlements of Cardiff in the west and Bristol/ Cheltenham/ Midlands in the east. Option L is best located in terms of access to

Caldicot railway station and the Severn Tunnel Junction at Rogiet; being 0.5 miles/ 10-minute walking distance from the Caldicot station. Option K is 800m from Caldicot station, however this would involve crossing the M48. Option J is 1.1 mile / 22-minute walk from the station; and Option M is furthest away, 2.5 miles to the north. In terms of bus services in the area, Options L and M are well located; Option L is located adjacent to bus services on Rogiet Road and Longfellow Road, and Option M is within 400m of a bus stop just off the A48. Options K and J are however less well located; Option K is detached from bus services extending through Caldicot by the M48, and Option J is distant from bus services on the B245m detached by the Country Park.

While not sustainable transport options, it is worth noting that there are good road links from the Options to the M4 and M48 motorways; including the M4 Junction at Magor and Undy. The A48 also runs across the north of the Severnside region connecting settlements along the A48 with settlements in Newport to the West, and Chepstow to the East. It is considered that Option L is the most well connected in this respect, with access to the M48 immediately to the north, and M4 and railway stations immediately to the south.

Options located in close proximity to the motorway also have the potential to perform negatively against this ISA theme as a result of potential impacts on residents' health (i.e., through atmospheric and noise pollution). The Department of Transport's Transport Analysis Guidance outlines that, within 200m, the contribution of vehicle emissions from the roadside to local pollution levels is significant.⁷⁰ Options J and K perform most negatively in this respect given their location adjacent to the motorway. However, it is noted that the nature and significance of effects are uncertain and dependent on the precise scale, layout and design of growth.

Overall, Option L performs particularly well in terms of proximity to health services and supporting healthy forms of transport to reach health (and wider) services/ facilities /employment. Options J and K perform relatively on a par against this ISA theme, with Option M performing least positively. This is given that in comparison to other Options, Option M is detached from health facilities and sustainable travel opportunities in the key Severnside settlements (namely Caldicot).

⁷⁰ <http://www.dft.gov.uk/webtag/documents/expert/unit3.3.3.php#013>

Equalities, diversity, and social inclusion

Options	Option J – Land north east of Caldicot	Option K – Land north west of Caldicot	Option L – Land west of Caldicot	Option M – Land east of Caerwent
Rank	2	3	1	4
Significant effect?	No	No	No	No

Within the Severnside area, Caldicot and Magor and Undy have been classified as higher tier settlements and as such, expanding upon built form through all Options will lead to positive effects in terms of supporting and sustaining a hierarchy of vibrant centres across the County, focussing development in accordance with recent population growth data. Positive effects are predicted for residents' quality of life, creating more positively integrated communities.

None of the growth options fall within areas of significantly high deprivation. As highlighted above, development at all Options will support equal communities with improved accessibility to services, employment, and affordable housing; however, it is considered that by targeting the most deprived communities through Option L, positive effects are likely to be enhanced to some degree.

Option J itself is the least deprived of the Options and will likely deliver increased positive effects through reducing inequalities between sub-urban and urban areas; expanding upon Portskewett village located to the east of Caldicot.

Options that are well located in terms of sustainable settlements also perform positively through ensuring access to services for more vulnerable or immobile groups in the community, particularly elderly residents and young families, and especially those without access to private vehicles. Option L is best performing in this respect given its location nestled between two existing communities that are well supported in terms of infrastructure provision and sustainable travel opportunities. Options J and K also perform positively in this respect; however, it is noted that Option J is slightly detached from the main centre, and Option K is detached from existing communities by the M48. Option M performs least positively given it is not well connected with sustainable centres, services and facilities.

Overall, it is considered that all Options perform positively against this ISA theme through supporting the growth of and regeneration of existing communities, improving access to housing, jobs and services. However, positive effects are likely to be less significant through Option M, given its comparative detachment from the Severnside area. Option L is predicted to lead to positive effects of greatest significance through targeting deprived areas to the east of the Option. This will promote equality, developing more inclusive communities in a sustainable location.

Transport and movement

Options	Option J – Land north east of Caldicot	Option K – Land north west of Caldicot	Option L – Land west of Caldicot	Option M – Land east of Caerwent
Rank	2	2	1	3
Significant effect?	No	No	No	No

In terms of the strategic transport network, the Severnside area has an important role as the gateway to Wales on the M4, with the M4 Junction at Magor and Undy. The A48 also runs across the north of the Severnside region connecting settlements along the A48 with Newport to the West, and Chepstow to the East. Levels of self-containment throughout the Severnside area are very low, holding the characteristics of a 'dormitory' area with high amounts of out-commuting and reliance on the car as the primary mode of travel. There are however, more recently, significant employment bases present at Magor, Undy, Rogiet and Portskewett; increasing traffic levels throughout the settlements and across the M4 corridor. It is considered that Option L is the most well connected in this respect, with access to the M48 immediately to the north, and M4 to the west of Magor Undy. Option M is the least well connected given its distance, comparatively, from the M4 corridor.

Given the location of all Options to the south of the County, it is considered that development under all Options is likely to result in increased vehicular use throughout the Severnside area, with the potential for long term negative effects. However, it is noted that all Options will deliver long term positive effects through capitalising upon the recent removal of the Severn Bridge Tolls and the ambitions and opportunities associated with the Cardiff Capital Region City Deal and the South East Wales Metro. Utilising these strategic transport links will contribute positively towards delivering sustainable communities, achieving infrastructure improvements/ provision in the South of the County.

Access to sustainable transport throughout the Severnside area is good. Caldicot and Rogiet (at Severn Tunnel Junction station) have rail links to Newport and Cardiff to the west and Bristol/ Cheltenham/Midlands in the east. Option L is best located in terms of access to Caldicot station, being 0.5 miles/ 10-minute walking distance away. While Option K is within 800m of the station, this would involve crossing the M48, and is therefore not seen to be particularly accessible. Option J is 1.1 mile/ 22-minute walk from the station; and Option M is furthest away, 2.5 miles to the north. In terms of bus services in the area, Options L and M are well located; Option L is located adjacent to bus services on Rogiet Road and Longfellow Road, and Option M is within 400m of a bus stop just off the A48. Options K and J are however less well located; Option K is detached from bus services extending through Caldicot by the M48, and Option J is distant from bus services on the B245 detached by the Country Park. Option L therefore performs most positively overall given its location in close proximity to the

railway station, and subsequently the increased opportunity to encourage modal shift for shorter journeys both within Caldicot and Rogiet, and for wider commuter journeys.

All Options are assumed to have the potential to include enhancements/ improvements to services/ facilities and public transport. As set out above, the level of infrastructure delivery is expected to be equal under all Options, and therefore none of the options are better performing in this respect.

Overall, all Options perform well against this ISA theme, directing growth towards the south of the County and more specifically around the M4 corridor, capitalising upon strategic transport links and opportunities associated with the Cardiff Capital Region City Deal and the South East Wales Metro. Option L is best performing given its location along the M4 corridor, nestled between Caldicot and Rogiet, and its ability to capitalise upon sustainable transport infrastructure and encourage modal shift. Options J and K perform relatively on a par in this respect, with Option M performing least positively. This is given that in comparison to other Options, Option M is detached from sustainable travel opportunities in the key Severnside settlements (namely Caldicot and Rogiet) and the wider M4 corridor.

Natural resources (air, land, minerals, and water)

Options	Option J – Land north east of Caldicot	Option K – Land north west of Caldicot	Option L – Land west of Caldicot	Option M – Land east of Caerwent
Rank	2	2	1	2
Significant effect?	Yes - Negative	Yes - Negative	Yes - Negative	Yes - Negative

While air pollution is not a major problem in Monmouthshire it can cause significant problems for people’s health. The greatest problems associated with air quality in the County are caused by vehicle emissions, and therefore Options perform positively where they seek to utilise sustainable transport opportunities; such as active travel networks, improved public transport and electric charging point infrastructure. This will help to reduce the impact of transport-based emissions and improvements in air quality. Option L is best performing in this respect, given its sustainable location nestled between Caldicot and Rogiet, and its ability to capitalise upon sustainable transport infrastructure (such as the Severn Tunnel Junction station) and encourage modal shift. Option M performs least positively given it is detached from sustainable transport along the M4 corridor and within/ surrounding Caldicot, with high reliance on the car for travel anticipated.

The Agricultural Land Classification (ALC) classifies land into six grades (plus ‘non-agricultural’ and ‘urban’), where Grades 1 to 3a are recognised as being the ‘best and most versatile’ land (BMV) and Grades 3b to 5 are of poorer quality. Detailed agricultural land quality

surveys will be undertaken by site promoters as part of the candidate site process, and therefore at this stage ALC at each of the Options has been based on the Predictive ALC model for Wales (2019).⁷¹ The area of all Options is predominately Grade 1 agricultural land. The exception to this is approximately 1/3 of Option K which is Grade 3b land; and Option L includes areas of Grade 2, Grade 3b and Grade 4 land to the north east of the Option. Options L and K are therefore best performing in this respect as they would necessitate the least amount of loss of BMV land.

All Options comprise entirely greenfield sites and consequently it is not possible to differentiate between them in terms of promoting the use of previously developed land. In this context it is possible to say that Options L and K perform better than Options J and M in relation to protecting the County's soil/ and resource.

Monmouthshire's mineral resource is focused to the south of the County, with part of Option M and Option K falling within a limestone minerals safeguarding area. Options J and L are therefore best performing in terms of protecting the County's mineral resource; however, in accordance with national and regional policy requirements, it is considered that a sustainable approach will be adopted to development within mineral safeguarding areas.

All Options are considered to perform equally in terms of demand for water, and impact on water quality.

Overall, all Options perform negatively against this ISA theme given development at each option would result in the loss of BMV agricultural land, and would not contribute towards promoting the use of brownfield land. However, it is recognised that there are limited opportunities within the County for brownfield development and development on lower grades of agricultural land. Option L is best performing given it is well located in terms of potential to utilise sustainable travel and improve air quality; is the least constrained in terms of Grade 1 agricultural land coverage; and is not located within a minerals safeguarding area. It is difficult to differentiate between all other Options at this stage.

⁷¹ The Predictive ALC model for Wales (2017) is based on the principles of the Agricultural Land Classification System of England & Wales, the Revised Guidelines & Criteria for Grading the Quality of Agricultural Land (MAFF 1988).

Biodiversity and geodiversity

Options	Option J – Land north east of Caldicot	Option K – Land north west of Caldicot	Option L – Land west of Caldicot	Option M – Land east of Caerwent
Rank	3	2	3	1
Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain

In terms of European sites, the Severn Estuary Special Area of Conservation (SAC), Special Protection Area (SPA)/ Ramsar site are located 900m south of Option L, 1.2km south of Option J, and over 2km from Options K and M. The Severn Estuary is the largest coastal plain estuary in the UK with the second highest tidal range in the world. The site covers the southern extent of the County, and contains habitats listed under Annex I of the Habitats Directive. These include estuaries, mudflats and sandflats. In addition to Annex I habitats present, primary reasons for designation are species listed under Annex II of the Habitats Directive including Sea lamprey, River lamprey and Twaite shad.

Page 793

Primary reasons for the SPA designation is that the site qualifies as an area of Internationally Important Assemblage of Birds, under Article 4.2, where over the winter the area regularly supports 84,317 waterfowl.

Primary reasons for Ramsar designation is that there are eight criteria that are within the Ramsar designation. This includes the immense tidal range creating diversity of the physical environment and biological communities, and due to unusual estuarine communities, reduced diversity and high productivity.

- This site is also designated due to the importance for the run of migratory fish between sea and river via the estuary. It is also of particular importance for migratory birds during spring and autumn.

HRA Screening (2019) of the Preferred Strategy policies found that there is the potential for development to significantly affect the Severn Estuary SAC through atmospheric pollution, recreation, water quality and water quantity, level and flow; and for development to affect the SPA/ Ramsar site through atmospheric pollution, recreation, loss of functionally linked land, water quality and water quantity, level and flow. As such, the Severn Estuary, and potential impact pathways, will be considered in more detail through the Appropriate Assessment stage. It is therefore considered that all Options have the potential to indirectly impact upon the SAC/ SPA/ Ramsar site. Potential strategic growth areas have been identified as needing to be screened in for further detailed consideration through the HRA process. However, given the distance of the Options to the SPA/ SAC/ Ramsar site; it is considered that only Options L and J have the potential to lead to significant effects.

There is a range of nationally and locally designated biodiversity located around the Severnside area. Some of these designations fall within or have the same boundaries as the European sites considered through the HRA and outline above, although they may have different designated features and sensitivities in some cases. Despite this, the impact pathways identified earlier for European sites are also applicable/ relevant to nationally and locally designated sites and wider biodiversity interests. Notably, as discussed above, Options have the potential to impact on the Severn Estuary SSSI through atmospheric pollution, recreation, loss of functionally linked land, water quality and water quantity, level and flow.

Options J and K are constrained by Ancient Woodland at Farthing Hill (adjacent to Option J) and Woodland Valley (to the north east of Option K). There is the potential for development at Options J and K to adversely impact upon biodiversity present at Farthing Hill and Woodland Valley through increased disturbance, noise, light and air pollution. There is also the potential to deliver positive effects through biodiversity net-gain, this may include creating ecological corridors and aiding connectivity between sites.

Options are not constrained by locally designated sites; however, it is recognised that all sites are greenfield, and may have the potential to hold biodiversity value. Notably, Option K includes scattered pockets of hedges/ dense scrub and linear tree/ hedgerow habitats. It is noted that Dewston Garden and Grottoes Park is located adjacent to the site to the west, which is rich in biodiversity and may hold connectivity with biodiversity present within the Option. In terms of Option M, mature trees/ hedgerows densely line the site boundary to the south along the A48, and there is a patch of woodland to the east of the site further along the A48 extending north. Option L also has hedgerows lining the field parcels within the Option, and there are sparse mature trees present throughout Option J. There is the potential for development across the Options to lead to negative effects on biodiversity through direct loss of habitats and any associated species. Development should seek to retain and enhance these habitats where possible, ensuring no net loss, and seek to deliver significant positive effects through biodiversity net gain. Notably Options have the potential to strengthen connectivity across the Options and with the wider biodiversity network.

Overall, all Options have the potential to lead to adverse effects in terms of the biodiversity ISA theme. Options L and J have the potential to lead to significant adverse effects on biodiversity, given the presence of the Severn Estuary SPA/ SAC/ Ramsar site/ SSSI within 900m and 1.2km of the Options, respectively. In terms of wider biodiversity effects, it is considered that Option K performs less well than other Options given the close proximity of Woodland Valley (Ancient Woodland), the presence of Dewston Garden and Grottoes Park adjacent to the Option, and the variety of biodiversity present within the Option itself. Option J is also constrained in terms of Ancient Woodland located adjacent to the Option at Farthing Hill, however, holds limited biodiversity within the Option. Option M is identified as best performing, given it is the least constrained of the Options in terms of potential impact on biodiversity designated sites, and overall biodiversity value. It is however also noted that there is the potential for Options to deliver positive effects through biodiversity enhancement/ net gain.

Historic environment

Options	Option J – Land north east of Caldicot	Option K – Land north west of Caldicot	Option L – Land west of Caldicot	Option M – Land east of Caerwent
Rank	3	2	1	2
Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain

There are no designated heritage assets within Option M; however, it is in close proximity to the Caerwent Conservation Area, Caerwent Roman City Scheduled Monument and a number of listed buildings. It's possible that the site could accommodate development without any significant residual negative effects on the historic environment as long it is sensitively designed, and the layout takes account of any important views into and from the Caerwent Conservation Area. However, this is uncertain at this stage. The Option is separated from the heritage assets by the A48 and is also adjacent to existing residential development, which should help to reduce impacts as a result of development in this area.

Development at Option K would extend the settlement of Caldicot to the North West, which would cross the boundary of the M48 motorway and encroach upon designated heritage settings in Caerwent, including the Caerwent Conservation Area. The Dewstow House Historic Park and Garden, which contains four listed buildings is located adjacent to the growth area in the south-west and development here has the potential to directly affect its setting, particularly through loss of greenfield land which is likely to contribute to the character of this area. It's possible that the site could accommodate development without any significant residual negative effects on the historic environment as long it is sensitively designed, and the layout takes account of any important views into and from the Caerwent Conservation Area and Dewstow House Park. However, this is uncertain at this stage.

Development at Option J would likely lead to some development within the Caldicot Conservation Area, which also contains Caldicot Castle Grade I listed building and Scheduled Monument covering the unoccupied parts. Development within this growth area would result in the loss of large areas of greenfield/ open space in the setting of the castle which is also a Country Park. On this basis, the potential for a permanent significant negative effect on the historic environment as a result of strategic development in this area is identified; however, there is some uncertainty at this stage.

There are no designated heritage assets within Option L, which is also largely contained by the M48 in the north, railway line in the south and existing urban areas in the east and west. It's possible that the site could accommodate development without any significant residual negative effects on the historic environment as long it is sensitively designed.

Cadw, Natural Resources Wales and the International Council on Monuments and Sites (ICOMOS UK) has compiled a non-statutory Register of 58 Landscapes of Outstanding or Special Historic Interest in Wales. None of the Options fall within, or adjacent to these Landscapes of Outstanding or Special Historic Interest.

It is recognised that Monmouthshire’s cultural assets also include the use of the Welsh language. The RLDP is not considered likely to have a significant effect on the Welsh language, and therefore no significant differences have been identified between the Options in this respect.

In summary, Option L is less sensitive in terms of the historic environment and development in this area is therefore less likely to result in a residual negative effect compared to the other options. Whilst uncertainties exist, Option J is considered to have greater potential for significant residual negative effects. It is not possible to identify any significant differences between Options K and M at this stage and the nature and significance of effects are uncertain and dependent on the precise scale, layout and design of growth.

Landscape

Options	Option J – Land north east of Caldicot	Option K – Land north west of Caldicot	Option L – Land west of Caldicot	Option M – Land east of Caerwent
Rank	3	3	2	1
Significant effect?	Yes - Negative	Yes - Negative	Uncertain	Uncertain

As a largely rural county Monmouthshire has major landscape resources and is home to internationally and nationally designated landscapes. Looking specifically at the Severnside area, while the area is not constrained by international or national landscape designations, it is noted that the west of Caldicot is separated by an important Green Wedge from Rogiet. This Green Wedge covers Option L, and it is therefore considered that development at this location could lead to coalescence between these two settlements; affecting the degree of physical and visual separation, as well as the visual impact upon the surrounding landscape.

Cadw, Natural Resources Wales and the International Council on Monuments and Sites (ICOMOS UK) has compiled a non-statutory Register of 58 Landscapes of Outstanding or Special Historic Interest in Wales. None of the Options fall within, or adjacent to these Landscapes of Outstanding or Special Historic Interest.

A Landscape Capacity Update study has been carried out for the County (2020), which identifies Local landscape Character Areas (LLCAs) and provides an overall analysis of each LLCA's sensitivity to residential development.⁷²

Overall, the study has found that there is capacity for housing in Monmouthshire focussing on the larger settlements; which includes Caldicot and Magor & Undy, as higher tier settlements within the Severnside area. However, looking specifically at the Options in turn:

- **Option J** is categorised as having a high-medium sensitivity to residential development.
- **Option K** is categorised as having a high-medium sensitivity to residential development.
- **Option L** is categorised as having a medium sensitivity to residential development.
- **Option M** is categorised as having a medium-low sensitivity to residential development.

Development of Option M would likely extend the settlement of Caerwent to the east, north of the A48. Development would significantly increase the size of Caerwent, altering the character of the settlement and village identity, and may set precedent for further growth to the east, along the A48.

Given uncertainties no significant differences between the Options in terms of the nature and significance of effects could be identified at this stage. They could all potentially affect the character and setting of the settlement and wider landscape, depending on the design and layout of development. Despite this, it is possible to rank them; assuming that the same scale/ type of development would be delivered within the strategic growth areas, the differences identified between them at this stage mainly reflect the Landscape Sensitivity and Capacity Study (2009) findings. Option J and Option K are identified as worst performing of the Options, given both have medium-high sensitivity to housing development. Option K would likely lead to negative effects through extending development northwest of the M48 into the open landscape, which currently acts as a physical barrier to development. Option J would extend the settlement of Caldicot to the northeast, towards the settlement of Crick and extend development north of the Caldicot Castle Country Park (which is also a conservation area). Option L performs more strongly than Options J and K as it is considered to have medium sensitivity to residential development. However, development of Option L could lead to coalescence between Caldicot and Rogiet, which may result in the loss of a multi-functional open space and designated 'Green Wedge'. Option M may also set precedent for further development in the open landscape to the east along the A48, however is of medium-low sensitivity to development, and therefore is best performing of the options.

⁷² White Consultants (2009) Monmouthshire Landscape Sensitivity and Capacity Study

It is noted that for all Options, mitigation (which reduces the extent of development to avoid the most sensitive areas) is considered likely to reduce the significance of the potential negative effects. However, this is uncertain at this stage and will be dependent on the design/ layout and implementation of specific mitigation measures.

Climate change (including flood risk)

Options	Option J – Land north east of Caldicot	Option K – Land north west of Caldicot	Option L – Land west of Caldicot	Option M – Land east of Caerwent
Rank	1	1	3	2
Significant effect?	Uncertain	Uncertain	Uncertain	Uncertain

Monmouthshire's rurality, limited public transport, high levels of car ownership and the subsequent reliance on the private car, combined with high energy consumption can all contribute to carbon emissions. Monmouthshire County Council declared a climate emergency in May 2019, and as such growth Options will be required to contribute positively towards meeting the Council's aim of reducing its net carbon emissions to zero by 2030.

In relation to climate change adaptation, key issues include the need to capitalise upon opportunities to design-in low carbon infrastructure to development from the outset, and therefore minimise additional CO₂ emissions associated with development. There are no significant differences between the Options in terms of opportunities to design-in low carbon infrastructure, i.e., given there is no difference in quantum of housing growth between Options.

All Options also present an opportunity to support adaptation to the potential effects of climate change through providing improvements to the local green infrastructure network. As above, it is considered that all options are able to deliver a similar level of infrastructure. However, it is noted that Option L is an area of open green space, defined as a 'green-wedge'. The loss of this area of green infrastructure has the potential to lead to negative effects in terms of climate change adaptation.

It is considered that there is the potential to reduce greenhouse gas emissions by reducing the need to travel and encouraging the use of sustainable transport modes. Notably, the Active Travel (Wales) Act (2013) requires all local authorities in Wales to deliver improvements to their network of active travel routes and facilities. All Options perform well in this respect, directing growth towards the South of the County; capitalising upon strategic transport links and opportunities associated with the Cardiff Capital Region City Deal and the South East Wales Metro. Option L is best performing given its location along the M4 corridor, nestled between Caldicot and Rogiet with good access to the town centre, and its ability to capitalise upon sustainable transport infrastructure and encourage modal shift. Options J and K perform

relatively on a par in this respect, with Option M performing least positively. This is given that in comparison to other Options, Option M is detached from sustainable travel opportunities in the key Severnside settlements (namely Caldicot) and the wider M4 corridor. It is however noted that the utilisation of the M4 itself will result in continued high car use in the County.

In terms of managing flood risk to address climate change, it is recognised that the Severn Estuary is located along the south of the County. While the majority of Options are not constrained in this respect, the southern extent of Option L is located within Flood Zones B and C. It is however noted that development of Option L could avoid the highest flood risk areas and deliver suitable mitigation (including sustainable drainage systems) to ensure that development does not increase flood risk elsewhere.

Overall, development proposed at the individual Growth Option scale is not likely to have a significant positive or negative effect on climate change when considered in isolation. It is anticipated that this will be addressed through the RLDP policy framework. All Options seek to support the uptake of sustainable travel where possible, capitalising upon strategic transport links to the south of the County; however, it is noted that the utilisation of the M4 corridor will result in continued high car use. As such, effects on climate change in this respect are uncertain. While Option L is best performing in terms of access to sustainable travel, Option L performs poorly due to high risk of flooding, with the potential for long term negative effects. However, it is considered that areas at high risk of flooding would be avoided where possible in line with higher tier planning policy and guidance via the PPW and Technical Advice Note 15. Option M also performs less well than other Options given its detachment from sustainable transport opportunities surrounding Caldicot and Rogiet, and subsequent likely reliance on the private vehicle for travel.

1. GIS analysis of Candidate Sites

Methodology and assumptions

- 1.1 In line with the Development Plans Manual Edition 3 (March 2020), separate more spatially specific and quantitative criteria have been developed to assess candidate sites through the ISA, which build on the ISA Framework developed at the scoping stage. The methodology for the ISA of candidate sites involves employing GIS data-sets and measuring ('quantitative analysis') how each candidate site relates to various constraint and opportunity features. Specifically, the aim is to differentiate the performance of the candidate sites in respect of specific locational (e.g., distance to a GP surgery) / intersect (e.g., intersect with flood risk zone) criteria. The ISA methodology allows for the consistent and transparent assessment of candidate sites.
- 1.2 Two GIS tools were used to undertake the appraisal of candidate site options depending on the feature and measurements required. These provided either a:
 - **Straight line distance** from a feature to a candidate site and percentage overlap of any features within a site. Measurements were taken from the closest boundary of the candidate site and the feature; or
 - **Network analyst** - Distances calculated from a candidate site to a feature along a real-world network of roads and urban footpaths using Open Street Map. The network analyst tool helps to provide approximate real world walking distances. Network analysis has been carried out assuming suitable access points to the sites (as we cannot use the whole site boundary) and so the walking distances are approximate, i.e., a feature may be closer to the site boundary than the assigned access point.

Assumptions and limitations

- 1.3 All relevant and available spatial data sets have been used; however, there are data limitations, which is a limitation of the appraisal overall. For example, on the basis of the available datasets, it is noted that much of the data (including Green Wedges, protected employment sites, and industrial and business sites) is from the adopted LDP. This data is being updated as part of the RLDP process.
- 1.4 Also, it is generally the case that, on the basis of the available datasets, there is more limited potential to appraise the merits of site options in terms of socio-economic objectives, relative to environmental objectives. In this respect, under the economy and employment ISA topic, singular employment sites are not considered (i.e., public house or scrap metal works); rather, clusters of employment sites are considered, including town/ local centres and industrial estates.
- 1.5 It is also important to state that the appraisal is limited on the basis that proximity / percentage intersect is often (i.e. for many objectives) a crude indicator of constraint or opportunity. For example, whilst percentage intersect with a flood risk zone is a strong indicator of actual flood risk constraint, proximity to a designated biodiversity feature, or Air Quality Management Area

(AQMA), is less robust as an indicator of biodiversity or air quality constraint. We understand that distance to features in this respect does not indicate a 'significant effect', but aids differentiation, which is the aim at this stage of the ISA process. However, it is important to note that these issues will be explored in further detail through the ISA of strategic options and RLDP policies.

1.6 Further criteria specific assumptions are set out below:

- Where candidate sites are brownfield in nature, we assume that any development would be an improvement on the existing form in accordance with principles of sustainable development and placemaking as set out in Planning Policy Wales (PPW).
- It is assumed that all development will deliver appropriate mitigation to address any potential water quality impacts, in accordance with the Water Supply (Water Quality) Regulations 2018 (in Wales). However, it is recognised that water quality issues in relation to Phosphates are affecting the River Wye and River Usk, with developments required to demonstrate betterment or neutrality.
- In terms of infrastructure (green, blue, grey), services and facilities, the appraisal considers only those assets that are existing and does not consider any future proposals.
- It is noted that many existing services and facilities (i.e., industrial and business sites, protected employment sites, etc.) are based on adopted LDP allocations and will be reviewed as part of the RLDP process.

Detailed methodology

1.7 The candidate site options appraisal methodology is presented in Table 1.1 and Table 1.2. The tables set out the criteria and thresholds as well as the GIS tool used and provides further commentary as necessary. The tables recognise data limitations and assumptions set out above. Where possible the ISA methodology has sought to remain consistent with MCC's candidate site methodology¹ and to reflect guidance in the Welsh Government Development Plans Manual Edition 3².

¹ Monmouthshire County Council (2022): 'Monmouthshire Replacement Local Development Plan Candidate Sites Assessment Methodology Updated August 2022' can be accessed via <https://www.monmouthshire.gov.uk/app/uploads/2022/12/CS-Methodology-Update-August-2022-1.pdf>

² Welsh Government (2020): 'Development Plans Manual Edition 3' can be accessed via [Welsh Government Development Plans Manual Edition 3 \(March 2020\)](#)

Table 1.1: Site options appraisal methodology

Criteria	Data and measurement	Commentary
Employment		
Identified Industrial & Business Site	Data provided by MCC and does not include features outside the authority. Network analyst measurement.	Highlights walking distance to identified industrial & business site. There is no clear guidance on distance thresholds, and it is recognised that identified industrial & business sites will often be reached by car or public transport. The thresholds therefore reflect the spread of the data.
Protected Employment Site	Data provided by MCC and does not include features outside the authority. Network analyst measurement.	Highlights walking distance to protected employment site. There is no clear guidance on distance thresholds, and it is recognised that protected employment sites will often be reached by car or public transport. The thresholds therefore reflect the spread of the data.
Population and communities		
Neighbourhood centre	Data provided by MCC and does not include features outside the authority. Network analyst measurement.	Highlights walking distance to neighbourhood centres. There is no clear guidance on distance thresholds, and therefore the thresholds reflect the spread of the data.
Central shopping area	Data provided by MCC and does not include features outside the authority. Network analyst measurement.	Highlights walking distance to a central shopping area. There is no clear guidance on distance thresholds, and it is recognised that these facilities will often be reached by car or public transport. The thresholds therefore reflect the spread of the data.
Area of amenity importance	Data provided by MCC and does not include features outside the authority. Network analyst measurement.	Highlights walking distance to an area of amenity importance. There is no clear guidance on distance thresholds, and therefore the thresholds therefore reflect the spread of the data.
School	Data provided by MCC and does not include features outside the authority. Network analyst measurement.	Highlights walking distance to schools. Thresholds based on the WG's Active Travel Guidance (800m for walkable neighbourhoods).
Health and wellbeing		
Health services	Data provided by MCC and does not include features outside the authority. Network analyst measurement.	Highlights walking distance to health facilities (including hospitals, GPs and dentists). Thresholds based on the WG's Active Travel Guidance (800m for walkable neighbourhoods).
Green space	Data provided by MCC and does not include features outside the authority. Network analyst measurement.	Highlights the walking distance of site options to areas of green space. It is recognised that there may be other areas of open or green space that are not considered through this criterion. Thresholds based on the WG's Active Travel Guidance (800m for walkable neighbourhoods).

Criteria	Data and measurement	Commentary
Green wedge	Data provided by MCC and is based on the adopted LDP. Straight line distance/ overlap measurement.	Green wedges are an urban containment mechanism intended to restrict the spread of built development beyond designated settlement boundaries and allocated sites. MCC has indicated several areas to be green wedges in order to prevent coalescence between settlements. Green wedges have been identified through the adopted LDP in the south of Monmouthshire.
Public right of way	Data provided by Welsh Government. Straight line distance/ overlap measurement.	Highlights the proximity of site options to walking routes.
National cycle network	Data provided by Welsh Government. Straight line distance/ overlap measurement.	Highlights the proximity of site options to cycling routes.
National trail	Data provided by MCC. Straight line distance/ overlap measurement.	Highlights the proximity of site options to national trail routes.

Equalities, diversity and inclusion

Deprivation	Data provided by Welsh Government and included features outside the authority. Straight line distance/ overlap measurement.	Highlights site options that fall within an area of deprivation. Development in an area of relative deprivation (as measured by the Index of Multiple Deprivation) may support regeneration. However, it is recognised that this will be dependent on a variety of factors, including the level of improvements delivered in terms of community facilities.
-------------	---	---

Transport and movement

Public transport	Data provided by MCC and includes features outside the authority. Network analyst measurement.	Highlights walking distance to a train station or bus stop. Thresholds based on the WG's Active Travel Guidance (800m for walkable neighbourhoods).
------------------	--	---

Natural resources

Air Quality Management Areas (AQMAs)	Data provided by MCC.	Highlights the proximity of site options to an Air Quality Management Area (AQMA).
Land classification	Data provided by Welsh Government. Straight line distance/ overlap measurement.	Highlights whether the site is a previously developed or greenfield site as defined by Future Wales.

Criteria	Data and measurement	Commentary
Agricultural land classification	Data provided by Natural Resource Wales. Straight line distance/ overlap measurement.	The ALC Predictive Map Version 2 (2019) is available and has informed MCC's CS assessments. The Map provides a distinction between Grade 3a (i.e. land classified as the 'best and most versatile') and Grade 3b land (i.e. land which is not classified as such). Taking the above into account it is appropriate to 'flag' red those sites that may include Grade 1 to 3a agricultural land.
Source Protection Zone	Data provided by Natural Resource Wales. Straight line distance/ overlap measurement.	Groundwater Source Protection Zones are designated zones around public water supply abstractions and other sensitive receptors that signal there are particular risks to the groundwater source they protect. The zones are based on an estimation of the time it would take for a pollutant which enters the saturated zone of an aquifer to reach the source abstraction or discharge point. For each source, three zones are defined around a particular water abstraction based on travel times, of the groundwater (Zone 1 = 50 days; Zone 2 = 400 days) and the total catchment area of the abstraction (Zone 3).
Nitrate Vulnerable Zone	Data provided by Natural Resource Wales. Straight line distance/ overlap measurement.	Nitrate Vulnerable Zones are areas within Wales that contain surface water or groundwater that is susceptible to nitrate pollution from agricultural activities. They are designated in accordance with the requirements of the European Commission's Nitrates Directive 91/676/EEC, which aims to protect water quality across Europe by preventing nitrates from agricultural sources polluting ground and surface waters and by promoting the use of good farming practices. The Welsh Government is responsible for maintaining and improving the quality of the aquatic environment and carries out a review of the NVZ areas every four years.
Mineral safeguarded site	Data provided by MCC. Straight line distance/ overlap measurement.	It is assumed that any development outside of a mineral safeguarded site would not result in the sterilisation of that resource and the RAG distances reflect this. Mineral safeguarding areas in Monmouthshire identified through the adopted LDP include limestone and sand gravel. It is noted that these are being reviewed as part of the RLDP process, and will be presented within the Deposit RLDP.
Waterbodies	Data provided by MCC. Straight line distance/ overlap measurement.	It is recognised that distance in itself is not a definitive guide to the likelihood or significance of effects on a waterbody (rivers, lakes and coastline). This criterion will help to highlight the waterbodies that lies in closest proximity to the site for the purposes of differentiating between sites.

Biodiversity

Ancient Woodland	Data provided by MCC and includes sites lying outside of the authority. Straight line distance/ overlap measurement.	Ancient Woodlands are spread across Monmouthshire. The RAG distances have been selected to take account of this and help differentiate between the sites options.
------------------	--	---

Criteria	Data and measurement	Commentary
European site (SAC, SPA or Ramsar site)	Data provided by NRW and includes sites lying outside of the authority boundary. Straight line distance/ overlap measurement.	It is recognised that distance in itself is not a definitive guide to the likelihood or significance of effects on a European site. This criterion will help to highlight the European sites that lies in closest proximity to the site for the purposes of differentiating between sites.
National Nature Reserve (NNR)	Data provided by NRW and includes sites lying outside of the authority. Straight line distance/ overlap measurement.	There are two National Nature Reserves (NNR) within Monmouthshire. NNR's are assumed to be of less significance and therefore less sensitive than European sites and SSSIs. However, it is recognised that the designations overlap.
Priority habitats	Data provided by NRW and includes sites lying outside of Monmouthshire. Straight line distance/ overlap measurement.	This seeks to flag if a development at a site could result in the loss of and therefore fragmentation of BAP priority habitats. It also helps to flag if there is the potential for disturbance to priority habitats within 50m of the site.
Sites of Importance for Nature Conservation (SINCs)	Data provided by MCC and does not include sites lying outside of the authority. Straight line distance/ overlap measurement.	There are numerous SINCs situated within Monmouthshire and the RAG distances reflect this along with the assumption that these are of less significance and therefore less sensitive than internationally and nationally designated biodiversity.
Site of Special Scientific Interest (SSSI)	Data provided by NRW and includes sites lying outside of the authority boundary. Straight line distance/ overlap measurement.	As above, it is recognised that distance in itself is not a definitive guide to the likelihood or significance of effects on a European site. This criterion will help to highlight the SSSI that lies in closest proximity to the site and together with the criterion below for SSSI Impact Zones, it will help to differentiate between sites.

Historic Environment

Conservation Area	Data provided by MCC and does not include conservation areas outside the authority. Straight line distance/ overlap measurement.	It is appropriate to 'flag' a red where a site is within, intersects or is adjacent to a Conservation Area. It is also appropriate to flag sites that might more widely impact on the setting of a Conservation Area and a 50m threshold has been assumed. It is recognised that distance in itself is not a definitive guide to the likelihood or significance of effects on a heritage asset. It is also recognised that the historic environment encompasses more than just designated heritage assets. Whilst there is good potential to highlight where development in proximity to a heritage asset might impact negatively on that asset, or its setting, a limitation relates to the fact that it has not been possible to gather views from heritage specialists on sensitivity of assets/ capacity to develop each of the sites. This is a notable limitation as potential for development to conflict with the setting of historic assets/ local historic character can only really be considered on a case-by-case basis rather than through a distance-based criteria. It will also sometimes be the case that development can enhance heritage assets.
-------------------	--	--

Criteria	Data and measurement	Commentary
Scheduled Monument	Data provided by Cadw and includes assets lying outside of the authority. Straight line distance/ overlap measurement.	As above.
Listed Building	Data provided by Cadw and includes assets lying outside of the authority. Straight line distance/ overlap measurement.	As above.
World heritage site	Data provided by Cadw and includes assets lying outside of the authority. Straight line distance/ overlap measurement.	As above.
Archaeologically sensitive area	Data provided by MCC and does not include sites lying outside of the authority. Straight line distance/ overlap measurement.	As above

Landscape

Area of Outstanding Natural Beauty (AONB)	Data provided by MCC. Straight line distance/ overlap measurement.	There is only one AONB in Monmouthshire, which is Wye Valley AONB in the east of the county. Highlights the proximity of site options to the Wye Valley AONB.
Country Park	Data provided by MCC. Straight line distance/ overlap measurement.	There are only two country parks in Monmouthshire. Highlights the proximity of site options to the nearest of the two country parks.
National Landscape Character Area	Data provided by MCC. Straight line distance/ overlap measurement.	Monmouthshire intersects five National Landscape Character Areas. Highlights which National Landscape Character Area the site falls within.
National Park	Data provided by MCC. Straight line distance/ overlap measurement.	There is only one National Park in Monmouthshire, which is the Brecon Beacons in the northwest of the county. Highlights the proximity of site options to the Brecon Beacons National Park.

Climate Change

Criteria	Data and measurement	Commentary
Groundwater flood risk	Data provided by MCC. Straight line distance/ overlap measurement.	This criterion will help to identify sites that fall within areas at risk of groundwater flooding.
Surface water flood risk	Data provided by Welsh Government. Straight line distance/ overlap measurement.	This criterion will help to identify sites that fall within areas at risk of surface water flooding. N.B. While it is important to avoid development in areas of high flood risk, there is the potential to address risk of surface water flooding at the development management stage through the use of appropriate mitigation, such as Sustainable Drainage Systems (SuDS).
Fluvial flood risk	Data provided by Welsh Government. Straight line distance/ overlap measurement.	This criterion will help to identify sites that fall within high flood risk areas. N.B. While it is important to avoid development in flood zones, there is the potential to address flood risk at the development management stage, when a 'sequential approach' can be taken to ensure that uses are compatible with flood risk. There is also the potential to design-in SuDS.

1.8 Table 1.2 overleaf presents the candidate site framework and assessment questions, where '++' represents major positive effects, '+' represents minor positive effects, '0' represents neutral/ no effects, '?' represents uncertain effects, '-' represents minor negatives effects, and '--' represents major negative effects.

Table 1.2: Candidate site framework and assessment questions

ISA themes	ISA objectives	ISA candidate site assessment questions	
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	++	New employment land proposed at the site.
		+	The site has good access to existing employment ($\leq 800\text{m}$ from an employment centre).
		0	The site has reasonable access to existing employment ($800\text{-}1,600\text{m}$ from an employment centre).
		?	Type of development uncertain at this stage.
		-	The site has poor access to existing employment ($>1,600\text{m}$ from an employment centre).
		--	Development at the site would result in the loss of existing employment land.
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	++	The site has capacity to deliver a significant number of new homes (≥ 100 dwellings) and it does not intersect with a designated green wedge.
		+	The site has capacity to deliver new homes (<100 dwellings) and it does not intersect with a designated green wedge.
		0	The site will deliver new employment land.
		?	N/A
		-	The site could deliver new homes or employment land; however, the site partially intersects with a designated green wedge.
		--	The site could deliver new homes or employment land; however, the site wholly intersects with a designated green wedge.

ISA candidate site assessment questions

Page 13

ISA themes	ISA objectives	ISA candidate site assessment questions	
	To enhance design quality to create places for people that maintain and enhance community and settlement identity.	++	The site is within reasonable walking distance (≤800m) to a primary and a secondary school (≤1,600m).
		+	The site is within reasonable walking distance (≤800m) to a primary or a secondary school (≤1,600m).
		0	N/A
		?	N/A
		-	The site is not within reasonable walking distance (≤800m) to a primary or a secondary school (≤1,600m).
		--	The site is >1,600m from a primary school and secondary school.
Health and Wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	++	The site is within 800m of a health service and an active travel route.
		+	The site is within 800m of a health service or an active travel route.
		0	N/A
		?	N/A
		-	The site is not within 800m of a health service or an active travel route.
		--	The site is not within 800m of a health service, or an active travel route and development would result in the loss of designated open/ recreational space.

ISA themes	ISA objectives	ISA candidate site assessment questions	
		--	The site is not within 800m of a formal leisure and green space or intersects with a formal leisure or green space and may result in their loss.
Equalities, Diversity and Inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	++	The site falls within one of the 10% or 20% most deprived LSOAs in Wales and development proposes the delivery of a new or improved community facility/building/ space that meets a demonstrated need in the area, particularly where it supports the Welsh Language and various groups within the community.
		+	The site falls within one of the 10% or 20% most deprived LSOAs in Wales.
		0	The site falls within one of the 20-30% most deprived LSOAs in Wales.
		?	The site falls within one of the 30-50% most deprived LSOAs in Wales.
		-	The site falls within one of the 50% least deprived LSOAs in Wales.
		--	Development at the site would result in the unjustified loss of a community facility/ building/ space.
Transport and Movement	Increase sustainable transport use and reduce the need to travel.	+	The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.
		0	N/A
		?	N/A
		-	The site is not within reasonable walking distance (>800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or active travel route.
		--	The site is not within reasonable walking distance (>800m) to a railway station or bus stop, neighbourhood centre or central shopping area, and active travel route.
		+	The site does not intersect with an AQMA.

2. GIS analysis findings

Abergavenny

Residential

CS0293 - Land east of of Abergavenny

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	+	<i>The site has good access to existing employment (≤800m from an employment centre).</i> The site is 1,200-1,300m from the nearest industrial and business site (Ross Road, Abergavenny), but 600-700m from the nearest protected employment site (Lower Monk Street).
	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	+	<i>The site has capacity to deliver new homes (<100 dwellings) and it does not intersect with a designated green wedge.</i>
		-	<i>The site is not within reasonable walking distance (≤800m) to a primary or a secondary school (≤1,600m).</i> The site is 1,500-1,600m from the nearest primary school (Our Lady St Michaels RC Primary) and 2-2.5km from the nearest secondary school (King Henry VIII Comprehensive).
	Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	++
		+	<i>The site is within 800m of a formal leisure or green space.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site is 500-600m from a play space.
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> Not classified as deprived or relatively deprived (3 rd quintile).
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i> The site is 100-200m from the nearest bus stop, and within 73m of the nearest National Cycle Network route. It is also within 50-100m of the nearest rail station. It is 2-2.5km from the nearest neighbourhood centre and 800-900m from the nearest central shopping area.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i> The site is adjacent to or intersects with a river.
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	-	<i>The site is predominantly greenfield land (>50%) and contains high quality agricultural land (Grade 1, 2 and 3a).</i>
		--	<i>The site intersects with a mineral safeguarding area.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site intersects with a mineral safeguarding area for sand and gravel.
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	-	<i>The site intersects or is adjacent to a regionally or locally (LNRs and SINC) designated site and/ or priority habitats/ species.</i> The site is 329m from the nearest SINC (River Gavenni), 428m from the nearest SSSI and SA(River Usk (Lower Usk)), and 82m from the nearest area of ancient woodland. However, the site is adjacent to and intersects an area of parkland priority habitat (0.08%).
Historic Environment	Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets. Promote understanding of Monmouthshire's cultural heritage.	?	<i>Development at the site would have an uncertain effect on the historic environment.</i> The site is 536m from the nearest scheduled monument (Area of Conventual Buildings, St Mary's Priory), 67m from the nearest grade II listed building, 576m from the nearest grade II* listed building, 349m from the nearest archaeologically sensitive area, 65m from the nearest conservation area (Abergavenny) and 546m from the nearest grade I listed building. Given the proximity of the site to heritage features, uncertain effects are most likely.
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	+	<i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park.</i>
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	+	<i>The site does not intersect with a high fluvial flood risk area (Flood Zone 2 and 3).</i>
		-	<i>The site intersects with surface water flood zone 2 or 3.</i> <50% of the site intersects with flood zone 2 or 3.

Caerwent

Residential

CS0091 – Caerwent Depot

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	-	<i>The site has poor access to existing employment (>1,600m away from an employment centre).</i> The site is 1,900-2000m from the nearest protected employment site (Severn Bridge, Caldicot).
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	+	<i>The site has capacity to deliver new homes (<100 dwellings) and it does not intersect with a designated green wedge.</i> The site has capacity to deliver 60 new homes.
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	--	<i>The site is >1,600m from a primary school and secondary school.</i> The site is 2-2.5km from the nearest primary school (Castle Park Primary) and 3-4km from the nearest secondary school (Caldicot Comprehensive).
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	+	<i>The site is within 800m of a health service or an active travel route.</i> The site is not within 800m of a health service; however, it is adjacent to the nearest National Cycle Network route.
		--	<i>The site is not within 800m of a formal leisure and green space.</i> The site is 1,200-1,300m from the nearest area of amenity importance and 1,300-1,400m from the nearest green space (playing field).
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site falls within the Caerwent LSOA, which is amongst the 10-20% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i> The site is 50-100m from the nearest bus stop (Crick House) and adjacent to the nearest National Cycle Network route. However, it is not within reasonable walking distance to a neighbourhood centre or central shopping area.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	0	<i>The site does not contain and is not in close proximity to a waterbody, nor does it fall within the River Wye Catchment Area.</i>
		-	<i>The site intersects with a Groundwater Source Protection Zone (SPZ).</i> The site falls within SPZ 3.
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	++	<i>The site is wholly brownfield land.</i>
--		<i>The site intersects with a mineral safeguarding area.</i> The site intersects with a mineral safeguarding area for carboniferous limestone, and sand and gravel.	

ISA topic	ISA objective	Significant effect?	Commentary
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	?	<p><i>The site does not intersect, but is within 1km of a designated site, and there is an element of uncertainty relating to the potential for significant effects.</i></p> <p>The site is 157m from the nearest SINC (Little Wood), 402m from the nearest SSSI (Nedern Brook Wetlands, Caldicot), and 780m from the nearest priority habitat (lowland meadows).</p>
Historic environment	<p>Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets.</p> <p>Promote understanding of Monmouthshire's cultural heritage.</p>	-	<p><i>Development at the site has the potential for a negative effect on the historic environment.</i></p> <p>The site is 99m from the nearest scheduled monument (Crick Round Barrow), 184m from the nearest grade II listed building, 334m from the nearest grade II* listed building, 462m from the nearest archaeologically sensitive area, and 871m from the nearest conservation area (Caerwent).</p> <p>Whilst the site is wholly brownfield, and relatively small in size (2.44ha), development has potential to disturb nearby archaeological remains. Nevertheless, it is recognised that development also has potential to improve the setting of the nearby listed buildings.</p>
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	++	<i>The site is predominantly brownfield and does not intersect with an Area of Outstanding Natural Beauty, National Park, or Country Park.</i>
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	+	<i>The site does not intersect with a high fluvial flood risk area (Flood Zone 2 and 3).</i>
		+	<i>The site does not intersect with a high surface water flood risk area (Flood Zone 2 and 3).</i>

CS0129 – Dewstow Village (Former Dewstow Golf Course)

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	+	<i>The site has good access to existing employment (≤800m of an employment centre).</i> The site is 400-500m from the nearest protected employment site (Cheeseman's Industrial Estate, Rogiet).
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	++	<i>The site has capacity to deliver a significant number of new homes (≥ 100 dwellings) and it does not intersect with a designated green wedge.</i> The site has capacity to deliver 815 new homes.
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	++	<i>The site is within reasonable walking distance (≤800m) to a primary and a secondary school (≤1,600m).</i> The site is 600-700m from the nearest primary school (Dewstow Primary) and 1,400-1,500m from the nearest secondary school (Caldicot Comprehensive).
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	++	<i>The site is within 800m of a health service and an active travel route.</i> The site is 700-800m from the nearest dentist (Teeth for Life, 186 Newport Road, Caldicot) and intersects with three PRowS (353/113/5, 353/115/3 and 353/115/5).
		++	<i>The site is within 800m of a formal leisure and green space.</i> The site is 0-50m from the nearest area of amenity importance and 50-100m from the nearest green space (cemetery).
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Caerwent LSOA, which is amongst the 10-20% least deprived LSOAs in Wales.

ISA topic	ISA objective	Significant effect?	Commentary
Transport and movement	Increase sustainable transport use and reduce the need to travel.	++	<i>The site is within close proximity (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, and an active travel route.</i>
			The site is 400-500m from the nearest bus stop (Cherry Tree Nursing Home), 700-800m from the nearest neighbourhood centre (West End, Caldicot), and intersects with two PRowS (353/115/3, 353/115/5 and 353/113/5). The site is also 129m from the nearest National Cycle Network route.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	0	<i>The site does not contain and is not in close proximity to a waterbody, nor does it fall within the River Wye Catchment Area.</i>
		-	<i>The site intersects with a Groundwater Source Protection Zone (SPZ).</i> The site falls within SPZ 3.
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	--	<i>The site is wholly greenfield land and contains high quality agricultural land (Grade 1, 2 and 3a).</i> The site is a former golf course.
--		<i>The site intersects with a mineral safeguarding area.</i> The northern part of the site intersects with a mineral safeguarding area for carboniferous limestone.	
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	-	<i>The site intersects or is adjacent to a regionally or locally (LNRs and SINCs) designated site and/ or priority habitats/ species.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			<p>The northern boundary of the site is adjacent to the nearest SINC (Caerwent Quarry), 26m from the nearest area of ancient woodland, 66m from the nearest propriety habitat (open mosaic habitat on previously developed land), and 176m from the nearest SSSI (Brockwells Meadows).</p>
Historic environment	<p>Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets.</p> <p>Promote understanding of Monmouthshire's cultural heritage.</p>	-	<p><i>Development at the site has the potential for a negative effect on the historic environment.</i></p> <p>The site is 35m from the nearest grade II* listed building, 46m from the nearest grade II listed building, 49m from the nearest archaeologically sensitive area, 610m from the nearest conservation area (Caerwent), 624m from the nearest scheduled monument (Church Farm Romano-British settlement), and 943m from the nearest grade I listed building.</p> <p>This is a large site (37.1ha), and therefore it is likely to impact the setting of the four listed buildings located in Dewstow Gardens and Grottoes, which borders the site to the east and south. In addition, development has potential to disturb nearby archaeological remains.</p>
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	?	<p><i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park; however, the site is either adjacent to/ within close proximity to one of these designated landscapes, and/ or the scale of development proposed (≥ 100 dwellings) on greenfield land has the potential for a negative effect. This is uncertain at this stage.</i></p> <p>The site will deliver 815 homes on a former golf course.</p>
		+	<p><i>The site does not intersect with a high fluvial flood risk area (Flood Zone 2 and 3).</i></p>

ISA topic	ISA objective	Significant effect?	Commentary
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	-	<p><i>The site intersects with surface water Flood Zone 2 or 3.</i></p> <p>Less than 50% of the site intersects with surface water Flood Zone 2 or 3. However, this is only a very small part of the site, just west of the M48 and north of Dewstow Road.</p>

CS0071 – Land at Slough Farm Caerwent

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	-	<p><i>The site has poor access to existing employment (>1,600m away from an employment centre).</i></p> <p>The site is 2-2.5km from the nearest protected employment site (Severn Bridge, Caldicot).</p>
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	++	<p><i>The site has capacity to deliver a significant number of new homes (≥ 100 dwellings) and it does not intersect with a designated green wedge.</i></p> <p>The site has capacity to deliver 143 new homes.</p>
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	--	<p><i>The site is >1,600m from a primary school and secondary school.</i></p> <p>The site is 2.5-3km from the nearest primary schools (Archbishop Rowan Williams VA Primary, Ysgol Y Ffin and Castle Park Primary) and 3-4km from the nearest secondary school (Caldicot Comprehensive).</p>
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	+	<p><i>The site is within 800m of a health service or an active travel route.</i></p> <p>The site is not within 800m of a health service; however, it is 1m from the nearest National Cycle Network route.</p>
		++	<p><i>The site is within 800m of a formal leisure and green space.</i></p>

ISA topic	ISA objective	Significant effect?	Commentary
			The site is 400-500m from the nearest area of amenity importance and 400-500m from the nearest green space (playing field).
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Caerwent LSOA, which is amongst the 10-20% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i> The site is 100-200m from the nearest bus stop (Dinham) and 1m from the nearest National Cycle Network route. The site is also 278m from the nearest PRow. However, it is not within reasonable walking distance to a neighbourhood centre or central shopping area.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i> The site is 133m from the nearest waterbody (river).
		-	<i>The site intersects with a Groundwater Source Protection Zone (SPZ).</i> The site falls within SPZ 3.
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield	--	<i>The site is wholly greenfield land and contains high quality agricultural land (Grade 1, 2 and 3a).</i>

ISA topic	ISA objective	Significant effect?	Commentary
	development and protecting, where possible, higher grade agricultural land.		The site is currently used for agriculture.
		--	<i>The site is within a mineral safeguarding area.</i>
			The site is within a mineral safeguarding area for sand and gravel.
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	?	<i>The site does not intersect, but is within 1km of a designated site, and there is an element of uncertainty relating to the potential for significant effects.</i> The site is 68m from the nearest SSSI (Nedern Brook Wetlands, Caldicot), 208m from the nearest priority habitat (traditional orchard), 400m from the nearest area of ancient woodland, and 404m from the nearest SINC (Little Wood).
Historic environment	Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets. Promote understanding of Monmouthshire's cultural heritage.	-	<i>Development at the site has the potential for a negative effect on the historic environment.</i> The site is 86m from the nearest archaeologically sensitive area, 121m from the nearest conservation area (Caerwent), 122m from the nearest scheduled monument (Crick Round Barrow), 563m from the nearest grade II listed building, and 719m from the nearest grade II* listed building. Whilst the site is relatively small (7.5ha), development has the potential to disturb nearby archaeological remains located to the west of the site. In addition, the site has the potential to impact the setting of the conservation area, also located to the west of the site, as well as the setting of the scheduled monument, located to the east of the site.
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	?	<i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park; however, the site is either adjacent to/ within close proximity to one of these designated landscapes, and/ or the scale of development proposed (≥ 100</i>

ISA topic	ISA objective	Significant effect?	Commentary
			<i> dwellings) on greenfield land has the potential for a negative effect. This is uncertain at this stage.</i>
			The site will deliver 143 homes on agricultural land.
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	+	<i>The site does not intersect with a high fluvial flood risk area (Flood Zone 2 and 3).</i>
		+	<i>The site does not intersect with a high surface water flood risk area (Flood Zone 2 and 3).</i>

CS0017 – Land at Village Farm

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	-	<i>The site has poor access to existing employment (>1,600m away from an employment centre).</i> The site is 5-6km from the nearest protected employment site (Cheeseman's Industrial Estate, Rogiet).
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	+	<i>The site has capacity to deliver new homes (<100 dwellings) and it does not intersect with a designated green wedge.</i> The site has capacity to deliver six new homes.
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	--	<i>The site is >1,600m from a primary school and secondary school.</i> The site is 4-5km from the nearest primary school (Shirenewton Primary) and 7-8km from the nearest secondary school (Caldicot Comprehensive).
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	+	<i>The site is within 800m of a health service or an active travel route.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site not within 800m of a health service; however, it is 91m from the nearest PRoW.
		+	<i>The site is within 800m of a formal leisure or green space.</i>
			The site is not within 800m of a formal leisure space; however, it is 0-50m from the nearest green space (religious grounds).
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i>
			The site falls within the Caerwent LSOA, which is amongst the 10-20% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i>
			The site is 400-500m from the nearest bus stop (Llanvair Discoed) and 91m from the nearest PRoW. However, it is not within reasonable walking distance to a neighbourhood centre or central shopping area.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i>
			The site is 30m from the nearest waterbody (river).
		-	<i>The site intersects with a Groundwater Source Protection Zone (SPZ).</i>
			The site falls within SPZ 3.

ISA topic	ISA objective	Significant effect?	Commentary
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	--	<i>The site is wholly greenfield land and contains high quality agricultural land (Grade 1, 2 and 3a).</i> The site is currently used for agriculture.
		--	<i>The site is within a mineral safeguarding area.</i> The site intersects with a mineral safeguarding area for carboniferous limestone.
Biodiversity and Ecodiversity		Protect and enhance biodiversity within and surrounding the plan area.	?
Historic environment	Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets. Promote understanding of Monmouthshire's cultural heritage.	-	<i>Development at the site has the potential for a negative effect on the historic environment.</i> The site is 36m from the nearest scheduled monument (Llanvair Castle) and 61m from the nearest grade II listed building. Whilst the site is very small (0.7ha), it still has the potential to impact the setting of the aforementioned heritage assets, which are located to the south of the site. However, it is recognised that there are existing homes and a road between the site and these heritage assets, which will likely provide a degree of screening.
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	+	<i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park.</i>

ISA topic	ISA objective	Significant effect?	Commentary
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	+	<i>The site does not intersect with a high fluvial flood risk area (Flood Zone 2 and 3).</i>
		+	<i>The site does not intersect with a high surface water flood risk area (Flood Zone 2 and 3).</i>

Mixed Use: Residential (C3), Care (C2), Employment (B1), Community Use (D1)

CS0009 – Land at former MoD Training Centre

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	++	<i>New employment land proposed at the site.</i>
		++	<i>The site is proposed for mixed-use development, including employment use.</i>
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	+	<i>The site has capacity to deliver new homes (<100 dwellings) and it does not intersect with a designated green wedge.</i>
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	--	<i>The site is >1,600m from a primary school and secondary school.</i> <i>The site is 2.5-3km from the nearest primary school (Ysgol Y Ffin) and 3-4km from the nearest secondary school (Caldicot Comprehensive).</i>
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	+	<i>The site is within 800m of a health service or an active travel route.</i>
		++	<i>The site is not within 800m of a health service; however, it is 28m from the nearest National Cycle Network route.</i> <i>The site is within 800m of a formal leisure and green space.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site is 300-400m from the nearest area of amenity importance and 300-400m from the nearest green space (play space).
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Caerwent LSOA, which is amongst the 10-20% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i> The site is 0-50m from the nearest bus stop (Dinham) and 28m from the nearest National Cycle Network route. The site is also 316m from the nearest PRow. However, it is not within reasonable walking distance to a neighbourhood centre or central shopping area.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	0	<i>The site does not contain and is not in close proximity to a waterbody, nor does it fall within the River Wye Catchment Area.</i>
		-	<i>The site intersects with a Groundwater Source Protection Zone (SPZ).</i> The site falls within SPZ 3.
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
		-	<i>The site is predominantly greenfield land (>50%) and contains high quality agricultural land (Grade 1, 2 and 3a).</i> The site comprises the former MoD Training Centre, however this is predominantly greenfield land.

ISA topic	ISA objective	Significant effect?	Commentary
		--	<p><i>The site is within a mineral safeguarding area.</i></p> <p>The site intersects with a mineral safeguarding area for carboniferous limestone and sand and gravel.</p>
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	?	<p><i>The site does not intersect, but is within 1km of a designated site, and there is an element of uncertainty relating to the potential for significant effects.</i></p> <p>The site is 141m from the nearest priority habitat (traditional orchard), 269m from the nearest SSSI (Nedern Brook Wetlands, Caldicot), 359m from the nearest area of ancient woodland, and 364m from the nearest SINC (Little Wood).</p>
Historic environment	<p>Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets.</p> <p>Promote understanding of Monmouthshire's cultural heritage.</p>	-	<p><i>Development at the site has the potential for a negative effect on the historic environment.</i></p> <p>The site is 125m from the nearest archaeologically sensitive area, 138m from the nearest conservation area (Caerwent), 327m from the nearest scheduled monument (Crick Round Barrow), 593m from the nearest grade II listed building, and 900m from the nearest grade II* listed building.</p> <p>Whilst the site is partially brownfield, and relatively small (4.2ha), development has the potential to disturb nearby archaeological remains located to the west of the site. In addition, the site could impact the setting of the conservation area, also located to the west of the site.</p>
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	+	<i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park.</i>
		+	<i>The site does not intersect with a high fluvial flood risk area (Flood Zone 2 and 3).</i>

ISA topic	ISA objective	Significant effect?	Commentary
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	-	<i>The site intersects with surface water Flood Zone 2 or 3.</i> Less than 50% of the site intersects with surface water Flood Zone 2 or 3.

Caldicot Castle

Residential

CS0067 – Land east and west of Church Road

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	0	<i>The site has reasonable access to existing employment (800-1,600m from an employment centre).</i> The site is 1,500-1,600m from the nearest protected employment site (Severn Bridge, Caldicot).
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	+	<i>The site has capacity to deliver new homes (<100 dwellings) and it does not intersect with a designated green wedge.</i> The site has capacity to deliver 23 new homes.
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	+	<i>The site is within reasonable walking distance (≤800m) to a primary or a secondary school (≤1,600m).</i> The site is 700-800m from the nearest primary school (Ysgol Y Ffin); however, it is 1,700-1,800m from the nearest secondary school (Caldicot Comprehensive).
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	+	<i>The site is within 800m of a health service or an active travel route.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site is not within 800m of a health service; however, it intersects with a PRow (354/39/2).
		++	<i>The site is within 800m of a formal leisure and green space.</i> The site is 0-50m from an area of amenity importance and 200-300m from a green space (religious grounds and play space).
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Caldicot Castle 1 LSOA, which is amongst the 10-20% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i> The site is 300-400m from the nearest bus stop (Heol Glaslyn) and intersects with a PRow (354/39/2). It is also 146m from the nearest National Cycle Network route. However, the site is not within reasonable walking distance to a neighbourhood centre or central shopping area.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i> The site is 122m from the nearest waterbody (river).
		-	<i>The site intersects with a Groundwater Source Protection Zone (SPZ).</i> The site falls within SPZ 3.

ISA topic	ISA objective	Significant effect?	Commentary
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	?	<i>The site is predominantly greenfield land (≥50%) and contains low quality agricultural land (Grade 3b, 4, urban).</i> The current use of the site is agriculture/ DES2.
		--	<i>The site is within a mineral safeguarding area.</i> The site intersects with a mineral safeguarding area for carboniferous limestone, and sand and gravel.
Biodiversity and Ecodiversity	Protect and enhance biodiversity within and surrounding the plan area.	--	<i>The site intersects or is adjacent to an internationally (SAC, SPA, Ramsar) or nationally (SSSI, Ancient Woodland, NNRs) designated site.</i> The northeastern end of the site is adjacent to an area of ancient woodland. In addition, the site is 46m from the nearest SSSI (Nedern Brook Wetlands, Caldicot), 242m from the nearest SINC (Caerwent Quarry), and 629m from the nearest priority habitat (traditional orchard).
Historic environment	Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets. Promote understanding of Monmouthshire's cultural heritage.	--	<i>Development at the site has the potential for a significant negative effect on the historic environment.</i> The northeastern half of the site (55% of the entire site), on the eastern side of Church Road, fully intersects with an archaeologically sensitive area. In addition, the site is 181m from the nearest scheduled monument (Church Farm Romano-British settlement), 500m from the nearest grade II listed building, 579m from the nearest grade II* listed building, 717m from the nearest conservation area (Caldicot), and 784m from the nearest grade I listed building. Whilst the site is small (2.6ha), development has the potential to disturb on-site archaeological remains.

ISA topic	ISA objective	Significant effect?	Commentary
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	?	<i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park; however, the site is either adjacent to/ within close proximity to one of these designated landscapes, and/ or the scale of development proposed (≥ 100 dwellings) on greenfield land has the potential for a negative effect. This is uncertain at this stage.</i> The site is 814m from the nearest Country Park (Caldicot Castle).
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	+	<i>The site does not intersect with a high fluvial flood risk area (Flood Zone 2 and 3).</i>
		+	<i>The site does not intersect with a high surface water flood risk area (Flood Zone 2 and 3).</i>

Caldicot Castle / Portskewett

Residential

CS0087 – The Showground

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	+	<i>The site has good access to existing employment (≤800m from an employment centre).</i> The site is 100-200m from the nearest protected employment site (Severn Bridge, Caldicot) and 700-800m from the nearest identified industrial and business site (Pill Row, Severnbridge Industrial Estate, Caldicot).
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	++	<i>The site has capacity to deliver a significant number of new homes (≥ 100 dwellings) and it does not intersect with a designated green wedge.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site has capacity to deliver 500 new homes.
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	++	<i>The site is within reasonable walking distance (≤800m) to a primary and a secondary school (≤1,600m).</i> The site is 300-400m from the nearest primary school (Castle Park Primary) and 1,100-1,200m from the nearest secondary school (Caldicot Comprehensive).
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	++	<i>The site is within 800m of a health service and an active travel route.</i> The site is 500-600m from the nearest dentist (The Bridges Dental Surgery, Caldicot) and intersects with four PRowS (354/48/1, 354/79/1, 376/25/1 and 376/26/1).
		++	<i>The site is within 800m of a formal leisure and green space.</i> The site is 0-50m from the nearest area of amenity importance and green space (public park or garden).
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Caldicot Castle 1 LSOA, which is amongst the 10-20% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	++	<i>The site is within close proximity (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, and an active travel route.</i> The site is 300-400m from the nearest bus stop (St Mary's Junior School), 400-500m from the nearest central shopping area (Caldicot), and intersects with four PRowS (354/48/1, 354/79/1, 376/25/1 and 376/26/1).

ISA topic	ISA objective	Significant effect?	Commentary
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i>
		-	<i>The western extent of the site, near the site boundary, intersects with a river (Nedern Brook).</i>
		-	<i>The site intersects with a Groundwater Source Protection Zone (SPZ).</i> <i>The site falls within SPZ 3.</i>
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	-	<i>The site is predominantly greenfield land (>50%) and contains high quality agricultural land (Grade 1, 2 and 3a).</i>
--		<i>The site intersects with a mineral safeguarding area.</i> <i>The site intersects with a mineral safeguarding area for carboniferous limestone, and sand and gravel.</i>	
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	--	<i>The site intersects or is adjacent to an internationally (SAC, SPA, Ramsar) or nationally (SSSI, Ancient Woodland, NNRs) designated site.</i>
		--	<i>The western extent of the site, near the site border, intersects with an SSSI (Nedern Brook Wetlands, Caldicot). In addition, the site is 54m from the nearest area of ancient woodland, 84m from the nearest SINC (Farthing Hill), and 896m from the nearest priority habitat (lowland calcareous grassland).</i>

ISA topic	ISA objective	Significant effect?	Commentary
Historic environment	Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets.	--	<i>Development at the site has the potential for a significant negative effect on the historic environment.</i>
	Promote understanding of Monmouthshire's cultural heritage.		The western half of the site intersects with an archaeologically sensitive area, and the southwestern quarter of the site intersects a conservation area (Caldicot). In addition, the site is 35m from the nearest grade II listed building, 39m from the nearest scheduled monument (Caldicot Castle (unoccupied parts)), 94m from the nearest grade I listed building, and 151m from the nearest grade II* listed building. The site is large (38.6ha), and therefore development has the potential to disturb on-site archaeological remains. In addition, the site will likely impact the setting of the conservation area that it intersects with, as well as the setting of the aforementioned listed buildings and scheduled monument.
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	?	<i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park; however, the site is either adjacent to/ within close proximity to one of these designated landscapes, and/ or the scale of development proposed (≥ 100 dwellings) on greenfield land has the potential for a negative effect. This is uncertain at this stage.</i> The southwestern boundary of the site is adjacent to a Country Park (Caldicot Castle). In addition, the site will deliver 500 new homes on land currently used as an equestrian event centre.
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	-	<i>The site intersects with fluvial Flood Zone 2 or 3.</i> Less than 50% of the site intersects with fluvial Flood Zone 2 or 3. This is largely isolated along the western and southern boundaries of the site.
		-	<i>The site intersects with surface water Flood Zone 2 or 3.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			Less than 50% of the site intersects with surface water Flood Zone 2 or 3. This is largely isolated along the western and southern boundaries of the site.

Cantref

Residential

CS0128 – Land at Chapel Farm Fields

ISA topic	ISA objective	Significant effect?	Commentary	
Page 845 Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	+	<i>The site has good access to existing employment (≤800m from an employment centre).</i> The site is 700-800m from the nearest protected employment site (Hatherleigh Place, Abergavenny).	
	Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	++	<i>The site has capacity to deliver a significant number of new homes (≥ 100 dwellings) and it does not intersect with a designated green wedge.</i> The site has capacity to deliver 120 new homes.
		To enhance design quality to create places for people that maintain and enhance community and settlement identity	++	<i>The site is within reasonable walking distance (≤800m) to a primary and a secondary school (≤1,600m).</i> The site is 600-700m from the nearest primary school (Cantref Primary) and 1,300-1,400m from the nearest secondary school (King Henry VIII Comprehensive).
	Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	+	<i>The site is within 800m of a health service or an active travel route.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site is not within 800m of a health service; however, it is 120m from the nearest PRow.
		++	<i>The site is within 800m of a formal leisure and green space.</i> The site is 200-300m from the nearest area of amenity importance and green space (playfield field).
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Cantref 1 LSOA, which is amongst the 10-20% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i> The site is 100-200m from the nearest bus stop (Albany Road) and 120m from the nearest PRow. However, it is not within reasonable walking distance to a neighbourhood centre or central shopping area.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i> The site is 186m from the nearest waterbody (river).
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>

ISA topic	ISA objective	Significant effect?	Commentary
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	--	<i>The site is wholly greenfield land and contains high quality agricultural land (Grade 1, 2 and 3a).</i> The current use of the site is agriculture.
		--	<i>The site is within a mineral safeguarding area.</i> The site is within a mineral safeguarding area for sand and gravel.
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	-	<i>The site intersects or is adjacent to a regionally or locally (LNRs and SINCs) designated site and/ or priority habitats/ species.</i> The western boundary of the site is adjacent to a SINC (Orchard House). In addition, the site is 169m from the nearest priority habitat (parkland), 226m from the nearest area of ancient woodland, and 726m from the nearest SAC and SSSI (River Usk/ Afon Wysg),
Historic environment	Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets. Promote understanding of Monmouthshire's cultural heritage.	--	<i>Development at the site has the potential for a significant negative effect on the historic environment.</i> The southeastern corner of the site is adjacent to a conservation area (Abergavenny). In addition, the site is 232m from the nearest grade II listed building, 900m from the nearest grade II* listed building, and 930m from the nearest archaeologically sensitive area. The site is relatively large (9.6ha) and is therefore likely to impact the setting of the adjacent conservation area.
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	?	<i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park; however, the site is either adjacent to/ within close proximity to one of these designated landscapes, and/ or the scale of development proposed (≥ 100 dwellings) on greenfield land has the potential for a negative effect. This is uncertain at this stage.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site is 4m from the nearest National Park (Brecon Beacons). In addition, it will deliver 120 homes on agricultural land.
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.		<i>The site intersects with Flood Zone 2 or 3.</i>
		-	Less than 50% of the site intersects with Flood Zone 2 or 3 (fluvial). This is isolated to the southern extent of the site near the site boundary.
		+	<i>The site does not intersect with a high surface water flood risk area (Flood Zone 2 and 3).</i>

GS0056 – Land south Brecon Road

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	0	<i>The site has reasonable access to existing employment (800-1,600m from an employment centre).</i> The site is 800-900m from the nearest protected employment site (Hatherleigh Place, Abergavenny).
		+	<i>The site has capacity to deliver new homes (<100 dwellings) and it does not intersect with a designated green wedge.</i> The site has capacity to deliver 76 new homes.
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.		<i>The site is not within reasonable walking distance (≤800m) to a primary or a secondary school (≤1,600m).</i>
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	-	The site is 1,100-1,200m from the nearest primary school (Cantref Primary) and 2-2.5km from the nearest secondary school (King Henry VIII Comprehensive).

ISA topic	ISA objective	Significant effect?	Commentary
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	+	<i>The site is within 800m of a health service or an active travel route.</i>
		++	<i>The site is not within 800m of a health service; however, it is 134m from the nearest PRow.</i> <i>The site is within 800m of a formal leisure and green space.</i>
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site is 100-200m from the nearest area of amenity importance and 500-600m from the nearest green space (playing field and religious grounds).</i> <i>The site falls within one of the 50% least deprived LSOAs in Wales.</i>
		-	<i>The site falls within the Cantref 1 LSOA, which is amongst the 10-20% least deprived LSOAs in Wales.</i>
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i> <i>The site is 100-200m from the nearest bus stop (Meadow Lane) and 134m from the nearest PRow. However, it is not within reasonable walking distance to a neighbourhood centre or central shopping area.</i>
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution. To conserve, protect and enhance the water environment, water quality and water resources.	+	<i>The site does not intersect with an AQMA.</i>
		-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i> <i>The site is 66m from the nearest waterbody (river).</i>
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>

ISA topic	ISA objective	Significant effect?	Commentary
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	--	<i>The site is wholly greenfield land and contains high quality agricultural land (Grade 1, 2 and 3a).</i> The site is currently used for agriculture.
		--	<i>The site is within a mineral safeguarding area.</i> The site is within a mineral safeguarding area for sand and gravel.
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	?	<i>The site does not intersect, but is within 1km of a designated site, and there is an element of uncertainty relating to the potential for significant effects.</i> The site is 15m from the nearest priority habitat (parkland), 180m from the nearest area of ancient woodland, 205m from the nearest SINC (Orchard House), and 357m from the nearest SAC and SSSI (River Usk/ Afon Wysg).
Historic environment	Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets. Promote understanding of Monmouthshire's cultural heritage.	-	<i>Development at the site has the potential for a negative effect on the historic environment.</i> The site is 33m from the nearest grade II listed building, 521m from the nearest conservation area (Abergavenny), 615m from the nearest scheduled monument (Llanwenarth Churchyard Cross-Base), and 618m from the nearest grade II* listed building. Whilst the site is relatively small (3.2ha), it still has the potential to impact the setting of the nearby grade II listed building, which is located to the north of the site. However, it is recognised that the listed building is relatively well screened by trees, and Pentre Road provides some separation between the listed building and the site.
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	?	<i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park; however, the site is either</i>

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	-	<i>The site has poor access to existing employment (>1,600m from an employment centre).</i> The site is 7-8km from the nearest protected employment site (Woodside Industrial Estate and Former Railway Goods Yard, both in Usk, and Raglan Enterprise Park, Raglan) and identified industrial and business site (South Woodside, Usk).
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	?	N/A It is currently unknown how many new homes the site will deliver. The site does not intersect with a designated green wedge.
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	--	<i>The site is >1,600m from a primary school and secondary school.</i> The site is 6-7km from the nearest primary school (Usk Church in Wales Primary) and 10-15km from the nearest secondary school (Chepstow Comprehensive).
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	+	<i>The site is within 800m of a health service or an active travel route.</i> The site is not within 800m of a health service; however, it intersects with three PRowS (365/57/1 365/58/4 and 365/58/5).
		--	<i>The site is not within 800m of a formal leisure and green space.</i> The site is 6-7km from the nearest area of amenity importance and 800-900m from the nearest green space (religious grounds).
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site falls within the Devauden LSOA, which is amongst the 20-30% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i> The site is 50-100m from the nearest bus stop (Wern Panna) and intersects with three PRowS (365/57/1 365/58/4 and 365/58/5). However, it is not within reasonable walking distance to a neighbourhood centre or central shopping area.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i> The eastern extent of the site is adjacent to a river.
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	--	<i>The site is wholly greenfield land and contains high quality agricultural land (Grade 1, 2 and 3a).</i> The site is currently used for agriculture.
		+	<i>The site does not intersect with a mineral safeguarding area.</i>
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	--	<i>The site intersects or is adjacent to an internationally (SAC, SPA, Ramsar) or nationally (SSSI, Ancient Woodland, NNRs) designated site.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The southeastern extent of the site intersects with an area of ancient woodland. In addition, the southwestern extent of the site intersects with a SINC (Rockfield Farm, Rockfield Wet Meadows). The site is also 15m from the nearest priority habitat (traditional orchard) and 519m from the nearest SSSI (Cwrt y Bela a Springdale)
Historic environment	<p>Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets.</p> <p>Promote understanding of Monmouthshire's cultural heritage.</p>	--	<p><i>Development at the site has the potential for a significant negative effect on the historic environment.</i></p> <p>The southeastern extent of the site is adjacent to a scheduled monument (Ringwork northeast of New House). In addition, the site is 90m from the nearest grade II listed building and 843m from the nearest grade I listed building.</p> <p>The site is large (18.7ha), and whilst the number of homes to be delivered on the site is currently unknown, it is likely to disturb the adjacent scheduled monument. In addition, the site is likely to impact the setting of two nearby grade II listed buildings, which are both located to the east of the site.</p>
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	?	<p><i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park; however, the site is either adjacent to/ within close proximity to one of these designated landscapes, and/ or the scale of development proposed (≥ 100 dwellings) on greenfield land has the potential for a negative effect. This is uncertain at this stage.</i></p> <p>The scale of development proposed is currently unknown; however, given the size of the site (18.7ha), it is likely that the site will deliver over 100 homes. Nevertheless, uncertainty is noted at this stage.</p>
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	+	<i>The site does not intersect with a high fluvial flood risk area (Flood Zone 2 and 3).</i>

ISA topic	ISA objective	Significant effect?	Commentary
			Whilst the site is within fluvial Flood Zone 1, it is recognised that the eastern extent of the site is adjacent to a river, which is within fluvial Flood Zone 2 and 3.
		+	<i>The site does not intersect with a high surface water flood risk area (Flood Zone 2 and 3).</i>

Dixton with Osbaston

Residential

CS0074 - Land rear of The Royal Oak

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	-	<i>The site has poor access to existing employment (>1,600m from an employment centre).</i> The site is 2-2.5km from the nearest protected employment site (Mayhill/ Hadnock Road, Monmouth) and 20-25km from the nearest identified industrial and business site (South Woodside, Usk and Ross Road, Abergavenny).
	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	+	<i>The site has capacity to deliver new homes (<100 dwellings) and it does not intersect with a designated green wedge.</i> The site has capacity to deliver 10 new homes.
Population and communities	To enhance design quality to create places for people that maintain and enhance community and settlement identity	-	<i>The site is not within reasonable walking distance (≤800m) to a primary or a secondary school (≤1,600m).</i> The site is 1,000-1,100m from the nearest primary school (Osbaston VC Primary) and 1,700-1,800m from the nearest secondary school (Monmouth Comprehensive).

ISA topic	ISA objective	Significant effect?	Commentary
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	+	The site is within 800m of a health service or an active travel route. The site is not within 800m of a health service; however, it is 55m from the nearest PRow.
		+	<i>The site is within 800m of a formal leisure or green space.</i> The site is not within 800m of a formal leisure space; however, it is 100-200m from the nearest green space (golf course).
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Dixton with Osbaston LSOA, which is amongst the 10% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i> The site is 0-50m from the nearest bus stop (Royal Oak) and 55m from the nearest PRow. However, it is not within reasonable walking distance to a neighbourhood centre or central shopping area.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i> The site wholly falls within the River Wye Catchment Area.
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>

ISA topic	ISA objective	Significant effect?	Commentary
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	-	<i>The site is predominantly greenfield land (>50%) and contains high quality agricultural land (Grade 1, 2 and 3a).</i>
		+	Part of the site is used for caravanning.
		+	<i>The site does not intersect with a mineral safeguarding area.</i>
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	?	<i>The site does not intersect, but is within 1km of a designated site, and there is an element of uncertainty relating to the potential for significant effects.</i>
			The site is 167m from the nearest priority habitat (traditional orchard), 434m from the nearest SINC (Cross Wood), and 416m from the nearest area of ancient woodland.
Historic environment	Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets.	?	<i>Development at the site would have an uncertain effect on the historic environment.</i>
	Promote understanding of Monmouthshire's cultural heritage.		The site is 331m from the nearest grade II listed building, 811m from the nearest conservation area (Monmouth (central)), and 982m from the nearest scheduled monument (Dixton Mound).
			Whilst the site is very small (0.5ha), and the nearest heritage asset is relatively far from the site and partially screened by existing development in Osbaston, it still has the potential to impact the setting of this heritage asset. Due to this, uncertainty is noted.
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	+	<i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park.</i>
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	+	<i>The site does not intersect with a high fluvial flood risk area (Flood Zone 2 and 3).</i>
		+	<i>The site does not intersect with a high surface water flood risk area (Flood Zone 2 and 3).</i>

CS0216 – Land at Hereford Road

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	-	<i>The site has poor access to existing employment (>1,600m from an employment centre).</i> The site is 2-2.5km from the nearest protected employment site (Mayhill/ Hadnock Road, Monmouth) and 20-25km from the nearest identified industrial and business site (Ross Road, Abergavenny and South Woodside, Usk).
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	+	<i>The site has capacity to deliver new homes (<100 dwellings) and it does not intersect with a designated green wedge.</i> The site has capacity to deliver 65 new homes.
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	+	<i>The site is within reasonable walking distance (≤800m) to a primary or a secondary school (≤1,600m).</i> The site is 700-800m from the nearest primary school (Osbaston VC Primary); however, it is 1,700-1,800m from the nearest secondary school (Monmouth Comprehensive).
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	+	<i>The site is within 800m of a health service or an active travel route.</i> The site is not within 800m of a health service; however, it is 70m from the nearest PRow.
		++	<i>The site is within 800m of a formal leisure and green space.</i> The site is 500-600m from the nearest area of amenity importance and 400-500m from the nearest green space (golf course).
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Dixton with Osbaston LSOA, which is amongst the 10% least deprived LSOAs in Wales.

CS0270 – Leasbrook (Land north of Dixton Road)

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	0	<p><i>The site has reasonable access to existing employment (800-1,600m from an employment centre).</i></p> <p>The site is 1,300-1,400m from the nearest protected employment site (Mayhill/ Hadnock Road, Monmouth).</p>
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	++	<i>The site has capacity to deliver a significant number of new homes (≥ 100 dwellings) and it does not intersect with a designated green wedge.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site has capacity to deliver 270 new homes.
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	+	<i>The site is within reasonable walking distance (≤800m) to a primary or a secondary school (≤1,600m).</i> The site is 1,200-1,300m from the nearest primary school (Osbaston VC Primary); however, it is 400-500m from the nearest secondary school (Monmouth Comprehensive).
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	++	<i>The site is within 800m of a health service and an active travel route.</i> The site is 500-600m from the nearest GP surgery (Dixton Road Surgery, Monmouth) and intersects with a PRoW (375/245/1).
		++	<i>The site is within 800m of a formal leisure and green space.</i> The site is 0-50m from the nearest area of amenity importance and 300-400m from the nearest green space (religious grounds).
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Drybridge 2 LSOA, which is amongst the 20-30% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i> The site is 0-50m from the nearest bus stop (Priory End) and intersects with a PRoW (375/245/1). The site is also 330m from the nearest National Cycle Network route. However, it is not within reasonable walking distance to a neighbourhood centre or central shopping area.

ISA topic	ISA objective	Significant effect?	Commentary
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i>
		+	<i>The site falls wholly within the River Wye Catchment Area. In addition, the site is 282m from the nearest waterbody (river).</i>
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
		--	<i>The site is wholly greenfield land and contains high quality agricultural land (Grade 1, 2 and 3a).</i>
--		<i>The site is currently used for agriculture.</i> <i>The site is within a mineral safeguarding area.</i> <i>The site intersects with a mineral safeguarding area for sand and gravel.</i>	
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	?	<i>The site does not intersect, but is within 1km of a designated site, and there is an element of uncertainty relating to the potential for significant effects.</i> The site is 173m from the nearest priority habitat (traditional orchard), 243m from the nearest SAC and SSSI (River Wye/ Afon Gwy), 356m from the nearest area of ancient woodland, 430m from the nearest SINC (River Monnow), and 619m from the nearest NNR (Fiddler's Elbow).

ISA topic	ISA objective	Significant effect?	Commentary
Historic environment	Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets.	--	<i>Development at the site has the potential for a significant negative effect on the historic environment.</i>
	Promote understanding of Monmouthshire's cultural heritage.		The southeastern boundary of the site is adjacent to a registered historic landscape (The Lower Wye Valley). In addition, the site is 15m from the nearest conservation area (Monmouth (Dixton)), 171m from the nearest grade II listed building, 185m from the nearest scheduled monument (Dixton Mound), 324m from the nearest grade II* listed building, 563m from the nearest archaeologically sensitive area, and 938m from the nearest grade I listed building. The site is large (11ha), and therefore it is likely to impact the setting of the adjacent registered historic landscape, as well as the nearby conservation area and listed buildings, which are located to both the east and southwest of the site. Development also has the potential to disturb the nearby scheduled monument, which is located to the east of the site.
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	?	<i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park; however, the site is either adjacent to/ within close proximity to one of these designated landscapes, and/ or the scale of development proposed (≥ 100 dwellings) on greenfield land has the potential for a negative effect. This is uncertain at this stage.</i> The site is 137m from the nearest Area of Outstanding Natural Beauty (Wye Valley), which is located to the southeast of the site.
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	-	<i>The site intersects with fluvial Flood Zone 2 or 3.</i> Less than 50% of the site intersects with fluvial Flood Zone 2 or 3. However, this is isolated to the southeastern boundary of the site.
		+	<i>The site does not intersect with a high surface water flood risk area (Flood Zone 2 and 3).</i>

Healthcare centre (D1)

CS0006 – Land at Osbaston Road

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	++	<i>New employment land proposed at the site.</i> The site will deliver a new healthcare centre (D1).
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	0	<i>The site will deliver new employment land.</i>
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	0	N/A
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	0	N/A
		0	N/A
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Drybridge 2 LSOA, which is amongst the 20-30% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	0	N/A
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i> The site falls wholly within the River Wye Catchment Area. In addition, the site is 146m from the nearest waterbody (river).

ISA topic	ISA objective	Significant effect?	Commentary
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	--	<i>The site is wholly greenfield land and contains high quality agricultural land (Grade 1, 2 and 3a).</i> The site is currently used for agriculture.

CS0078 – Land adjacent to Croft y Bwla

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	0	<i>The site has reasonable access to existing employment (800-1,600m from an employment centre).</i> The site is 1,300-1,400m from the nearest protected employment site (Wonastow Road, Monmouth).
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	++	<i>The site has capacity to deliver a significant number of new homes (≥ 100 dwellings) and it does not intersect with a designated green wedge.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site has capacity to deliver 300 new homes.
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	-	<i>The site is not within reasonable walking distance (≤800m) to a primary or a secondary school (≤1,600m).</i> The site is 1,100-1,200m from the nearest primary school (Overmonnow Primary) and 2.5-3km from the nearest secondary school (Monmouth Comprehensive).
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	+	<i>The site is within 800m of a health service or an active travel route.</i> The site is not within 800m of a health service; however, it intersects with two PRowS (375/278/3 and 375/278/4).
		++	<i>The site is within 800m of a formal leisure and green space.</i> The site is 300-400m from the nearest area of amenity importance and 50-100m from the nearest green space (play space). It is also adjacent to a National Trail (Offas Dyke).
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Drybridge 1 LSOA, which is amongst the 30-40% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i> The site is 500-600m from the nearest bus stop (Willow Drive) and intersects with two PRowS (375/278/3 and 375/278/4). However, it is not within reasonable walking distance to a neighbourhood centre or central shopping area.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>

ISA topic	ISA objective	Significant effect?	Commentary
Page 883	To conserve, protect and enhance the water environment, water quality and water resources.	-	The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area. The site falls wholly within the River Wye Catchment Area. In addition, the site is 329m from the nearest waterbody (river).
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	--	<i>The site is wholly greenfield land and contains high quality agricultural land (Grade 1, 2 and 3a).</i> The site is currently used for agriculture.
		--	<i>The site is within a mineral safeguarding area.</i>
		--	The site is within a mineral safeguarding area for sand and gravel.
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	?	<i>The site does not intersect, but is within 1km of a designated site, and there is an element of uncertainty relating to the potential for significant effects.</i> The site is 102m from the nearest priority habitat (traditional orchard), 210m from the nearest SINC (River Monnow), and 392m from the nearest area of ancient woodland.
Historic environment	Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets.	--	<i>The site intersects or is adjacent to an internationally (SAC, SPA, Ramsar) or nationally (SSSI, Ancient Woodland, NNRs) designated site.</i>
	Promote understanding of Monmouthshire's cultural heritage.	--	The site is 94m from the nearest grade II listed building and 787m from the nearest conservation area (Monmouth (central)).

ISA topic	ISA objective	Significant effect?	Commentary
			The site is large (13.6ha), and therefore it is likely to impact the setting of the grade II listed building, which is located to the west of the site. The site also has the potential to impact the setting of the nearest conservation area.
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	?	<i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park; however, the site is either adjacent to/ within close proximity to one of these designated landscapes, and/ or the scale of development proposed (≥ 100 dwellings) on greenfield land has the potential for a negative effect. Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	+	<i>The site does not intersect with a high fluvial flood risk area (Flood Zone 2 and 3).</i>
		-	<i>The site intersects with surface water Flood Zone 2 or 3.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			Less than 50% of the site intersects with surface water Flood Zone 2 or 3. However, it is recognised that this is isolated to a couple of small areas in the eastern half of the site.

Residential and Employment

CS0051 – Land at Croft y Bwla Farm

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	++	<i>New employment land proposed at the site.</i> The site is proposed for mixed-use development, including employment use.
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	++	<i>The site has capacity to deliver a significant number of new homes (≥ 100 dwellings) and it does not intersect with a designated green wedge.</i> The site has capacity to deliver 900 new homes.
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	-	<i>The site is not within reasonable walking distance (≤800m) to a primary or a secondary school (≤1,600m).</i> The site is 900-1,000m from the nearest primary school (Overmonnow Primary) and 2.5-3km from the nearest secondary school (Monmouth Comprehensive).
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	+	<i>The site is within 800m of a health service or an active travel route.</i> The site is not within 800m of a health service; however, it intersects with five PRowS (375/38/1, 375/39/1, 375/40/1, 375/42/1 and 375/266/1).

ISA topic	ISA objective	Significant effect?	Commentary
		+	<i>The site is within 800m of a formal leisure or green space.</i> The site is 300-400m from the nearest area of amenity importance and intersects with a National Trail (Offas Dyke). However, the site is not within 800m of a formal green space.
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Drybridge 1 LSOA, which is amongst the 30-40% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i> The site intersects with five PRoWs (375/38/1, 375/39/1, 375/40/1, 375/42/1 and 375/266/1). In addition, it is 763m from the nearest National Cycle Network route. However, the site is not within reasonable walking distance to a railway station or bus stop or a neighbourhood centre or central shopping area.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i> The site wholly falls within the River Wye Catchment Area. In addition, the site is 409m from the nearest waterbody (river).
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>

ISA topic	ISA objective	Significant effect?	Commentary
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	--	<i>The site is wholly greenfield land and contains high quality agricultural land (Grade 1, 2 and 3a).</i> The site is currently used for agriculture.
		--	<i>The site is within a mineral safeguarding area.</i> The site is within a mineral safeguarding area for sand and gravel.
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	--	<i>The site intersects or is adjacent to an internationally (SAC, SPA, Ramsar) or nationally (SSSI, Ancient Woodland, NNRs) designated site.</i> The southwestern extent of the site intersects with an area of ancient woodland, and the northwestern extent of the site intersects with a SINC (Croft-y-Bwla). In addition, the northeastern boundary of the site is adjacent to a priority habitat (traditional orchard).
Historic environment	Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets. Promote understanding of Monmouthshire's cultural heritage.	--	<i>Development at the site has the potential for a significant negative effect on the historic environment.</i> The site is 104m from the nearest grade II listed building, 690m from the nearest conservation area (Rockfield), 983m from the nearest archaeologically sensitive area, 986m from the nearest grade II* listed building, and 997m from the nearest scheduled monument (Clawdd Du). The site is very large (49ha) and is therefore likely to impact the setting of the nearby grade II listed building, which is located to the northeast of the site. Whilst further away, the site also has the potential to impact the setting of the nearest conservation area, located to the north of the site, as there is open land between the site and the conservation area. However, it is recognised that trees provide a degree of screening to the conservation area.

ISA topic	ISA objective	Significant effect?	Commentary

			The site is 76m from the nearest waterbody (river) and falls wholly within the River Wye Catchment Area.
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	++	<i>The site is wholly brownfield land.</i> The site currently comprises poultry units.
		--	<i>The site is within a mineral safeguarding area.</i> The site is within a mineral safeguarding area for sand and gravel.
Biodiversity and Ecodiversity	Protect and enhance biodiversity within and surrounding the plan area.	?	<i>The site does not intersect, but is within 1km of a designated site, and there is an element of uncertainty relating to the potential for significant effects.</i> The site is 76m from the nearest area of ancient woodland, 319m from the nearest SINC (River Monnow), 393m from the nearest priority habitat (traditional orchard), and 886m from the nearest SAC and SSSI (River Wye/ Afon Gwy).
Historic environment	Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets. Promote understanding of Monmouthshire's cultural heritage.	+	<i>Regeneration of brownfield land that is currently detracting from the historic environment.</i> The eastern boundary of the site is adjacent to a conservation area (Monmouth (central)). In addition, the site is 341m from the nearest archaeologically sensitive area, 359m from the nearest grade II* listed building, 371m from the nearest grade II listed building, 437m from the nearest scheduled monument (Monmouth Castle), and 488m from the nearest grade I listed building.

ISA topic	ISA objective	Significant effect?	Commentary
			Whilst the site is small and (1.3ha) and partially shielded by trees, as it comprises poultry units it is likely currently detracting from the historic environment. Therefore, development has the potential to improve the setting of the adjacent conservation area. However, it is also recognised that development has the potential to disturb nearby archaeological remains.
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	++	<i>The site is predominantly brownfield and does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park.</i>
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	--	<i>The site falls wholly within fluvial Flood Zone 2 or 3.</i> The entire site intersects with fluvial Flood Zone 2.
		-	<i>The site intersects with surface water Flood Zone 2 or 3.</i> Less than 50% of the site intersects with surface water Flood Zone 2 or 3.

Mixed Use: Residential (C3), Flexible Office Space (B1) and Doctor's Surgery / Medical Centre (D1)

CS0136 – Land at former Poultry Units, Rockfield Road

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	++	<i>New employment land proposed at the site.</i> The site is proposed for mixed-use development, including employment uses (flexible office space and a GP surgery/ medical centre).
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	+	<i>The site has capacity to deliver new homes (<100 dwellings) and it does not intersect with a designated green wedge.</i> The site has capacity to deliver 48 new homes.

ISA topic	ISA objective	Significant effect?	Commentary
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	++	<i>The site is within reasonable walking distance (≤800m) to a primary and a secondary school (≤1,600m).</i> The site is 400-500m from the nearest primary school (Overmonnow Primary) and 1,500-1,600m from the nearest secondary school (Monmouth Comprehensive).
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	++	<i>The site is within 800m of a health service and an active travel route.</i> The site is 700-800m from the nearest GP surgery (Monnow Eyecare, Monmouth) and hospital (Monnow Vale Health and Social Care Facility and Overmonnow Day Hospital, both in Monmouth), and 130m from the nearest PRow.
		++	<i>The site is within 800m of a formal leisure and green space.</i> The site is 0-50m from the nearest area of amenity importance and 200-300m from the nearest green space (play space). It is also 70m from the nearest National Trail.
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Drybridge 1 LSOA, which is amongst the 30-40% least deprived LSOAs in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	++	<i>The site is within close proximity (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, and an active travel route.</i> The site is 50-100m from the nearest bus stop (Ancre Hill), 500-600m from the nearest central shopping area (Monmouth) and 130m from the nearest PRow. It is also 376m from the nearest National Cycle Network route.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>

ISA topic	ISA objective	Significant effect?	Commentary
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i> The site is 76m from the nearest waterbody (river) and falls wholly within the River Wye Catchment Area.
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	++	<i>The site is wholly brownfield land.</i> The site currently comprises poultry units.

CS0268 – Westgate Gardens

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	0	<i>The site has reasonable access to existing employment (800-1,600m from an employment centre).</i> The site is 900-1,000m from the nearest identified industrial and business site (Westgate Business Park, Llanfoist).
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	+	<i>The site has capacity to deliver new homes (<100 dwellings) and it does not intersect with a designated green wedge.</i> The site has capacity to deliver 6 new homes.
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	+	<i>The site is within reasonable walking distance (≤800m) to a primary or a secondary school (≤1,600m).</i> The site is 700-800m from the nearest primary school (Cantref Primary); however, it is 1,600-1,700 from the nearest secondary school (King Henry VIII Comprehensive).
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	++	<i>The site is within 800m of a health service and an active travel route.</i> The site is 0-50m from the nearest GP surgery (The Westgate Clinic, Abergavenny), 400-500m from the nearest dentist (The Brecon Road Dental Surgery, Abergavenny), and 60m from the nearest PRoW.
		++	<i>The site is within 800m of a formal leisure and green space.</i> The site is 0-50m from the nearest area of amenity importance and green space (public park or garden).

ISA topic	ISA objective	Significant effect?	Commentary
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	?	<i>The site falls within one of the 30-50% most deprived LSOAs in Wales.</i>
			The site falls within the Grofield LSOA, which is amongst the 40-50% most deprived LSOA in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	++	<p><i>The site is within close proximity (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, and an active travel route.</i></p> <p>The site is 400-500m from the nearest bus stop (Brecon Road Surgery and Bridge Inn), 300-400m from the nearest central shopping area (Abergavenny), and 60m from the nearest PRow. It is also 181m from the nearest National Cycle Network route.</p>
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<p><i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i></p> <p>The site is 209m from the nearest waterbody (river).</p>
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	--	<p><i>The site is wholly greenfield land and contains high quality agricultural land (Grade 1, 2 and 3a).</i></p> <p>The site comprises vacant scrub and vegetation.</p>
--		<i>The site is within a mineral safeguarding area.</i>	

ISA topic	ISA objective	Significant effect?	Commentary
			The site is within a mineral safeguarding area for sand and gravel.
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	?	<p><i>The site does not intersect, but is within 1km of a designated site, and there is an element of uncertainty relating to the potential for significant effects.</i></p> <p>The site is 181m from the nearest SAC and SSSI (River Usk/ Afon Wysg), 288m from the nearest priority habitat (purple moor grass and rush pastures), 313m from the nearest area of ancient woodland, and 328m from the nearest SINC (Neville Hall Hospital).</p>
Historic environment	<p>Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets.</p> <p>Promote understanding of Monmouthshire's cultural heritage.</p>	--	<p><i>Development at the site has the potential for a significant negative effect on the historic environment.</i></p> <p>The site fully intersects with a conservation area (Abergavenny). In addition, the site is 25m from the nearest grade II listed building, 232m from the nearest scheduled monument (Abergavenny Bridge), 247m from the nearest grade II* listed building, 252m from the nearest archaeologically sensitive area, and 534m from the nearest grade I listed building.</p> <p>Whilst the site is very small (0.3ha), it will still likely impact the setting of the conservation area. It will also likely impact the setting of three nearby grade II listed buildings, which are all located to the northeast of the site.</p>
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	?	<p><i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park; however, the site is either adjacent to/ within close proximity to one of these designated landscapes, and/ or the scale of development proposed (≥ 100 dwellings) on greenfield land has the potential for a negative effect. This is uncertain at this stage.</i></p> <p>The site is 691m from the nearest National Park (Brecon Beacons).</p>

ISA topic	ISA objective	Significant effect?	Commentary
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	-	<i>The site intersects with fluvial Flood Zone 2 or 3.</i> Less than 50% of the site intersects with fluvial Flood Zone 2 or 3. However, it is recognised that this is isolated to the southern boundary of the site.
		+	<i>The site does not intersect with a high surface water flood risk area (Flood Zone 2 and 3).</i>

Mixed Use: Retail / Professional services / Food outlets (A1 / A2 / A3), Employment (B1 / B2 / B8), Health / leisure (D1 / D2) and Sui Generis

CS0178 – Abergavenny Workhouse

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	++	<i>New employment land proposed at the site.</i> The site is proposed for mixed-use development, including employment use (B1/B2/B8).
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	0	<i>The site will deliver new employment land.</i>
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	0	N/A
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	0	N/A
		0	N/A
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	?	<i>The site falls within one of the 30-50% most deprived LSOAs in Wales.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site falls within the Grofield LSOA, which is amongst the 40-50% most deprived LSOA in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	0	N/A
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i> The site is 352m from the nearest waterbody (river).
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	++	<i>The site is wholly brownfield land.</i>
		+	<i>The site does not intersect with a mineral safeguarding area.</i>
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	?	<i>The site does not intersect, but is within 1km of a designated site, and there is an element of uncertainty relating to the potential for significant effects.</i> The site is 50m from the nearest SINC (Neville Hall Hospital), 209m from the nearest priority habitat (traditional orchard), 220m from the nearest area of ancient woodland, and 315m from the nearest SAC and SSSI (River Usk/ Afon Wysg).

ISA topic	ISA objective	Significant effect?	Commentary
Historic environment	Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets.	+	<i>Regeneration of brownfield land that is currently detracting from the historic environment.</i>
	Promote understanding of Monmouthshire's cultural heritage.		The site contains a grade II listed building. In addition, the site is 1m from the nearest conservation area (Abergavenny), 309m from the nearest scheduled monument (Abergavenny Bridge), 332m from the nearest grade II* listed building, 401m from the nearest archaeologically sensitive area, and 847m from the nearest grade I listed building. The site is small (0.6ha), and whilst the impact of the site on the grade II listed building within the site, as well as the conservation area directly to the east of the site, will be dependent on the detailed design and layout of the site, it is recognised that it has the potential to improve the setting of these heritage assets.
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	?	<i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park; however, the site is either adjacent to/ within close proximity to one of these designated landscapes, and/ or the scale of development proposed (≥ 100 dwellings) on greenfield land has the potential for a negative effect. This is uncertain at this stage.</i> The site is 386m from the nearest National Park (Brecon Beacons).
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	+	<i>The site does not intersect with a high fluvial flood risk area (Flood Zone 2 and 3).</i>
		+	<i>The site does not intersect with a high surface water flood risk area (Flood Zone 2 and 3).</i>

Mixed Use: Retail / Professional services / Food outlets (A1 / A2 / A3), Employment (B1 / B2 / B8), Health / leisure (D1 / D2), Sui Generis and Residential (C3)

CS0267 – Waterloo Court

ISA topic	ISA objective	Significant effect?	Commentary
Economy and employment	Support a strong, diverse and resilient economy, with innovative responses to changing conditions and support for a strong future workforce.	+	<i>The site has good access to existing employment (≤800m from an employment centre).</i> The site is 400-500m from the nearest identified industrial and business site (Westgate Business Park, Llanfoist).
Population and communities	To provide a sufficient quantity of good quality market and affordable homes, and community infrastructure, in sustainable locations to meet identified needs.	+	<i>The site has capacity to deliver new homes (<100 dwellings) and it does not intersect with a designated green wedge.</i> The site has capacity to deliver 5 new homes.
	To enhance design quality to create places for people that maintain and enhance community and settlement identity	-	<i>The site is not within reasonable walking distance (≤800m) to a primary or a secondary school (≤1,600m).</i> The site is 900-1,000m from the nearest primary school (Llanfoist Fawr Primary) and 2.5-3km from the nearest secondary school (King Henry VIII Comprehensive).
Health and wellbeing	To improve the health and wellbeing of residents within Monmouthshire.	+	<i>The site is within 800m of a health service or an active travel route.</i> The site is not within 800m of a health service; however, it is 1m from a PRow.
		++	<i>The site is within 800m of a formal leisure and green space.</i> The site is 200-300m from the nearest area of amenity importance and 300-400m from the nearest green space (playing field and religious grounds).

ISA topic	ISA objective	Significant effect?	Commentary
Equalities, diversity and inclusion	To reduce poverty and inequality; tackle social exclusion and promote community cohesion.	-	<i>The site falls within one of the 50% least deprived LSOAs in Wales.</i> The site falls within the Castle and Llanfoist Fawr LSOA, which is amongst the 40-50% least deprived LSOA in Wales.
Transport and movement	Increase sustainable transport use and reduce the need to travel.	+	<i>The site is within reasonable walking distance (≤800m) to a railway station or bus stop, neighbourhood centre or central shopping area, or an active travel route.</i> The site is 100-200m from the nearest bus stop (Llanfoist Inn) and 1m from a PRow. It is also 4m from the nearest National Cycle Network route. However, it is not within reasonable walking distance to a neighbourhood centre or central shopping area.
Natural resources	To identify and pursue any opportunities to reduce, or at least, minimise population exposure to air pollution.	+	<i>The site does not intersect with an AQMA.</i>
	To conserve, protect and enhance the water environment, water quality and water resources.	-	<i>The site contains or is in close proximity to a waterbody, and/ or falls within the River Wye Catchment Area.</i> The site is 198m from the nearest waterbody (river).
		+	<i>The site does not intersect with a Groundwater Source Protection Zone (SPZ).</i>
		+	<i>The site does not intersect with a Nitrate Vulnerable Zone (NVZ).</i>
	To make the best use of previously developed land and existing buildings to minimise pressure for greenfield development and protecting, where possible, higher grade agricultural land.	?	<i>The site is predominantly greenfield land (≥50%) and contains low quality agricultural land (Grade 3b, 4, urban).</i> The site is currently used for agriculture (and is part scrub).
+		<i>The site does not intersect with a mineral safeguarding area.</i>	
Biodiversity and geodiversity	Protect and enhance biodiversity within and surrounding the plan area.	-	<i>The site intersects or is adjacent to a regionally or locally (LNRs and SINC)s designated site and/ or priority habitats/ species.</i>

ISA topic	ISA objective	Significant effect?	Commentary
			The site intersects with a SINC (Waterloo Court) (88% overlap). In addition, the site is 25m from the nearest priority habitat (lowland fens and reedbeds), 360m from the nearest area of ancient woodland, and 368m from the nearest SAC and SSSI (River Usk/ Afon Wysg)
Historic environment	<p>Preserve and enhance Monmouthshire's heritage resources, including its historic environment and archaeological assets.</p> <p>Promote understanding of Monmouthshire's cultural heritage.</p>	--	<p><i>Development at the site has the potential for a significant negative effect on the historic environment.</i></p> <p>The site is 14m from the nearest grade II listed building, 266m from the nearest World Heritage Site (Blaenavon Industrial Landscape), 291m from the nearest scheduled monument (St. Faith's Churchyard Cross, Llanfoist), 448m from the nearest conservation area (Abergavenny), and 534m from the nearest grade II* listed building.</p> <p>The site is small (0.3ha); however, given the proximity of the nearest grade II listed building, the site is likely to impact its setting.</p>
Landscape	To protect and enhance the quality and character of Monmouthshire's landscape, townscape, and seascape.	?	<p><i>The site does not intersect with an Area of Outstanding Natural Beauty, National Park or Country Park; however, the site is either adjacent to/ within close proximity to one of these designated landscapes, and/ or the scale of development proposed (≥ 100 dwellings) on greenfield land has the potential for a negative effect. This is uncertain at this stage.</i></p> <p>The northwestern corner of the site intersects with a National Park (Brecon Beacons).</p>
Climate change	Support the resilience of the Monmouthshire Area to the potential effects of climate change, including flooding from fluvial, coastal and surface water sources.	+	<i>The site does not intersect with a high fluvial flood risk area (Flood Zone 2 and 3).</i>
		+	<i>The site does not intersect with a high surface water flood risk area (Flood Zone 2 and 3).</i>
